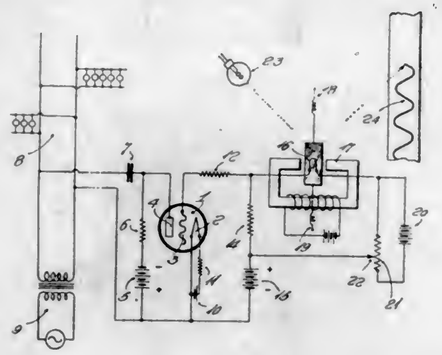
1. In a device of the character set forth, the combination with a casing having a lifting cylinder and piston, of a pump for supplying fluid thereto, said pump comprising a cylinder mounted in the casing and having a bottom therein, an inlet opening through the bottom, a ball check valve in said opening, a sleeve mounted in the cylinder and having slots extending upwardly from the bottom thereof, an outlet valve in the bottom of the cylinder, a piston mounted in said sleeve, a piston rod having a rack thereon, a shaft mounted transversely of the rack and having a bearing in the casing, a pinion on said shaft engaging with said rack, and a handle for turning said shaft, the arrangement being such that when the handle is turned through a predetermined arc the pump will operate and when the handle is turned through a greater arc the piston rod will engage with the outlet valve and permit fluid to pass back through the outlet valve under the piston and from thence through the slots and over the top of the piston.

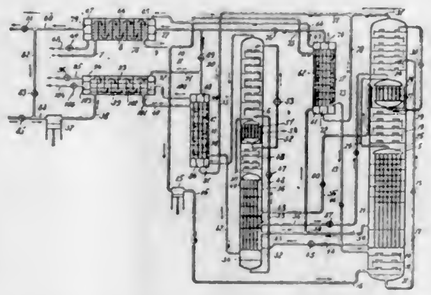
1,784,117. PERPETUAL CALENDAR. WILLIAM JAMES SIDIS, New York, N. Y. Original application filed Dec. 15, 1927, Serial No. 240,214. Divided and this application filed June 13, 1929. Serial No. 370,713. 1 Claim. (Cl. 40—113.)

The combination, in a perpetual calendar, of a disk containing the months properly grouped in sectors and the years occupying sectors of the same disk in a concentric ring; a front sheet with two slots making visible respectively the month-sectors and a year-sector, and containing week-days in seven rows and seven columns, and date-numbers occupying a continuation of those seven columns; with a pivot by means of which the disk may be rotated at will with reference to the front sheet.



1,784,118. TIRE AND METHOD FOR MARKING THE SAME. VERNON L. SMITHERS, Akron, Ohio. Filed Sept. 21, 1928. Serial No. 307,523. 3 Claims. (Cl. 41—26.)

1. A tire construction formed with spaced, circumferential ribs on the side walls of the tire to define a flat circumferential band and also formed with radial webs of a height equal to said ribs across said band dividing it into a plurality of arcuate sections, said band having rubber cements of contrasting colors applied thereto in the arcuate sections, said webs preventing running of the cements together at the ends of the sections when they are applied and also distinctly demarking the arcuate sections.

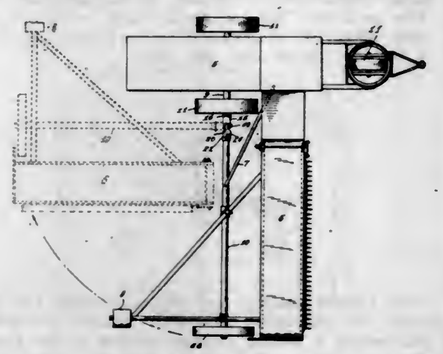


1,784,119. OSCILLOGRAPH. FREDERICK E. TERMAN, Stanford University, Calif., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 19, 1929. Serial No. 408,390. 5 Claims. (Cl. 171—95.)

3. An electrical indicating system comprising, a source of fluctuating voltage, an electron discharge device including plate, grid and cathode, an input circuit included between said plate and cathode and capacitively coupled

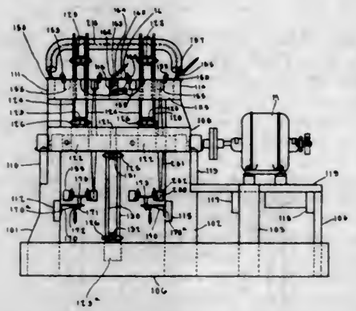
to said source of fluctuating voltage, an output circuit included between said grid and said cathode, and an electrical indicating device connected in said output circuit.

1,784,120. SEPARATION OF THE CONSTITUENTS OF GASEOUS MIXTURES. CLAUDE C. VAN NUYS, Cranford, and JOSEPH L. SCHLITT, Elizabeth, N. J., assignors to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 23, 1926. Serial No. 143,594. 15 Claims. (Cl. 183—115.)



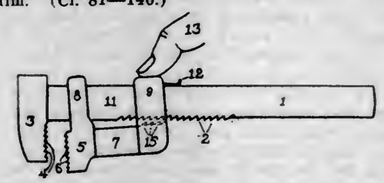
1. A method of separating the constituents of gaseous mixtures, which comprises subjecting a liquid containing the constituents of the gaseous mixture to a primary rectification to form a liquid consisting of one of the constituents in substantial purity, subjecting a gaseous mixture containing the constituents of the original mixture and including the effluent from the primary rectification to liquefaction and an auxiliary rectification to separate another constituent as a gas in substantial purity and delivering the impure liquid product of the auxiliary rectification to the primary rectification at a point where the liquid flowing downwardly therein has a composition corresponding substantially to that of the liquid produced in the auxiliary rectification.

1,784,121. COMBINATION HARVESTER THRASHER. JAMES A. WALSH, Indianapolis, Ind., assignor to J. I. Case Company, Racine, Wis., a Corporation. Filed Feb. 17, 1925. Serial No. 9,898. 2 Claims. (Cl. 287—92.)



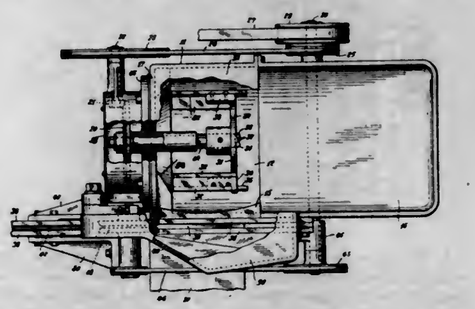
2. A connection for a machine embodying a combined harvester and thrasher said harvester having a horizontal supporting axle embodying a flange, a hinge member comprising a collar having a flange swivelingly connected to said axle flange, a flange on the thrasher, a hinge member

comprising a collar having a flange swivelingly connected to the thrasher flange, means connecting said hinge members whereby they may together rotate in said axle and



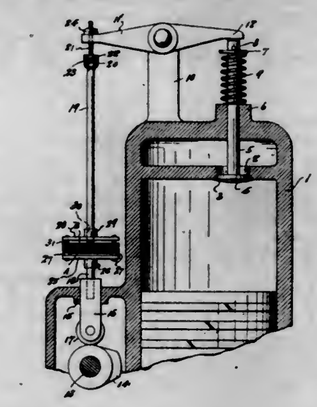
thrasher flanges, and means for securing the hinge members in non-rotatable relation to the axle and thrasher flanges.

1,784,122. RECTIFYING SWITCH. JULIUS B. WANTZ, Oak Park, Ill. Filed Sept. 4, 1925. Serial No. 54,461. 5 Claims. (Cl. 175—364.)



2. In a rectifying switch having a frame, and a plurality of stationary connectors on said frame, insulatory means comprising a plurality of cross members of non-conducting sheet material for supporting said connectors upon said frame, each of said cross members being secured to said frame by fasteners of conductive material and being apertured a greater portion of its width and serrated adjacent such aperture to a depth greater than the width of material remaining about such aperture to prevent said conducting material parts and said connectors from having an unbroken straight line of insulating material therebetween.

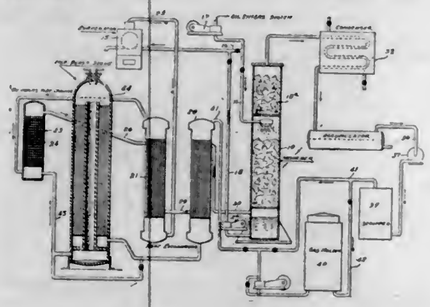
1,784,123. WRENCH. ERNST A. G. WERNER, Brooklyn, N. Y. Filed Nov. 4, 1929. Serial No. 404,662. 1 Claim. (Cl. 81—146.)



In a wrench having a wrench shank terminating at one end in a handle and at the other end in a rigid jaw, the combination with a plurality of teeth upon said shank intermediate the ends thereof and a shiftable jaw having a jaw frame, a yoke upon said shiftable jaw enveloping said shank loosely so that said jaw may normally hang down out of contact with said shank, a second yoke spaced from said first yoke upon said jaw frame and also loosely engaging said shank, one or more teeth secured upon said jaw frame for engaging said shank teeth and an eccentric spring associated with said second yoke and arranged to project rearwardly from said second yoke toward the handle of the wrench so as to provide solely an eccentric lift and forward urge to said second yoke and thereby to said shiftable jaw.

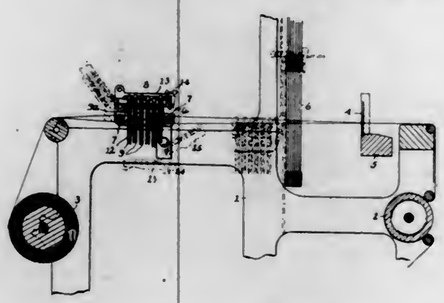
1,784,124. HOPPER MECHANISM. RICHARD LESTER WILCOX, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Dec. 9, 1927. Serial No. 238,963. 9 Claims. (Cl. 10—169.)

1. A hopper having a receptacle to receive blanks or the like in an indiscriminate mass; means for segregating some of the blanks from the mass and carrying them along the inside face of the receptacle to a delivery point, comprising a rotor member having a rotor head and a plurality of arms connected therewith at substantially a right angle thereto, some of said arms projecting on both sides of the rotor head and other of the arms projecting upon only one side thereof.



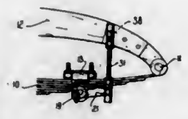
1,784,125. POPPET-VALVE-ACTUATION MEANS. ROBERT EZEKIEL WILSON and ROBERT EUGENE WILSON, Belleville, N. J. Filed May 29, 1929. Serial No. 366,835. 2 Claims. (Cl. 267—1.)

1. A counter-balancing spring structure for the valve mechanism of internal combustion engines, comprising a thrust plate having transverse abutments, a thrust rod guide plate, means for connecting said guide plate in spaced relation to said thrust plate, a rectangular lami-



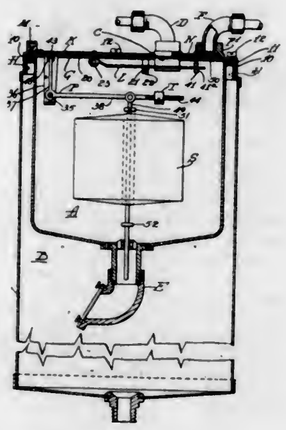
nated spring means supported at its ends on said abutments of said thrust plate and intermediate the latter and said guide plate, a thrust rod slidable through said guide plate to bear on an intermediate joint of said spring means whereby under thrust the latter may flex toward said thrust plate.

1,784,126. PROCESS OF CRACKING HYDROCARBONS. EDWIN W. BEARDSLEY and MYRON W. COLONY, Texas City, Tex., assignors to Petroleum Conversion Corporation, New York, N. Y., a Corporation of Delaware. Filed June 28, 1927. Serial No. 201,981. 4 Claims. (Cl. 196—66.)



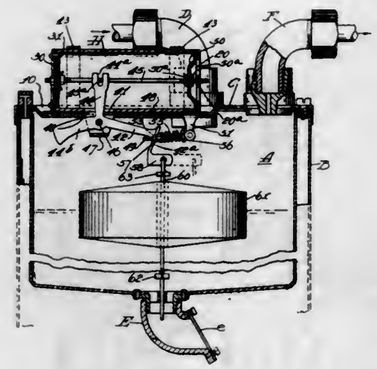
1. The process of converting hydrocarbon oils into compounds of lower molecular weight which consists in storing heat in a carrier gas, introducing the thus heated gas into a reaction chamber there to mingle with the vapor of the product to be converted, passing the products of the conversion reaction from the reaction chamber through heat exchange means, separately vaporizing the incoming hydrocarbon material and passing the produced vapor in heat exchange relation with said products of reaction in said heat exchange means and thence into the reaction chamber, passing the heat carrier gas entering the cycle into heat exchange relationship with said products in further heat exchange means, thence to a gas heating device and thence to said reaction chamber and subjecting the products of the reaction to condensing conditions.

1,784,127. MEANS FOR REMOVING THE HARNESS AND STOPPING INSTRUMENTALITIES FROM A LOOM. JOHN HENRY BECKER, Richmond Hill, N. Y., assignor to Warp Twisting-In Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 17, 1928. Serial No. 262,408. 11 Claims. (Cl. 28—41.)



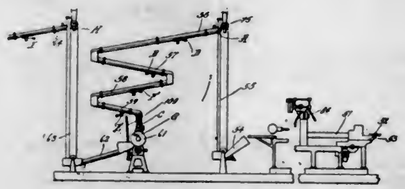
1. Means to remove from a loom the stop-motion fallers and the bar carrying them and also the harness and contained warp including separate sections, one for supporting said bar and the other for supporting the harness, said sections having means to connect them as a unit so that either may serve as the carrying member for the other.

1,784,128. SHOCK REDUCER FOR VEHICLES PROVIDED WITH LEAF SPRINGS. HENRICUS FRANCISCUS JOZEF BERNAERTS, Zeist, Netherlands, assignor to Naamlooze Vennootschap Technisch- en Handelsbureau van Vliet en Zonen, Bussum, Netherlands. Filed Oct. 23, 1928, Serial No. 314,342, and in the Netherlands Aug. 3, 1928. 5 Claims. (Cl. 267—53.)



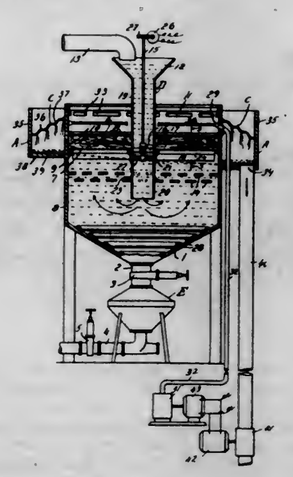
1. In a shock absorber for vehicles provided with leaf springs, the combination of a strap adapted to embrace a leaf spring, a locking member pivoted to the shanks of the strap and provided with an eccentric portion intermediate between the shanks, said eccentric portion being adapted to engage said spring, two set screws in said strap positioned on each side of a vertical plane through the axis of said locking member and engaging one side of said leaf spring, a crank connected to the locking member, and means for operatively coupling the free end of the crank with the sprung part of the vehicle.

1,784,129. VACUUM TANK. CHARLES S. BURTON, Oak Park, Ill. Filed Feb. 16, 1929. Serial No. 340,352. 14 Claims. (Cl. 103—236.)



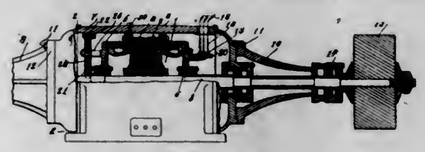
1. A construction for lifting liquid by suction, comprising a vacuum chamber having a suction connection, a liquid inflow connection, an atmosphere inlet port and a liquid discharge port, a valve controlling the atmosphere inlet port arranged for suction action thereon holding it against its seat, a limited portion of the chamber wall being inwardly and outwardly movable without opening the wall, operating connections between the valve and said movable wall part arranged for opposing the suction action on the latter to the suction action on the valve; a float in the chamber and connections from the float to said operating connections adapted to move the valve in opening direction upon the float being lifted by the rise of the liquid in the chamber to a predetermined high level, and to move the valve in closing direction upon the subsidence of the liquid to a predetermined low level.

1,784,130. VACUUM TANK. CHARLES S. BURTON, Oak Park, Ill. Filed Feb. 21, 1929. Serial No. 341,586. 7 Claims. (Cl. 103—236.)



1. In a construction for the purpose indicated, a casing enclosing a chamber having connection with a source of suction for producing partial vacuum in the chamber, said chamber having a liquid inlet, a liquid outlet and an atmosphere inlet; a valve controlling the atmosphere inlet; a limited part of the enclosing wall exteriorly exposed to atmosphere being inwardly and outwardly movable without opening the wall; operating connections between said movable part of the wall and the atmosphere inlet valve arranged for opposing to each other respectively the actions due to vacuum in the chamber, said connections being dimensioned and arranged for substantially balancing said actions against each other; means operated by change of level of the liquid content of the chamber for operating said connections for opening and closing the valve, and a snap action interposed between said liquid level-operated means and said operating and balancing connections between the valve and the movable wall aranged to exert force in opposition to one of said counter-balanced actions by its snap caused by the high liquid level and in opposition to the other of said counterbalanced actions by its snap caused by the low liquid level.

1,784,131. CAN-MAKING MACHINERY AND APPARATUS. WALTER K. CABOT, Montclair, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 2, 1927, Serial No. 230,442. Renewed Mar. 3, 1930. 13 Claims. (Cl. 113—7.)

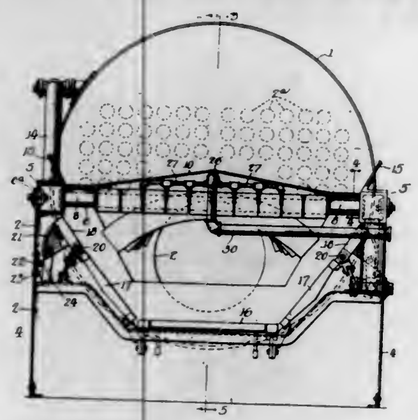


1. The combination of a machine for performing an operation upon a can body and the like, means delivering can bodies from said machine after operation thereupon and an electric control causing interruption of the operation of said machine upon creation of a predetermined condition in said delivery means and causing also interruption of both said machine and said delivery means upon creation of another predetermined condition in said delivery means.

1,784,132. FILTRATION SYSTEM. CHARLES T. CABRERA, New York, N. Y., assignor to Electro Dialyzer Corporation, New York, N. Y., a Corporation of New York. Filed July 9, 1928. Serial No. 291,237. 11 Claims. (Cl. 210—7.)

1. In a device for treating solid laden liquids, a container, a filter bed extending across said container, means for introducing a solid laden liquid to said container below said filter bed, a trough surrounding said container for receiving filtered liquid therefrom, and means in said trough for agitating and aerating the filtered liquid.

1,784,133. ELECTRIC DRIVE FOR GRINDER WHEELS. ALONZO G. DECKER, Baltimore County, Md., assignor to Marschke Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Dec. 14, 1927. Serial No. 240,068. 5 Claims. (Cl. 172—36.)

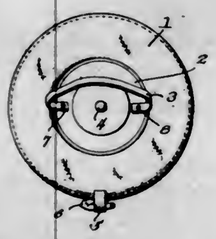


1. An electric drive for a grinding or buffing machine comprising a main shaft, an alternating current induction motor having a rotor secured to the shaft, a field member mounted to rotate about the axis of the shaft, planetary gearing for rotating the field member comprising a gear secured to the shaft, an internal ring gear non-rotatively mounted and an intermediate gear mounted on the field member and meshing with both the shaft gear and the ring gear.

1,784,134. STEAM-GENERATING FURNACE. THOMAS F. DOWNEY and JAMES DONALD, Chicago, Ill. Filed May 5, 1928. Serial No. 275,495. 6 Claims. (Cl. 122—190.)

1. A steam-generating furnace comprising a grate, and a tile-protected water-wall over the grate comprising a series of spaced parallel water tubes extending transversely of the furnace, a header at each side of the furnace connected to said tubes, there being fuel feed openings between said tubes adjacent to said headers, a series of

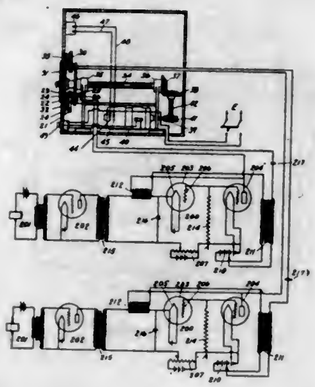
members for each of said series of fuel feed openings, each of said members comprising a semi-cylindrical shield for one of said tubes and flanges at one end of the shield, said



flanges forming a substantially continuous series adjacent to and parallel with one of said headers, and tiles enclosing that portion of each tube which extend between the said series of flanges.

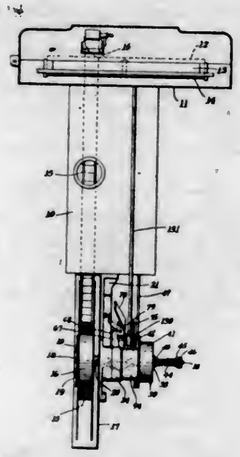
1,784,135. FLOOR COVERING. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Feb. 26, 1927, Serial No. 171,380. Renewed Feb. 8, 1930. 10 Claims. (Cl. 91—68.)

1. A floor covering in transportable form comprising a roll of saturated felt web carrying in a state of extension an adherent tread veneer containing nitrocellulose, a glyceride resin, and a finely-divided fire-retarding mineral substance.



1,784,136. BUOY-INFLATED SWIMMING PADDLE. MARTIN F. ENKE, Oakland, Calif. Filed May 22, 1928. Serial No. 279,828. 5 Claims. (Cl. 9—21.)

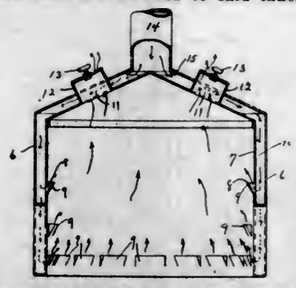
1. The combination of a circular inflated device to be placed on the hand to aid in swimming and floating, said device having for its body an outer casing of fabric, a slot in the center to insert an inner tube of rubber to be inflated substantially as set forth.



1,784,137. SUBMARINE SIGNALING. RICHARD DUDLEY FAY, Cambridge, and HERBERT GROVE DORSEY, Gloucester, Mass., assignors to Submarine Signal Corporation, Boston, Mass., a Corporation of Delaware. Filed May 21, 1925. Serial No. 31,873. 13 Claims. (Cl. 177—386.)

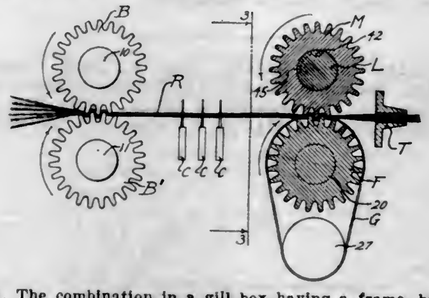
1. An apparatus for determining the direction of a source of sound comprising spaced receivers responsive to said sound, visual indicators, means for operating said visual indicators by the action of said receivers, each receiver being associated with a different indicator, a rotating disc, said indicators mounted upon said rotating

disc, a dial concentric with said rotating disc, means for adjusting the dial to measure the angle between the indications of said rotating indicators whereby the direction may be determined.



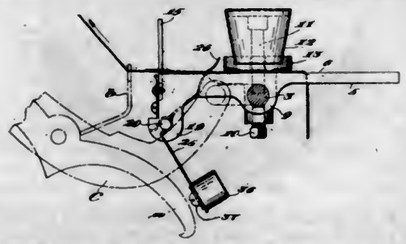
1,784,138. MOTION-PICTURE-PROJECTING APPARATUS. CHRISTIAN M. GOTTSCHAU, Columbus, Ohio, assignor to Picture Machine Service Corporation, a Corporation of Colorado. Filed June 13, 1924. Serial No. 719,724. 73 Claims. (Cl. 88—17.)

6. Apparatus of the type described comprising a reel, a running drive for said reel adapted to slip under a predetermined resistance, and a starting drive more positive than said running drive, and independent thereof for overcoming the inertia of said reel and connected parts.



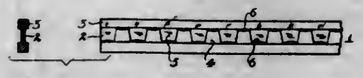
1,784,139. HAIR-DRYING HOOD. WALTER A. GUNTER and CHARLES F. GRIESSER, Baltimore, Md., assignors to Eugene Ltd., a Corporation of New York. Filed June 12, 1928. Serial No. 284,814. 1 Claim. (Cl. 34—26.)

A hair drying structure comprising a hood having spaced inner and outer walls defining an air passage, an air supply source secured to and communicating with said passage, said inner wall provided with spaced air openings, air deflectors secured to said inner wall adja-



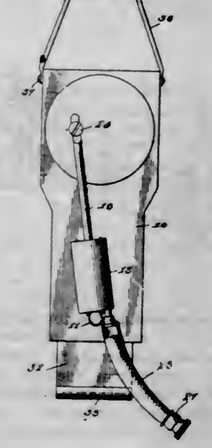
cent said openings for deflecting the air upwardly in said hood, and air outlets formed through the walls of said hood to permit said air to escape therefrom.

1,784,140. FRONT FLUTED DRAWING ROLL FOR GILL BOXES. SAMUEL HADFIELD and GUSTAVE J. BUCKLITCH, Lawrence, Mass. Filed Apr. 24, 1929. Serial No. 357,849. 3 Claims. (Cl. 19—129.)



1. The combination in a gill box having a frame, back feed rolls, fallers, a positively driven, fluted bottom front delivery roll, and an endless apron which passes around said delivery roll; of two guideways fixed to the frame; with shaft carriers slidable in the guideways; a horizontal shaft fixed to said carriers, said shaft having at the top oil recesses and oil channels which extend from said recesses down around and along the surface of said shaft; a fluted shell roll so revoluble on the shaft between the oil recesses as to carry oil down from said channels; and spring pressed saddles which engage the shaft outside the shell roll, said saddles having oil holes which connect with the oil recesses and bearings for the shell roll which extend over the oil channels and confine the oil therein.

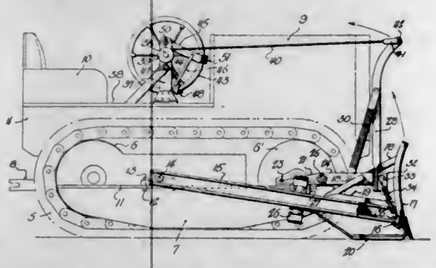
1,784,141. CLEARER AND SLUB CATCHER FOR TEXTILE MACHINES. WALTER M. HASTINGS, Methuen, Mass. Filed Nov. 10, 1927. Serial No. 232,315. 7 Claims. (Cl. 28—64.)



1. A filament clearer and slub catcher having plates with slots therein, means for supporting the plates normally out of contact with each other, one of said plates being mounted for motion about a center toward the other plate, and having a slot narrower toward the center than toward the periphery of its arc of motion, and means for guiding the filament normally to run in the wider part of the slot in the movable plate.

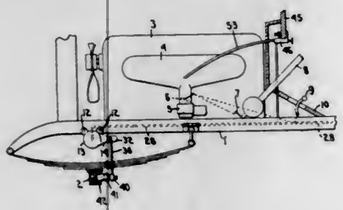
1,784,142. MATERIAL STRIP FOR SPRING-TOOTH LOCK WASHERS. RICHARD T. HOSKING, Wilmette, Ill., assignor, by mesne assignments, to Shakeproof Lock Washer Company, Incorporated, Chicago, Ill., a Corporation of Delaware. Filed Dec. 15, 1928. Serial No. 326,347. 4 Claims. (Cl. 29—148.)

2. A strip of spring material thinned in the region of its central longitudinal axis, the thinned portion severed lengthwise along an irregular line giving two stock strips each having a serrated edge consisting of locking members thinner than the strip and spaced apart, portions of said locking members formed to constitute biting prongs that project out of the plane of the thicker portion of the strip on opposite sides thereof, the outer ends of said locking members of curved contour, for the purposes set forth.



1,784,143. TIRE PUMP. REUBEN B. JORDAN, Poplarville, Miss. Filed Nov. 5, 1928. Serial No. 317,266. 2 Claims. (Cl. 230—39.)

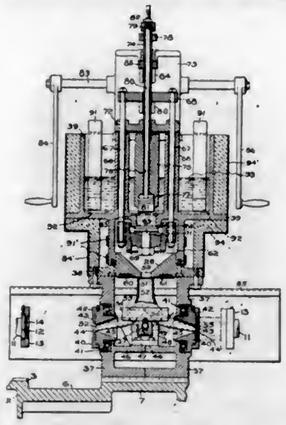
1. In a device of the character described, a base including a substantially flat standard rising therefrom, a rectangular plate including a reduced channel like lower portion slidably mounted upon the standard, a pivoted handle carried by said plate whereby the latter can be adjusted vertically on the standard, said plate having notches formed in the rear wall thereof, a pivoted dog carried by the standard and cooperating with the notches to hold the plate in a given position, a post projecting horizontally from the front face of the plate, a cylinder supported on said post, a piston operating within the



cylinder, a piston rod, and means supported by the plate for reciprocating said piston rod and including a drive shaft arranged at one side of the plate.

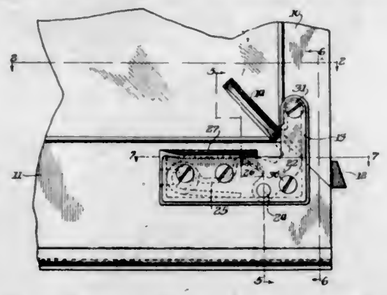
1,784,144. MATERIAL-HANDLING APPARATUS. JOSEPH H. KERBER, West Allis, Wis., assignor to Hi-Way Service Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 7, 1930. Serial No. 433,973. 7 Claims. (Cl. 37—144.)

1. An attachment for tractors of the endless tread propelled type comprising an implement-carrying frame, means for pivotally connecting said frame to the tread frames of the tractor, means for raising and lowering said frame including hoisting frames operatively connected with said carrying frame, means for pivotally connecting said hoisting frames to the tread frames of the tractor, and means under the control of the operator for raising and lowering said hoisting frames.



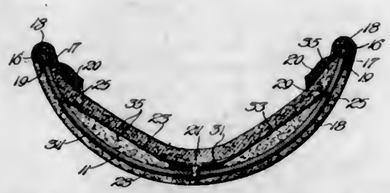
1,784,145. MOTION-ARRESTING MEANS FOR MOTOR-PROPELLED VEHICLES. JAMES B. KIRBY, West Richfield, Ohio. Filed June 2, 1922. Serial No. 565,317. 11 Claims. (Cl. 188—130.)

1. In a motion arrester for motor propelled vehicles, a plurality of pairs of relatively movable friction elements adapted to be connected to relatively movable parts of a vehicle, independent vacuum operated means for causing pressure between the elements of each of said pairs and means for controllably connecting all of said means to the manifold of the propelling motor.



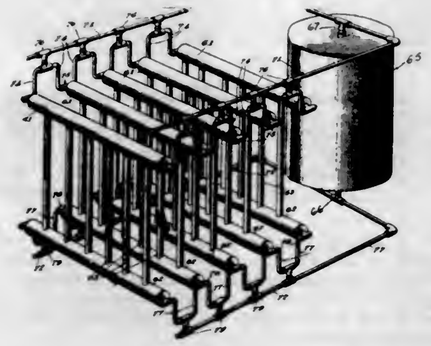
1,784,146. MACHINE FOR BABBITTING SLEEVE BEARINGS. CARL H. LEIS, New Castle, Pa., assignor to Johnson Bronze Company, New Castle, Pa., a Corporation of Pennsylvania. Filed Dec. 28, 1929. Serial No. 417,134. 15 Claims. (Cl. 22—58.)

7. In a machine for babbitting sleeve bearings, a babbitt melting pot having a discharge chamber in the base thereof, heating means for the pot, a valve for closing the outlet end of the chamber, a valve for controlling the inlet end thereof, means for actuating said valves, a support for said pot and provided with a secondary discharge opening, heating means for maintaining said support at the desired temperature, and a dual conductor



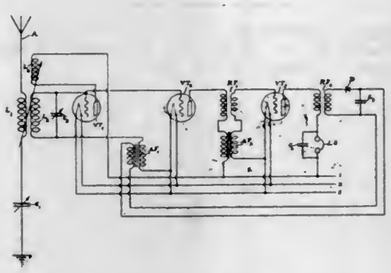
spout member pivotally supported beneath said support and adapted to be adjusted to conduct a discharge of metal through either of the spouts.

1,784,147. SASH LATCH. JOHN F. LEVAN, Elkhart, Ind., assignor to The Adams & Westlake Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 11, 1927. Serial No. 174,510. 6 Claims. (Cl. 292—173.)



1. The combination with a metal sash, of a slideway in one of the marginal members of the sash, a relatively narrow bolt in the slideway, and projections on both sides of the bolt in contact with the sides of the slideway for centering the bolt in the slideway in spaced relation to the sides of the latter.

1,784,148. GUARD FOR ATHLETES. DAVID LEVINSON, Chicago, Ill., assignor to Wilson-Western Sporting Goods Co., Chicago, Ill., a Corporation of Delaware. Filed Mar. 23, 1929. Serial No. 349,314. 2 Claims. (Cl. 2—2.)

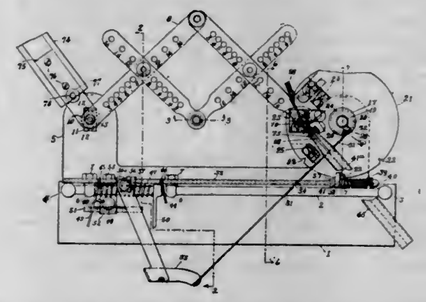


1. In an athletic guard, the combination of a relatively stiff guard member curved to the general contour of a member to be protected, with a metal tension member extending along a chord of an arc of curvature of said guard member, a rivet for simultaneously tensioning said tension member and securing the same to said guard, and a compressible washer between said tension member and said guard and adapted to be compressed in said tensioning operation.

1,784,149. BOILER. ALVA ARTHUR LINDLEY, Spokane, Wash. Filed Nov. 13, 1925. Serial No. 68,856. 1 Claim. (Cl. 122—332.)

A boiler, including a housing, a plurality of units therein, each unit comprising spaced apart upper and lower longitudinal headers, vertical water tubes connecting said longitudinal headers, upper and lower transverse headers adjacent the opposite ends of said longitudinal headers, bent pipe connections between the longitudinal and transverse headers to facilitate assembly as well as accommodate expansion, a vertical feed drum or tank positioned exteriorly of the housing, and pipe connections between the upper and lower ends of said tank and said upper and lower transverse headers, said vertical feed tank extending throughout the length of said vertical water tubes to maintain the water in said tubes at the desired level therein.

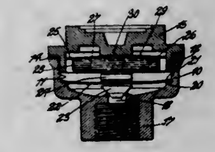
1,784,150. AMPLIFIER OF ELECTRICAL CURRENTS. EDWARD H. LOFTIN, Washington, D. C., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed June 22, 1923. Serial No. 647,028. 6 Claims. (Cl. 179—171.)



1. An electrical amplifying system including a pair of amplifiers, an input circuit common to said amplifiers having a portion responsive to high frequency currents and a portion responsive to lower frequency currents, and independent output circuits associated with said amplifiers, one of said output circuits being so coupled to said input circuit as to transfer said high frequency currents therebetween, and one of said output circuits being adapted to transfer said lower frequency currents therefrom.

1,784,151. GOGGLES. ROBERT MALCOM, Chicago, Ill. Filed Nov. 25, 1929. Serial No. 409,468. 6 Claims. (Cl. 2—14.)

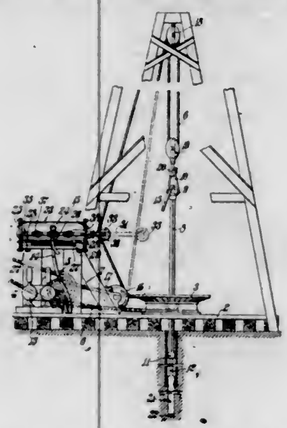
1. In a goggle, an eye-cup having a side wall of sheet material formed to bring the ends of the sheet into adjacent relation, while one of the edges of the sheet is formed to provide a lens-holding groove; a plate disposed transversely of the eye-cup in lapping relation with the adjacent ends of the cup-wall, said plate being provided with diverging slots; and protruding portions on the cup-wall disposed through said slots whereby the position of said plate controls the relation of the adjacent ends of the cup-wall.



1,784,152. LETTERING MACHINE. LEONARD MCDONALD, Houston, Tex. Filed July 5, 1924. Serial No. 724,347. 23 Claims. (Cl. 33—25.)

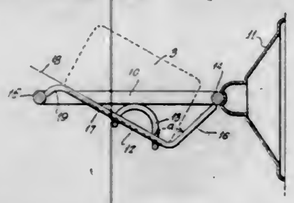
2. A guide bar, a support mounted for movement longitudinally on said guide bar, a master copy and a pantograph mounted upon said support, a tracing point and a drawing point carried by said pantograph, for copying the characters of said master copy, and spacing mechanism adapted for producing an intermittent movement of said support for spacing the copied characters.

8. A guide bar, a support mounted for movement longitudinally thereon, a pantograph having a drawing point and a tracer, mounted on said support, a master copy mounted on said support, consisting of grooved designs of characters superposed, each design having the elements of several characters, the grooves serving to guide said tracer.



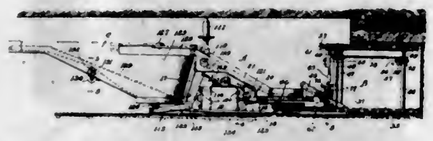
1,784,153. STEAM TRAP. JOSEPH MESSMER, Kirkwood, Mo., assignor to Messmer Brass Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 2, 1926. Serial No. 139,083. 1 Claim. (Cl. 236—58.)

In a steam trap, a housing, a heat expansible valve-operating member within said housing, a valve seat, a



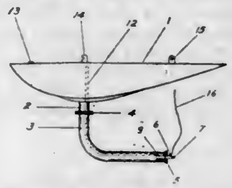
normally arched resilient valve-carrier disposed beneath said member, and a plug secured to said carrier, said member consisting of a receptacle, diaphragms forming both sides of said receptacle, and a volatile fluid within said receptacle, the diaphragms being so constructed and said fluid so proportioned that said diaphragms assume inwardly concave positions when the operating member is subjected to normal temperatures and outwardly convex positions when subjected to a predetermined higher temperature, the central portion of said diaphragms being under a compression stress when in a flat or plane position whereby when said diaphragms pass slightly beyond said plane position, while moving in either direction responsive to temperature variations, they automatically snap into curved positions and thus rapidly complete the closing or opening of the valve in advance of full expansion of said fluid.

1,784,154. DRILLING APPARATUS. JOSEPH S. MITCHELL, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Oct. 17, 1925. Serial No. 63,147. 4 Claims. (Cl. 255—19.)



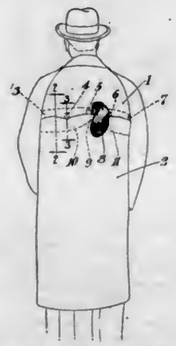
1. In a rotary oil or gas well drilling apparatus, the combination with a rotary table, rod line, and hoisting mechanism including a hoisting drum and a hoisting cable supporting the rod line, of means for feeding and controlling the rod line including an auxiliary feeding device having means engaging the hoisting cable intermediate the ends thereof, the connection between the hoisting drum and rod line on which the feeding device acts being deflected upon initial feeding of said device and being slackened during feeding until it assumes a straight line when the limit of feed of said device has been reached, said connection being so arranged that a predetermined feeding movement of the feeding device effects a substantially reduced feeding movement of the rod line.

1,784,155. SOAP HOLDER. HECTOR E. MOINEAU, Marlboro, Mass. Filed Jan. 29, 1929. Serial No. 335,884. 5 Claims. (Cl. 45—28.)



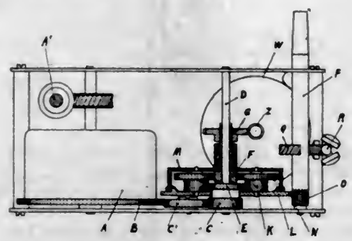
1. A soap holder embodying a frame, and filler wires extending across the frame from the rear to the front thereof and forming a support for a cake of soap, said filler wires being bent downwardly to collectively form a support for a cake of soap and the base of which support is inclined in an upward and forward direction, the forward ends of the filler wires being bent downwardly to their point of attachment to the frame, whereby the plane of the inclined base is appreciably above the frame at the front thereof.

1,784,156. APPARATUS FOR MINING AND LOADING COAL. EDMUND C. MORGAN, New York, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed Nov. 19, 1917. Serial No. 202,825. 63 Claims. (Cl. 262—28.)



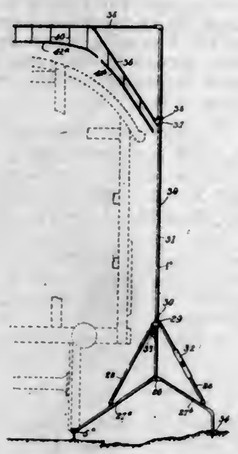
1. A mining machine comprising a frame, a cutter carried by said frame, a jack comprising a U-shaped bar pivotally connected with said frame, and a lever for tilting said bar about its pivot to adjust the height of a portion of said frame relative to the surface upon which said machine is supported.

1,784,157. PROCESS AND APPARATUS FOR ATOMIZING MATERIALS FROM MOVING AIRCRAFT. NICHOLAS E. OGLESBY and FLEMING R. WEAVER, Edgewood, Md. Filed Mar. 9, 1929. Serial No. 345,856. 5 Claims. (Cl. 244—1.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



5. An apparatus for dispersing fluids comprising a fluid container, discharge and vent lines communicating with the interior of said container and terminating at the same point externally of said container, and a common means for closing said lines.

1,784,158. RAINCOAT. CHARLES H. PLACE, New Rochelle, N. Y. Filed Oct. 30, 1929. Serial No. 403,470. 1 Claim. (Cl. 2—87.)



A raincoat comprising, in combination, an outer yoke, an inner yoke of moisture absorbing material, both yokes being joined at the shoulder; a back portion the upper edge of which extends transversely across the back of the wearer and is removed from and positioned below the shoulder; the lower edge of both of said yokes extending below said upper edge; the said outer yoke being so secured to said back portion as to form a plurality of openings leading from the region inside the coat to the outside atmosphere; the said inner yoke being of less width than the adjacent part of said back portion so as to form an air space between said inner yoke and said back portion; the bottom of said inner yoke comprising two convexly curved edges meeting at the center to form an upward recession, the entire said bottom being unattached to and free from the garment.

1,784,159. DOUBLE-CONTROL DEVICE FOR PHONOGRAPHS. WASSILY REBIKOFF, Paris, France, assignor to Leonide Davydoff, Paris, France. Filed May 10, 1929, Serial No. 362,009, and in Germany Aug. 11, 1928. 4 Claims. (Cl. 185—2.)

1. Double control device for phonographs comprising a spring motor, a second motor, a differential mechanism controlled simultaneously by both motors when the second motor is operative, a turn-table shaft controlled by said mechanism and means adapted to prevent the reverse actuation of the second motor by the differential mechanism.

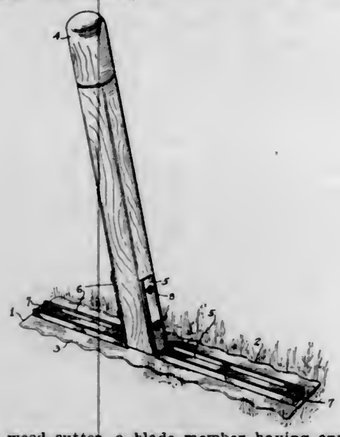
1,784,160. PORTABLE LOADING GAUGE FOR RAILROAD CARS. JACQUES RÉMOND, Amiens, France. Filed Nov. 5, 1928, Serial No. 317,376, and in France Nov. 21, 1927. 3 Claims. (Cl. 33—169.)

3. In a portable loading gauge for railroad cars, the combination of an upright, a pivot member disposed at the lower end of said upright, a tripod the legs of which are pivoted to said member, two base plates mounted respectively at the bottom of each of two front legs of the tripod and adapted to be placed upon the rails of the track, a pointed portion at the bottom part of the rear leg, a ground plate situated above said pointed portion, a sleeve slidable on the said upright, two struts pivoted each at one end to a corresponding front leg and at the other end to said sleeve, two sections placed in line and forming a strut for the rear leg, said sections being respectively pivoted to said sleeve and to the rear leg, a threaded sleeve connecting the said sections and serving to regulate the length of the strut which they form, and means for holding the said slidable sleeve in its two positions corresponding respectively to the open and to the folded positions of the tripod.

1,784,161. PROCESS OF REFINING CELLULOSE PULP. GEORGE A. RICHTER and MILTON O. SCHUR, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed May 27, 1924. Serial No. 716,154. 3 Claims. (Cl. 92—9.)

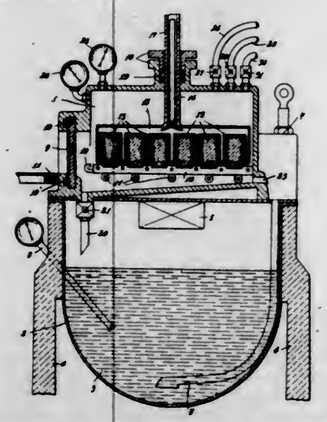
1. A process which comprises treating unbleached, previously-liberated pulp with an oxidizing agent until the residue from this treatment shows a maximum alpha cellulose content, and then treating this high alpha-cellulose-containing residue with an alkaline liquor under conditions to increase further the alpha cellulose content of the residual pulp, thus preserving or developing in the fibres the most desirable paper-making characteristics.

2. A process which comprises treating unbleached wood pulp with an oxidizing agent until the residue from this treatment shows a maximum alpha cellulose content, and then digesting this high alpha-cellulose-containing residue in an alkaline liquor under conditions to increase further the alpha cellulose content of the residual pulp, thus preserving or developing in the fibres the most desirable paper-making characteristics, and bleaching the digested pulp.



1,784,162. PARACHUTE HARNESS. FLOYD SMITH, Morrisville, Pa., assignor to Switlik Manufacturing Company, a Corporation of New Jersey. Filed Nov. 4, 1929. Serial No. 404,556. 9 Claims. (Cl. 244—21.)

1. A harness comprising a swing in which the wearer is adapted to be seated with the upright elements extending upwardly in front of him, diagonal back straps each adapted to extend forwardly over a shoulder of the wearer and over the hip at the opposite side, a member slidable along each of said upright elements, the upper portion of each back strap extending slidably through the corresponding slidable member and being continued to the back along the strap, a sliding connection between the lower end of the back-turned part of each back strap and the body of the strap, the lower and forward ends of the back straps being connected to said upright elements, two leg straps extending from the bottom of the swing to the

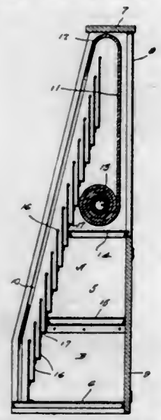


said upright elements near the lower ends of the latter, and a breast strap device detachably connecting said upright elements together.

1,784,163. WEED CUTTER. EDWARD STAUVERMAN, Lakeland, Fla. Filed Dec. 21, 1928. Serial No. 327,684. 2 Claims. (Cl. 30—9.)

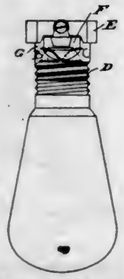
1. In a weed cutter, a blade member having oppositely disposed wavelike cutting edges, a handle element angularly mounted on the blade intermediate its ends, bracket members for securely holding the handle in fixed relationship to the blade, one portion of the bracket members extending upwardly along the handle element, another portion of the bracket members extending along the upper surface of the blade, substantially to the ends thereof, the bracket portions being securely fastened to both the handle and blade in such a manner that the blade will receive reinforcement therefrom throughout its length.

1,784,164. PROCESS FOR IMPREGNATING BRICKS AND LIKE MATERIALS. ANDREAS JOHANNES MARIA STOFFELS and HERMAN TOBIAS VAN DER WISSEL, The Hague, Netherlands. Filed Aug. 25, 1927, Serial No. 215,498, and in the Netherlands Dec. 31, 1926. 12 Claims. (Cl. 91—70.)



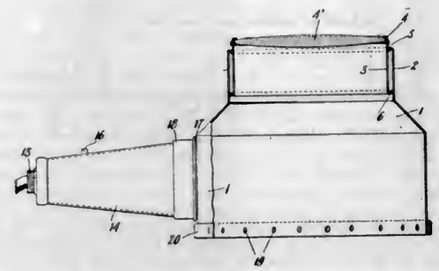
1. A process for impregnating bricks and like material with thermo-plastic substances, consisting in first preheating said material and then impregnating the different sides of the preheated material to a different extent under pressure by cooling the impregnated medium in the impregnating chamber at those sides of the material where a less intensive impregnation is desired.

1,784,165. METHOD OF PRODUCING BORNEOL AND LIMONENE. YOSHIO TANAKA, Kitatoshima-Gun, Tokyo-Fu, and TSUTOMU KUWATA, Ebara-Gun, Toyko-Fu, Japan. Filed July 8, 1929, Serial No. 376,848, and in Japan Mar. 18, 1929. 2 Claims. (Cl. 260—153.)



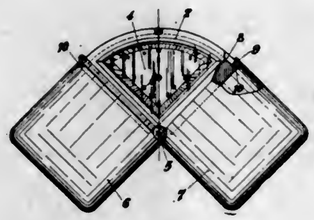
1. A method of producing borneol and limonene consisting in treating pinene or pinene-containing material with organic acids in presence of silica gel as catalyst, and distilling out the limonene and saponifying the remaining borneol ester.

1,784,166. FILING CABINET. GEORGE TONY WASHINGTON, Russell, Ky. Filed Jan. 13, 1927. Serial No. 160,926. 1 Claim. (Cl. 45—2.)



In a file cabinet of the class described, a casing including a bottom, a pair of end walls, a top, and a back wall which extends downwardly from the top to the intermediate portion of the casing, the front side of the casing being open, a series of vertically arranged stepped pockets secured between the end walls of the casing adjacent the open front side thereof, a horizontal partition arranged between the lower edge of the rear wall and the intermediate portion of said pocket for dividing the cabinet into upper and lower compartments in the rear of the pockets, a spring drum mounted between the end walls in the lower portion of the upper compartment, a sectional rolling lid attached at one end to the roller and adapted to be extended downwardly between the end walls in front of the pockets to cover the same when in one position, said lid being confined in the upper compartment when in a rolled position, and a swinging closure arranged between the end walls and between the lower edge of the back wall and the bottom of the casing whereby access to the lower compartment may be had.

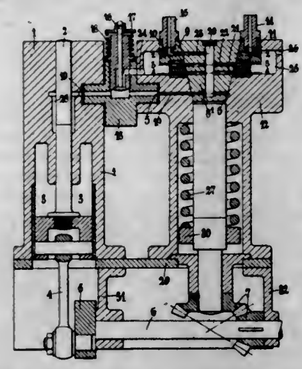
1,784,167. SAFETY DEVICE FOR ELECTRIC-LAMP BULBS. PAULINO GARCIA ARGÜELLES, La Felguera, Spain. Filed May 17, 1929, Serial No. 363,826, and in Spain Oct. 23, 1928. 3 Claims. (Cl. 176—31.)



3. A locking device for bulbs of electric lamps having threaded shells, including a metallic spring member attached to the outer end of the shell of the bulb and adapted to be sprung inwardly for insertion in the socket of an electric fixture and subsequently adapted to be engaged in an inaccessible position in the socket for positively preventing reverse rotation and withdrawal of the lamp bulb.

1,784,168. READING GLASS. JACOB B. BANDER, Newark, N. J., assignor of one-half to Christian Berger, Brooklyn, N. Y. Filed June 4, 1928. Serial No. 282,531. 6 Claims. (Cl. 88—39.)

1. A device of the kind described including an open bottomed body having a lower portion provided with a lateral opening adjacent the bottom end of the body, said body having its inner surface arranged to reflect and diffuse light entering said lateral opening, a lamp housing extending from said opening, a lamp in said housing, and a lens closing the upper end of the body.

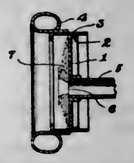


1,784,169. WATCHCASE. FRÉDÉRIC BAUMGARTNER, Geneva, Switzerland, assignor to the Firm Fabrique des Montres Zenith, successeurs de Fabriques des Montres Zenith, Georges Favre-Jacot, Le Locle, Switzerland. Filed Jan. 11, 1929, Serial No. 331,792, and in Switzerland Dec. 1, 1928. 2 Claims. (Cl. 206—37.)

1. A combination case comprising a central part and two cover parts, the central part having the shape of a sector of a circle and being adapted to receive an article to be enclosed in the case, and the two cover parts being in slidable engagement with the curved portion of the periphery of the central part and hingedly connected to th vertex of this part, so as to swing in opposite directions to expose or to cover said article.

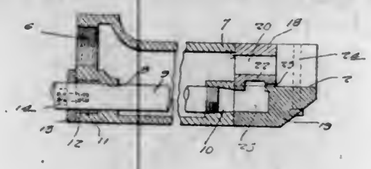
1,784,170. FUEL PUMP FOR INTERNAL-COMBUSTION ENGINES. JOSEF BENEŠ, Vsetin, Czechoslovakia. Filed May 29, 1929, Serial No. 367,108, and in Great Britain Mar. 12, 1929. 4 Claims. (Cl. 123—138.)

1. A fuel pump for multi-cylinder internal-combustion engines working with self-ignition and with fuel injection without the help of air, comprising a single pressure pump in combination with a fuel distributor capable of supplying fuel to the nozzles of the various cylinders and having a stationary saddle, a revolvable valve plug within the said saddle and an annular passage between the saddle and the valve plug and the valve plug having an axial bore and radial bores leading from the said axial bore to



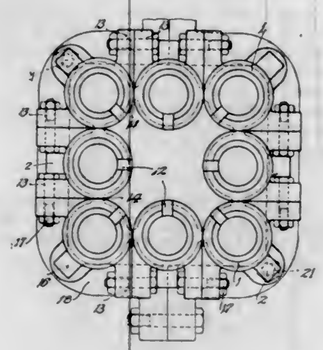
the said annular passage and radial bores leading to the nozzles, and in further combination with a pump delivery chamber with which the said axial bore is in open communication and with means for revolving the valve plug for establishing an open communication from the said axial bore to the various injection nozzles in turn, as set forth.

1,784,171. ARTIFICIAL LIGHTING HAVING A DAYLIGHT EFFECT. HERBERT BERTLING, Berlin-Wilmersdorf, Germany. Filed Apr. 28, 1928, Serial No. 273,731, and in Germany May 14, 1927. 5 Claims. (Cl. 240—1.)



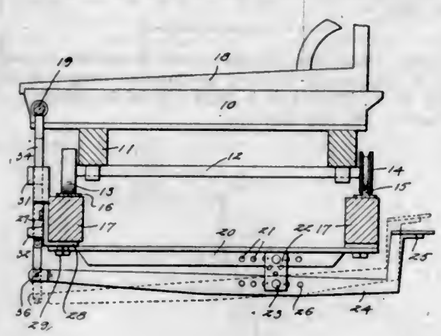
1. A device for artificially illuminating objects for reproducing their daylight colour effect, for photography in correct colour values, for colour photography and the like, comprising in combination a metal vapour lamp emitting violet and blue rays, a second metal vapour lamp emitting violet and blue rays and having a yellow filter placed in front of it so as to pass green rays, a metal vapour lamp emitting yellow and red rays, and means for combining the rays of differently coloured light emitted from the respective lamps as set forth.

1,784,172. LISTENING AND SELECTING APPARATUS. ANDRÉ BLOCH, Paris, France. Filed Oct. 11, 1926, Serial No. 140,911, and in France Oct. 26, 1925. 3 Claims. (Cl. 181—25.)



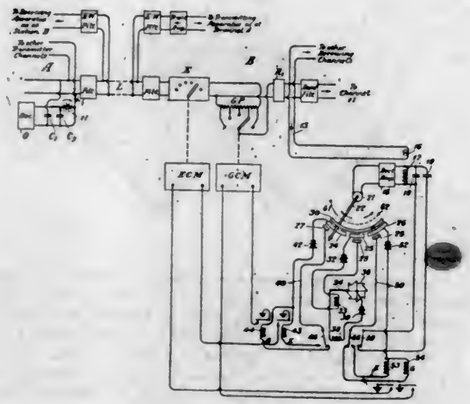
1. In apparatus of the character described, the combination with a sound conducting member, of enclosing means for surrounding the ear of the operator and connected with the sound conducting member for regulating at will the volume of the air cushion existing between the auditory channel of the operator's ear and the sound conducting member.

1,784,173. OIL BURNER. GEORGE H. BOWLER and OTOHEI NASU, Las Vegas, Nev. Filed Jan. 14, 1928. Serial No. 246,830. 1 Claim. (Cl. 299—140.)



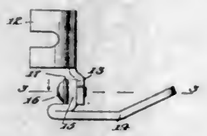
In an oil burner including a body portion, a nozzle detachably mounted on one end of the body portion and comprising a lower section and an upper section mounted on the lower section, the upper section having its free end terminating inwardly of the free end of the lower section, the upper section being provided with a longitudinal, polygonal air passage extending from end to end thereof, diverging wings formed integrally on the forward end of the upper section on opposite sides of the air passage and extending over the lower section, the upper section being further provided with a recess in its lower side beneath the air passage and of a width substantially corresponding to the width of the air passage, the lower side of the upper section being still further provided with a comparatively shallow recess extending from the first named recess to the forward end of the upper section and constituting an oil passage therebetween, and the lower section of the nozzle being provided with an angular oil receiving chamber communicating with the rear end of the lower section and with the first named recess in the upper section in a manner to discharge oil thereinto.

1,784,174. COMPOUND MOLD FOR CASTING METAL BODIES. GEORG BÜHLER, Vienna, Austria. Filed Oct. 29, 1928, Serial No. 315,818, and in Germany Nov. 4, 1927. 3 Claims. (Cl. 22—149.)



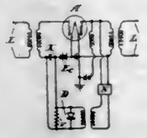
1. A compound mold for casting metallic bodies comprising a plurality of cylindrical chill molds having substantially opposed surfaces made smooth and contacting with each other, spaced lugs extending rearwardly from each of the molds and screw bolts passing through the lugs on adjacent molds so as to combine all of the molds into one unit to facilitate an easy filling from above with molten material through a common funnel.

1,784,175. ADJUSTING STOP FOR SAWMILL CARRIAGE HEADBLOCKS. CONRAD A. CARBAUGH, Dickeys Mountain, Pa. Filed Aug. 6, 1929. Serial No. 383,915. 3 Claims. (Cl. 143—105.)



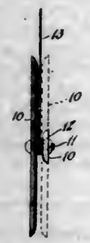
1. The combination with a saw mill carriage having a head block, supporting wheels and a track structure with which the wheels engage, the head block being freely movable along the carriage but normally moving with the carriage, of means for stopping the movement of the head block with relation to the carriage comprising upwardly extending guides on the track structure, a lever extending transversely of and below the track structure and pivotally connected thereto for movement in a vertical plane, one end of the lever having a treadle, and a vertically sliding stop mounted in and extending through the guides thereof, the stop being operatively connected to the end of the lever opposite the treadle, a depression of the treadle acting to shift the stop upward into the path of movement of the head block.

1,784,176. EQUALIZATION FOR CARRIER SYSTEMS. ALLEN CARPE, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 2, 1929. Serial No. 375,403. 9 Claims. (Cl. 178—44.)



2. In a multi-frequency signaling system, a transmission line, means for transmitting over the line a plurality of pilot frequencies in sequence, means at a repeater point for observing the amplitude of the received pilot frequencies, and means controlled by the incoming pilot signals for introducing gain or loss in proportion to these amplitudes to bring the level of transmission for the different frequencies to a desired value.

1,784,177. SEWING-MACHINE PRESSER FOOT. ANDREW J. CARMICHAEL and ORESTE BALZANO, New Haven, Conn., assignors to The Greist Manufacturing Company, a Corporation of Connecticut. Filed Oct. 6, 1927. Serial No. 224,371. 2 Claims. (Cl. 112—235.)

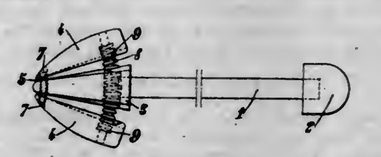


2. A sewing machine presser-foot comprising a shank having a flat offset depending portion, the offset affording a shoulder at the top of said depending portion, a presser-foot proper having near its rear end a flat upwardly projecting lug one face of which abuts against said depending portion of said shank and the upper edge of which is beneath said shoulder, a rivet passing through said lug and said depending portion of said shank and serving to pivotally connect the said presser-foot proper with said shank, and a plate bow-spring located beneath the head of said rivet; whereby said presser-foot proper may rock and tilt relative to its shank to accommodate itself to inequalities of the work passing beneath it.

1,784,178. VOICE-CONTROLLED CIRCUITS. ALLEN CARPE, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 18, 1928. Serial No. 300,473. 16 Claims. (Cl. 178—44.)

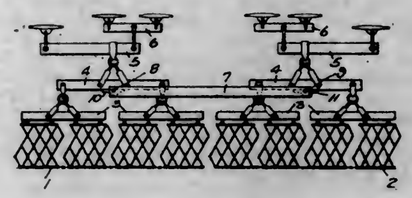
1. In a transmission system, a transmission element, a voice responsive control circuit for determining the effectiveness of said transmission element in response to voice frequency components of predetermined magnitude, and means associated with said control circuit to discriminate against those frequencies of an applied voice wave which are in a range of large energy, whereby corresponding components of induced cross-talk will be reduced to a magnitude smaller than applied voice frequencies in a range of small energy.

1,784,179. WHIRLIGIG. PEYTON S. COLES, Atlanta, Ga. Filed Jan. 29, 1930. Serial No. 424,352. 1 Claim. (Cl. 46—14.)



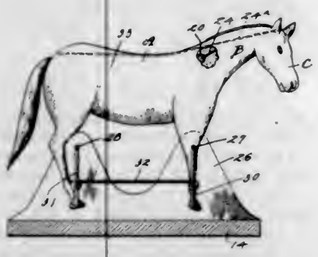
A whirligig comprising, in combination, a pair of elongated, flat bars having control openings; a bolt passing through the openings; a washer on the bolt between the bars providing a winding shaft; a nut on the bolt adapted to grip the bars against the washer; and a cord adapted to be wound on the shaft, said bars having their inside edges beveled to guide the cord between them.

1,784,180. ROOF FOR CARRIAGE BODIES. EMILE DELALE, Paris, France. Filed July 9, 1926, Serial No. 121,443, and in France Sept. 12, 1925. 1 Claim. (Cl. 296—137.)



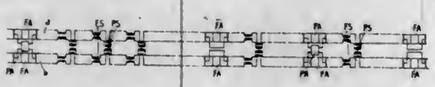
In a folding top for closed vehicle bodies, a flexible hood, transverse members fastened on the under face of the said flexible hood, and comprising intermediate transverse members constituted by resilient blades, two extreme transverse members constituted by angle bars, longitudinal slides at the upper edges of the vehicle body for the ends of the transverse members, means at the ends of the said transverse members for locking the same at any point of the slides, bolts fastened on the upper part of the front and rear walls of the vehicle body, for eventually engaging the vertical wings of the extreme angle bars and tightening the flexible hood when the same is entirely unfolded, longitudinal grooves on the vehicle body adjacent to the longitudinal slides for receiving the longitudinal edges of the flexible hood, and means for maintaining, for tightening purposes, the said edges of the hood in the said grooves.

1,784,181. BOOT LAST. GASTON JULES DEMOUCRON, Paris, France. Filed Feb. 24, 1928, Serial No. 256,751, and in France Feb. 24, 1927. 2 Claims. (Cl. 12—128.2.)



1. In a boot-last comprising a part for connecting a heel-piece with a toe piece, a central member perforated at the front part, flank members perforated at their front part, a connecting member freely fitted in the perforations of the central member and of the flank members, and resilient members for spacing apart the two flank members.

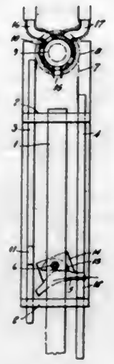
1,784,182. DRAG HARROW. CLARENCE JOHN LAWRENCE DYER, Kisbey, Saskatchewan, Canada. Filed Oct. 5, 1929. Serial No. 397,614. 1 Claim. (Cl. 55—84.)



A drag harrow, comprising two members each member being provided with a transverse gang of harrow sections, cross-trees to which the sections are connected, intermediate cross-trees to which the aforesaid cross-trees are connected at their ends, and a draft gear connected centrally of each intermediate cross-tree, and a bar member extending between the intermediate cross-trees of each harrow member, a king bolt extending through each end of the bar, and a bracket carried by each intermediate cross-tree and in which the corresponding king bolt is turnably held.

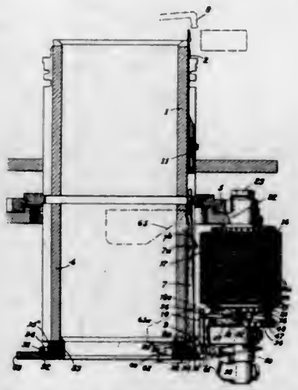
1,784,183. MECHANICAL BUCKING HORSE. ROY H. FIKE, Eagle, Idaho. Filed Jan. 15, 1929. Serial No. 332,713. 3 Claims. (Cl. 46—40.)

1. A mechanism of the character described, comprising the similitude of an animal body having two forelegs and two hind legs, the legs being rigid with the body of the animal, a head having a neck, the neck being hingedly connected to the body and moving in a vertical plane, an elastic member attached to the body beyond the pivotal center of the head and neck and extending along the neck and engaged with the head, the head when shifted in either direction beyond the neutral point carrying the elastic member across the pivotal center whereby the elastic member tends to yieldingly hold the head in one of two positions, forward and rear crank shafts connected to the respective forward and rear legs of the shafts, means for turning one of said crank shafts, and a connecting rod connecting the two crank shafts.



1,784,184. LONG-DISTANCE CABLE INSTALLATION. KUNO FISCHER, Nuremberg, Germany, assignor to Süddeutsche Tele-F-On-Apparate-Kabel- und Drahtwerke A.-G., Nuremberg, Germany. Filed Mar. 31, 1928, Serial No. 266,248, and in Germany Feb. 2, 1928. 5 Claims. (Cl. 178—45.)

1. Long distance cable installation comprising an inductively loaded cable and amplifiers along the cable, in which each two individual conductors are twisted together to a pair of conductors and each four such pairs of conductors are twisted together to a double star and in which side circuits are formed of the individual pairs of conductors and phantom circuits are formed of each two diagonally opposite pairs so that the ratio of the capacity of the phantom circuits to the capacity of the side circuits is less than 1.2.

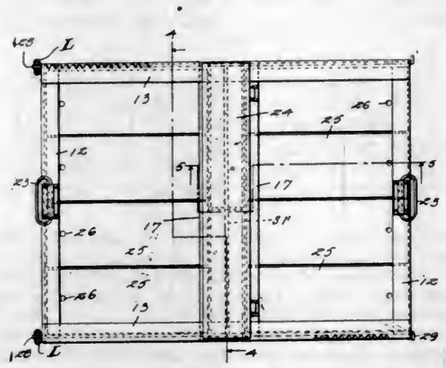


1,784,185. MECHANICAL MOVEMENT. NILS LUDVIG HAMMARSTRÖM, Stockholm, and ERIK ADOLF HOVING, Kungsor, Sweden, assignors to Aktiebolaget Maskinfabriken Gota, Stockholm, Sweden, a Corporation. Filed Dec. 9, 1926, Serial No. 153,657, and in Sweden Nov. 19, 1925. 4 Claims. (Cl. 74—14.)

1. In a device for the transmission of movement, a reciprocating member, a pair of slidable members adapted to be moved alternately in opposite directions, a carrier mounted for oscillation on the reciprocating member, a projection on the carrier, lugs on said slidable members positioned in the path of movement and engageable by the carrier, and an abutment coacting with the projection

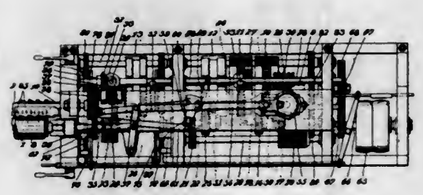
on the carrier and adapted after engagement of the carrier with either of the lugs to shift said carrier to normal position.

1,784,186. KNITTING MACHINE. KENNETH HOWIE, Norristown, Pa., assignor to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Filed Jan. 6, 1928. Serial No. 244,974. 14 Claims. (Cl. 66—49.)



1. In combination in a knitting machine, needles, jacks, an elevating cam for the jacks normally out of operative position, a series of controllers for the jacks also normally out of operative position, a drum arranged on a vertical axis alongside the jack circle and having cam surfaces for setting said cam and controllers in operative position, said drum releasing the controllers seriatim to allow the jacks to be operated by the cam and to release the cam for its return to inoperative position after the jacks have performed their cycle of operation, substantially as described.

1,784,187. SHIPPING CRATE FOR SMALL ANIMALS. MARVIN C. IMLER, Malheur County, Oreg. Filed Aug. 7, 1928. Serial No. 298,001. 11 Claims. (Cl. 119—19.)

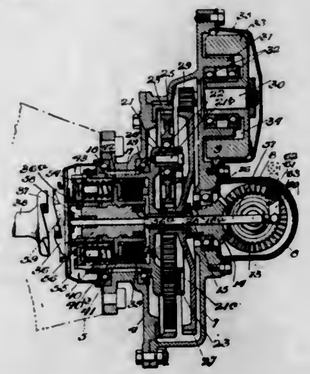


1. In a shipping crate for small animals, spaced parallel groups of individual open-ended cells, the cells of each group being parallel and contiguous, a containing structure for the cells having open sides and including parallel walls opposing the open ends of the cells of each

group, means fixed with relation to the walls preventing vertical movement of the cells, and removable means sup-

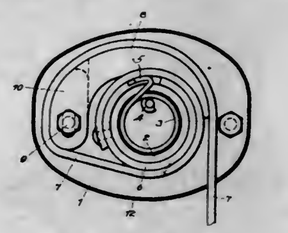
ported by said walls and engaging the outer faces of the end cells of the group for preventing transverse movement of the cells.

1,784,188. OPERATING MECHANISM FOR NET-MAKING MACHINES. SAIBEI KAKUDA, Hiroshima-Ken, Japan, assignor to Saibi Mojiami Kabushiki Kaisha, Hiroshima-Ken, Japan, a Corporation of Japan. Filed May 2, 1927. Serial No. 188,291. 3 Claims. (Cl. 96—4.)



1. In an operating mechanism for net-making machines, the combination of a driving shaft, a plurality of toothed wheels fixed to the driving shaft, each of the toothed wheels being formed in several parts and only partially provided with teeth, intertwisting and interchanging shafts, a plurality of slidable toothed wheels secured to the intertwisting and interchanging shafts so as to permit longitudinal sliding movement along the partly toothed wheels, each of the toothed wheels engageable with the respective partly toothed wheels, a shifting device for said slidable toothed wheels, means for operating said shifting device from one of said partly toothed wheels on said driving shaft to control the timed intermittent rotation and reversal of the intertwisting shafts, toothed wheels connecting one intertwisting shaft to another intertwisting shaft whereby to form the net.

1,784,189. PROPELLANT POWDER AND METHOD OF COLLOIDING SAME. CHARLES H. KECK, New York, N. Y. Filed June 28, 1927. Serial No. 202,154. 6 Claims. (Cl. 52—22.) (Granted under the provisions of the act of Mar. 3, 1883, 22 Stat. L., 625.)

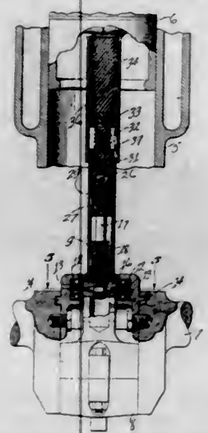


1. A method of colloiding nitro-cellulose which includes incorporating therewith a nitro-aromatic to which has been added only sufficient solvent to carry the nitro-aromatics into solution and then subjecting the mass to pressure and heat.

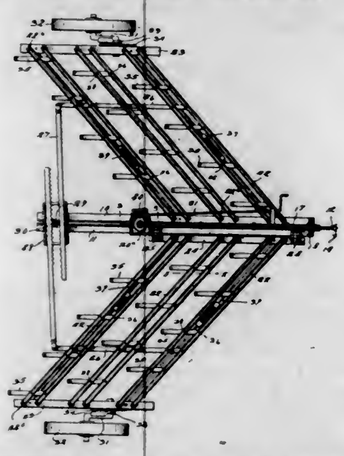
1,784,190. ENGINE STARTER. RAYMOND P. LANSING, Montclair, N. J., assignor to Eclipse Machine Company, Elmira Heights, N. Y., a Corporation of New York. Filed Jan. 18, 1928. Serial No. 247,727. 14 Claims. (Cl. 123—179.)

1. In apparatus of the class described, a driven member, a driving member therefor, means including a yielding driving connection for operatively connecting said driving member and the driven member, a flywheel, means for rotating the flywheel, the axes of rotation of said driven member and flywheel being laterally spaced and substantially parallel, and a two-step gear train directly connected to said driving member and flywheel for transferring energy stored in the flywheel to said driving member.

1,784,191. SHOCK ABSORBER. HANS LUDWIG, Homburg-on-the-Hohe, Germany. Filed July 8, 1926, Serial No. 121,194, and in Germany Oct. 1, 1925. 5 Claims. (Cl. 267—10.)



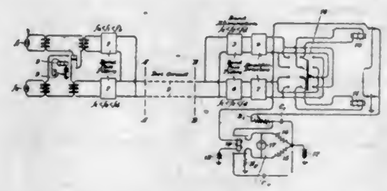
1. A shock absorber for vehicles, comprising in combination, a base member intended to be secured to the frame of the vehicle, a winding drum rotatably mounted on said base member, a rigid brake block pivoted on said base member so as to be capable of displacement towards and away from said winding drum, a brake band having one end intended to be connected to the vehicle underframe and the other end connected to the said winding drum so as to be capable of being wound on the drum, said brake band being passed round the brake block so as to enable it to force the brake block towards the winding drum and bear on a portion of the brake band wound on the drum, on the brake band being subjected to tension, and a spring connected to said winding drum for rotating the drum for winding up the brake band, on the frame of the vehicle approaching the vehicle underframe, as and for the purposes set forth.



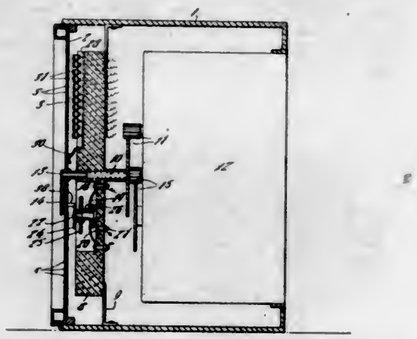
1,784,192. ENGINE CONSTRUCTION. ARTHUR D. MACFARLANE, Los Angeles, Calif. Filed Aug. 9, 1929. Serial No. 384,731. 2 Claims. (Cl. 74—14.)

1. In a device of the character described the combination of a piston, a crank shaft having an offset formed

therein, a connecting rod extending between said piston and said crank shaft, said connecting rod comprising sections, threads formed in said sections, and means carried within said sections and engaging said threads whereby said connecting rod may be lengthened or shortened during the rotation of said crank shaft, said means including a rotating rod having threaded extremities, means for moving said rod lengthwise of said connecting rod, said means comprising a pair of rollers actuated by a cam in the manner described.



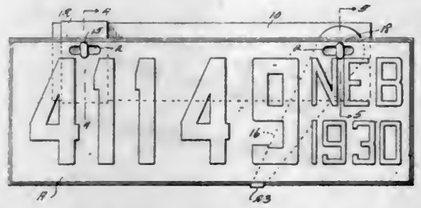
1,784,193. SPRING-TOOTH CULTIVATOR. ERNEST LOUIS MCOSKER, Preston, Kans. Filed Dec. 27, 1928. Serial No. 328,826. 2 Claims. (Cl. 55—125.)



1. An implement of the character described, comprising a medially disposed frame having means at its forward end whereby it may be connected to a draft hitch, and having a vertically adjustable wheel at its rear end, wings disposed on each side of the medial frame, each of said wings comprising a plurality of parallel pairs of frame bars and longitudinal bars pivoted thereto, one of said wings being hingedly connected to the medial frame to thereby permit the wings to move vertically independently of each other, vertically adjustable supporting wheels carried on the outer ends of the wings, means mounted at the forward end of the medially disposed frame whereby the forward end of the frame may be raised or lowered, and teeth disposed in staggered relation to each other and swingingly connected to the pairs of frame bars.

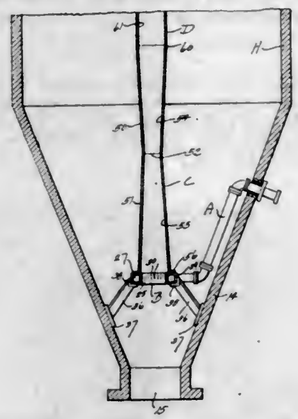
1,784,194. TRANSMISSION FREQUENCY-DELAY-MEASURING CIRCUIT. DOREN MITCHELL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 12, 1928. Serial No. 312,183. 10 Claims. (Cl. 175—183.)

1. The method of measuring the relative delay of a transmission circuit, which consists in simultaneously impressing upon the sending end of said circuit a pair of distinct single frequency currents, separating said frequencies at the receiving end to facilitate measurement thereon, and measuring the difference in time of arrival of said frequencies.



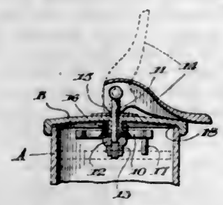
1,784,195. ELECTRIC PROGRAM CLOCK. LEVI CLYDE MORRIS, North Canton, Ohio. Filed Jan. 21, 1929. Serial No. 334,011. 5 Claims. (Cl. 200—38.)

1. An electric program clock comprising in combination, an insulated base, a stationary clock dial, a rotatable disc having circular rows of holes formed therein in a predetermined manner for cooperation with the dial, means for rotating the disc one complete revolution every hour, an hour hand movable across the front face of the rotatable disc, a minute hand arranged on the rotatable disc, a series of segmental contacts arranged radially within a socket formed in the front face of the insulated base, the inner end portions of the segmental contacts being raised and terminating in laterally disposed extremities, a contact ring arranged in the base with which the laterally disposed extremities are adapted to cooperate, means operable by the rotation of the disc for holding the laterally disposed extremities of the segmental contacts successively in engagement with the contact ring for one hour period, said stationary base being arranged rearwardly of the rotatable disc, a plug removably inserted in a predetermined one of the holes in said rotatable disc, and additional means arranged on the insulated base for cooperation with the aforementioned contacts to close an electric circuit to an alarm when the plug moves into position with the means.



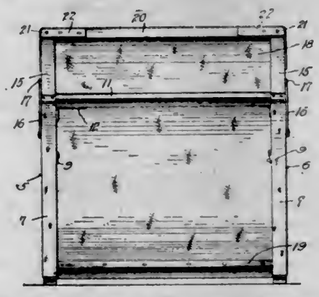
1,784,196. ADJUSTABLE LICENSE-PLATE HOLDER. FRANK H. NAGGATZ, Fairmount, N. Dak. Filed May 8, 1930. Serial No. 450,802. 5 Claims. (Cl. 40—125.)

1. A license plate holder including a supporting plate, an outwardly projecting T-shaped stud carried at one end of the plate and permanently extending transversely thereto and an outwardly projecting T-shaped stud oscillatably mounted at the other end of the plate, and resilient means



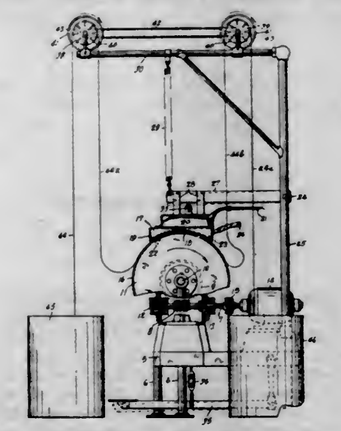
urging the stud in a direction transverse to the length of the plate, but permitting the stud to be turned into parallel relation to the plate.

1,784,197. CIRCULATING APPARATUS FOR WOOD-PULP DIGESTERS. ALBERT G. NATWICK, St. Catharines, Ontario, Canada. Filed Mar. 17, 1928. Serial No. 262,489. 9 Claims. (Cl. 92—7.)



3. In a wood pulp digester the combination of a casing, an upright Venturi tube in the casing, means for discharging a ring-shaped fluid jet upwardly into the Venturi tube from the lower end thereof, and a conveyor pipe at the top of the Venturi tube for receiving circulating materials in an upward flow from the Venturi tube.

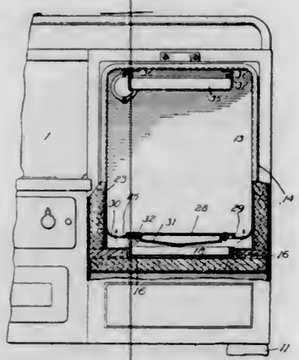
1,784,198. CLOSURE CAP FOR RADIATORS, WATER TANKS, PRESSURE TANKS, GAS TANKS, AND THE LIKE. EDWIN PERSSON, Estevan, Saskatchewan, Canada. Filed July 20, 1929, Serial No. 379,786, and in Canada May 28, 1929. 2 Claims. (Cl. 220—55.)



1. A closure of the class described comprising in combination, a cylindrical seat portion and a removable closure cap therefor, diametrically opposed circumferentially spaced apart, inwardly projecting ledges on the inner periphery of the seat portion and spaced from the mouth thereof, a plunger extending freely through a central orifice in the cap and disposed axially of the seat, a bar perpendicular to the plunger and rigidly secured centrally of its length to the inner end of the plunger, the ends of said bar adapted to underlie the aforesaid ledges, an operating lever hingedly connected to the outer end of the plunger, the axis of the hinge connection being perpendicular to the axis of the plunger whereby the plunger may be turned about its axis by means of the lever, a coil spring encircling the plunger and normally depressing the plunger to maintain the lever against the outer face of the cap and urge the bar away from the cap, the lever formed with a cam portion operatively contacting with the outer face of the cap whereby oscillation of the lever about its hinge connection raises and depresses the plunger.

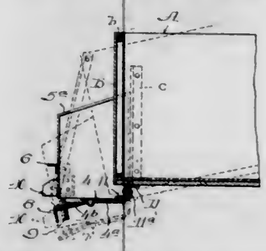
1,784,199. BEACH CANOPY. MARTIN J. PETERSON, Selma, Calif. Filed Apr. 28, 1930. Serial No. 448,069. 2 Claims. (Cl. 135—5.)

2. In a canopy, a frame, said frame comprising end sections, a bar pivotally connected to one end section, means for removably connecting the opposite end of the bar to the opposite end section to hold the end sections in spaced relation with each other, pivoted bars extending forwardly from the frame, means for holding the pivoted bars in their extended positions, and a removable cover adapted to be stretched over the frame, and means for securing the cover to the frame.



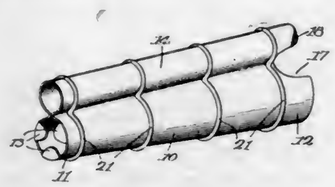
1,784,200. IRONING MACHINE. GUSTAVE A. PIEPENBRING, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 4, 1928. Serial No. 303,685. 4 Claims. (Cl. 26—40).

1. In an ironing machine a base, a rotary drum mounted on the base, means for rotating the drum, an upright



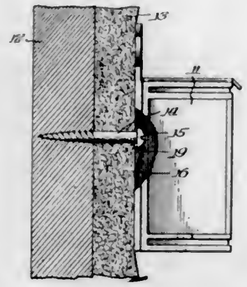
standard carried by the base, a lever pivoted to the standard, an iron carried by the lever and having a curved surface opposite that of the drum, means tending to lift the iron from the drum, personally operable means for pressing the iron against the drum, a lateral extension on the standard above the iron, and a pair of spaced rotary carriers on said lateral extension over one of which the material passes to the drum and over the other of which it passes after leaving the drum.

1,784,201. OVEN STRUCTURE FOR ELECTRIC RANGES. GEORGE E. PICKUP, Newark, Ohio, assignor to The Wehrle Company, Newark, Ohio, a Corporation of Ohio. Filed Jan. 28, 1929. Serial No. 335,399. 3 Claims. (Cl. 219—35.)



1. An electric range comprising an oven section having a bottom wall, a plate spaced a short distance above said bottom wall and forming the bottom of an oven compartment, an electric heating unit disposed in the space between the bottom wall and said plate, said plate having an opening therein through which the heating unit may be inserted and removed, a removable cover plate for said opening, said bottom plate having apertures therein adjacent the edges of said opening, and means positioned to prevent the radiant heat from striking the plate forming the bottom of the oven compartment.

1,784,202. STONE SPREADER. DAVID M. RENTON, EVERETT N. LONG, Jr., and ANSON E. MURPHY, Avalon, Calif., assignors to Santa Catalina Island Company, Avalon, Calif., a Corporation of California. Filed Aug. 13, 1927. Serial No. 212,764. 2 Claims. (Cl. 275—2.)

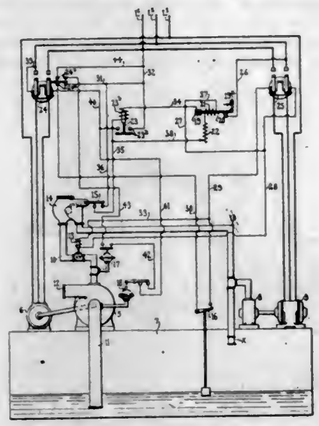


1. A spreader attachment for a vehicle dump body comprising an elongated box-like receptacle mounted at the rear of said body and having covered end portions extending beyond the sides thereof, the front wall of said receptacle being reduced in height intermediate its ends to provide a recess embracing the rear end of said vehicle body, and a movable wall section extending longitudinally of said receptacle below the level of the body, and means for adjusting said wall section to form a discharge slot adjacent the bottom rear edge of said receptacle.

1,784,203. HOLDER FOR SOCKET-WRENCH SETS. HAROLD G. RICE, Chicago, Ill. Filed Nov. 5, 1926. Serial No. 146,360. 9 Claims. (Cl. 206—16.)

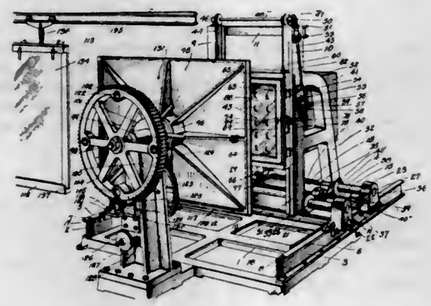
2. A holder for holding a set of sockets in a row and a bent end handle member alongside the row, comprising an elongated socket receiving means adapted to receive a set of sockets in a row, said receiving means having stop means at one end for preventing movement of the sockets therethrough, and an opening adjacent the other end for permitting insertion or removal of the sockets therefrom, and means for releasably holding a handle member alongside the row of sockets with a portion of the handle member extending over said opening so as to lock the sockets in the receiving means.

1,784,204. SECURING MEANS. GORDON E. ROEDDING, Grand Rapids, Mich., assignor to Doerr Manufacturing Company, Grand Rapids, Mich., a Corporation of Michigan. Filed May 15, 1924. Serial No. 713,633. 1 Claim. (Cl. 248—30.)



A securing device for securing an article to a resilient surface comprising a securing member fixed to the support of the resilient surface, said member extending through the resilient surface and having an enlarged head with a flat under face lying against said surface, a wall of the article to be secured having an elongated slot formed therein, an enlarged portion of the slot being of a size to permit entry of the head of the securing member, a connected portion of the slot being less in width than said head, and sloping lugs formed from material cut from said slot extending inwardly of said wall substantially at right angles thereto adjacent a part of the narrow portion of the slot, the sloping lugs serving to engage the flat under face of the head to compress the resilient material and permit engagement of the parts by a relative linear movement, said lugs ending abruptly upon the end away from the enlarged portion of the slot.

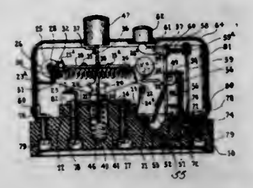
1,784,205. CONTROLLER FOR POWER-DRIVEN PUMPS. EDWIN W. SEEGER, South Milwaukee, Wis., assignor, by mesne assignments, to Cutler-Hammer, Inc., a Corporation of Delaware. Filed Jan. 18, 1926. Serial No. 82,076. 3 Claims. (Cl. 103—25.)



1. In a controller for power driven pumps, the combination with automatic starting means, of electro-thermally

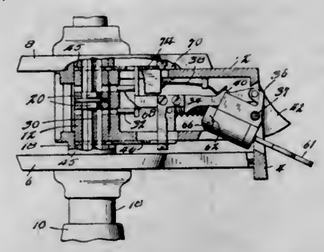
responsive means subject to control by said starting means and operable automatically to terminate the action

of said starting means following a predetermined number of operations of the latter wherein the pump fails to perform its normal functions.



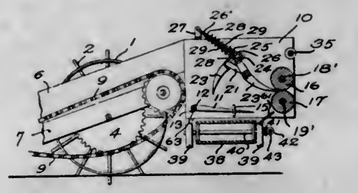
1,784,206. PHOTOGRAPHIC PROCESS PRINTING MACHINE. WILLIAM J. SNYDER, Fort Leavenworth, Kans. Filed Oct. 22, 1924. Serial No. 745,102. 8 Claims. (Cl. 95—73.)

8. A photographic process printing machine comprising two main members, one of the members consisting of a light box and a negative holder carried by the light box, the other main member consisting of a sensitized sheet holder having a plurality of portions registrable individually with the negative holder, means for moving the light box horizontally and vertically to a selected position with respect to the sensitized sheet holder, and means for rotating the sensitized sheet holder, said sheet holder being rotatable to position a selected portion in registry with the moved light box and negative holder.



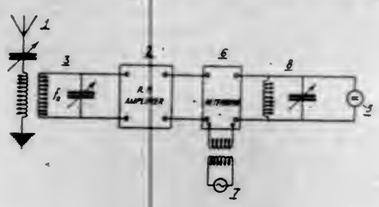
1,784,207. ELECTRIC SNAP-SWITCH MECHANISM. WILLIAM C. STEVENS and GEORGE J. MEUER, Milwaukee, Wis., assignors, by mesne assignments, to Cutler-Hammer, Inc., a Corporation of Delaware. Filed Sept. 29, 1928. Serial No. 309,299. 18 Claims. (Cl. 200—116.)

14. In snap switch mechanism, the combination with two sets of stationary contacts arranged in different horizontal planes, of a pair of vertically oscillatable bridging contactors adapted to cooperate with said sets of stationary contacts respectively, the pivots of said contactors being horizontally alined, a reciprocating actuator, spring means connected to said actuator and to the free ends of said contactors respectively whereby said contactors may be moved jointly to opposite extreme positions with a snap action, means for biasing said actuator to cause movement of said contactors jointly to their upper extreme positions respectively wherein one of said contactors engages its stationary contacts and the other contactor is out of engagement with its stationary contacts, said actuator upon movement thereof against said bias being adapted to simultaneously effect disengagement of said first mentioned contactor and engagement of said second mentioned



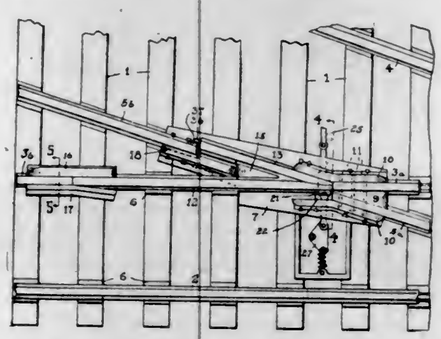
contactor, an automatically operable latch for holding said second mentioned contactor in engagement while permitting reengagement of said first mentioned contactor under the influence of said actuator, and a bimetallic electro-thermally responsive element to be connected in circuit in series with said stationary contacts and said contactors for effecting release of said latch under predetermined current conditions.

1,784,208. LOCK. ERNEST L. TRICH, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Mar. 15, 1929. Serial No. 347,331. 8 Claims. (Cl. 70—46.)



2. A lock having, in combination, a frame, a knob having a shank, a member in engagement with said shank for holding the shank from outward movement but permitting turning movement thereof and adapted to be retracted from said frame to permit the knob and shank to be removed, and key-controllable means for thus retracting said member.

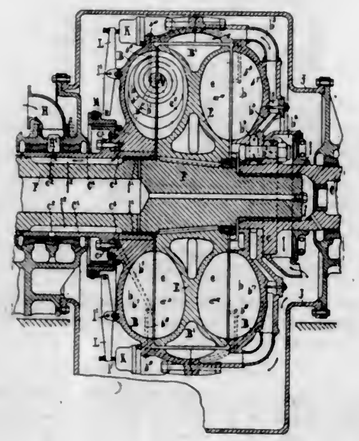
1,784,209. POTATO GATHERER FOR POTATO DIGGERS. HENRY TIMM, Saxeville, Wis. Filed Aug. 18, 1926. Serial No. 129,927. 12 Claims. (Cl. 130—30.)



8. In a potato digger and conveyor for receiving and conveying the potatoes and their vines in one direction, vine picking means for separating the vines from the free potatoes and actuating them in another direction, in combination with means for receiving such vines and separating attached potatoes therefrom.

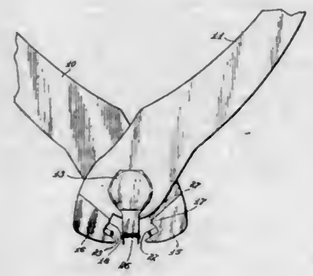
1,784,210. RADIO RECEIVING SYSTEM. ARTHUR F. VAN DYCK, Yonkers, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Sept. 15, 1926. Serial No. 135,497. 1 Claim. (Cl. 250—22.)

Apparatus for reproducing sound from a modulated radio frequency signal comprising a circuit energized by said signal, a local source of energy, amplifying and detecting means for obtaining an amplified superaudible beat frequency from said signal and the energy from said local source, a tuned circuit connected to the output of said amplifying and detecting means for obtaining a resonance potential rise, said tuned circuit consisting of an inductive reactance element and a capacitive reactance element connected in parallel, and an electrostatic loudspeaker connected across the terminals of one of the reactance elements whereby the maximum potential obtained by said resonance potential rise is applied across the electrostatic loudspeaker terminals and the electrostatic loudspeaker functions as a detector to reproduce sound from said superaudible beat frequency.



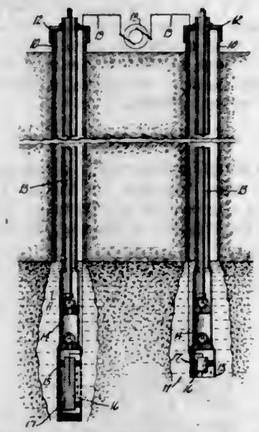
1,784,211. RAILWAY-CROSSOVER FROG CONSTRUCTION. ANTHONY L. VISSAT, Jeannette, Pa. Filed Dec. 24, 1927. Serial No. 242,453. 2 Claims. (Cl. 246—382.)

1. In a railway cross-over frog structure, the combination with a pair of converging rail ends, of a frog point comprised of converging leg-rails and arranged to be moved into registration with either of said rail ends, and means for preventing the point from tipping upwardly when a wheel engages the outer end of one of said leg rails, said means comprising a bar secured to and extending past the end of the leg-rail and bearing down on the base of the track rail when said leg-rail and track rail are in registration.



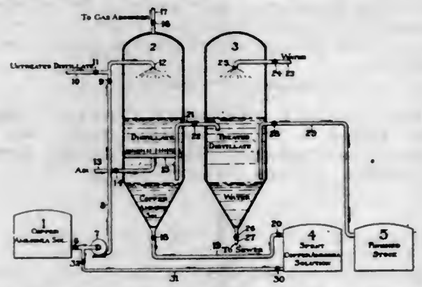
1,784,212. HYDRAULIC CLUTCH. GEORGE HENRY WALKER, Worcester, England, assignor to Heenan & Froude Limited, Worcester, England. Filed Jan. 9, 1929, Serial No. 331,358, and in Great Britain Jan. 20, 1928. 2 Claims. (Cl. 192—58.)

1. A hydraulic clutch of the type referred to comprising the combination with a rotor of a casing adapted to rotate, cups in the rotor, and co-acting cups in the casing, in both of which cups the liquid circulates, vanes separating the adjacent cups of the rotor, vanes separating the adjacent cups of the casing, passages formed in these vanes through which fresh cooled liquid enters and is conveyed to the centres of the cups where the pressure is at a minimum owing to the vortices set up therein, outlet



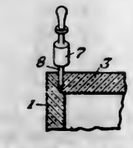
passages near the periphery of the casing through which the heated liquid escapes and a quick acting outlet valve which normally remains closed but which can be suddenly opened to put the zone of high pressure in the casing into communication with the exterior and allow the liquid in the clutch casing to escape rapidly.

1,784,213. SEALING TOOL. RUDOLPH E. WESTPHAL, Chicago, Ill., assignor, by mesne assignments, to Signode Steel Strapping Company, a Corporation of Delaware. Filed Aug. 22, 1927. Serial No. 214,509. 6 Claims. (Cl. 81—9.1.)



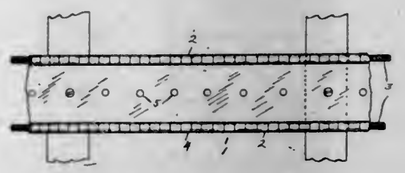
1. A sealing tool comprising a pair of pivotally connected levers having confronting deforming jaws on one side of the pivot, said jaws each having a projecting lip overhanging the work engaging deforming surfaces of the jaw and a notch for receiving the lip of the other jaw so that when the jaws are closed the lips extend beyond the plane of the center of the pivot.

1,784,214. METHOD OF RECOVERING AND INCREASING THE PRODUCTION OF OIL. PAUL E. WORKMAN, Dallas, Tex. Filed Oct. 19, 1928. Serial No. 313,458. 7 Claims. (Cl. 166—21.)



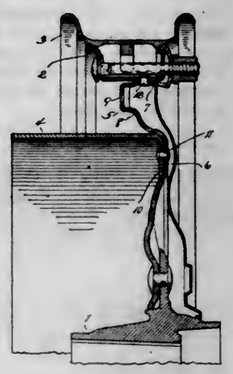
1. The method of recovering oil consisting in introducing into a well an electrode insulated from ground and immersed in the water present in the well, and feeding to said electrode a current of sufficient strength to release elements of the water by electrolysis.

1,784,215. METHOD OF TREATING PETROLEUM OILS CONTAINING SULPHUR. GEORGE J. ZISER, Los Angeles, and JAMES H. OSMER, El Segundo, Calif., assignors, by mesne assignments, to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Jan. 9, 1926. Serial No. 80,156. 4 Claims. (Cl. 196—30.)



1. A method of treating petroleum oil which comprises treating the oil with an aqueous solution of a copper salt containing dissolved oxygen.

1,784,216. PROCESS AND MEANS FOR SEALING STORAGE BATTERIES. HERBERT H. ALDRICH and JOHN L. RUPP, Wilkinsburg, Pa., assignors, by mesne assignments, to Wubco Battery Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Apr. 5, 1927, Serial No. 181,127. Renewed Apr. 11, 1930. 6 Claims. (Cl. 136—170.)

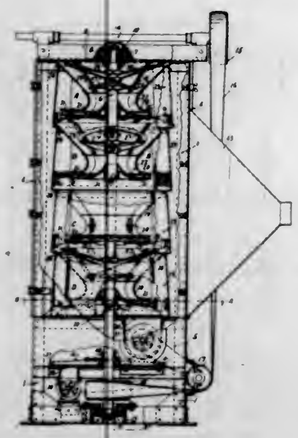


1. The process of closing a container composed of a bituminous composition which consists in applying a cover of the same material to the container, heating the adjoining faces of the cover and container until such faces flow together, and then ironing the joint to form a homogeneous union.

1,784,217. ELECTRIC WIRE CASING. JAMES M. BERRY, Detroit, Mich. Filed Dec. 31, 1923. Serial No. 683,667. 5 Claims. (Cl. 247—37.)

1. In an electric wire structure, a casing for pliable electric wires, said casing including a strip of material of a readily pliable character and having its opposite longitudinally extending edges transversely slit to form longitudinally extending series of tongues for increasing the flexible or pliable character of the casing, each series of tongues adapted to be return-bent to completely enclose an electric wire.

1,784,218. METHOD OF FORMING VEHICLE WHEEL DISKS. WILLIAM N. BOOTH, Detroit, Mich., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich., a Corporation of New York. Filed May 18, 1925. Serial No. 31,147. 4 Claims. (Cl. 29—159.)

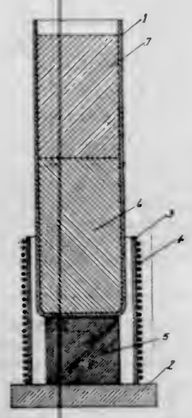


1. The method of forming a vehicle wheel disk, which includes hooping a metal blank, welding its ends to form an annulus, forming an outwardly extending depression at the welded joint, rolling the annulus to fashion the same into a plurality of corresponding forms, severing the annulus intermediate the forms into a plurality of corresponding sections, and fashioning the sections into disks.

1,784,219. CLEANING APPARATUS FOR COTTONSEED. EDWARD M. BRENNAN, Springfield, Ohio, assignor to The Bauer Brothers Company, Springfield, Ohio, a Corporation of Ohio. Filed Sept. 29, 1927. Serial No. 222,901. 3 Claims. (Cl. 209—306.)

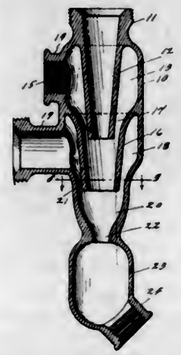
1. In a separating apparatus of the character described, a stationary hopper, a horizontally-arranged revoluble disk beneath said hopper, the lower portion of said hopper being so shaped as to form with said disk an annular dis-

charge passage with unbroken walls, the area of the inner portion of which is considerably larger than the



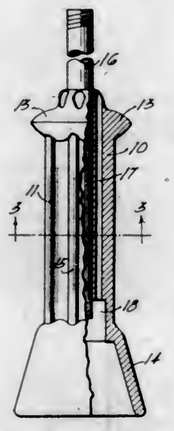
area of the outer portion with the area between said inner and outer portions gradually decreasing, and a screen surrounding the discharge end of said passage.

1,784,220. COOLING COMPOUND AND LUBRICANT AND PROCESS OF MANUFACTURING SAME. FRANK C. BROEMAN, Cincinnati, Ohio, assignor to National Products-Supply Company, Ashland, Ky., a Corporation of West Virginia. Filed Mar. 28, 1928. Serial No. 265,525. 1 Claim. (Cl. 87—9.)



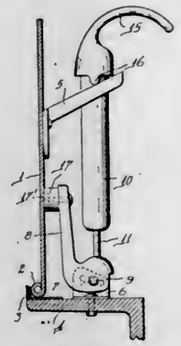
A cooling compound and lubricant consisting substantially of the following ingredients:—100 lbs. of potash vegetable oil soap containing sixty per cent of water, 30 lbs. of water, 3 lbs. of neat's foot oil, 3 lbs. of graphite mixed with three pounds of cocoanut oil and six and one quarter pounds of stearic acid soap.

1,784,221. ANNEALING. JOHN R. CAIN, Washington, D. C., assignor to The Richardson Company, Lockland, Ohio, a Corporation of Ohio. Filed Aug. 2, 1927. Serial No. 210,131. 1 Claim. (Cl. 148—1.)



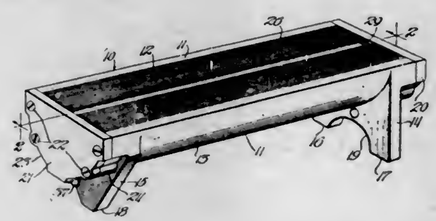
A heat treating process comprising maintaining a temperature gradient in a liquid annealing medium ranging from a temperature at least as high as that necessary to effect the desired heat treatment to a temperature at least as low as will permit withdrawal of a heat treated article to the air without danger of the formation of scale or oxide thereon, advancing an article from a cooler portion of said liquid medium to a heat treating zone therein, holding said article in said zone for a length of time necessary to effect a desired heat treatment, then withdrawing said article from said zone through a cooler portion of said liquid, said liquid medium comprising a plurality of immiscible heat resistant liquids.

1,784,222. SUCTION ATOMIZER. CHARLES S. CRICKMER, Dallas, Tex., assignor to Tridex Corporation, Dallas, Tex., a Corporation of Delaware. Filed May 5, 1928. Serial No. 275,355. 4 Claims. (Cl. 261—76.)



1. In a suction atomizer, a hollow body having chambers therein, separate inlets to said chambers, jets within said chambers of said body, one of said jets having a separate inlet free from said chambers, an enclosed expansion bowl having a restricted inlet receiving the combined discharge of the chambers and jets, and a larger outlet from the bowl provided with a coupling member for a conductor.

1,784,223. HANDLE. CHARLES S. CRICKMER, Dallas, Tex., assignor to Tridex Corporation, Dallas, Tex., a Corporation of Delaware. Filed Nov. 4, 1929. Serial No. 404,857. 6 Claims. (Cl. 299—112.)

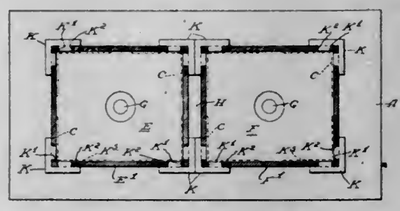


1. A flexible handle including an elongated body having an embedded pipe, said pipe having screw-threaded ends, the body having an opening for exposing one of the screw-threaded ends for coupling.

1,784,224. HOOD CLAMP. NORMAN W. CUMMINS, Louisville, Ky., assignor to The Bade-Cummins Mfg. Company, Louisville, Ky., a Corporation of Delaware. Filed Feb. 25, 1929. Serial No. 342,329. 5 Claims. (Cl. 292—114.)

1. A hood clamp comprising a spring locking device, a pair of guides for said member adapted for attachment respectively to a movable hood wall and a fixed base member adjacent such wall, said guides converging towards said hood, said locking member being adapted to slide along the guide for attachment to the hood wall, and means carried by said locking device and movable along the other guide for engaging the hood.

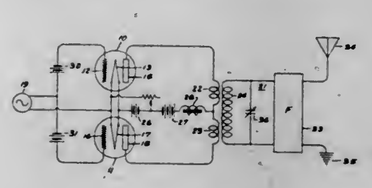
1,784,225. CORE BOX. PATRICK F. DEVANY, Chicago, Ill. Filed Apr. 4, 1929. Serial No. 352,378. 4 Claims. (Cl. 22—13.)



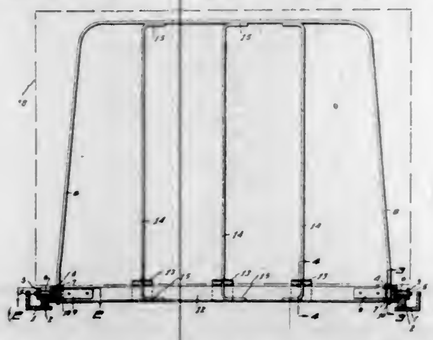
1. A core box comprising a cast metal base member having an inner core molding surface, a multiplicity of sheet metal members, each having an inner core molding surface, and each having an outer surface complementary to the core molding surface of the adjacent sheet metal member, the outer edges of all of said sheet metal members terminating substantially flush with the upper edge of the core box, members adapted to be secured to said base member and to form end walls for a mold provided by any of said sheet metal members, and means for securing said sheet metal members in position, comprising a threaded member passing through said sheet metal members and said base members, said base member being provided with legs for supporting said core box and bolts in spaced relation to a supporting member in any adjusted position of said bolts.

1,784,226. MOTOR-CONTROL SWITCH. WILLIAM S. EDSALL, Brookline, Mass., assignor to Condit Electrical Manufacturing Corporation, South Boston, Mass., a Corporation of Massachusetts. Filed May 29, 1928. Serial No. 281,425. 6 Claims. (Cl. 175—294.)

1. An electric switch comprising sets of contact members each set comprising two contact members, the contact members of one set being insulated from each other and adapted to be connected in separate sections of a circuit, the contact members of the other set being electrically connected, means effecting the simultaneous separation of the sets of contact members, and means including a resistor connecting said electrically connected set of contact members to one of said electrically insulated contact members.

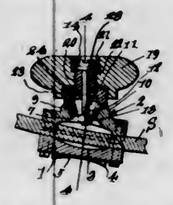


1,784,227. SYSTEM FOR MOUNTING STEREOSCOPIC VIEWS. ALBERT W. ENGEL, Chicago, Ill. Filed June 2, 1928. Serial No. 282,468. 5 Claims. (Cl. 88—29.)



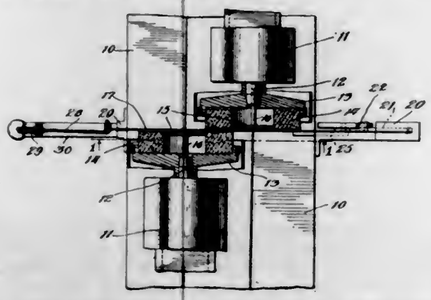
1. A mount for stereoscopic prints having two rectangular openings therein, each opening approximating the size of picture area of one print, said openings being spaced apart a distance for proper focusing to the human eyes through a stereoscope, said prints being secured to the back side of the mount with the picture area thereof, registering with the openings.

1,784,228. FREQUENCY CONVERTER. PAUL D. FLEHR, San Francisco, Calif. Filed July 20, 1926. Serial No. 123,695. 6 Claims. (Cl. 175—363.)



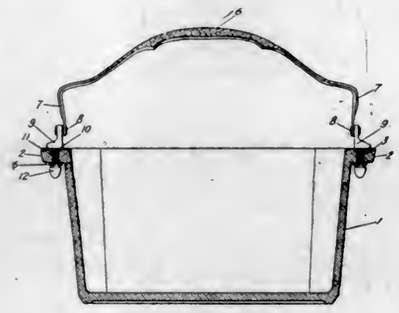
1. A device for converting pulsating current of one frequency to pulsating current of another frequency comprising at least two electron relays having different characteristic curves, means for connecting their inputs to a common exciting source of current and means for coupling their outputs to differentially affect a work circuit.

1,784,229. CONVEYER RACK. VERNIE A. FOX, Detroit, Mich., assignor to Young Brothers Company, Detroit, Mich., a Corporation of Michigan. Filed June 22, 1928. Serial No. 287,529. 5 Claims. (Cl. 198—134.)



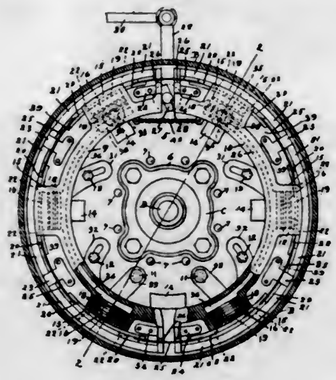
1. In a conveyer, opposed channel members, a yoke having its ends passed through the flanges of said members, straps secured to said ends between said flanges, and a base bar connecting said straps.

1,784,230. HAND-GRIP ATTACHMENT FOR STEERING WHEELS. JOHN C. FREEMAN, Jeffersonville, Ind. Filed Dec. 4, 1928. Serial No. 323,622. 3 Claims. (Cl. 74—33.)



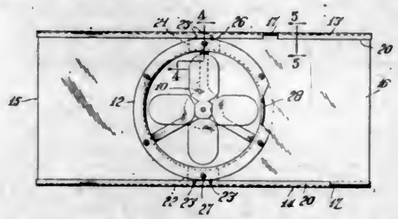
1. A hand grip attachment for automobile steering wheels comprising an attaching unit embodying clamping members for disposal against the upper and under sides of a spoke of the wheel, means connecting the members for clamping engagement with the spoke, a member disposed above the upper clamping member of the attaching unit, the said upper member of the attaching unit and the last mentioned member having contacting arcuate surfaces, means connecting the said members to provide for adjustment of the second mentioned member, and a hand knob upon the second mentioned member.

1,784,231. GRINDING MACHINE. FREDERIC E. GARDNER, Beloit, Wis. Filed Mar. 24, 1924. Serial No. 701,357. 6 Claims. (Cl. 51—124.)



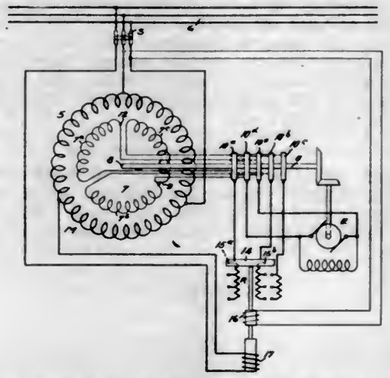
1. A grinding machine comprising, in combination, a base, a pair of annular grinding disks disposed in parallel relation and positioned to overlap to the extent of their radial depth, a relatively thin wide flexible work carrier mounted for reciprocation between said disks with the width parallel to the grinding faces of said disk, said work carrier being provided with an aperture for supporting a work blank, power means engaging one end of said carrier for periodically drawing the carrier outwardly in one direction, and yielding means engaging the opposite end of said carrier to oppose the action of said first mentioned means.

1,784,232. ICE RECEPTACLE. EDGAR WILSON HEISEY, Newark, Ohio, assignor to A. H. Heisey & Company, Newark, Ohio, a partnership. Filed Sept. 8, 1928. Serial No. 304,829. 4 Claims. (Cl. 215—100.)



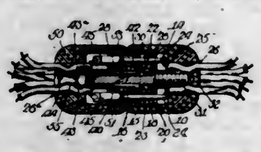
1. An ice receptacle comprising a glass container with lugs integrally formed thereon and having flared apertures therein and a handle structure comprising bolts adapted to fit in said apertures, said bolts having flared portions.

1,784,233. VEHICLE AIR BRAKE. FRANCIS LEROY HORSPOOL, Salt Lake City, Utah. Filed Oct. 26, 1928. Serial No. 315,192. 5 Claims. (Cl. 188—106.)



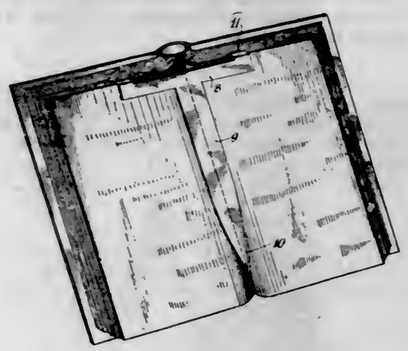
1. In a vehicle air brake comprising an emergency brake, a brake plate secured to the vehicle, expanding brake jaws to be operated on said brake plate, cylinders extending from each of said jaws, each of said cylinders having a piston therein, brake shoes placed on the outer end of said pistons, means for securing said brake shoes to said pistons, said jaws having an air port therein through which air passes to each of said cylinders to operate said pistons so they will place said brake shoes against a brake drum.

1,784,234. VENTILATOR. HERMAN C. HUEGLIN, Chicago, Ill., assignor to Federal Merchandise Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 31, 1929. Serial No. 403,706. 14 Claims. (Cl. 98—94.)



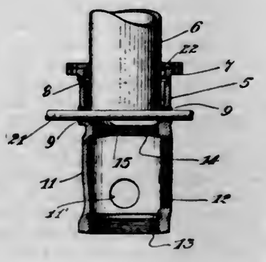
1. In a ventilating panel, a fan having a circular mounting ring, a pair of mounting plates diametrically mounted on said ring, a pair of channel members fitted over said plates and attached thereto, said members being parallel to each other and tangential to said ring, and panel members supported in said channels and butted against said ring.

1,784,235. INDUCTION SYNCHRONOUS MOTOR SYSTEM. FRASER JEFFREY, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed May 10, 1928. Serial No. 276,527. 13 Claims. (Cl. 172—280.)



1. In combination, a dynamo-electric machine adapted for operation as both an alternating current induction motor and synchronous motor and having its secondary or exciting element provided with a polyphase winding having the phase winding sections thereof connected to a neutral point, a direct current exciter, and means for connecting said exciter in circuit with a plurality of phases of said secondary winding with the latter in series with each other and with said exciter at said neutral point during the starting of said motor as an induction motor and for rendering one of the phases of said secondary winding inactive upon the attainment by said motor of an operating condition substantially corresponding to operation as a synchronous motor.

1,784,236. ELECTRICAL CONNECTION DEVICE. HOWARD B. JONES, Evanston, Ill. Filed Mar. 2, 1923. Serial No. 622,241. 9 Claims. (Cl. 173—332.)

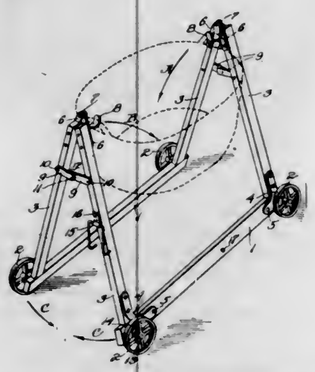


1. An electrical connection plug of the character described comprising in combination a housing member of insulating material having an open end adapted to receive a socket member, a supporting member readily removably positioned within said housing member and at a materially great distance from the open end thereof, said supporting member having a plurality of substantially parallel apertures, a contact stem positioned loosely in and extending through each of said apertures and directed toward said open end of said housing member, the ends of said stems being on the inner side of said supporting member, said housing member having means adapted to hold said stems against inward longitudinal movement when the device is in assembled relation.

1,784,237. HOLDER. ERNEST F. KAISER, New York, N. Y. Filed Apr. 8, 1929. Serial No. 353,405. 4 Claims. (Cl. 281—42.)

1. A holder as characterized comprising a cross head and a blade, said cross head and blade being disposed in perpendicular relation each to the other, and means disposed adjacent the terminals of the cross head offset from the plane thereof for engaging in grouped relation, the leaves of a book, and means provided on said blade for cutting objects such as envelopes or other paper articles.

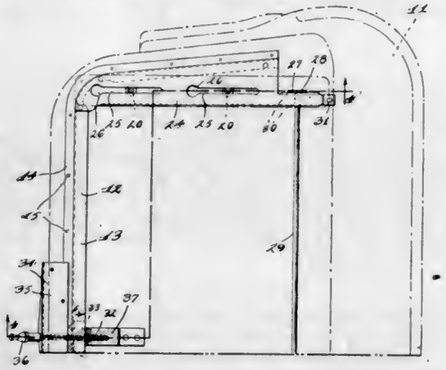
1,784,238. COMBINED TEST T AND EXPANSION FITTING FOR DRAINAGE AND SOIL PIPES. EDWARD KENNEDY, New York, N. Y., assignor to The Kennedy-Steiner Corporation, Bronx County, N. Y. Filed Dec. 29, 1927. Serial No. 243,272. 1 Claim. (Cl. 285—115.)



A method of forming a packed pipe joint of the one piece bell and spigot and test fitting type to provide for limited expansion, comprising forming apertures in the side walls of the bell, inserting a rod therein, introducing the spigot end of a pipe into the bell until it seats on the rod, packing the space between the bell and the spigot, removing the rod, and closing the apertures with screw threaded plugs.

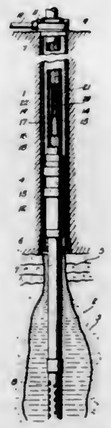
1,784,239. WRIST-WATCH STRAP. IRVING R. LEDERER, Providence, R. I. Filed May 15, 1928. Serial No. 277,905. 4 Claims. (Cl. 224—4.)

1. A wrist watch strap comprising two members each formed of a length of flexible material folded upon itself to provide a loop and two contiguous ends, an attaching element connected to each loop for detachably connecting the members to the bails of a watch or the like, a loop on each member for holding the sides of the member in adjacency, a clasp for each member including a catch for independently securing each of the contiguous free ends of the member thereto, and cooperating releasable locking elements on the two clasps.



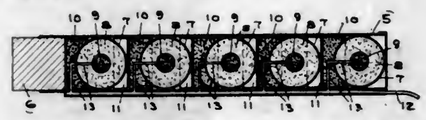
1,784,240. COLLAPSIBLE BASKET SUPPORT. WALTER A. LYNDS, Boston, Mass. Filed Dec. 12, 1927, Serial No. 239,353. Renewed Apr. 24, 1930. 3 Claims. (Cl. 280—36.)

1. A truck of the character described comprising two side frames each consisting of a base bar and two posts one adjacent each end thereof, each post being provided at its lower end with a rigid laterally extending arm pivotally connected with its base bar with the laterally extending arm of one post made longer than the laterally extending arm of the other and the difference in the lengths of said arms being approximately equal to the width of the latter post; means pivotally connecting the free ends of the pair of posts at each end of the truck; means adjacent the pivotally connected free ends of said posts and upon the inner sides of the latter for supporting a clothes basket or the like so that the latter holds said posts in upstanding positions against inward pivotal movement on the pivotal connections between said arms and said base bars, and means for holding said side frames in extended relationship with provision for folding the two side frames together when desired, the lower ends of said posts abutting said base bars to hold said posts against outward pivotal movement on said last mentioned pivotal connections when said posts are in their upstanding positions.



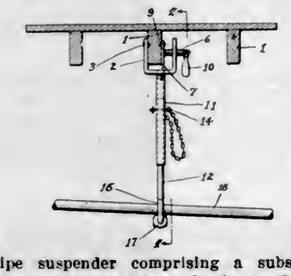
1,784,241. SEAT ASSEMBLY. WILLIAM MARSHALL and LLEWELLYN S. WOODHULL, Detroit, Mich., assignors to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 31, 1928. Serial No. 329,426. 5 Claims. (Cl. 155—14.)

1. In combination, a supporting member, a seat member positioned upon the supporting member, means establishing a sliding movement between the seat and support including an element projecting from one of said members and extending through an elongated slot formed in the other of said members, said element having an enlarged head portion insertable through an enlarged portion of the slot and normally preventing relative tilting movement between the said members, and means for adjusting said members relative to each other



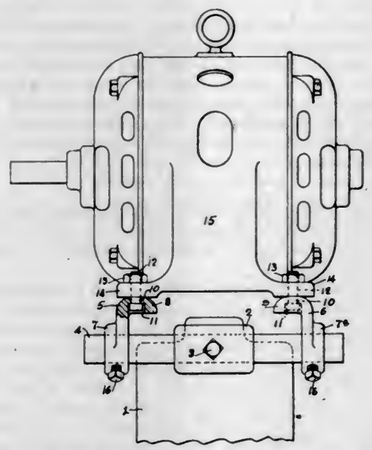
including a nut carried by one of said members and a screw carried by the other of said members and engageable with said nut, the length of said screw and configuration of the slot being so determined that when the screw is disengaged from the nut the enlarged head portion aforesaid will assume a position opposite the enlarged portion of the slot permitting said members to be readily detached from each other.

1,784,242. APPARATUS FOR INDUCING FLOW OF OIL FROM WELLS. WENDELL A. MELTON, Tulsa, Okla., assignor to The J. A. Hull Co., Tulsa, Okla. Filed Sept. 25, 1926. Serial No. 137,741. 2 Claims. (Cl. 103—232.)



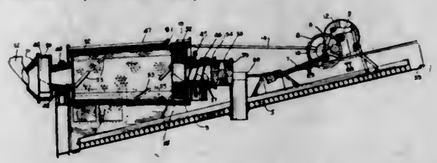
1. In combination with well casing, sectional tubing, two lower tubing sections having interior screw threads at their adjacent ends, said ends being in abutment, a nozzle having an exteriorly threaded body coupling said tubing sections to enclose the nozzle by the tubing and having an upwardly directed reducing nipple, the upper part of said tubing sections having upwardly inclined ports opening inwardly about the nipple, a packer between the tubing and casing below the ports, means for sealing the top of the casing, and means for delivering artificial pressure medium to the space between the tubing and casing above the packer.

1,784,243. SPRAYING DEVICE. LLOYD A. MOFFET, Fremont, Nebr. Filed Apr. 11, 1929. Serial No. 354,402. 3 Claims. (Cl. 43—124.)



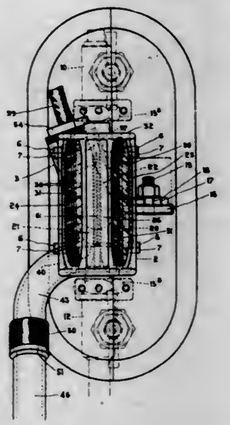
1. An improved spraying device comprising a tube, a partition in said tube, a projectile containing spraying material mounted in said tube and being separate and distinct from said partition, and a charge of explosive propulsive material mounted between said projectile and said partition.

1,784,244. ADJUSTABLE PIPE SUSPENDER. JOHN R. MORRIS, Philadelphia, Pa. Filed Sept. 22, 1928. Serial No. 307,610. 2 Claims. (Cl. 248—32.)



1. A pipe suspender comprising a substantially U-shaped body member, said body having a threaded opening in one side and in the bottom thereof, a plurality of inwardly extending beam piercing members in the opposite side of said body, a threaded shaft engaging said threaded opening in said body, a plate pivotally mounted on the inner end of said shaft, a plurality of beam piercing members mounted on said plate and opposing the piercing members of said body, a handle pivotally secured to the outer end of said shaft, an adjustable arm depending from said body, a lateral arm carried by said depending arm and rollers on said lateral arm.

1,784,245. PUMP-MOTOR SUPPORT. PHILIP A. MYERS, Ashland, Ohio, assignor to The F. E. Myers & Brother Company, Ashland, Ohio, a Corporation of Ohio. Filed Feb. 23, 1928. Serial No. 256,167. 4 Claims. (Cl. 248—15.)

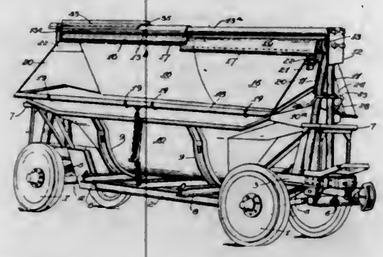


1. The combination with a deep well working head, having a bearing, of a shaft secured therein, and a pair of tracks, adapted to support a motor, positioned on said shaft laterally of said bearing at one end, another shaft at the other end of the tracks, and an altitude and supporting screw mounted between the working head and such latter shaft and adapted to be rotated to raise or lower that end of the motor support.

1,784,246. CLASSIFYING AND WASHING APPARATUS. HARRY W. NEWTON, Denver, Colo., assignor to The Dorr Company, New York, N. Y., a Corporation of Delaware. Filed July 9, 1925. Serial No. 42,338. 7 Claims. (Cl. 209—44.)

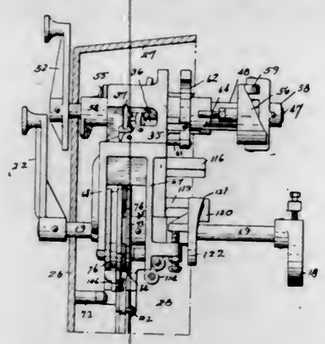
1. Apparatus for the classification of solids in liquids comprising a wet classifier, a trommel extending above the fluid in the classifier and having a passage for oversize solids at one end, means in said passage for washing the oversize solids, and means for draining wash water and undersize solids carried thereby into the classifier.

1,784,247. WATER-GAUGE GUARD. WILLIAM A. NEWMAN, Montreal, Quebec, Canada. Filed Dec. 16, 1925, Serial No. 75,843, and in Canada Oct. 9, 1926. 3 Claims. (Cl. 73—54.)



1. In a gauge glass guard and illuminator for locomotive boilers equipped with valve fittings connected to the upper and lower ends of the gauge glass, a casting adapted to be mounted behind the gauge glass and provided with a lamp containing chamber, said chamber being obliquely disposed with reference to the longitudinal axis of the gauge glass so that the upper end of the chamber is clear of the upper valve fitting, a frame having a pair of angularly related glass plates and means hingedly connecting the frame to said casting to provide a protecting enclosure for the gauge glass.

1,784,248. ROLL-TOP COVER FOR DUMPING VEHICLES. TRULY NOLEN and JOHN C. TRUEMPER, Indianapolis, Ind., assignors to Highway Trailer Company, Edgerton, Wis., a Corporation of Wisconsin. Filed Feb. 5, 1927. Serial No. 166,115. 3 Claims. (Cl. 296—98.)

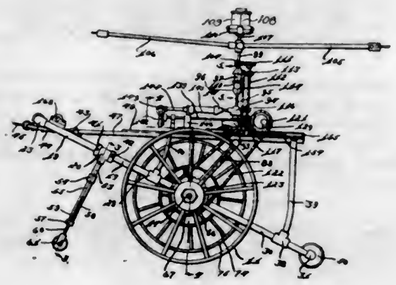


1. In a vehicle of the type described, including an upwardly open body and a frame on which it is tiltably

mounted, a plurality of rollers extending longitudinally over the body and supporting means therefor upstanding from the frame beyond the ends of the body, said supporting means including tubular upright members, flexible covers wound on the rollers respectively adapted to extend

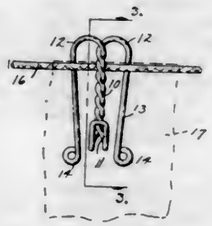
over the body, and yielding means for turning each roller in the direction for winding up its cover, comprising a weight guided for up-and-down movement in one of the tubular uprights, and a flexible connector extending from the weight around the roller.

1,784,249. COIN-CONTROLLED MECHANISM. RAYMOND P. NORTON, Algona, Iowa, assignor of one-half to William A. Norton, Marshalltown, Iowa. Filed Sept. 21, 1926. Serial No. 136,811. 11 Claims. (Cl. 194—97.)



9. In a device of the class described, a coin testing mechanism, a coin guide for conveying coins to said testing mechanism and to a coin controlled mechanism, means actuated by the insertion of a coin in said guide for stopping said coin in said guide in operative relation with said testing mechanism, and means for automatically releasing said coin after the testing operation is complete.

1,784,250. COMPOSITION FOR DENTURES. STANLEY E. NOYES, Los Angeles, Calif., assignor to Harrison-Noyes Chemical Corporation, Ltd., Long Beach, Calif., a Corporation of California. Filed June 30, 1928. Serial No. 289,365. 3 Claims. (Cl. 32—4.)

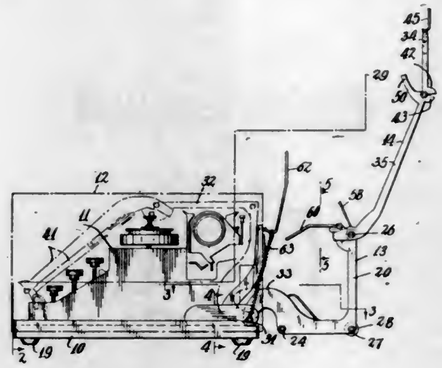


1. In a denture composed of a phenol condensation product, reenforcing strips of a textile fabric impregnated with the semi-cured product and thereafter slowly dried, the strips being positioned within said denture to withstand strains.

1,784,251. SPRINKLER. JAMES T. PLUMER, Detroit, Mich. Filed Oct. 12, 1927. Serial No. 225,625. 8 Claims. (Cl. 299—53.)

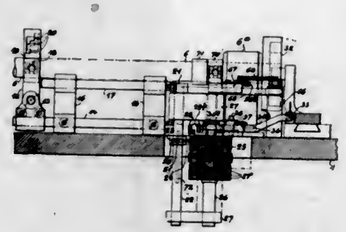
1. A sprinkler of the class described, comprising: rotatable nozzles rotatable in response to the reaction of the jets of water issuing therefrom; an auxiliary set of nozzles rockably mounted; and means operable upon the rotation of said first mentioned nozzles for effecting a rocking of said second mentioned nozzles.

1,784,252. CLOTHESPIN. AGNES H. SCARR, Atlantic, Iowa. Filed Feb. 24, 1930. Serial No. 430,932. 3 Claims. (Cl. 24—139.)



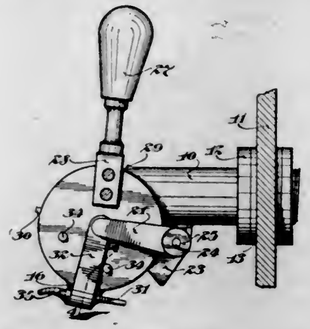
3. A clothes pin comprising a vertical body portion having arm members bent outwardly and thence downwardly from its upper end in position substantially parallel with the body portion and spaced a slight distance therefrom, the lower ends of said arms extending below the lower end of said body portion, the lower end of said body portion being bent outwardly and upwardly to form a finger hook.

1,784,253. FOLDABLE COPY STAND FOR PORTABLE TYPEWRITERS. PETER SCHANO, Union City, N. J. Filed Sept. 18, 1930. Serial No. 482,656. 12 Claims. (Cl. 120—28.)



1. A foldable copy stand and cover for portable typewriters, comprising a base for supporting a portable typewriter and for connection with a cover to constitute a valise for carrying the typewriter, a bottom member pivotally connected in the rear edge of said base for moving from a vertical position covering a portion of said typewriter to a horizontal position resting on a flat element on which said base is placed, a top member pivotally connected with said bottom member, means for limiting pivoting of the top member relative to the bottom member so that the top member may assume a position rearwards

from the vertical to the horizontal position of the bottom member for supporting a copy and downwards from the

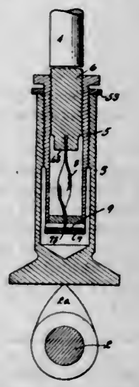


horizontal in the vertical position of the bottom member for covering the keyboard of the typewriter, and means for holding a copy on said top member.

1,784,254. MACHINE FOR MANUFACTURING METAL CHAIN MAIL. EUGEN SCHOFER, Pforzheim, Germany. Filed Oct. 24, 1927, Serial No. 228,209, and in Germany Aug. 25, 1927. 10 Claims. (Cl. 140—3.)

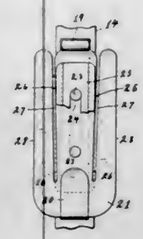
1. A machine for producing coloured patterned ring chain mail, comprising in combination a wire feeder in the form of a double lever oscillatable around a horizontal axle, several wire feeders on the front arm of said double lever superimposed to each other and parallel to the axis of oscillation the rear arm of said lever serving as steering lever, a link having in its upper end three funnel-shaped indentations arranged on its front side the one at the side of the other at different heights and within range of the free end of the steering arm of said double lever, a hinge piece on which the lower end of said link is oscillatably mounted, a carrying axle on which said hinge piece and said link are mounted adapted to oscillate forward and backward, a pull spring attached to said link diagonal to the right and rear, a roller on the back of said link, an eccentric on the main shaft against which said roller of said link bears, a pressure rod parallel above the carrying axle against the left end of which rod said link bears, and elements of a driving mechanism against which bear the right ends of said pressure rod or the carrying axle or both said pressure rod, when not bearing, being secured in the longitudinal direction, eccentrics on the main shaft of the machine, and stops on the carriage carrying the chain mail or on an extension of the same the opposite end parts of the driving mechanism of the pressure rod bearing against or being in engagement with or situated in the range of said eccentric and of said stops.

1,784,255. MEASURING VALVE. ALBERT SLATEN, Minneapolis, Minn. Filed July 5, 1929. Serial No. 375,973. 8 Claims. (Cl. 221—106.)



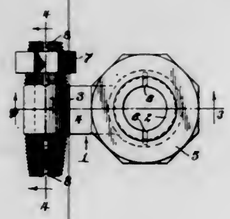
1. A device of the class described comprising a valve casing having an intake port and a discharge passage, a main valve mounted in the casing having a measuring compartment and operable to alternately bring the measuring compartment into communication with the port and the discharge passage, and a non-drip auxiliary valve for the discharge passage.

1,784,256. METHOD OF MANUFACTURING SINKERS FOR KNITTING MACHINES. HAROLD E. STOUT, West Reading, Pa. Filed Oct. 12, 1928. Serial No. 312,192. 3 Claims. (Cl. 29—148.)



1. The method of progressively die forming a sinker plate for a knitting machine which comprises first striking up a projection on a piece of stock, then setting back said projection to form a lug, and finally setting the stock to produce sharp corners on the lug where desired and blanking out the stock to the form of a sinker plate.

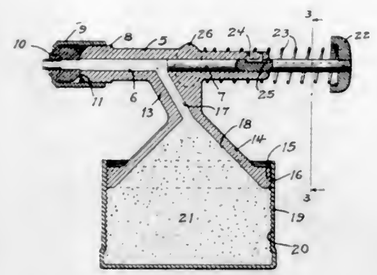
1,784,257. VALVE GEARING. HORACE T. THOMAS, Lansing, Mich. Filed Mar. 6, 1929. Serial No. 344,644. 4 Claims. (Cl. 123—90.)



1. A pusher-rod having an axial cylindrical aperture therein, a screwthreaded rod engaging screwthreads in said aperture and a thermostat engaging said rod and said pusher-rod to turn said rod in said aperture.

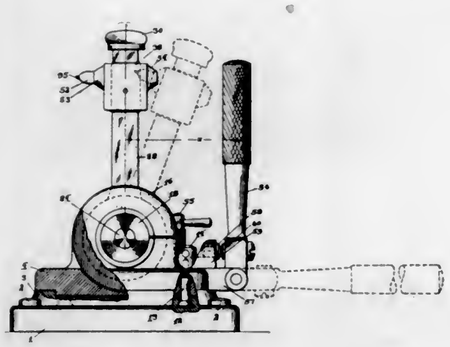
1,784,258. TWINE HOLDER AND CUTTER. HENRY J. TYNAN, Ridgewood, N. J. Filed Feb. 23, 1929. Serial No. 342,101. 2 Claims. (Cl. 30—14.)

1. In a twine cutter, a base-plate having two separated vertically inclined slits open at their upper ends, bosses on said base-plate, a cover-plate similarly slitted to match said base-plate and having openings receiving said bosses, a blade arranged for engagement with said bosses and having opposite parallel cutting edges partially overlapping said slits at the lower ends of the latter, an outwardly and upwardly projecting hook attached to the lower end of said base-plate for the reception of the lower end of said cover-plate, and a spring catch at the upper end of said base-plate for detachably engaging the upper end of said cover-plate.



1,784,259. BATTERY-TERMINAL CONNECTER. RICHARD S. WALLENBERG, Buffalo, N. Y., assignor of one-half to Robert E. Donovan, Tonawanda, N. Y. Filed May 3, 1928. Serial No. 274,793. 1 Claim. (Cl. 173—259.)

A battery terminal connecter comprising as an integral unit a pair of tubular clamping members disposed at right angles to each other, one of said members having a continuous lower end and a split upper end, the said upper end being tapered and externally threaded for cooperation with a nut to spring the walls of the split upper end against a terminal post of a battery, the other said member having oppositely extending split ends and a continuous central portion, each of said split ends being tapered and externally threaded for cooperation with a nut to spring the walls of said split portions against a lead wire to said battery.

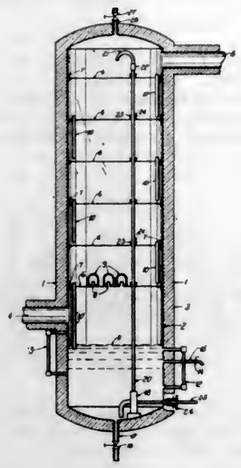


1,784,260. DOUBLE-ACTING GREASE GUN. AXEL M. WALSTROM, Minneapolis, Minn. Filed July 27, 1929. Serial No. 381,451. 3 Claims. (Cl. 221—47.)

1. A grease gun, comprising: a barrel having a bore and a plunger adapted to be reciprocated therein, an integral projection of comparatively small cross-sectional area extending a considerable distance on one side of said barrel and having a flared end portion terminating in a circular flange which is provided with a screw-threaded periphery of comparatively large diameter, a grease duct

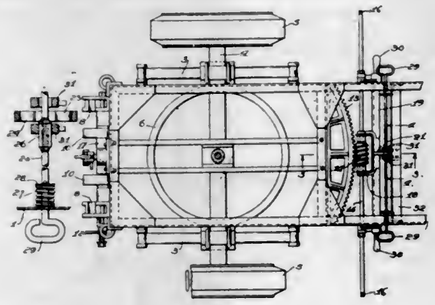
extending through said projection to a point in front of said plunger in said bore, and a comparatively shallow grease cup having interior screw-threads adapted to operatively engage said screw-threaded periphery, substantially as described.

1,784,261. PRECISION DRESSING APPARATUS FOR GRINDING WHEELS. GEORGE WEIDNER, Rochester, N. Y. Filed June 28, 1929. Serial No. 374,510. 9 Claims. (Cl. 125—11.)



1. A dressing apparatus for grinding wheels comprising a base, a turn table mounted on said base, a guide member mounted to swing on said turn table, a diamond holder mounted to slide on said guide member and means for moving said holder along said guide member at any angular position of said guide member.

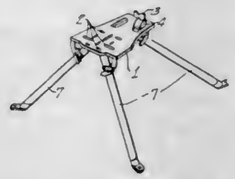
1,784,262. ALKALINE TREATMENT OF PETROLEUM VAPORS. RAYMOND C. WHEELER and PAUL W. PRUTZMAN, Los Angeles, Calif. Filed June 24, 1927. Serial No. 201,259. 5 Claims. (Cl. 196—36.)



1. The continuous method of purifying petroleum vapors which consists in contacting a mixture of said vapors and steam with a solution of sodium hydrate, without substantial condensation of said petroleum vapors, thereby producing a reaction product substantially insoluble in said solution; maintaining a body of said solution in continuous contact with said vapor mixture and at such concentration as to neither evolve nor absorb

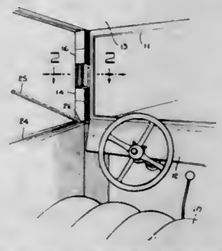
a material quantity of steam during said contact; continuously contacting said solution with said vapors by

cyclic counterflow, and withdrawing said reaction product from said body of solution without discontinuing said contact.



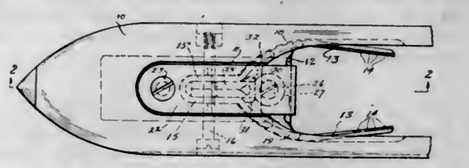
1,784,263. TRAILER-STEERING DEVICE. LEROY E. WILLIAMS, Edgerton, Wis., assignor to Highway Trailer Company, Edgerton, Wis., a Corporation of Wisconsin. Filed Jan. 3, 1927. Serial No. 158,505. 8 Claims. (Cl. 280—98.)

1. In a trailer vehicle comprising a main frame, a sub-frame swivelly connected thereto, and wheels on the sub-frame adapted for steering movement by virtue of such swivel connection, manually operable steering connections accessible for manipulation at the side of the vehicle, comprising a gear segment attached to the sub-frame, a shaft extending transversely on the main frame with a worm adapted to mesh with said segment, said shaft being mounted for movement on the main frame toward and from the sub-frame to carry the worm into or out of engagement with the segment.



1,784,264. PIPE-VISE STAND. LEE C. YOUNG, St. Louis, Mo., assignor to Western Wire Products Co., St. Louis, Mo., a Corporation of Missouri. Filed June 13, 1928. Serial No. 284,898. 1 Claim. (Cl. 81—41.)

A pipe-vise stand including a head in the form of a plate, a supporting-leg pivotally attached at an end to the head for swingable movement, and an arcuate bracket-arm depending from the head and having a bifurcated free end presented inwardly relatively to and disposed under the head for engagement by and with the leg for re-inforcingly bracing the head, in combination with means com-

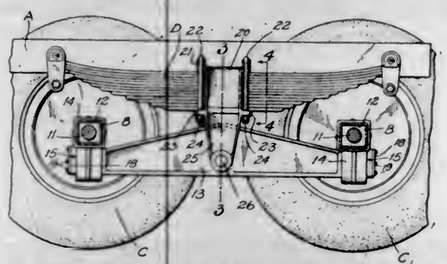


prising outwardly presented opposed lugs upon the arm, and a double hook spanning and pivoted at its shank upon the leg for detachable engagement with the lugs for releasably retaining the leg obliquely in engagement with the arm.

1,784,265. CLEAR-VISION AUTOMOBILE BODY CONSTRUCTION. HAROLD R. ZEAMANS, New York, N. Y. Filed July 24, 1926. Serial No. 124,730. 8 Claims. (Cl. 296—28.)

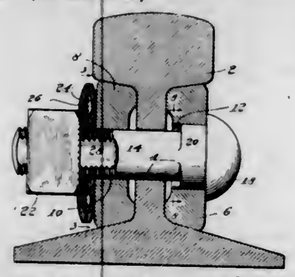
2. A support of the character described comprising a windshield corner post including within the intermediate length thereof a section comprising rigid members and transparent members, the whole having clear vision therethrough when viewed from spaced points corresponding to the human eyes.

1,784,266. ADJUSTABLE GRIPPER FOR SHUTTLES. WILLIAM H. BAHAN, Greenville, S. C. Filed May 4, 1929. Serial No. 360,457. 15 Claims. (Cl. 139—207.)



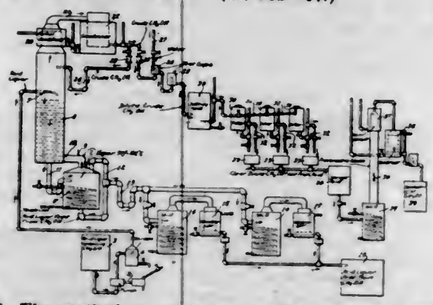
1. In a shuttle having a gripper to hold the bobbin, means for adjusting the position of the gripper into horizontal alinement with the shuttle and means for spreading the base of the gripper in said adjusted position.

1,784,267. METHOD OF MAKING HALOGENATED AROMATIC HYDROCARBON DERIVATIVES. EDGAR C. BRITTON and WILLIAM ROBERT REED, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Jan. 3, 1927. Serial No. 158,818. 10 Claims. (Cl. 260—161.)



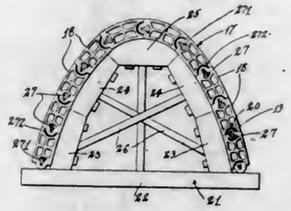
1. A process of making mono and di halogen substituted naphthalene derivatives which comprises subjecting naphthalene to the action of not more than the theoretically required proportion of a halogen in a liquid vehicle included within the group consisting of benzene, toluene, the xylenes and chlorobenzenes.

1,784,268. MOTOR VEHICLE. LAURENCE R. BUCKENDALE, Detroit, Mich., and CLARENCE A. PEIRCE, Chicago, Ill. Filed Dec. 19, 1927. Serial No. 241,079. 9 Claims. (Cl. 180—22.)



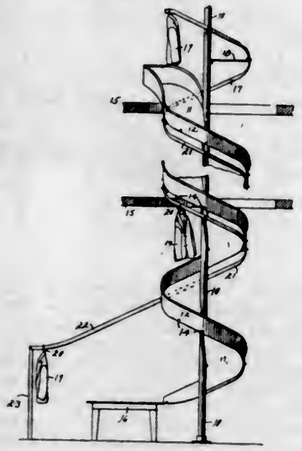
1. A motor vehicle comprising two driving axles provided with housings, a rigid torque bar extending from housing to housing, upstanding pedestals on said housings, and nonmetallic cushioning members between the ends of said torque bar and said pedestals.

1,784,269. LOCK WASHER. ROY E. CLEGG, Chicago, Ill., assignor to Clegg Lock Washer Corporation, Chicago, Ill. Filed Sept. 27, 1928. Serial No. 308,838. 2 Claims. (Cl. 151—13.)



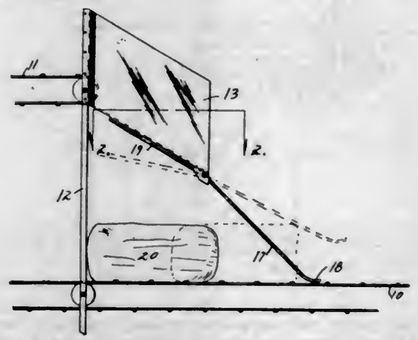
2. A nut lock for tightening means comprising a bolt and a nut, a pair of interlocking washers, one of said washers being concavo-convex and having an annular groove inwardly of the marginal edges of the washers to render the same resilient and thereby effect a yielding engagement between interlocking portions of the washers, and an integral abutment formed on one of said washers inwardly of said groove for engagement with a surface of the companion washer to present a rigid backing for a tightened nut, means for causing one washer to rotate with the nut, and means for preventing rotation of the other washer on the bolt.

1,784,270. METHOD OF REMOVING METHANOL FROM PYROLIGNEOUS ACID LIQUOR. JESSE M. COAHRAN, Colegrove, Pa. Filed Apr. 23, 1925. Serial No. 25,312. 10 Claims. (Cl. 202—67.)



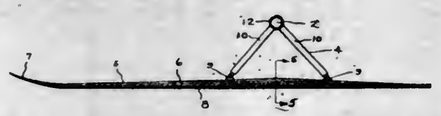
1. The method of producing purified methanol which comprises distilling off methanol from pyroligneous acid liquor and fractionating it to a concentration above substantially 27% (Tralles's scale), diluting the product with water sufficiently to cause the dissolved oils to pass out of solution, and then filtering out said oils.

1,784,271. CONDUIT AND METHOD OF CONSTRUCTING THE SAME. WALTER H. COLLINS, Los Angeles, Calif., assignor to Pacific Clay Products, Los Angeles, Calif., a Corporation of California. Filed July 13, 1927. Serial No. 205,342. 4 Claims. (Cl. 72—51.)



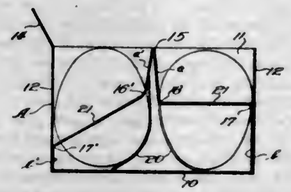
1. A conduit comprising a slab of cementitious material provided along its side margins with longitudinally extending channels, cement grout along the margins of said channels, and a series of arch units, each arch unit formed of blocks provided with tongues and grooves, the tongues and grooves of adjacent blocks interfitting, the tongues being provided with aligned openings, cement keys extending through the aligned openings to lock the adjacent blocks together, the tongues of the end blocks of each arch unit engaging in one of the channels, and the cement grout extending into the grooves in the end blocks of each arch unit.

1,784,272. SPIRAL CONVEYER DEVICE FOR PACKAGES AND COAT HANGERS. CHARLES E. CONSTABLE, Cincinnati, Ohio, assignor to The National Marking Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 4, 1929. Serial No. 368,334. 2 Claims. (Cl. 193—12.)



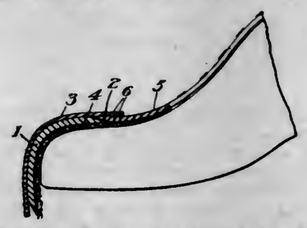
1. The combination of a spiral package conveyer and a coat hanger conveyer having its upper end spaced considerably above the upper end of the spiral package conveyer, and having its body portion supported beneath the body portion of the spiral package conveyer, and having its lower end extended radially outwardly from the spiral package conveyer, whereby articles mounted on coat hangers may move downwardly on the spiral coat hanger conveyer without interfering with the movement of the packages upon the spiral package conveyer, the upper and lower ends of the spiral coat hanger conveyer being secured to fixed supports, and the body portion of the spiral conveyer being rigidly secured to the under portion of the spiral package conveyer, whereby said conveyers mutually brace and support each other.

1,784,273. BUNDLE-TRANSFERRING DEVICE FOR CONVEYERS. CHARLES E. CONSTABLE, Cincinnati, Ohio, assignor to The National Marking Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 11, 1929. Serial No. 406,348. 5 Claims. (Cl. 198—27.)



1. The combination with a conveyer of a bundle transferring device comprising a series of fingers pivotally supported above the conveyer and inclined downwardly and in the direction of travel of the conveyer and having their lower ends curved upwardly, a counterbalancing weight for each finger so arranged that the fingers normally stand in position adjacent to the conveyer, said fingers being so shaped and arranged that when moved to an elevated position they will retain a bundle thereon.

1,784,274. AIRPLANE SKID. FREDERICK SIDNEY COTTON, London, England. Filed Oct. 18, 1926. Serial No. 142,303. 10 Claims. (Cl. 244—2.)

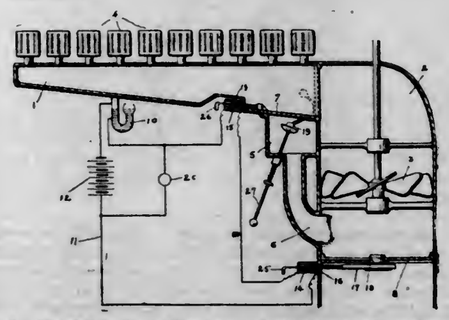


6. An airplane skid for use on snow, comprising a relatively long and narrow flexible member, the under surface of said member being transversely concave, whereby said skid may compact and compress the snow therebeneath and thus ride readily upon the surface of the snow.

1,784,275. EGG CARTON. JOSEPH L. COYLE, London, Ontario, Canada, assignor to Leon Benoit, Chicago, Ill. Filed May 28, 1928. Serial No. 280,999. 6 Claims. (Cl. 229—29.)

1. A carton in which is fitted a semi-flexible blank folded upon itself to provide double walls extending lengthwise of the carton centrally thereof, the blank being slitted transversely for a portion of the distance between the fold and its longer edges, and having other slits connecting the transverse slits at their outer ends whereby to provide a series of alternating tongues and webs, the tongues providing an under support for articles which are placed between the webs, there being a portion of the blank between its opposite edges and the webs adapted to sustain the latter in a generally horizontal plane whereby to provide a lateral support for articles intermediately of their tops and bottoms.

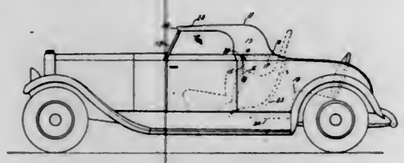
1,784,276. SOFT BOX TOE. CHARLES LEO DALY, Brockton, Mass., assignor, by mesne assignments, to Arden Box Toe Company, Watertown, Mass., a Corporation of Massachusetts. Filed Jan. 18, 1927. Serial No. 161,775. 3 Claims. (Cl. 36—77.)



1. As a new article of manufacture, a soft flexible one piece box toe blank carrying an external coating of latently adhesive material capable when rendered adhesive of forming the sole connecting medium between the blank and the tip and vamp of a shoe and when hardened acting to stiffen the blank adjacent to its tip line edge.

1,784,277. SWITCH-BOX PLATE COVER. FRANCIS GEORGE DARLINGTON, San Francisco, Calif. Filed Oct. 25, 1927. Serial No. 228,652. 4 Claims. (Cl. 247—23.)

1. A switch box plate cover of the class described, a cover sheet consisting of one sheet of fabricated material shaped to fit the general outline of the switch box plate and having an area on the back treated with adhesive material, a pad of sheets of fabricated material fastened together and to cover sheet, both cover sheet and pad being perforated to expose and operate the switch box mechanism.

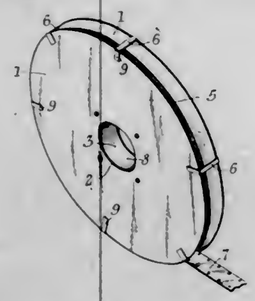


1,784,278. METHOD AND APPARATUS FOR FILTERING AND CLEANING FILTERS. LEWIS L. DOLLINGER, Rochester, N. Y., assignor to Staynew Filter Corporation, Rochester, N. Y., a Corporation of New York. Filed Apr. 1, 1925. Serial No. 20,002. 4 Claims. (Cl. 183—57.)

4. The method of filtering and cleaning a filter having a series of filtering units connected to a series of intake

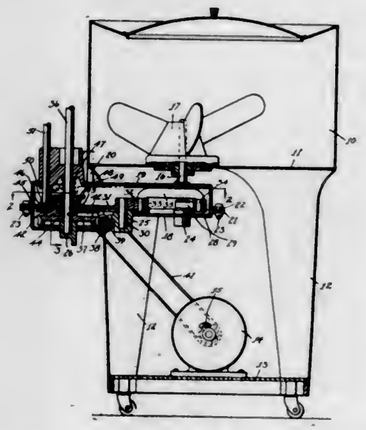
ducts which consist in drawing the material to be filtered in thru a plurality of the intake ducts and the filtering units connected thereto and alternately returning this material thru another of the series of intake ducts and the filtering units connected thereto at a higher velocity.

1,784,279. CONVERTIBLE AUTOMOBILE TOP. BEN BROWN ELLERBECK, Salt Lake City, Utah. Filed Jan. 7, 1929. Serial No. 330,702. 4 Claims. (Cl. 296—107.)



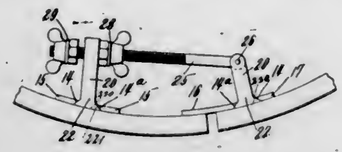
1. The combination with an automobile body having a deck seat compartment in the rear of the front driving compartment, of a rigid top having a roof portion that contains a transparent forward section, side and rear walls having outwardly flared lower edges to form an upwardly pressing lip against the deck and adjacent body surfaces, and pivots extending laterally from the lower forward portion of the side walls and resting on cushioning springs held in channels, the said top being rotatable backwardly on said pivots and movable downwardly into the body to such position that the forward transparent roof section extends above the body to form a properly inclined windshield for the deck seat compartment.

1,784,280. CONCENTRATION OF MINERALS BY FROTH FLOTATION. LOCKWOOD W. FERRIS, Salt Lake City, Utah. Filed Dec. 11, 1928. Serial No. 325,396. 1 Claim. (Cl. 209—166.)



The method of effecting the flotation of silicate forms of copper minerals, which comprises subjecting such ores and materials to heat alone in the absence of reagents, so as to decompose such copper silicates and subjecting the heated material to a froth flotation operation.

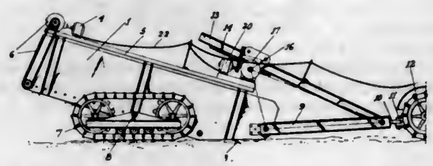
1,784,281. PHOTOGRAPHIC CARTRIDGE. EDWIN C. FRITTS, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 27, 1928. Serial No. 249,935. 7 Claims. (Cl. 206—59.)



1. A photographic film cartridge comprising a band of sensitized material coiled into a roll, a side wall of flexible material on each side of said roll, readily severable strips connecting the edges of the two side walls and holding said flexible side walls in contact with the edges of the roll and thereby preventing the entrance of light and also preventing the roll from uncoiling.

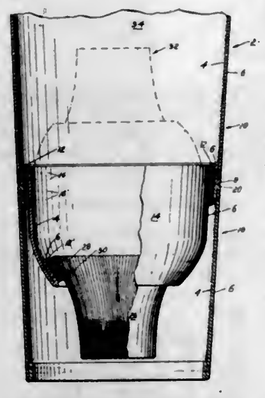
1,784,282. GEARING MECHANISM FOR WASHING MACHINES. GEORGE M. GIBSON, Pella, Iowa, assignor to Woodrow Washing Machine Company, Pella, Iowa, a Corporation of Iowa. Filed Aug. 6, 1928. Serial No. 297,824. 5 Claims. (Cl. 74—14.)

1. A gearing mechanism for washing machines including a shaft having a continuous driving member, one face of said member being provided with laterally projecting radial lugs and a friction surface, a driven member rotatively mounted and adapted to move toward and from the first said member and provided with notches for receiving lugs of the first said member, and a friction surface for coacting with the first friction surface, an agitator shaft, means operated by the driven member for imparting a rotary oscillatory movement to said agitator shaft, and means for yieldably supporting said friction faces in operative relation.



1,784,283. DEVICE FOR EXPANDING AND CONTRACTING DEMOUNTABLE RIMS. ABRAHAM LAWRENCE GOLDSMITH and PERLEY WHITING ROGERS, Orono, Me. Filed Feb. 20, 1930. Serial No. 429,898. 2 Claims. (Cl. 157—1.)

1. A pushing and pulling tool adapted to engage pairs of undercut abutment faces extending crosswise on the inner side of a split rim at opposite sides of the split, said tool comprising a pair of lugs having gibs complemental to and slidable between said abutment faces and adapted to cooperate therewith in maintaining the lugs substantially perpendicular to portions of said rim, and in position to exert pushing and pulling force on said abutment faces, and pushing and pulling means organized to push the lugs from each other and cause the gibs to exert pushing pressure on one abutment face of each pair and thereby expand the rim and to pull the lugs toward each other to cause the gibs to exert pulling pressure on another abutment face of each pair and thereby contract the rim, said means including a screw-threaded rod pivoted at one end to one of the lugs and extending loosely through a slot in the other lug, an inner nut engaged with the rod between the lugs and adapted to exert pushing pressure

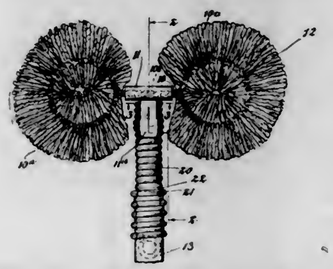


on one side of the slotted lug and thereby expand the rim, and an outer nut engaged with the rod and adapted to exert pulling pressure on the opposite side of the slotted lug and thereby cause contraction of the rim, each nut being displaceable from its operative position to permit the operation of the other nut; the effect of the rod and nut connection being to transmit either the pushing or the pulling force at right angles to said lugs.

1,784,284. SCRAPER-CONTROL MECHANISM. WILLIAM H. GUY, IRA D. GUY, and ROBERT E. GUY, Stockton, Calif. Filed July 16, 1929. Serial No. 378,662. 1 Claim. (Cl. 37—118.)

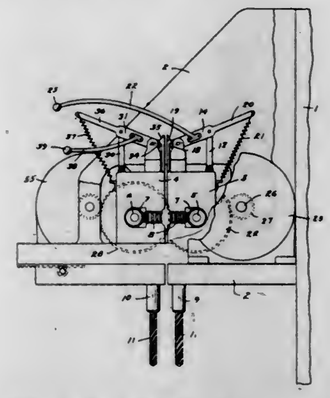
A scraper including a body, ground supported elements on which the body is rockably mounted, a drawbar pivoted on the body and extending forwardly for connection to a draft means, a bar pivoted on the draw-bar toward the forward end of and above the same and extending thence rearwardly and upwardly to the body, and terminating rearwardly of the point of connection of the drawbar with the body and means on the body engaging the bar adjacent such rear termination for enabling a downward or upward pressure to be exerted on the forward portion of the body.

1,784,285. METHOD AND MEANS FOR MAKING GARMENTS. WILLIAM H. HEATON Oakland, Calif., assignor to Tufoak Products Co., Oakland, Calif. Filed Oct. 26, 1926. Serial No. 144,332. 4 Claims. (Cl. 2—243.)



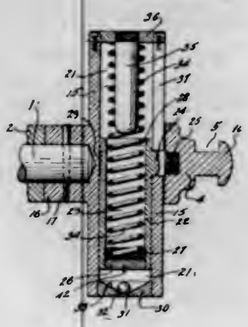
1. In a waterproof garment formed of rubber-coated cloth, a sleeve-like limb-encasing member comprising an upper tubular portion, a lower tubular portion abutting said upper portion as a continuation thereof, and a second lower portion disposed within said first lower portion and providing a small end adapted to hug the limb of the wearer, all of said portions having only the outer surfaces thereof rubber-coated and the larger end of said lower portion being secured to both of said other portions at their point of abutment for securing the three portions together, the seam edges of said outer portions being folded inwardly to dispose rubber surfaces thereof in opposition to that of the inner portion.

1,784,286. PROCESS OF MAKING EASILY SOLUBLE STABLE HYPOCHLORITES. PAUL RALPH HERSHMAN, Chicago, Ill., assignor of one-fourth to C. O. Sethness, one-fourth to C. H. Sethness, and one-fourth to Paul Rudnick, Chicago, Ill. Filed Apr. 15, 1927. Serial No. 184,184. 4 Claims. (Cl. 23—86.)



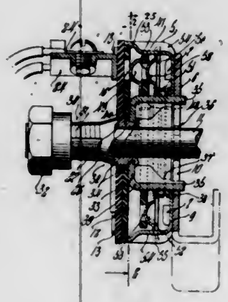
1. The method of making hypochlorite of calcium soluble which consists in mixing it, in the presence of moisture, with sodium acetate, and then drying the product.

1,784,287. HOLDER FOR DUSTERS AND THE LIKE. HARRY HERTZBERG, Brooklyn, N. Y. Filed May 8, 1928. Serial No. 275,985. 3 Claims. (Cl. 306—20.)



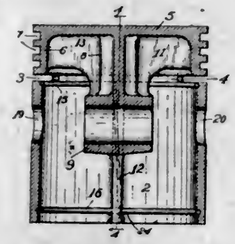
1. A holder for dusters or the like consisting of a helical coil, the turns of said coil forming means for holding a handle in the hollow part of said coil at one of its ends, a journal adapted to hold a duster frame for rotation therein at the other end of said coil and a stem on said journal mounted within the turns of said coil and a shoulder on said stem for locking said journal permanently to said coil.

1,784,288. MULTIPLE DRILL APPARATUS. WILSON P. HUNT, Moline, Ill. Filed Nov. 23, 1927. Serial No. 235,177. 3 Claims. (Cl. 77—24.)



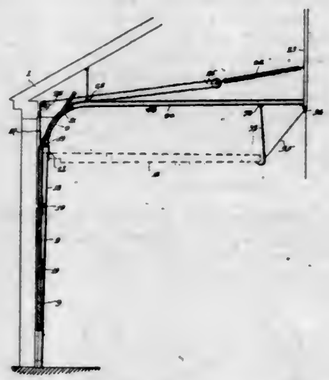
1. A device of the class described, comprising a frame and carriage movable thereon, a pair of spindle supporting devices oppositely disposed in said carriage capable of independent movement to or from a piece of work and tool-holding spindles supported thereby, spring controlled levers yieldably mounted for movement away from each other and catch mechanism therefor, said levers being operatively connected with the spindle supports, catch devices on said levers and detents therefor on said carriage, and operators' rods connected with said levers and projected in the same general direction for operation from one side of the machine for use in actuating said levers to release the same and cause a retraction of the spindles from a piece of work.

1,784,289. EXERCISING MACHINE. ELBERT L. HYDE, Shaker Heights, Ohio. Filed Feb. 25, 1928. Serial No. 257,016. 11 Claims. (Cl. 128—63.)



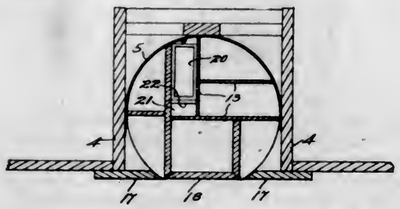
5. An exercising machine, comprising a driving shaft provided with two heads, an operating device transversely movable on each head toward and from central position and provided with means whereby an applicator end may be connected thereto, yielding means for moving each device inwardly, and means for adjusting said yielding means.

1,784,290. SWITCH. EDWARD N. JACOBI, Milwaukee, Wis., assignor to Briggs and Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 25, 1928. Serial No. 314,950. 19 Claims. (Cl. 200—11.)



1. In a switch mechanism, stationary contacts, a movable contact carrying member having both axial and rotary movement with respect to the stationary contacts, contacts carried by said member and adapted for engagement with the stationary contacts, a pressure applying member engageable with the face of the contact carrying member opposite the stationary contacts, means permitting axial movement of the pressure applying member but restraining rotary movement thereof, and spring means at all times urging the pressure applying member toward the contact carrying member whereby contact pressure is obtained between the movable and stationary contacts.

1,784,291. PISTON. FRANK JARDINE, Cleveland, Ohio, assignor, by mesne assignments, to The Cleveland Trust Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 9, 1926. Serial No. 100,771. 13 Claims. (Cl. 74—108.)

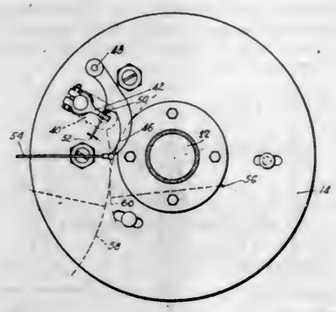


1. A piston comprising a head, a central depending wrist pin boss and a skirt connected to the head at one side and separated from the head at the opposite side.

1,784,292. DOUBLE OVERHEAD DOOR. CLARENCE G. JOHNSON, Hartford City, Ind. Filed Feb. 14, 1927. Serial No. 167,978. 7 Claims. (Cl. 20—20.)

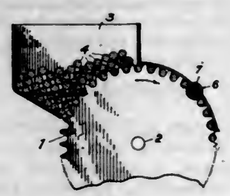
7. An element of a door construction comprising a horizontal double track having one end bent downwardly, a double rail hinged to and depending from said bent end and communicating therewith, said track and rail each being adapted to receive two sets of rollers.

1,784,293. ROTARY CABINET. LYNN A. KNIPP, Los Angeles, Calif. Filed Nov. 16, 1929. Serial No. 407,735. 1 Claim. (Cl. 312—183.)



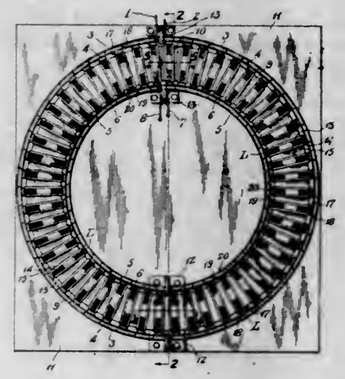
A cabinet structure including a case, a rotary carrier disposed and turnable on a vertical axis in said case and provided with shelves and partitions and having substantially cylindrical form, a flat door attached to one side of the carrier, and said case having front wing panels extending toward each other to form, with the said door, a flush front closure for the cabinet.

1,784,294. MATTRESS. ELIZABETH KRIEGE, San Diego, Calif. Filed Apr. 8, 1929. Serial No. 353,313. 1 Claim. (Cl. 5—357.)



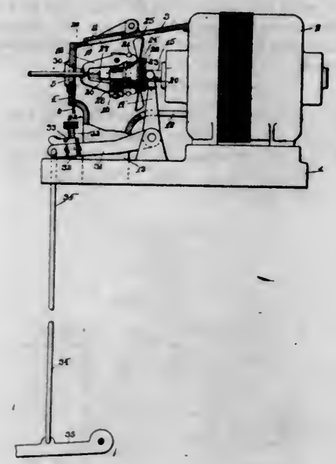
In a mattress, a plurality of mattress units adapted to be assembled in abutting relation, securing strips secured to the contiguous surfaces of said units, said strips substantially equal in width and depth to said surfaces and forming marginal flaps adjacent the upper and lower margins of said units, complementary fasteners secured to the outer surface of said flaps and accessible from the rear of said flap when said units are assembled.

1,784,295. BRAKE-OPERATING MEANS. LUDGER ELIZÉ LA BRIE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed May 6, 1926, Serial No. 107,151. Renewed June 11, 1928. 11 Claims. (Cl. 188—78.)



3. A brake comprising, in combination, friction means and an adjacent support, an applying device for the friction means including a shaft extending through the support, an operating arm on the shaft on the opposite side from the friction means, and a lever fulcrumed at one end on the support at a point spaced from said shaft and having a part operatively engaging said arm.

1,784,296. PROCESS AND DEVICE FOR IMPROVING CIGARETTES. VALENTIN LORENTZ, Dresden, Germany, assignor to United Cigarette Machine Company Aktiengesellschaft, Dresden, Germany. Filed Sept. 21, 1927, Serial No. 220,978, and in Germany Sept. 23, 1926. 5 Claims. (Cl. 131—39.)



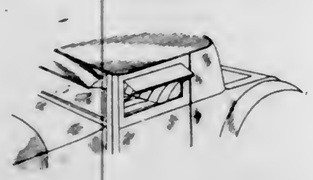
5. A process for improving cigarettes consisting in passing an air current alternately in both directions in a lengthwise direction through them.

1,784,297. HIGH-FREQUENCY TRANSFORMER. HENRY G. MAERLENDER and HUGO A. MAERLENDER, Cleveland, Ohio. Filed May 31, 1929. Serial No. 367,530. 13 Claims. (Cl. 175—359.)

1. A high frequency current transformer comprising a plurality of magnetically independent primary inductance elements joined in parallel and secondary inductance elements, each comprising two sections connected in parallel and severally coupled interiorly and exteriorly of each of said primary inductance elements, all of said secondaries being connected in parallel.

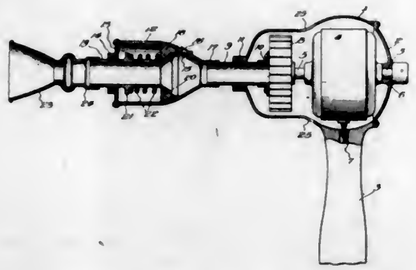
1,784,298. WIRE-STRIPPING MACHINE. CHARLES B. MAHAN and CARL M. WEBER, Rochester, N. Y., assignors to Weber Machine Corporation, a Corporation of New York. Filed Mar. 2, 1929. Serial No. 344,075. 3 Claims. (Cl. 81—9.51.)

1. In a wire stripping machine having a stripper head and means for locating the wire to be stripped in a predetermined position with relation thereto, the combination of a plurality of circular knives carried by said stripper head and mounted concentrically to the center of rotation of said stripper head and in an angular position to each other, means for uniformly moving said circular knives in



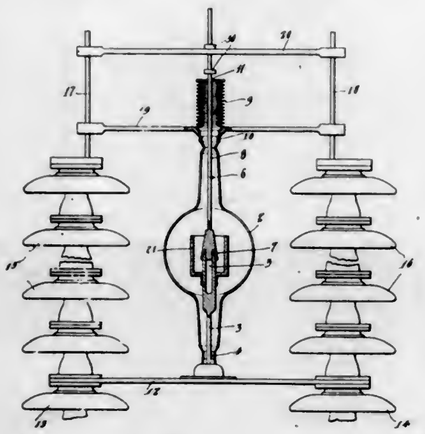
their relative angular position toward a common center during the rotation of said stripper head to have their cutting edges overlap one another and cut the insulation of a wire located in said stripper head radially and axially to the wire.

1,784,299. TIE FOR CARDS, SHEETS, ETC. FILLETTE C. MANY, Kalamazoo, Mich. Filed Aug. 24, 1929. Serial No. 388,107. 2 Claims. (Cl. 40—128.)



1. The combination in an assembly of cards or sheets, of a plurality of the cards or sheets disposed edge to edge and having holes spaced from their adjacent edges, and ties connecting said cards or sheets consisting of flexible tapes and end bars of substantially greater length than the width of the tape and to which the ends of the tape are centrally secured the holes being of such size as to receive the bars when presented endwise thereto, the tape being retained within the holes when the bars are disposed transversely thereof.

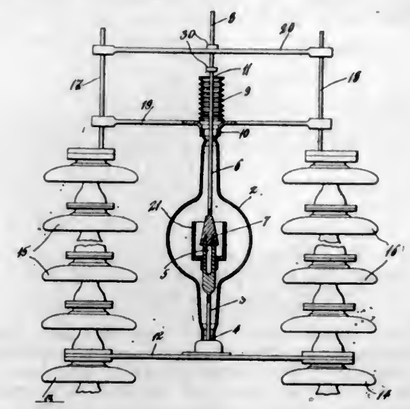
1,784,300. COMBINED SHADE AND AWNING. EARL E. MCGREW, Lincoln, Nebr., assignor to McGrew Machine Company, Lincoln, Nebr., a Corporation of Nebraska. Filed Nov. 1, 1928. Serial No. 316,435. 3 Claims. (Cl. 156—44.)



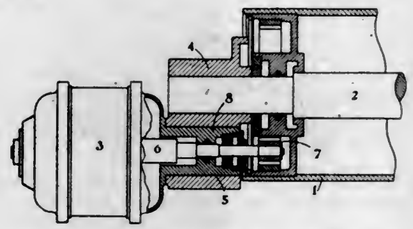
2. In an awning construction, the combination with a window jamb engaging frame adapted to be seated in a window for supporting at the upper end the upper edge of an awning web, and a movable frame for attachment to the lower edge of the awning web, universal connections between the lower portions of said frames for interconnecting the same.

1,784,301. MASSAGING DEVICE. LEV A. MEKLER, Chicago, Ill. Filed Dec. 9, 1927. Serial No. 238,790. 9 Claims. (Cl. 128—56.)

1. In a massaging device, the combination with a rotatable massaging element, of means for rotating said massaging element, and means permitting the disengagement of the said massaging element from said rotating means when the pressure against said massage element exceeds a predetermined amount.



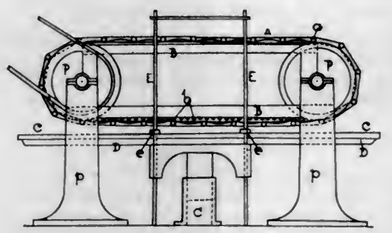
1,784,302. PROCESS FOR CONDITIONING ELECTRIC SWITCHES. ROBERT A. MILLIKAN and ROYAL W. SORENSEN, Pasadena, Calif., assignors to California Institute of Technology, Pasadena, Calif., a Corporation of California. Filed Nov. 15, 1926. Serial No. 148,418. 10 Claims. (Cl. 200—144.)



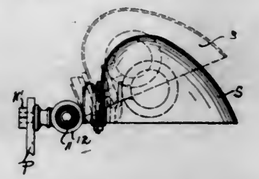
1. A process of producing an electrical switch, which comprises mounting contacts within a gas-tight chamber, exhausting the chamber to a pressure lower than the pressure at which gases are conductive, imposing an electrical potential on the contacts, opening the contacts to establish an arc therebetween, and exhausting from the chamber expelled occluded gases.

1,784,303. ALTERNATING-POWER-CURRENT INTERRUPTER. ROBERT A. MILLIKAN and ROYAL W. SORENSEN, Pasadena, Calif., assignors to California Institute of Technology, Pasadena, Calif., an Educational Corporation of California. Filed Sept. 5, 1928. Serial No. 304,158. 10 Claims. (Cl. 200—144.)

1. A power circuit interrupter comprising electrodes relatively movable to open and close a power circuit, a vacuum ambient for said electrodes containing insufficient gas to establish an arc when the electrodes are separated, the electrodes being sufficiently free of occluded gases as to have the capacity of producing a fractional cycle arc only, when the electrodes are separated while carrying a power current.

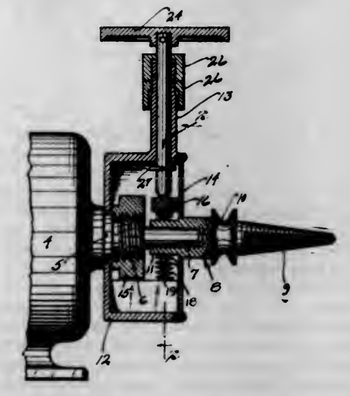


1,784,304. ELECTRICALLY-OPERATED EDGE-DRIVEN ROLL. FRITZ MÖLLER, Duisburg, Germany, assignor to Demag Aktiengesellschaft, Duisburg, Germany. Filed July 2, 1928. Serial No. 289,898. 3 Claims. (Cl. 80—58.)



1. An electrically driven roll for rolling mills, provided with a stationary spindle, a support for the said spindle, a driving motor having a casing with an axial extension of the casing serving as bearing for the motor shaft and to extend through the said support, a pinion upon the motor shaft, and internal teeth upon the roll with which said pinion engages.

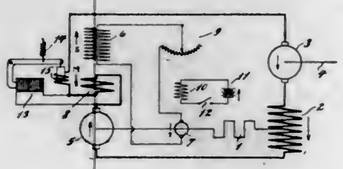
1,784,305. EXCELSIOR-CUTTING MACHINE. JOSEPH L. MONKHOUSE, Guelph, Ontario, Canada. Filed May 27, 1929. Serial No. 366,424. 1 Claim. (Cl. 144—187.)



In combination with an excelsior cutting machine composed of a plurality of cutting and scoring planes formed into an endless link belt, scoring and planing units with flat outer sides in which are inserted the scoring studs or pins, and planing knife, the central part of the inner side being concaved and faced with wooden or leather friction layers, the projecting ends of said scoring and planing units being flattened and adapted to pass over parallel, closely spaced friction rollers attached to the under sides of carrying bars; and narrow smooth faced driving pulleys which fit the concaved rear sides of the scoring and planing units.

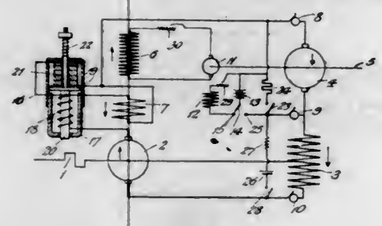
1,784,306. SWIVELED LAMP-SHADE SUPPORT. FRANK J. MURPHY, Floral Park, N. Y., assignor to S. W. Farber, Inc., Brooklyn, N. Y., a Corporation of New York. Filed May 17, 1929. Serial No. 363,938. 4 Claims. (Cl. 240—73.)

4. A shade support for a lamp having an upright or the like, comprising a coupling member adapted to be nonmovably connected to said upright, said coupling member having an annular extension, the width of said annular extension being substantially one-half the width of said coupling member, a shaft which is non-revolubly mounted in said extension, a shade holder having an annular extension which is non-revolubly mounted upon said shaft, the width of said shade holder and of said extension being substantially equal to the width of said coupling member, and friction members which are slidably and non-revolubly mounted upon the shaft at the outer ends of said extensions, said friction members and said extensions having non-interlocking friction faces which are perpendicular to said shaft, and additional end members which are connected to the ends of said shaft and projecting beyond said ends, and compression springs located intermediate said additional end members and the lateral walls of said friction members, said compression spring being adapted to produce frictional contact between said friction members and said extensions.



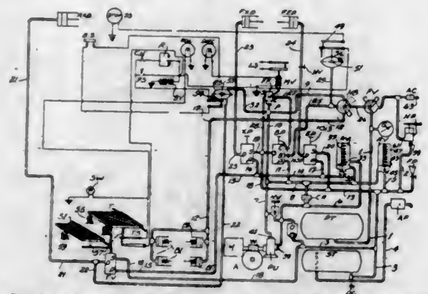
1,784,307. COMBINED DENTAL LATHE AND VIBRATOR. EARL A. NELSON, Minneapolis, and CHARLES E. LARSON, St. Louis Park, Minn. Filed Feb. 21, 1929. Serial No. 341,632. 5 Claims. (Cl. 259—91.)

1. A dental vibrator comprising a casing, a motor driven tappet-acting cam within said casing, a rocker pivotally



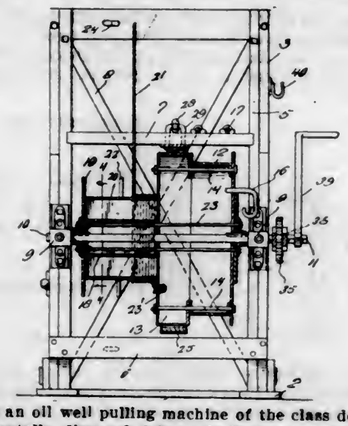
mounted within said casing and yieldingly held out of the zone of action of said cam but depressible into the zone of action, and a table having a plunger working vertically through said casing and resting on the rocker and said rocker being movable into the zone of action of said cam through said plunger and table.

1,784,308. AUTOMATIC POWER TRANSMISSION. ALFONS H. NEULAND, Irvington, N. J., assignor to Electro-Mobile Corporation, Irvington, N. J. Filed Sept. 13, 1927. Serial No. 219,227. 7 Claims. (Cl. 290—29.)



6. In combination, an engine shaft, a load shaft, a dynamo rotatively associated with both shafts, a second dynamo rotatively associated with the engine shaft and having pole pieces provided with series and auxiliary field coils, a source of current connected to the auxiliary field coil adapted to magnetize the field poles in generating direction, a load circuit including the first dynamo and series field coil adapted to magnetize the field poles in motoring direction, and means for shunting the series field coil operative to reverse the magnetism in the field poles from motoring direction to generating direction.

1,784,309. POWER-TRANSMISSION DEVICE. ALFONS H. NEULAND, Irvington, N. J., assignor to Electro-Mobile Corporation, Irvington, N. J. Filed Jan. 22, 1927. Serial No. 162,788. 11 Claims. (Cl. 172—239.)



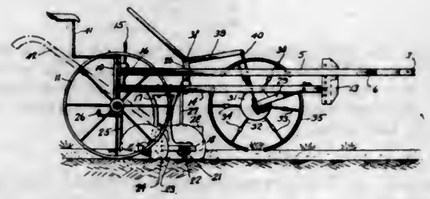
1. In a power transforming mechanism, a magnetic induction clutch comprising a rotative field and armature, associated between a power source and a load shaft, an electro-dynamic booster, likewise having armature and field elements, and mechanically associated with the power source, and means for controlling the direction and amount of transfer of power through said booster, comprising an auxiliary field winding therein, and a regulating dynamo connected thereto and operatively associated with the load shaft, having an armature and a field, and means for the steady energization of said field, whereby a controlling current is produced by said regulating dynamo in accordance with the speed of the load shaft, and means comprising a variable resistance in shunt to the series field of said booster, and a magnetic control device cooperating therewith, for variably shunting current from the booster field as the load current varies.

1,784,310. CONTROL SYSTEM. HARVEY S. PARDEE, Ravinia, Ill., assignor to John R. Blackhall, Chicago, Ill. Filed Oct. 19, 1929. Serial No. 400,870. 31 Claims. (Cl. 303—6.1.)

1. In a vehicle control circuit, a pressure tank, a sump tank, means for placing liquid in said sump tank and means for placing air under pressure in said pressure tank, and means for pumping liquid from said sump tank into said pressure tank to further build up the pressure therein.

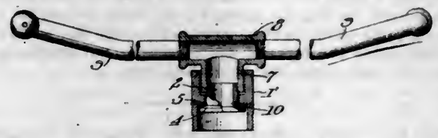
1,784,311. OIL-WELL PULLING MACHINE. MILES DARWIN PERRY, Parkers Landing, Pa. Filed Sept. 21, 1928. Serial No. 307,535. 2 Claims. (Cl. 254—184.)

1. In an oil well pulling machine of the class described, a horizontally disposed driven shaft, a support therefor, actuating means for said shaft, a low speed winding drum secured on the shaft for rotation therewith, and a high speed drum detachably secured around the low speed drum for rotation with said shaft, said high speed winding drum including complementary sections, hinges connecting the sections, and means consisting of the cable on the drum sections for securing the sections against accidental swinging movement relative to one another on said hinges during the winding operation.



1,784,312. POCKET HOLDER. EDWARD WALTER PERRY and GEORGE ALBERT HUDSON, Winnipeg, Manitoba, Canada. Filed Apr. 17, 1929. Serial No. 355,900. 8 Claims. (Cl. 24—11.)

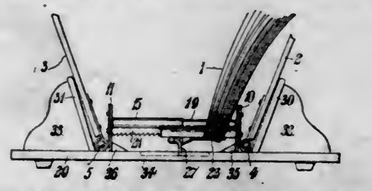
1. A pocket holder comprising a front plate, a curved rear plate, an interposed tongue carrying plate and a



hooked suspending portion, the front plate having flanged edges holding the several plates together and the back plate being provided with piercing prongs protruding through the other plates and extending beyond the front plate and underlying the hooked portion.

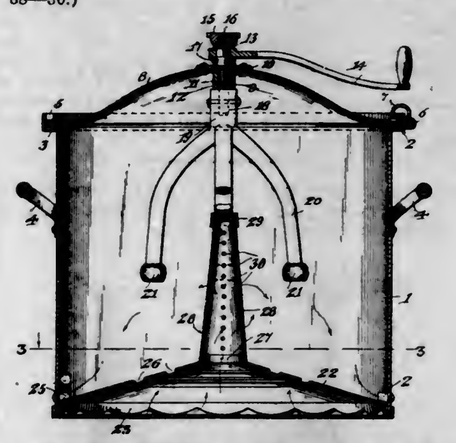
1,784,313. COMBINED COTTON BLOCKER AND CULTIVATOR. ARTEMUS ERASTUS PITTMAN, Muscogee, Fla. Filed Oct. 29, 1928. Serial No. 315,827. 4 Claims. (Cl. 97—22.)

1. In an agricultural machine of the character described, a main frame, a pair of supporting wheels at the rear end of the frame, draft attaching means at the forward end of the frame, a sub-frame arranged beneath said main frame, a vertically adjustable pivotal connection between the forward end of the sub-frame and said main frame, means at the rear end of said sub-frame whereby it may be raised or lowered, earth working elements associated with and depending from the opposite sides of the sub-frame, a blocking unit located at the forward end of and intermediate the sides of said sub-frame, said blocking units consisting of a wheel including a hub portion, spokes radiating therefrom, and segmental rim sections associated with the outer ends of the spokes, and having spaced relation at their ends to provide spaces within the rim of the wheel.



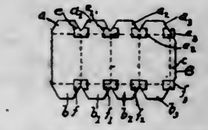
1,784,314. ROTARY SPRINKLER. HENRY NOEL POTTER, Encinitas, Calif. Filed Aug. 1, 1928. Serial No. 296,734. 6 Claims. (Cl. 299—69.)

1. In a sprinkler, a pair of relatively rotatable elements comprising a hollow spindle within and loosely guided for rotation by a sleeve, and means on said elements providing an end thrust bearing, the contact surface of said bearing having the form of a zone of a spherical surface, whereby within the range of relative movement permitted by the loose guiding action of said sleeve, a tight water seal is provided by the spherical surfaces of said thrust bearing when water is supplied to said sprinkler.



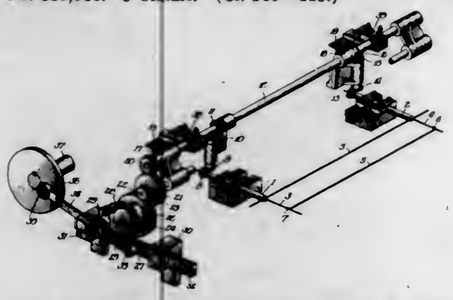
1,784,315. TRANSFER-BINDING CASE AND RELEASE STAND THEREFOR. RICHARD FITZ POWER, Hampstead, London, England, assignor to Morland & Impey Limited, Birmingham, England. Filed July 13, 1927, Serial No. 205,362, and in Great Britain Sept. 25, 1926. 12 Claims. (Cl. 129—18.)

1. A binding case for securing loose leaves of the kind having on one edge open-faced recesses with undercut ends, comprising binding elements for clamping the loose leaves, telescopic anchoring members mounted on said binding elements and parts of which occupy said undercut ends,



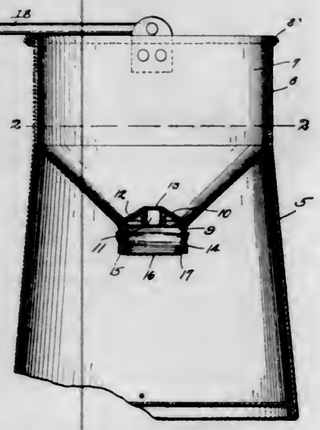
and self-locking means in said telescopic members for holding said binding elements in clamping relation to the leaves.

1,784,316. WASHING MACHINE. LESLIE A. SCHUER and FLOYD BRECKENRIDGE, Breckenridge, Mich. Filed Mar. 16, 1929. Serial No. 347,643. 3 Claims. (Cl. 68—30.)



1. The combination with a container and agitating arms mounted for rotation within the container, of a frusto-conical member removably mounted in the lower portion of the container, an annular apron depending from said member and cut away to afford communication past the margin of said member between the container and the space below the conical member, said member having a concentric gutter therein between its upper and lower portions, an upwardly tapered apertured nozzle carried by the upper portion of the conical member and extending between the agitating arms.

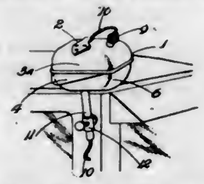
1,784,317. PACKAGE, WRAPPER, AND METHOD OF APPLYING WRAPPERS TO CONTAINERS. JOHN S. STOKES, Huntingdon Valley, Pa., assignor to Stokes and Smith Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 8, 1926. Serial No. 79,936. 14 Claims. (Cl. 229—87.)



10. A wrapper for encircling and inclosing a previously completed closed container comprising an individual sheet having spaced reinforcing elements adhering thereto and substantially spaced from the ends thereof to overlie the corners of the container formed by a wall which is engaged by end portions of the wrapper extending beyond the re-enforcing elements.

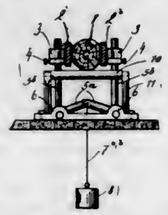
1,784,318. WIRE-TWISTING APPARATUS. ALBERT SWANBAUM, Duluth, Minn. Filed Feb. 14, 1929. Serial No. 339,835. 5 Claims. (Cl. 140—115.)

1. A wire twisting apparatus comprising, in combination, a plurality of twister heads constructed and arranged for intermediate rotation in the same direction, rotary means for driving the twister heads, and means connecting the rotary means with the twister heads, said connecting means comprising a device for changing the movement of the rotary means to alternate and opposite reciprocations in a lineal path, and a device for changing such reciprocations to intermittent rotation in one direction.



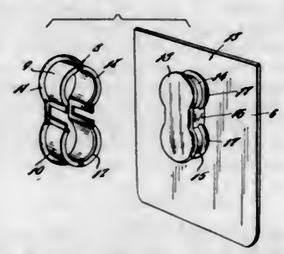
1,784,319. SANITARY MILK PAIL. WILLIAM H. SWARTZ, Celina, Ohio. Filed Sept. 27, 1929. Serial No. 395,630. 1 Claim. (Cl. 210—157.)

A strainer comprising a funnel-shaped body portion having an open lower end, a hollow straining member positioned in the open lower end, said hollow straining member including a threaded body portion, a strainer having an upstanding flange formed with threads, to removably connect the strainer to the hollow straining member, said hollow straining member and strainer having cooperating flanges to support a gasket to provide a fluid-tight connection between the hollow straining member and strainer, said hollow straining member having an upstanding flange, and a straining member having an extension held within the confines of the upstanding flange of the hollow straining member.



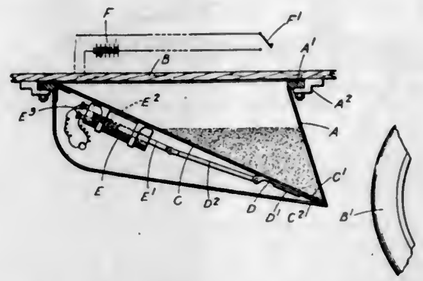
1,784,320. LAMP FOR MOTOR AND LIKE VEHICLES. MARTIN SWENSON, Jr., Taihape, New Zealand. Filed Dec. 17, 1928. Serial No. 326,641. 2 Claims. (Cl. 240—7.1.)

1. A lamp of the class described comprising an elongated dome-shaped casing formed with a bead having a depression on the inside thereof and a depending portion below the bead, the depending portion inclining from the rear toward the front of the casing and merging into the bead, an elongated inverted dome-shaped globe formed with . bead to engage in the depression in the bead on the



casing, the rear depending portion and the inclined side wall thereof on the casing being spaced from the curved rear and side walls of the inverted globe to form reflecting surfaces, and a lamp bulb supported between the casing and globe.

1,784,321. CENTERING AND GUIDING DEVICE. ANDERS TYCHO TIDBLAD, Soderhamn, Sweden. Filed June 27, 1927, Serial No. 201,865, and in Sweden July 6, 1926. 1 Claim. (Cl. 143—4.)

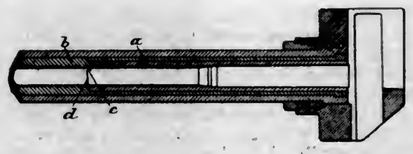


A centering and guiding device for timbers in saw frames and the like, comprising guide bars for the log arranged on each side of the path of movement of the log and opposite to one another, means for supporting said guide bars to permit them to move towards and from each other, comprising pivotally mounted bell crank levers, the upper arms of which support the bars, the other of said arms of said bell crank levers extending laterally towards each other, a weight common to both levers and cable connections between the weight and both levers whereby a guide bar meeting with a bend or the like in a log moves the log by virtue of the weight towards the median line of the path of movement of the log, while the guide bar on the opposite side of the log is inactive upon the log through the weight at that time.

1,784,322. ARTIFICIAL TOOTH. FRANK S. TRUSLER, Vernon, Tex. Filed Feb. 2, 1929. Serial No. 336,969. 3 Claims. (Cl. 32—9.)

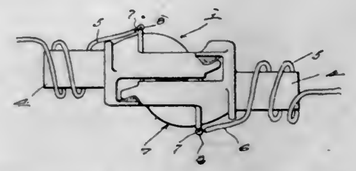
1. In an artificial tooth structure of the class described, a facing having a cavity adapted to receive an expansible female coupling member, said female coupling member comprising upper and lower sockets and a restricted vertical channel between the sockets communicating with the sockets, a backing cooperable with said facing and having an integral male coupling member embodying upper and lower substantially cylindrical portions receivable in said sockets and a vertical web connecting said substantially cylindrical portions and receivable in said channel.

1,784,323. GRIT-DISTRIBUTING DEVICE. HENRY WALLACE, London, England. Filed June 6, 1930, Serial No. 459,495, and in Great Britain Aug. 19, 1929. 4 Claims. (Cl. 291—23.)



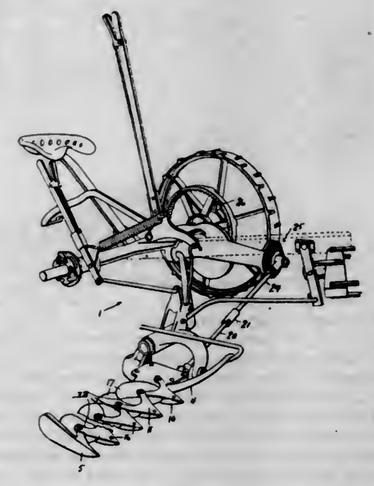
1. A device for distributing grit before the road wheels of vehicles including in combination a container adapted to be mounted in front of and adjacent to one of the wheels, a removable partition in the container inclined toward the wheel so as to divide the container into an upper grit compartment and a lower compartment, an outlet port for grit in the lower end of the partition registering with an opening in the base of the container, and means for controlling the outlet port carried on the lower face of the partition and comprising a shutter and a solenoid operatively connected thereto.

1,784,324. MEDICINE. LEON A. WILSON, Los Angeles, Calif., assignor of one-half to Edwin L. Yewell, Washington, D. C. Filed Aug. 16, 1923, Serial No. 657,825. Renewed May 17, 1930. 1 Claim. (Cl. 167—56.)



In the process of preparing a relatively mobile liquid-petrolatum-agar-water emulsion, the steps of boiling the water with the agar and of agitating the mixture containing the water and agar until cool.

1,784,325. BARREL OF FIREARMS. KARL WITZELL, Berlin-Lichterfelde, Germany, assignor to Rheinische Metallwaaren- und Maschinenfabrik, Dusseldorf-Derendorf, Germany, a Corporation of Germany. Filed Nov. 18, 1929, Serial No. 408,059, and in Germany June 1, 1928. 1 Claim. (Cl. 89—16.)

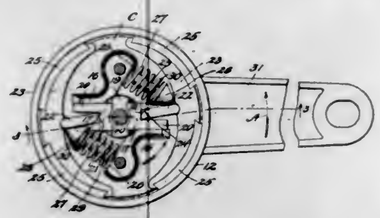


In a barrel of fire arms provided with grooves or furrows and an exchangeable insertion piece, in combination a projection at the front face of said insertion piece and a corresponding opening in the rear face of said barrel adjoining the front face of said insertion piece, said adjoining front faces of said insertion piece and said barrel being formed as helicoidal surfaces of equal pitch the direction of which is opposite to that of said grooves or furrows and being each provided with a stepped face or shoulder extending in the direction of the axis of said barrel.

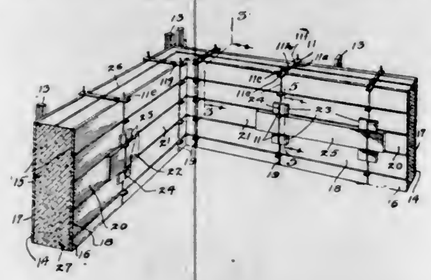
1,784,326. ELECTRIC SIGNAL. MARVIN F. ALDER, La Grange, Ky. Filed Sept. 9, 1926. Serial No. 134,464. 1 Claim. (Cl. 173—333.)

A hollow coupling head having an exposed surface of material that is rust-proof and is a good conductor of electricity and also having at an intermediate point on its top an exterior integral tubular projection disposed at right angles to the length of the head and further having a tubular projection at one end, in combination with a conducting wire and an insulating casing on said wire; said wire and casing coiled about the tubular end projection and arranged to surround a rubber hose on said projection, and said wire and casing being arranged exteriorly of the coupling head and a bared portion of said wire being disposed at right angles to the length of the head and welded in said exterior transverse tubular projection.

1,784,327. MOWING MACHINE. AMBROSE L. ALLEN, Mart, Tex. Filed Dec. 19, 1928. Serial No. 326,985. 3 Claims. (Cl. 56—295.)



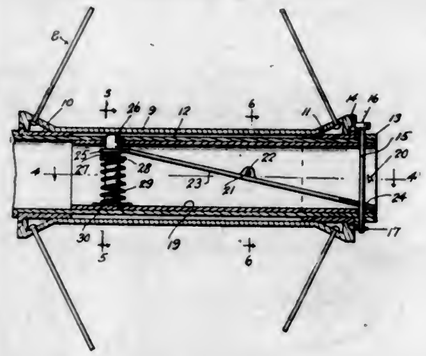
1. In a cutting mechanism for harvesters or the like comprising a casing, stationary guard fingers extending forwardly therefrom, a driven shaft extending longitudinally of the casing, a series of horizontally disposed overlapping cutting disks mounted for rotation on the casing and extending beyond the forward side thereof for cooperation with the respective guard fingers, cover plates for the guard fingers and the upper forward portions of the cutting disks, intermeshing bevel gears arranged on the drive shaft and the respective cutting disks whereby said disks will rotate simultaneously, and means for actuating the driven shaft.



1,784,328. SHOCK ABSORBER. JAMES PIERCE BALDWIN and CLIFFORD GARVER, Los Angeles, Calif.; said Garver assignor to said Baldwin. Filed Oct. 20, 1926. Serial No. 142,984. 7 Claims. (Cl. 188—130.

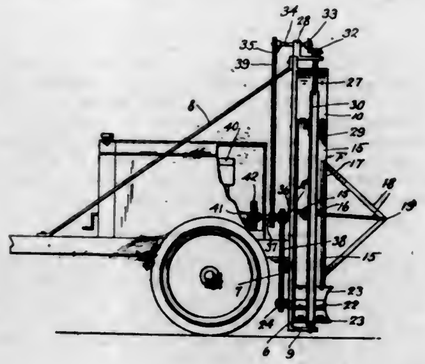
1. A shock absorber of the moving strut friction shoe type and having abutments for the struts which may be

adjusted relatively to each other, of an abutment adjusting device comprising a wedge member having inclined faces contacting with the abutments respectively, a primary spring acting directly on said wedge and a secondary spring acting on the wedge through the intermediary of a screw bolt which has threaded relation with the wedge member.



1,784,329. MOLD-FORM CONSTRUCTION. DIRK BIERHAALDER, Minneapolis, Minn., assignor to Edna May Bierhaalder, Minneapolis, Minn. Filed June 30, 1928. Serial No. 289,393. 5 Claims. (Cl. 25—131.)

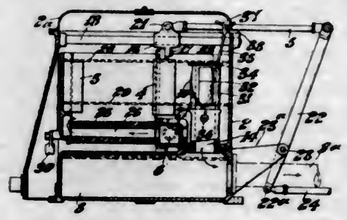
3. A wall mold form construction having in combination a plurality of boards laid edge on edge to form spaced form walls, the ends of certain boards being laid to abut the ends of certain other boards, boards spanning the abutting ends of adjacent boards at the outer sides thereof, a plurality of horizontally spaced and vertically alined spacing and tie bars extending transversely between the form walls and projecting outwardly between the edges of adjacent boards, said bars having shoulders inwardly spaced from their ends and abutting the inner sides of the form walls, and having openings therein outwardly spaced from said shoulders, members inserted within said openings except where spanning boards are used, said members bearing against the outer sides of said form walls to force the same against said shoulders, said bars above and below said spanning bars having openings outwardly therefrom, and members fitting through the last mentioned openings in bars above and below spanning boards and extending across the spanning boards to force the same inwardly, said first mentioned and last mentioned members forming practically continuous vertical studs for said form walls.



1,784,330. WHEEL RETAINER. MAURICE L. BOWERS, Long Beach, Calif. Filed June 14, 1929. Serial No. 370,997. 3 Claims. (Cl. 301—121.)

1. In a structure of the class described, in combination, a hollow axle, a hollow hub mounted for rotation on said axle, a bracing sleeve within said axle, and a spring pressed retaining latch carried by the sleeve, the sleeve and the axle being provided with aligned openings through which the retaining end of said latch projects, and a lever pivotally mounted intermediate its ends within said sleeve, and cooperable with said latch, whereby to permit the latch to be retracted to allow the sleeve to be removed or to allow the hub to be removed from said axle.

2. In a safety retaining device of the class described, a latch assembly including a latch bolt, a spring abutment washer surrounding the bolt, a retaining pin carried by the bolt and cooperable with the washer, a spring surrounding said bolt below the washer, a spring surrounding said bolt below the washer, an anchoring stud, means for guiding the bolt, said spring cooperating at one end with said stud, and means for mounting said latch assembly within the axle of a wheel structure.

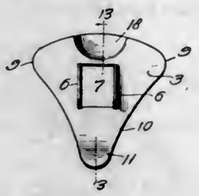


1,784,331. SNOWPLOW. ERICK A. BRATTLIEN, Kensington, Minn. Filed Apr. 23, 1929. Serial No. 357,582. 6 Claims. (Cl. 37—43.)

1. An apparatus of the class described comprising a vertical plate, a flange projecting forwardly from the bottom edge of the plate to form a share, a baffle extending across the upper portion of the plate forwardly thereof, a fan like member rotatably mounted forwardly of the plate, a pair of side beaters rotatably mounted on vertical axes one to each side of the fan like member a pair of augers mounted forwardly of the lower corners of the plate on horizontal axes.

1,784,332. LIQUID ELECTRIC CONTROLLER. HERBERT BROOKE, Brighton, England. Filed Jan. 31, 1928, Serial No. 250,914, and in Great Britain Mar. 3, 1927. 5 Claims. (Cl. 201—57.)

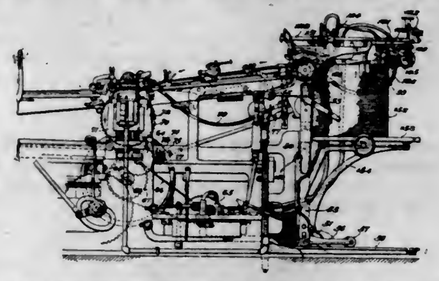
1. A liquid electric controller comprising a trough containing an electrolyte, a fixed electrode, a horizontally moving electrode, means for effecting the horizontal movement of the moving electrode, a vertically moving weir provided in the trough and means for effecting the vertical movement of the weir, the said horizontal and vertical movements being mechanically coupled together



to move the movable electrode away from the fixed electrode at the same time that the weir is lowered to vary the extent of immersion of both electrodes.

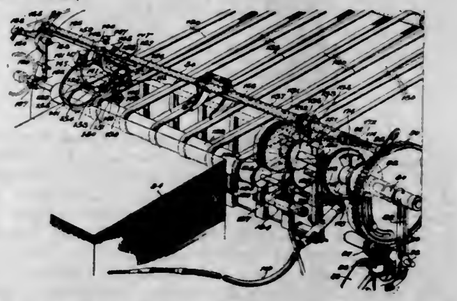
1,784,333. HATBOX. GENEVIEVE BRUER, San Francisco, Calif. Filed Dec. 10, 1928. Serial No. 324,939. 4 Claims. (Cl. 206—8.)

1. The combination with a support, of a hat retaining member including a flexible strip bent substantially in U-shape, the free ends of said strip being inserted through slots in said bottom and bent inwardly towards one another, thereby creating a positive force acting through said strip to maintain an outward bulge in the opposite side walls of the strip above the support.



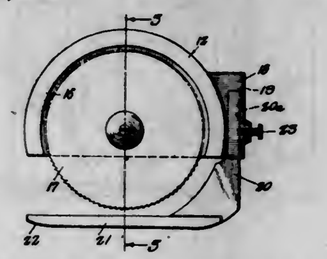
1,784,334. KNIFE GUARD. PRESTON D. CALLUM, Baltimore, Md. Filed Sept. 9, 1925. Serial No. 55,212. 6 Claims. (Cl. 30—9.)

1. A knife guard comprising, a plate having corresponding and oppositely disposed wings, a downwardly projecting lip, the end of the lip being curved backward, flanges formed integral with the body of the plate between the wings, an aperture formed centrally between the wings and demountable fastening means in the flanges.



1,784,335. SHEET-FEEDING DEVICE. CARL E. CHRISTOPHEL, deceased, Pearl River, N. Y., by The First National Bank and Trust Company of Pearl River, N. Y., executor; said Christophel assignor to Dexter Folder Company, New York, N. Y., a Corporation of New York. Original application filed Aug. 14, 1924, Serial No. 732,046, and in Great Britain Aug. 10, 1925. Divided and this application filed Jan. 3, 1927, Serial No. 158,770. Renewed May 21, 1930. 18 Claims. (Cl. 271—62.)

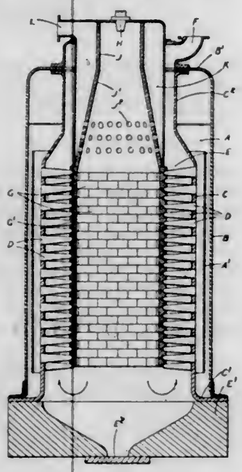
1. In combination, a governor roller, a pile elevating mechanism, a control member cam operated in one direction and spring-operated in the opposite direction, connections between said roller and said member, and a



cam surface movable with said member and adapted to actuate said connections during the pile elevating operation to relieve the pressure of said roller on the pile.

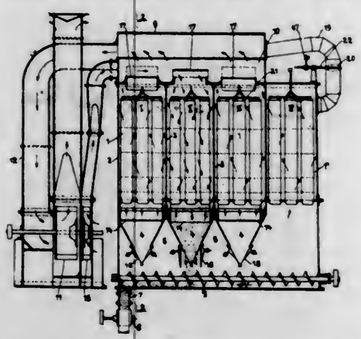
1,784,336. SHEET-FEEDING DEVICE. CARL E. CHRISTOPHEL, deceased, Pearl River, N. Y., by The First National Bank and Trust Company, Pearl River, N. Y., executor; said Christophel assignor to Dexter Folder Company, New York, N. Y., a Corporation of New York. Original application filed Aug. 14, 1924, Serial No. 732,046, and in Great Britain Aug. 10, 1925. Divided and this application filed Jan. 3, 1927, Serial No. 158,771. Renewed Sept. 27, 1929. 14 Claims. (Cl. 192—126.)

1. In a calipering mechanism for sheet feeding devices, a clutch, a clutch throw-out shaft, means carried thereby for operating said clutch, calipering mechanism for the sheets being fed, a pendant provided with a tooth, a driven shaft provided with a ratchet, connections between said pendant and the throw-out shaft, and means controlled by said calipering mechanism permitting said ratchet to engage said tooth to operate said throw-out shaft.



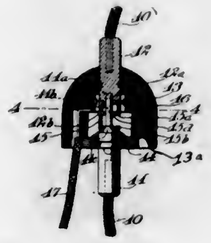
1,784,337. CAST OR SPLINT REMOVING DEVICE. BRUCE E. CLARKE and ARTHUR A. SCHLEW, Tulsa, Okla. Filed Feb. 25, 1929. Serial No. 342,620. 1 Claim. (Cl. 128—317.)

In a device for removing surgical casts, a rotatable cutting element, a guard for said element, an arm extend-



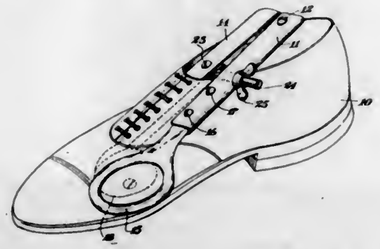
ing from the guard, a plate carried by and extending at right angles to the arm adjacent the edge of the cutting element and having its engaging surface rounded at its ends, and rollers journalled in the plate and having portions of their peripheries projecting beyond the engaging surface of the plate, said rollers being located one near each edge of the plate.

1,784,338. STEAM GENERATOR OR WATER HEATER. THOMAS CLARKSON, London, England. Filed Feb. 23, 1929, Serial No. 342,082, and in Great Britain May 4, 1928. 18 Claims. (Cl. 122—173.)



1. A water heater including in combination a vertically arranged annular water chamber surrounding a heating space, a closure for one end of this heating space, a series of closed-ended water tubes radiating inwards from the inner circumferential wall of the water chamber into the heating space, a built-up tubular combustion member formed of refractory material supported on the inner ends of the water tubes, and means for delivering hot gases through the end of the tubular combustion member which lies adjacent to the open end of the heating space.

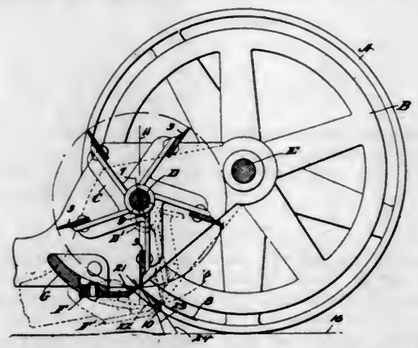
1,784,339. FILTERING APPARATUS. FRIEDRICH CLASEN, Lubeck, and HEINRICH LENCKERSTORF, Stockelsdorf, Germany, assignors to Maschinenfabrik Beth, Aktiengesellschaft, Lubeck, Germany, a Corporation of Germany. Filed Dec. 21, 1928, Serial No. 327,619, and in Germany Oct. 1, 1928. 3 Claims. (Cl. 183—57.)



1. A filtering apparatus, comprising filtering chambers, filtering members in said filtering chambers, passages adapted to be connected with said chambers respectively at opposite sides of the filtering members, means to supply air or gas to be purified through one of said passages and into said chambers at one side of the filtering members and to remove the air or gas from the opposite side of said members and the passage connected therewith, a subsidiary filtering chamber comprising a filtering member and connected at opposite sides thereof respectively with said passages, means to produce a counter-current of air or gas through said main filtering chambers, through said subsidiary filtering chamber and through the passage through which the purified air is removed, and gates controlling the flow of said current and counter-current through said filtering chambers.

1,784,340. ELECTRICAL CONNECTER. CLARENCE H. CONANT, Chicago, Ill. Filed June 18, 1926. Serial No. 116,936. 3 Claims. (Cl. 173—363.)

1. A connecter comprising a bell-housing of insulation having a rim, a terminal carried by the housing, a bottom closure for the latter and spaced from the rim thereof, a plug carried by the closure, a yieldable jack for the plug carried by the terminal, and means to lock the plug in the jack, said jack having sections containing slightly staggered plug-receiving perforations conducive to tension of the jack upon the plug.



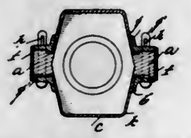
1,784,341. SHOE STRETCHER. ITALO FANTINO, New York, N. Y. Filed Feb. 2, 1929. Serial No. 337,095. 3 Claims. (Cl. 12—129.2.)

1. A device for stretching shoes including an oval-shaped loop member positioned diagonally on a shank and a knob-like member of like contour adapted to be moved into the loop member to stretch the material of the shoe positioned therebetween.

1,784,342. LAWN MOWER. FRANK T. FARMER, Detroit, Mich., assignor of one-half to Robert E. Farmer, New York, N. Y. Filed May 5, 1925. Serial No. 28,144. 6 Claims. (Cl. 56—294.)

1. A lawn mower provided with drive wheels, end frames supported by the drive wheels and by a ground roller, a rotary reel provided with knives and carried by the end frames, a cutter bar blade relative to which the said knives rotate and means for adjusting the position

of the cutting elements so that their cutting edges are in vertical alignment with the axis of said rotary reel to cut the grass at the maximum length.



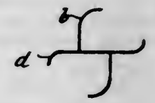
1,784,343. NEW AZO DYESTUFFS. ERNST FELLMER, Leverkusen-on-the-Rhine, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 25, 1928, Serial No. 257,098, and in Germany Aug. 17, 1922. 8 Claims. (Cl. 260—83.)

1. As new products the azodyestuffs having the general formula:

$$R-N=N-\overset{Y}{X}-N=N-R_1$$

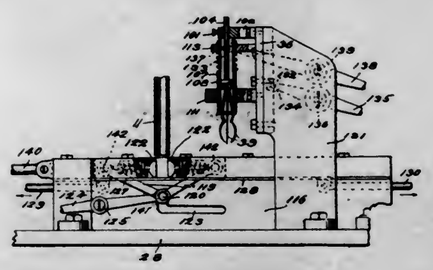
wherein X represents the residue of a p-diamine of the benzene or naphthalene series having not more than ten carbon atoms in nuclear linkage, Y represents a substituent of the group consisting of halogen, alkyl, alkoxy and R and R_1 represent a hydroxynaphthalene sulfonic acid azodyestuff coupling component, the hydroxy groups of which stand in ortho-position to the azo groups, which azodyestuffs are, after being dried and pulverized, in the shape of their alkali metal salts dark powders soluble in concentrated sulfuric acid generally with a blue to bluish green coloration, dyeing silk reddish-blue to black shades of excellent fastness to water which can be discharged to a pure white with hydrosulfite, which dyestuffs upon reduction with stannous chloride and hydrochloric acid, are split up into a substituted para diamino-compound and two molecules of amino-naphthol-sulfonic acid.

1,784,344. JOINT FOR MOLDS OPERATING BY CENTRIFUGAL FORCE. PAUL FERRIER, Paris, France. Filed Sept. 21, 1928, Serial No. 307,466, and in France Mar. 24, 1928. 3 Claims. (Cl. 25—30.)



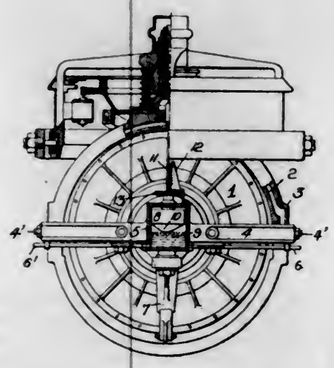
3. In a centrifugal molding apparatus, a mold divided into two sections, angle bars secured at the meeting edges of the sections, said bars having holes in their projecting side, joint pieces having a bore therein secured between the angle pieces, the inner face of the joint pieces coming flush with the inner surface of the mold, a plate secured to the outer edge of each joint abutting the angle bars and preventing said joint pieces from projecting into the mold, and means for securing said joint pieces in position.

1,784,345. MEANS FOR POSITIONING MOLD PATTERN UNITS. THEODORE J. FLACK, Brooksville, Fla. Filed Jan. 16, 1929. Serial No. 332,776. 1 Claim. (Cl. 22—158.)



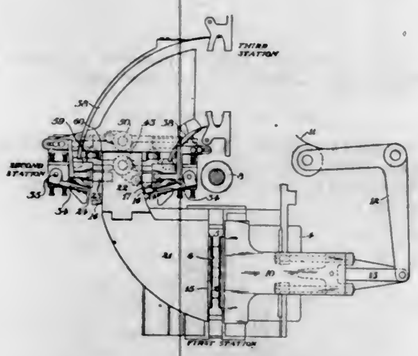
Means for use in the proper positioning of pattern units for the casting of a composite of the units, embodying means for effecting the correct positioning of one of the units with respect to another, the said means comprising anchor blocks for disposal in juxtaposition to the said other unit, and a fin extending from one side of each block to be engaged by notches in the unit to be positioned.

1,784,346. COOLING MEANS FOR CASTINGS. LUDWIG FÖBUS, Dortmund-Barop, Germany. Filed Dec. 24, 1929, Serial No. 416,232, and in Germany Jan. 2, 1929. 10 Claims. (Cl. 22—174.)



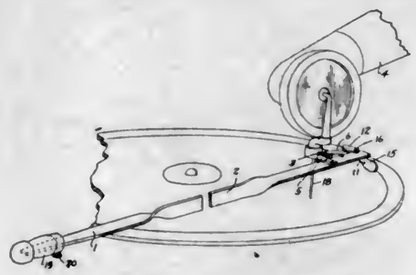
1. Cooling body for foundry purposes, comprising a cross-sectionally ramified strip of sheet metal.

1,784,347. FRUIT-PITTING MACHINE. GIOVANNI FROVA, Milan, Italy. Filed Nov. 26, 1927, Serial No. 235,974, and in Italy Oct. 17, 1925. 17 Claims. (Cl. 146—19.)



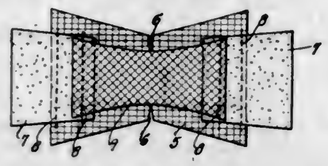
1. A fruit pitting machine comprising means for initially supporting fruit to be pitted, means for feeding fruit in predetermined position to such supporting means, means for grasping fruit on such supporting means, and means for grasping and removing pits from the fruit, and means for reciprocating said fruit grasping means between said fruit feeding means and said fruit pitting means.

1,784,348. LATITUDE ADJUSTMENT FOR GYROCOMPASSES. REGINALD E. GILLMOR, Washington, D. C., and RICHARD F. DEIMEL, Hoboken, N. J., assignors, by mesne assignments, to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed June 21, 1928. Serial No. 287,215. 6 Claims. (Cl. 33—226.)



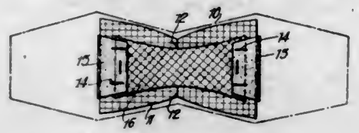
1. In a liquid-controlled gyro compass, means for varying the gravitational factor comprising a member adapted to engage the free surface of the liquid, and means for moving said member to different positions with respect to said surface to alter the free surface thereof.

1,784,349. MACHINE FOR WRAPPING CIGARS AND SIMILAR ARTICLES. FREDERICK GROVER, Leeds, England, assignor to The Forgrove Machinery Company Limited, Leeds, England. Filed Nov. 24, 1928. Serial No. 321,619. 12 Claims. (Cl. 93—7.)



2. In a machine for wrapping cigars and similar goods having tapered ends, a turret head carrying grippers and mounted for progressive rotary movement interrupted by temporary stops at stations along the path of travel of said grippers, means at the first station for enclosing the goods in a wrapper of tubular form, means at the second station adapted to form the projecting ends of the wrapper with gussets, means for overlapping the side walls of said gussets one upon the other, and means at the third station for bending the projecting ends of said overlapped portions and means for ejecting the goods from the machine, the device at each station performing its particular portion of the entire operation simultaneously with the devices at the other stations.

1,784,350. VIBRATION CONDUCTOR FOR THE DEAF. AMEDEE GUERIN, San Francisco, Calif. Filed Feb. 1, 1928. Serial No. 251,133. 3 Claims. (Cl. 181—28.)

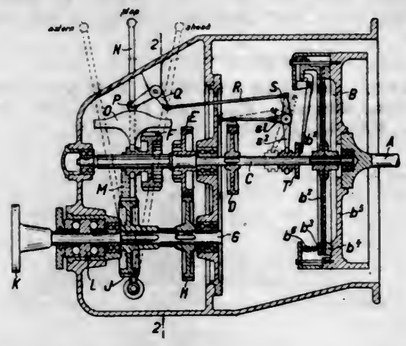


1. The combination with a reproducer having a projection, of a strip removably and pivotally secured to said projection, and a mouth-piece removably carried by said strip, said strip having a portion thereon bent for reinforcing it.

1,784,351. NECKTIE. MAX HALPERN, Bronx, and WILLIAM MAYER, Brooklyn, N. Y. Filed Nov. 6, 1929. Serial No. 403,240. 2 Claims. (Cl. 2—151.)

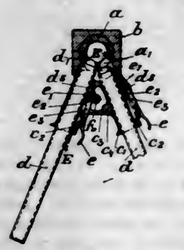
1. A lining insert for bow ties comprising a flexible body of a shape conforming to the shape of the wing of a bow tie, elastic tabs stitched to the ends of said flexible body, and extending therebeyond, and a relatively stiff strip of reinforcing material of a length and width less than the width and length of the body and disposed on one side of said body, the ends of said reinforcing strip overlapping said elastic tabs, and stitching passing through the overlapping ends of said reinforcing strip, elastic tabs and body, substantially as and for the purpose specified.

1,784,352. NECKTIE STRUCTURE. MAX HALPERN, Bronx, and WILLIAM MAYER, Brooklyn, N. Y. Filed Nov. 6, 1929. Serial No. 405,184. 4 Claims. (Cl. 2—151.)



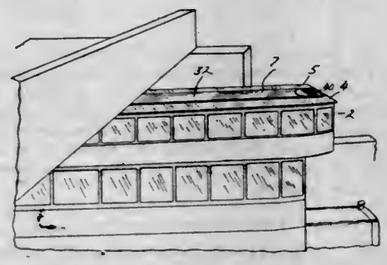
1. In a ready tied bow tie having a double wing member embodying front and rear plies of material, a stiff flexible body of a shape conforming to the general shape of said double wing member and disposed within said double wing member, elastic strips looped around opposite ends of said body and having their ends fixedly secured to opposite sides of said flexible body to cause the looped portions to bulge outward on opposite sides to distend the ends of the double wing member to maintain the same in a full expanded condition.

1,784,353. GUIDE AND PATTERN STRIP AND ANCHOR THEREFOR. GEORGE W. HARLEY, Collingswood, N. J. Filed Oct. 20, 1927. Serial No. 227,563. 10 Claims. (Cl. 94—17.)



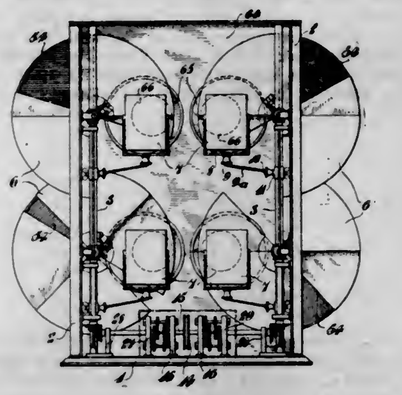
7. A division device for terrazzo flooring including a strip, and an anchor plate engageable through said strip and equipped with means to limit the extent of its movement through the strip.

1,784,354. DRIVE FOR MOTOR BOATS. KARL HAUSSMANN, Kiel, Germany, assignor to Fried. Krupp Germaniawerft Aktiengesellschaft, Kiel-Gaarden, Prussia, Germany. Filed Oct. 2, 1928, Serial No. 309,880, and in Germany Nov. 28, 1927. 4 Claims. (Cl. 74—58.)



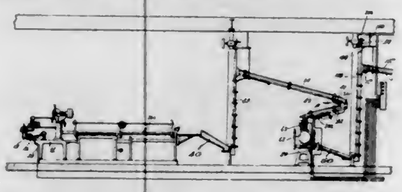
1. In a device of the character described, a driving shaft, a driven shaft, a reversing gearing intermediate said shafts, a clutch and a separate brake intermediate one of said shafts and said gearing, said gearing having control means for shifting it from one rotating direction to the other over a neutral position, a cam connected to said control means, transmitting means actuated by said cam, a rocking lever connected to said transmitting means, means connecting said lever to said clutch, separate means connecting said lever to said brake, said cam actuating said brake and said clutch in a definite sequence if moved out of its neutral position.

1,784,355. AUTOMATIC FIREARM WITH TWO CARTRIDGE MAGAZINES. FRITZ HERLACH and THEODOR RAKULA, Dusseldorf, Germany, assignors to Rheinische Metallwaaren- und Maschinenfabrik, Dusseldorf-Derendorf, Germany. Filed June 4, 1929, Serial No. 368,396, and in Germany Jan. 31, 1929. 7 Claims. (Cl. 42—3.)



1. An automatic firearm having at least two magazine chambers and a cartridge magazine adapted for insertion in each chamber; means for locking one of said magazines in cartridge-feeding position; and means for securing the other magazine out of feeding position; means for unlocking the magazine from which the cartridges have been fired; and means responsive to the action of said unlocking means for ejecting said magazine and for automatically shifting the other magazine into feeding position.

1,784,356. COVER FOR BUSES. DANIEL N. HYMAN, Detroit, Mich. Filed Mar. 8, 1926. Serial No. 93,199½. 12 Claims. (Cl. 296—105.)



1. The combination with a motor bus having an upper deck provided with an open aisle, and top sections at each side of said aisle, of a collapsible cover for said aisle including a plurality of bows extending transversely of said aisle and having the leg portions thereof pivoted on said top sections, a flexible covering for said bows, stiffening means for said covering including bars extending longitudinally of said covering, and means for flattening said covering on said bows when the cover is collapsed including bars extending transversely of the covering and secured to the bars aforesaid.

1,784,357. APPARATUS FOR THE PROJECTION OF LIGHT RAYS. GILBERT THORNTON-JONES, Sherwood, Nottingham, England. Filed Apr. 12, 1929, Serial No. 354,639, and in Great Britain June 20, 1928. 10 Claims. (Cl. 240—3.)

1. Apparatus for projecting light rays embodying a light projector, a shutter in front of said light projector, said shutter composed of a plurality of members located one in front of another, openings in said shutter members, means for effecting continued motion of the shutter members relatively to each other to vary the formation of the light passages through the combined shutter members, and means for producing coloured light effects by the light beam projected through the shutter.

1,784,358. LINE CONTROL FOR CAN-MAKING MACHINERY. LYMAN L. JONES, Seattle, Wash., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 25, 1925. Serial No. 58,562. 37 Claims. (Cl. 113—115.)

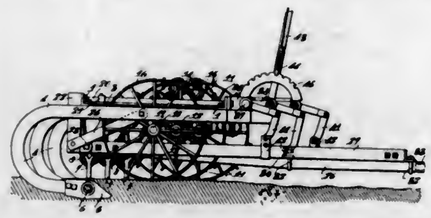
1. The combination of associated machines for performing operations on can bodies and the like, automatically operating transferring devices receiving partly formed can bodies and the like from a said machine and delivering them to a successively operating machine, and an electric control determining the operation of a said machine in accordance with operating conditions in a second said machine.

1,784,359. MINERAL-OIL COMPOSITION. CHARLES F. KAEGEBEHN, Hoboken, N. J., assignor to R. T. Vanderbilt Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 31, 1929. Serial No. 336,656. 6 Claims. (Cl. 87—9.)

1. A mineral oil composition comprising in addition to the oil a fraction of a percent of a hydroxy-diphenyl.

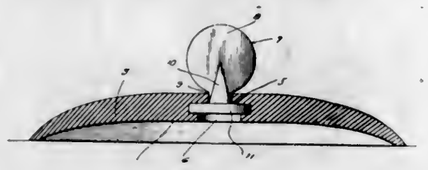
1,784,360. FATTY-OIL COMPOSITION. CHARLES F. KAEGEBEHN, Hoboken, N. J., assignor to R. T. Vanderbilt Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 31, 1929. Serial No. 336,657. 7 Claims. (Cl. 23—250.)

1. A stabilized fatty acid glyceride which comprises a small amount of a phenol having a nuclear H atom substituted by an aryl group.



1,784,361. MEANS FOR ATTACHING SEAT COVERS AND THE LIKE. GEORGE A. KING, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Original application filed Nov. 1, 1927, Serial No. 230,287. Divided and this application filed Mar. 26, 1929. Serial No. 350,019. 6 Claims. (Cl. 24—150.)

1. Means for attaching seat covers and the like, including a hook pin consisting of an attaching pin portion having a bend or head and a hook hinged to said bend or head and adapted to swing freely on said bend or head.

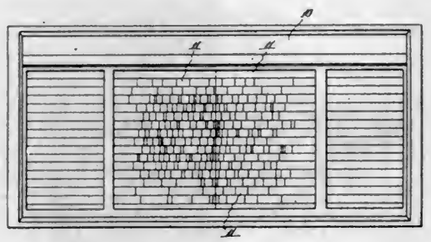


1,784,362. GANG WEEDER WITH TRACTOR HITCH. RALEIGH M. LARGENT, Walla Walla, Wash., assignor to Cheney Weeder Company, Cheney, Wash., a Corporation of Washington. Filed June 9, 1927. Serial No. 197,706. 30 Claims. (Cl. 97—42.)

1. In combination with a plurality of rotary rod weeder units each including a body having rod supports and a rotatable rod journaled in bearings on said supports, said units also including supporting and driving wheels; means flexibly connecting said units together endwise on longitudinal axes whereby said units may rise and fall to accommodate them to the surface of the ground traversed,

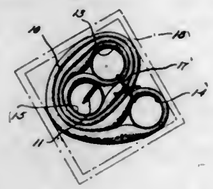
the rotary rod of one unit projecting to overlap an adjacent unit whereby to treat the ground by the rods in a continuous way from the outer end of one end unit to the outer end of the opposite end unit for the purposes specified, and a draft appliance connected to the several units.

1,784,363. GOLFER'S PRACTICE TARGET. GEORGE LESTER, Milwaukee, Wis. Filed July 16, 1929. Serial No. 378,697. 1 Claim. (Cl. 273—35.)



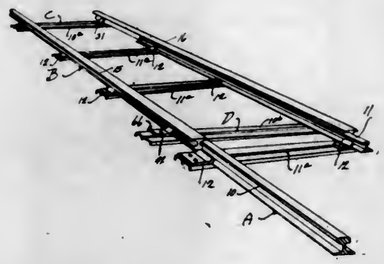
A golf practice device of the class described comprising a circular concavo-convex rubber base having a central opening and a retaining channel, a detachable target comprising a disc-like rubber flap, a neck attached thereto and extending through said opening, and a disc like head carried by said neck and removably seated in said channel.

1,784,364. CHANGEABLE EXHIBITOR. ELAINE VON DER LIPPE-LIPSKI, Washington, D. C. Filed Oct. 24, 1929. Serial No. 402,281. 5 Claims. (Cl. 40—76.)



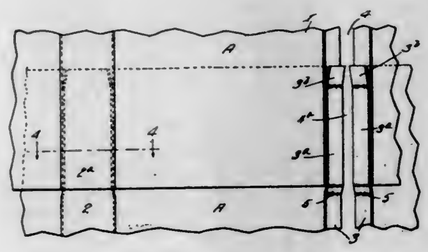
1. A changeable sign or picture exhibitor comprising a plurality of bars or units having media faces on which the different signs or pictures are depicted to be brought successively in coplanar relation, auxiliary units independently rotatable between adjoining main bars or units and having portions of the sign or picture depicted on the media faces thereof, means for turning the main bars or units, and means for turning the auxiliary units independently of said main bars or units.

1,784,365. ANIMATED SIGN. ELAINE VON DER LIPPE-LIPSKI, Washington, D. C. Filed Mar. 22, 1930. Serial No. 438,072. 6 Claims. (Cl. 40—76.)



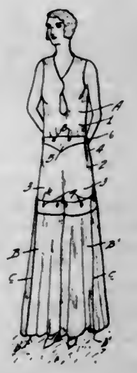
1. A changeable sign exhibitor comprising rotatable bars or units having a plurality of media faces adapted to be brought successively into coplanar relation with respect to front of the sign, pins projecting from the ends of the bars or units and corresponding in number to the media faces and in spaced relation thereto, means engaging the pins for rotating the bars or units in one direction, and means engaging the pins for reversing the rotation of said bars or units.

1,784,366. METHOD OF PACKING TUBES. LLOYD M. LITTLEFIELD, Chicopee Falls, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Oct. 11, 1929. Serial No. 398,929. 3 Claims. (Cl. 206—46.)



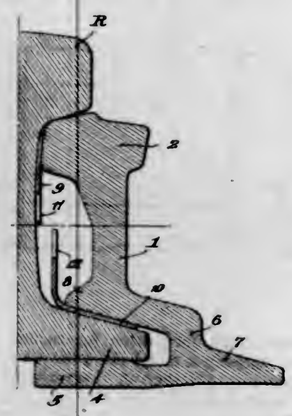
2. The method of packaging an inner tube which comprises winding the tube about a plurality of shells and securing the shells together to hold the tube convolutions in position.

1,784,367. TEMPORARY EXTENSION FOR MINE RAILWAYS. ARMISTEAD R. LONG, Scarbro, W. Va. Filed Apr. 27, 1929, Serial No. 358,641. Renewed Oct. 20, 1930. 26 Claims. (Cl. 238—10.)



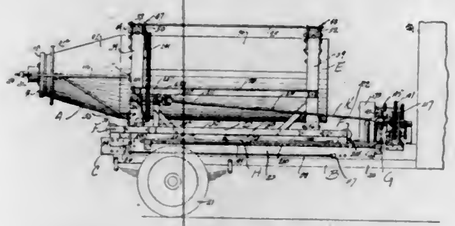
1. In a railway extension unit a tie having releasable clamps separated to receive therebetween the head and web portions of an inverted rail in an unobstructing relation with the normal foot portion of said rail, one of said clamps comprising a pivoted clamp swingable in the plane of the tie into and out of engagement with the head and web of an inverted rail placed on the tie.

1,784,368. SHEET-METAL BUILDING CONSTRUCTION. JAMES F. LOUCKS, Cleveland, Ohio, assignor to Detroit Steel Products Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 17, 1927. Serial No. 233,853. 4 Claims. (Cl. 189—85.)



2. A sheet metal foundation for roofing construction, the same comprising a metal sheet having hollow ribs extending from one side thereof, there being a narrow slot provided between each of the ribs and the body of the sheet whereby the surface of the sheet opposite the said ribs is a substantially continuous load-carrying surface, the end portions of the ribs at one end of the sheet diminishing in cross-sectional area toward such end and being provided on each side thereof with a projection constituting a stop to limit the insertion of such reduced ends of the ribs of said sheet into the ribs on the opposite end of a like sheet.

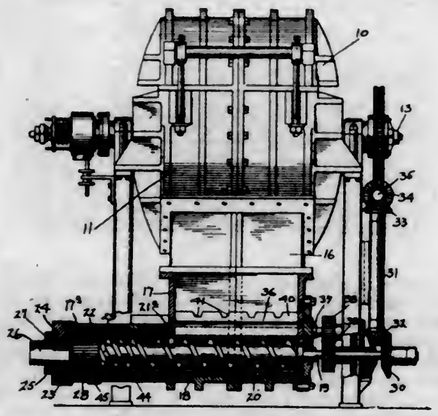
1,784,369. WOMAN'S COMBINATION OR CONVERTIBLE GARMENT. RALPH LOWENBAUM, St. Louis, Mo., assignor to R. Lowenbaum Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed Sept. 2, 1930. Serial No. 479,140. 3 Claims. (Cl. 2—72.)



3. In an article of women's wearing apparel, a foundation-garment comprising a waist and short drawers, in combination with separate companion sections, and series of fastening on each of said sections and on the waistline of the garment and on, and below the crotch of, the drawers for co-operative engagement for selective detachable connection of said sections to the waist or drawers of the garment for converting the garment into either pajama or dress-formation.

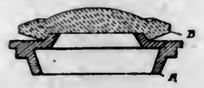
1,784,370. CONSTRUCTION FOR REHABILITATING RAIL JOINTS. MILTON MARKLEY, Harrisburg, Pa., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Jan. 22, 1930. Serial No. 422,627. 10 Claims. (Cl. 238—188.)

1. A rehabilitated rail joint structure including the rails, a splice bar having bearing engagement with the rail head and a clearance from the outer portion of the head fishing surface of the rail, and a wear compensating spacing member interposed between the foot of the bar and the rail flange.



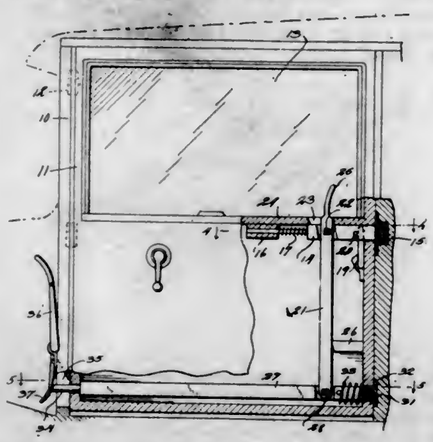
1,784,371. CONCRETE MIXER. CHARLES K. MARKS, Womelsdorf, and WALTER G. WEINHOLD, Shillington, Pa. Filed Oct. 5, 1929. Serial No. 397,556. 11 Claims. (Cl. 83—73.)

1. In a concrete mixing device the combination of a frame, a rotary mixing drum, means for releasably pivoting the rotary mixing drum at each end upon said frame, and hoisting means to hoist the rotary mixing drum on the effective pivot means at one end of the drum for elevating the other end of the drum.



1,784,372. CAKE-DISCHARGING MEANS FOR PRESSURE FILTERS. JASPER A. MCCASKELL, Salt Lake City, Utah. Filed Oct. 7, 1925. Serial No. 61,152. 10 Claims. (Cl. 210—201.)

1. In a continuous pressure filter of the class described, a closed casing adapted to receive material to be filtered, a rotating leaf filter medium partially submerged in the liquid to be filtered, means to subject the filter medium and the liquid to be filtered to a super-atmospheric gaseous pressure, means to dislodge filter cake from the filter medium and discharge said cake into a cake receiving compartment communicating with said casing and subjected to said super-atmospheric gaseous pressure, and means to discharge the filter cake from said compartment without loss of said pressure which comprises a screw conveyor, a discharge valve at the end of said conveyor,



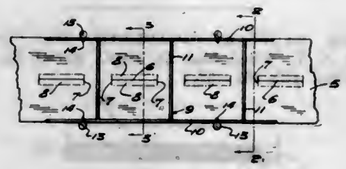
said valve having a conical end thereon, and resilient means to actuate said valve to oppose the discharge of said filter cake with a pressure proportional to said super-atmospheric pressure.

1,784,373. POTTERY MOLD AND METHOD OF MAKING THE SAME. WILLIAM J. MILLER, Swissvale, Pa. Filed Jan. 19, 1927. Serial No. 162,140. 11 Claims. (Cl. 25—129.)

1. A mold of the class specified, comprising a standard base member and a renewable body member, said members being formed with cooperating recesses and projections for removable association of one with another.

1,784,374. DOOR-OPENING DEVICE. WILLIAM MILLER, Ritzville, Wash. Filed Apr. 22, 1930. Serial No. 446,378. 6 Claims. (Cl. 268—3.)

1. A door opening device of the character described comprising a door bolt adapted to be mounted in a hollow door

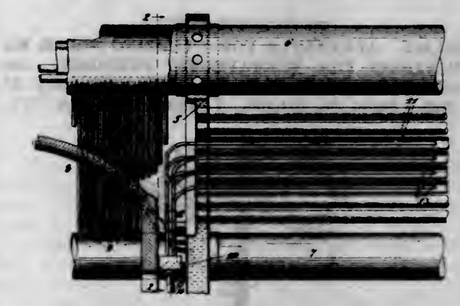


structure, means for slidably mounting the door bolt in the door frame, a door opening member slidably mounted within the door frame, link means connecting the member with said door bolt, and rockable operating means engaging one end of the member for coactively moving the member and the bolt within the door frame to unlock and open the door.

1,784,375. CURTAIN FIXTURE. JOHN L. MOHUN and HENRY PIESCH, Omaha, Nebr., assignors to National Lock Washer Company, Newark, N. J., a Corporation of New Jersey. Filed Dec. 9, 1929. Serial No. 412,628. 8 Claims. (Cl. 156—26.)

4. A curtain fixture for a window, comprising a hollow bottom bar made of metal within the upper edges of which bar the lower edge of the curtain is secured, blocks fixed within said bar near the ends thereof, members supported by said blocks and extending beyond the bar and adapted to track within suitable ways in the sides of the window casing, spaced movable blocks within said bar near the central portion thereof, brake rods extending loosely through said end blocks and having operative connection with said members and secured at their inner ends to said movable blocks, spring means acting upon said movable blocks and functioning to normally force the latter apart, and means for adjusting said spring means.

1,784,376. PAPER MULCH AND REENFORCING AND RETAINING MEANS THEREFOR. DAVID PELTON MOORE, Avon Park, Fla. Filed May 22, 1928. Serial No. 279,701. 11 Claims. (Cl. 47—9.)

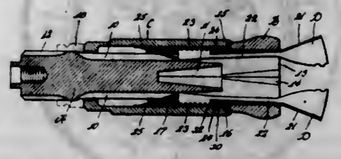


1. A retaining means for a strip of mulch paper and adapted to be placed on top of the flat laid paper, said means having parallel and longitudinal members connected by cross members.

1,784,377. SET SCREW. GEORGE A. MOORE, Boston, Mass. Filed Feb. 20, 1930. Serial No. 429,927. 2 Claims. (Cl. 85—1.)

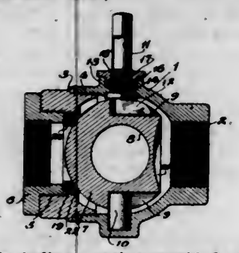
1. A set-screw having a driving tool-engaging outer end, a threaded periphery, an abutment-engaging inner end, and a longitudinal bore extending from the inner end, and having a closed end or bottom constituting a pressing face, an inner portion intersecting said face and of relatively small diameter, and an outer portion of larger diameter, combined with a helical spring inserted in the bore and normally projecting from the inner end of the screw, the inner end portion of the spring being in frictional binding engagement with the inner bore portion and bearing on the pressing face, the outer end portion of the spring extending loosely through the outer bore portion, so that it is free to expand and contract lengthwise, the outer end convolution of the spring being inclined so that it constitutes a one-way acting dog adapted to slip on an abutment when the screw is turned in one direction, and have a biting engagement with the abutment to oppose a turning movement of the screw in the opposite direction.

1,784,378. LOCOMOTIVE SUPERHEATER. JOHN E. MUHLFELD, Scarsdale, and JOHN C. CHAPPLE, Brooklyn, N. Y. Filed Apr. 20, 1927. Serial No. 185,100. 3 Claims. (Cl. 122—461.)



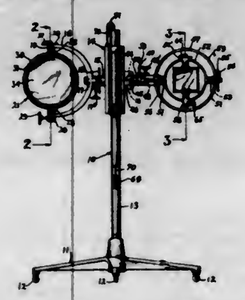
2. In combination with a fire tube boiler and a fire box, a superheater header mounted adjacent to the boiler flue sheet and below the path of flow of the products of combustion.

1,784,379. PROCESS OF REDUCING ORGANIC KETO COMPOUNDS. EDUARD MÜNCH, Ludwigshafen-on-the-Rhine, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed May 19, 1927, Serial No. 192,796, and in Germany June 24, 1926. 5 Claims. (Cl. 260—52.)



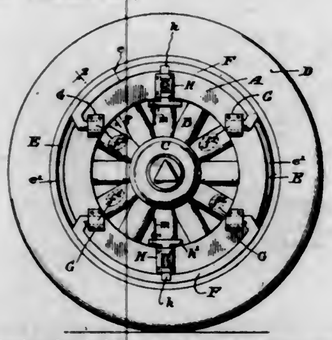
1. The process which comprises subjecting an organic compound containing a keto group to the action of sulfurous acid and formic acid in the presence of an organic base, but substantially in the absence of water.

1,784,380. BIT OR DRILL HOLDER. WALTER B. MURDOCH, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed July 19, 1928. Serial No. 293,897. 5 Claims. (Cl. 279—52.)



1. In a chuck of the character described, a body portion having a core and a head, said core having a socket and longitudinally extending grooves in its opposite sides, jaw elements slidably mounted in said grooves, a sleeve about said core and having an internal thread, said jaw elements having threaded portions engaging said thread, and means on said body portion bridging said grooves adjacent their forward ends and against which the forward ends of said threaded portions are adapted to engage.

1,784,381. VALVE. FRANK J. O'STROSKE, Columbus, Ohio. Filed Nov. 28, 1927. Serial No. 236,289. 9 Claims. (Cl. 251—113.)

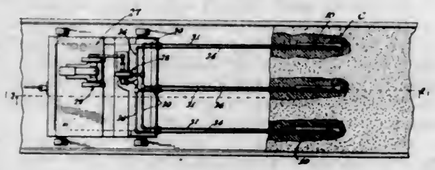


1. A valve including a casing provided with two internal seats at one end thereof, and a valve head in said casing mounted for rotary and reciprocatory movement, one of said seats being normally inoperative.

1,784,382. APPARATUS FOR UTILIZING SOLAR RADIATIONS FOR THERAPEUTIC PURPOSES. ASBJÖRN P. OUSDAL, Santa Barbara, Calif. Filed Nov. 27, 1926. Serial No. 151,166. 7 Claims. (Cl. 174—177.)

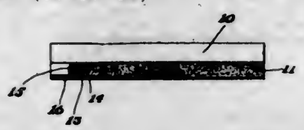
1. In a therapeutic apparatus means for directing solar rays upon an area comprising a base, a standard on said base, an arm on said standard, a lens frame mounted on said arm, a lens in said frame, a hollow member on said lens frame and projecting therefrom, said member having an opening therein, and a removable closure for said opening.

1,784,383. TIRE RIM. EUGENE PATRONE, Washington, D. C. Filed Nov. 10, 1925. Serial No. 68,168. 3 Claims. (Cl. 152—21.)



1. A device for holding a tire on a wheel comprising a curved holding member extending over more than 1/7 of the periphery of the wheel, pivotally engaged at two opposite ends, the outer extent in toto of the curved holding member being swingable inwardly of the inner periphery of the tire, and locking means engaging the curved holding member between its pivoted ends for securing the curved holding member in operative position.

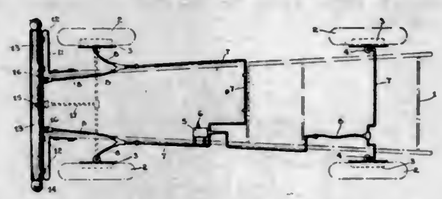
1,784,384. WATER-COOLED WELDING CABLE-JOINT CONSTRUCTION. JAMES J. PAUGH, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 29, 1929. Serial No. 358,825. 13 Claims. (Cl. 219—4.)



1. In a welding apparatus, the combination with a flexible conducting cable and a tubular welding head of a plug removably receivable in adjacent ends of said cable and head and adapted to electrically connect said elements together, said plug having a bore extending therethrough providing a water conduit between said cable and said head.

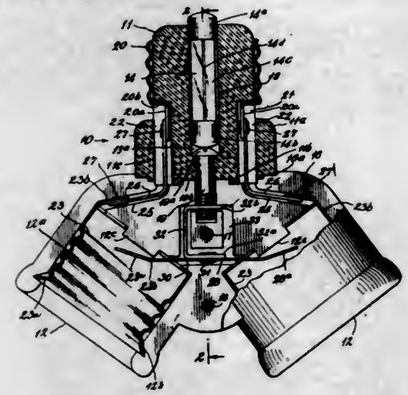
1,784,385. COMPACTING MECHANISM. JOHN C. PELTON, Santa Barbara, Calif. Filed Nov. 5, 1929. Serial No. 405,041. 5 Claims. (Cl. 259—72.)

1. An apparatus for compacting plastic masses comprising a casing, a hose connected to one end of said casing, a head formed of metal having a port or passage extending therethrough connected to said hose, and means for inducing a circulation of fluid through said hose and the passage through said head, whereby the re-action of fluid discharging therefrom against the side wall of said casing will impart vibratory movement to said head which through striking on the side wall of said casing will impart vibration thereto.



1,784,386. SANITARY CIGARETTE. MAX POECK, New York, N. Y. Filed Aug. 23, 1928. Serial No. 301,511. 1 Claim. (Cl. 131—52.)

In a cigarette having a wrapper and a filling of tobacco, a filtering pad, a tubular holder adapted to be releasably mounted in one end of said wrapper, said pad being housed in said tubular member, a conical wall closing on one end of said tubular member, said pad resting in said conical end, said conical wall having openings therein to permit passage of smoke from one end of the cigarette through the filtering pad and out of the open end of the tubular member and raised points on said tubular member for frictionally binding the wrapper to the tubular member.

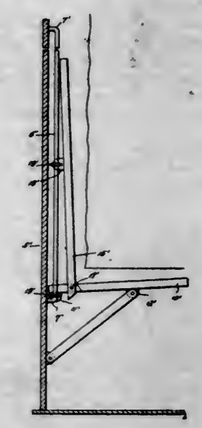


1,784,387. BRAKE MECHANISM FOR MOTOR VEHICLES. JOHN WILLIAM POSTEL, Palisade, N. J. Filed Feb. 21, 1929. Serial No. 341,617. 6 Claims. (Cl. 180—83.)

1. A device of the character described comprising motor vehicular means, braking mechanism therefor, hydraulic pressure valves associated with said braking mechanism, a hydraulic fluid supply chamber, a pneumatic bumper mounted on said vehicular means arranged to receive fluid from said hydraulic supply chamber, fluid ducts connected up with said pressure valves said supply chamber and said bumper, and means whereby when pressure from

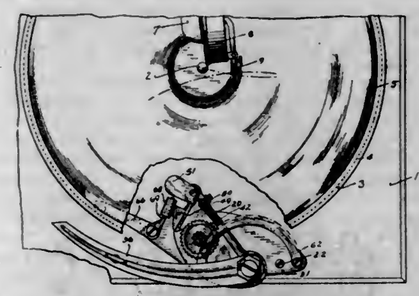
contact distorts said bumper the fluid pressure therein affects said valves to actuate said braking mechanism of said vehicular means.

1,784,388. ELECTRIC SOCKET FITTING. LOUIS PROPP, New York, N. Y., assignor to The M. Propp Co. Inc., New York, N. Y., a Corporation of New York. Filed June 3, 1927. Serial No. 196,236. 15 Claims. (Cl. 200—115.5.)



1. A fitting of the character described comprising a body formed of a plurality of separate parts, one of said parts forming a plug porton, and other parts constituting mating side portions forming the body of a lamp socket portion, said plug portion having a chamber, and a replaceable fuse element in said chamber having an extending end portion forming a center contact for said plug portion.

1,784,389. SHIFTABLE FASTENER. DANIEL I. REITER, New York, N. Y. Filed Apr. 27, 1929. Serial No. 358,456. 16 Claims. (Cl. 24—213.)

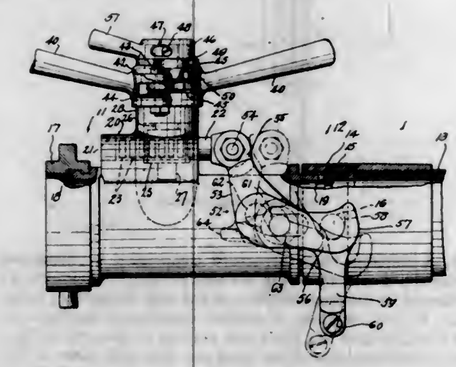


1. In a prolonged carpet fastener element, a stud provided with an annular flange member having an opening therein, a plate member supporting and guiding said flange for transverse movement in all directions, said plate member closing said opening, spaced inwardly bent lugs on one of said members providing a groove for the reception of the other member, and edge prongs on said plate member adapted to be passed upwardly through a carpet and bent thereover, said prongs being arranged between the lugs and entirely above said flange member and extending in a direction opposite to the direction of the stud whereby the stud lies entirely below the carpet to which the element is attached.

1,784,390. FOLDABLE CHAIR. HOWARD E. RICE, Miami, Fla. Filed July 16, 1929. Serial No. 378,969. 2 Claims. (Cl. 55—83.)

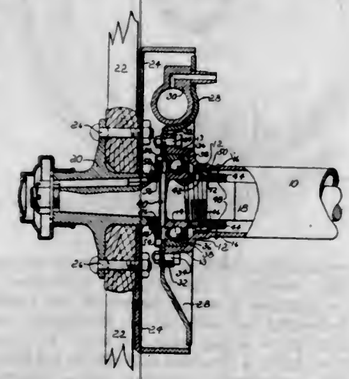
1. A foldable chair structure comprising a supporting structure, a seat section, a slidable connection between the inner end of the seat section and the said supporting structure, a back section, a pivotal connection between the back section and the inner end portion of the seat section, and a slidable connection between the said back section and the said supporting structure, the inner end of the said seat section being adapted to be lifted, so that the outer end will swing downwardly and cause the seat section to assume a position on substantially the same plane with the back section.

1,784,391. PHONOGRAPH STOP. WILLIAM C. ROE, Pittsburgh, Pa. Filed Dec. 17, 1927. Serial No. 240,773. 13 Claims. (Cl. 192—122.)



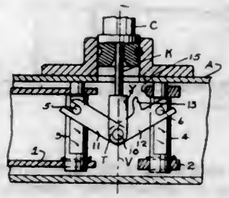
1. In combination with a phonograph of the type employing disc records, a turntable, a reproducer element adapted to traverse a record placed on the turntable, a pointer journalled laterally of the phonograph turntable and adapted to be swung over the upper surface of the supported record in a direction opposite to the direction of travel of the reproducer, a portion thereof adapted to be "set" in the path of the reproducer element at the end of the record thereon, a spring constantly exerting an effort to restore the pointer to its normal position; a ratchet mechanism adapted to retain the pointer in the path of the reproducer and means actuatable by a slight pressure contact of the reproducer element against the pointer to trip the ratchet mechanism whereby said spring will return the pointer to a normal position lateral of the record.

1,784,392. MANUFACTURE OF INSULATORS. DAVIDGE H. ROWLAND, Baltimore, Md., assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Aug. 17, 1928. Serial No. 300,386. 5 Claims. (Cl. 25—156.)



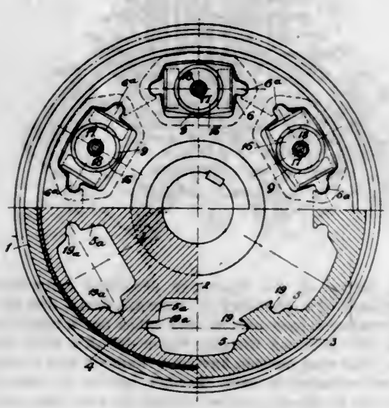
1. In the manufacture of porcelain insulators of the type having a portion provided with granular material united thereto, the step of subsequently applying glazing liquid upon said portion to coat the granular material.

1,784,393. THREADLESS COUPLING. MORRIS SCHAWROW, Bayonne, N. J. Filed Feb. 11, 1929. Serial No. 338,991. 12 Claims. (Cl. 285—171.)



1. A device of the character described, including a plurality of separate members, and means to detachably interconnect the same, said means including a single rack and pinion carried by one of the members, a fastener portion on the other member, and a lever pivotally mounted on one of said members, said lever engaging both the rack and the said fastener portion and being swingable to disengage one of them.

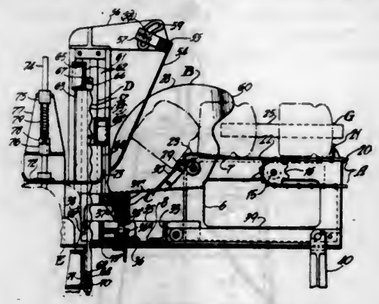
1,784,394. AXLE CONSTRUCTION. OWEN R. SKELTON, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 19, 1927. Serial No. 240,965. 6 Claims. (Cl. 180—75.)



1. In an axle construction of the class described, an axle housing, an integral radially extended bell shaped portion at the outer end of said housing, a bearing in said extended portion, a radial flange at the outer edge of said bell shaped portion, and a brake mechanism supporting plate adapted to be secured to the outer surface of said flange and extending radially beyond the inner periphery of said bell shaped portion to hold said bearing.

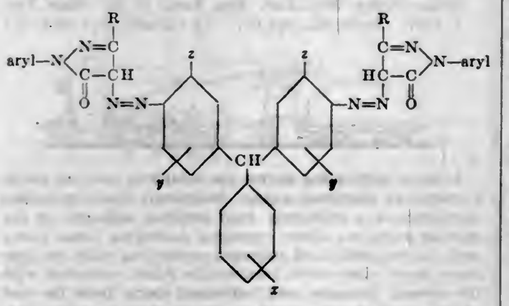
1,784,395. BRAKE STRUCTURE. JOHN SNEED, Ferndale, Mich., assignor to The Midland Steel Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 7, 1928. Serial No. 290,955. 20 Claims. (Cl. 188—78.)

1. Toggle spreading mechanism comprising a pair of levers pivoted together, one of said levers having a normally idle arm adapted to include the fulcrum point for one end of the toggle when the pivot point of the toggle approaches the line which joins the normally operative ends of the toggle.



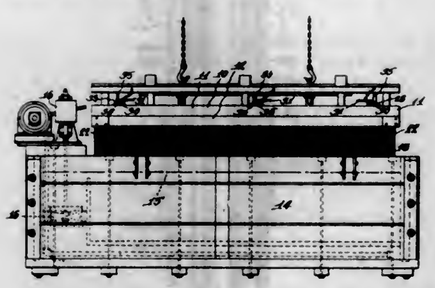
1,784,396. POWER-TRANSMISSION GEAR FOR INTERNAL-COMBUSTION ENGINES. WILLIAM JOSEPH STILL, London, England. Filed May 1, 1924, Serial No. 710,356, and in Great Britain May 14, 1923. 9 Claims. (Cl. 74—29.)

1. A power transmission gear comprising a flexible coupling in the form of a wheel, comprising a rim and a nave or hub, said rim being mounted on the nave or hub for relative circumferential movement, said rim and hub having intercalated flanges on their opposing faces and also having openings in said intercalated flanges adapted to register with each other in the undisplaced position of the parts of the coupling, wedges located in and bridging said openings and springs acting on the wedges and tending to resist any relative movement between the rim and the nave or hub thereby damping the oscillations, the arrangement being such that relative movement between the rim and the nave or hub causes the wedges to be moved and to compress their respective springs.



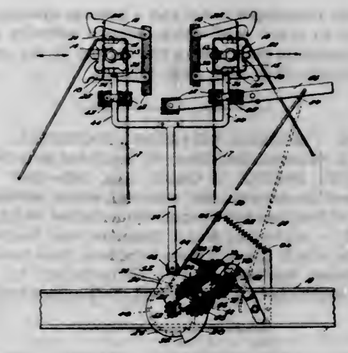
1,784,397. BREAD-SLICING MACHINE. ANTHONY TEWES, St. Louis, Mo., assignor to Papendick, Inc., St. Louis, Mo., a Corporation of Missouri. Filed Apr. 22, 1929. Serial No. 357,279. 9 Claims. (Cl. 146—153.)

1. In an automatic bread-loaf slicing machine, in combination, a stationary feed-plate, and means for successively delivering the loaves one by one to and upon the feed-plate from a plane thereabove, said means including an oscillatory member, rails on said member for supporting the loaf deposited therein, and yielding fingers for engaging the loaf for retaining the same upon the rails when the oscillatory member is in loaf-receiving position.



1,784,398. AZO DYESTUFFS. KARL THIESS, Frankfort-on-the-Main-Hochst, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed July 23, 1929, Serial No. 380,467, and in Germany Aug. 13, 1928. 6 Claims. (Cl. 260—76.)

1. As new products, the compounds of the following formula:

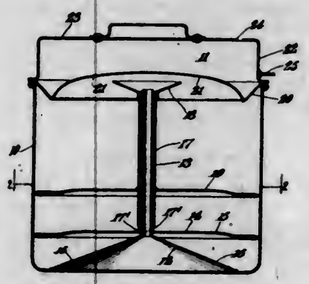


wherein x stands for hydrogen or halogen, y for halogen, z for hydrogen or a methyl group and R for hydrogen or an alkyl group and wherein each of the two aryl-residues contains halogen and a sulfo group, being greenish-yellow movement of the card cylinder.

1,784,399. MACHINE FOR DYEING AND TREATING YARN. JAMES HARRY THOMPSON, Trenton, N. J., assignor to Walker & Davis, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 17, 1929. Serial No. 378,926. 9 Claims. (Cl. 8—19.)

1. In a machine of the character indicated, a two-part rack including upper and lower parts to be used at different times together as a unit and apart as separate units, a lower side rail upon the lower part, an upper side rail upon the upper part vertically perforated and adapted to register with the lower side rail when the parts are together, a bolt fastened to place upon the lower rail having an upwardly extending portion adapted to pass through the perforation when the parts are together, a locking member vertically pivoted upon the upper surface of the upper rail having a hook portion adapted in locking position to span the bolt, and a downwardly directed abutment carried upon the upper portion of the bolt adapted to be engaged by an upwardly directed surface of the hook.

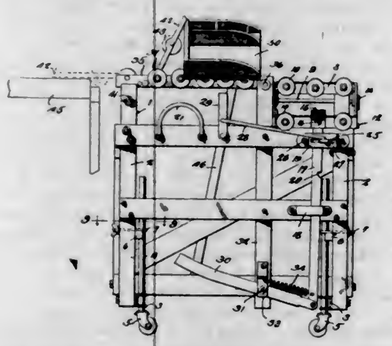
1,784,400. LOOM. LOUIS VISCOLOSI, Providence, R. I., assignor to The Esmond Mills, Esmond, R. I., a Corporation of Rhode Island. Filed Jan. 30, 1929. Serial No. 336,234. 11 Claims. (Cl. 139—324.)



1. In a loom, in combination, a jacquard mechanism including a frame, a griff actuating lever mounted thereon, a card cylinder mounted on said frame, means to reciprocate said card cylinder, two oppositely disposed pawls for turning said cylinder on reciprocation thereof pivotally mounted on the jacquard frame on opposite sides of said cylinder, link means pivotally joining said pawls together, and a repeat mechanism comprising a cam rotatably mounted on the loom frame having a semi-circle of a relatively small radius and a semi-circle of a greater radius, a vertically reciprocable support having the upper and attached to the lower pawl and the lower end thereof resting on said cam, whereby when said end rests on the semi-circle of greater radius it will raise up said lower pawl to reverse the direction of rotation of the card cylinder and when said end contacts the portion of lesser radius on said cam, it will lower the connected upper pawl to a position to rotate the card cylinder forwards, a ratchet gear attached to said cam, a rod having the upper end thereof attached to and reciprocated by the griff actuating lever extending obliquely downwardly and having the lower end thereof terminating in a pawl end adapted to be moved to a position on reciprocation thereof to rotate said ratchet and attached cam, a train of reducing gearing actuated by said cam, and knockoff means for said reciprocating rod actuated on a complete rotation of the last gear in the reducing train of gearing after multiple revolutions of said cam to automatically permit continuous forward movement of the card cylinder.

1,784,401. WASHING DEVICE. SRINIVAS RAM WAGEL, New York, N. Y., assignor of seventy-five per cent to The Winchester American Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 31, 1927. Serial No. 216,649. 2 Claims. (Cl. 68—30.)

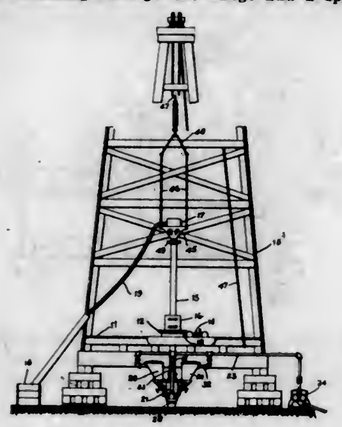
2. In a device of the character described the combination of a closed container, a support therein for articles



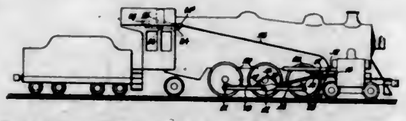
to be washed, means effective upon the heating of water in said container for causing upward discharge in said container of water and water vapor whereby said water vapor is liberated to saturate said articles, a trap for collecting the discharged water and a passage extending from said trap to below said article support whereby the discharged water is returned to the bottom of the container without contacting with said articles.

1,784,402. MONOSACCHARIDE MATERIAL. THEODORE B. WAGNER, Brooklyn, N. Y. Filed July 30, 1923. Serial No. 654,782. 1 Claim. (Cl. 127—38.)

The new monosaccharide material which consists of a mixture of dextrose and nongummy dextrines which may be produced by converting starch liquor by acid hydrolysis to a point at which the dextrines have lost their gummy and mucilaginous condition and is characterized by the absence of dextrines in a gummy and mucilaginous condition.



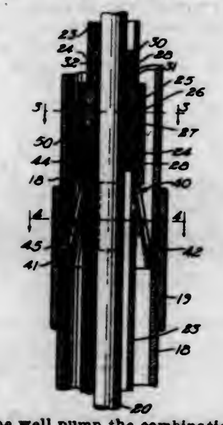
1,784,403. FRUIT-PACKING STAND. EDWIN R. WALKER, Yakima, Wash. Filed June 11, 1928. Serial No. 284,444. 5 Claims. (Cl. 226—129.)



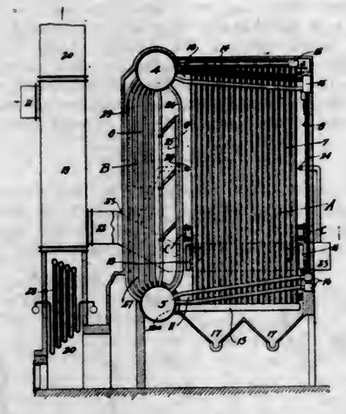
1. In a device of the class described, a frame, a packing table, a skid located at one side of the packing table, means for mounting the skid and the packing table on the frame for vertical swinging movement in directions at right angles to each other, and mechanism for holding the skid and the packing table in adjusted positions.

1,784,404. DRILLING APPARATUS. LOUIS H. WELLENSIEK, Houston, Tex. Filed Aug. 15, 1924. Serial No. 732,254. 7 Claims. (Cl. 255—24.)

4. In drilling apparatus, a casing head having an internal annular flange having a portion thereof provided with grooves and tongues, a plurality of arcuate members having grooves and tongues adapted to cooperate with the grooves and tongues of said annular flange and means for resiliently securing each of said arcuate members to said flange including a bolt secured to the arcuate member and extending through the flange and a spring surrounding the bolt, one end of which spring constitutes a seat for the enlarged end of the bolt whereby limited movement of the arcuate member is permitted.



1,784,405. METHOD AND MECHANISM FOR LUBRICATING LOCOMOTIVE-DRIVING-ROD JOURNALS. ROGER STONE WILLIAMS, New York, N. Y. Filed July 8, 1927. Serial No. 204,167. 12 Claims. (Cl. 184—7.)

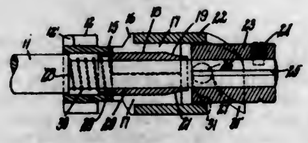


1. In a lubricating device for relatively moving parts, a source of lubricant supply, individual ducts extending therefrom to a relatively fixed position adjacent to the moving parts, an elbow connector including hinge joints each having individual passages connecting with the separate ducts, other ducts between the joints connected with the several passages, and individual ducts from the last of the joints to the bearings intended to be lubricated.

1,784,406. SHAFT-TUBING SUSTAINING DEVICE FOR DEEP-WELL PUMPS. JOHN A. WINTROATH, Los Angeles, Calif., assignor to Peerless Pump Company, Los Geles, Calif., a Corporation of California. Filed Dec. 10, 1927. Serial No. 239,251. 9 Claims. (Cl. 103—102.)

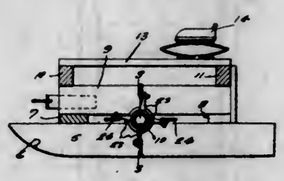
1. In a turbine well pump the combination of: a column pipe; a line shaft extending downward in said column pipe; a shaft tubing extending downward in said column pipe and surrounding said line shaft, said tubing being formed in sections; an adjustable coupling device connecting adjacent ends of said tubing sections; and a supporting member supported by said column pipe and engaging said coupling device to support said tubing.

1,784,407. STEAM GENERATOR. WILFRED R. WOOD, London, England, assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 5, 1927, Serial No. 210,787, and in Great Britain Feb. 14, 1927. 10 Claims. (Cl. 122—235.)



7. In combination, a furnace-shaped boiler, means for introducing fuel tangentially into the lower part thereof to be burned in space, means for introducing air for combustion below the point of fuel introduction in a manner to create an ascending vortical current sweeping the walls of the furnace-shaped boiler, and means for introducing air above the point of fuel introduction to maintain said vortical current for the length of the fuel and flame stream.

1,784,408. PROCESS FOR MANUFACTURING AMINONAPHTHOL ETHERS. ARTHUR ZITSCHER, Offenbach-on-the-Main, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 16, 1927, Serial No. 240,636, and in Germany Jan. 3, 1927. 3 Claims. (Cl. 260—130.5.)

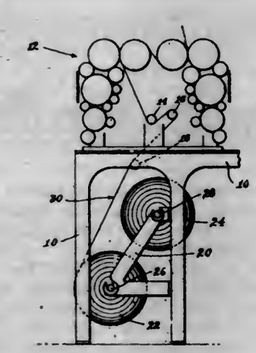


1. Process for manufacturing aminonaphtholethers which process comprises treating hydroxynaphthalenecarboxyamides with alkylating agents and subjecting the naphtholethercarboxyamides, thus obtained, to the action of alkali metal salts of the hypochlorous or hypobromous acid according to Hofmann's decomposition reaction.

1,784,409. ENGINE-DRIVE MECHANISM. ROLLIN ABELL, Milton, Mass. Filed Jan. 20, 1930. Serial No. 421,958. 16 Claims. (Cl. 74—7.)

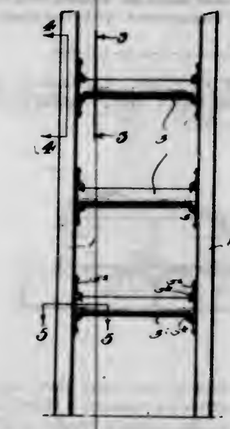
1. An engine drive mechanism having, in combination, a driving shaft, a driven member embodying a gear, a pinion slidable longitudinally on said shaft into engagement with said gear and embodying therein a hub split longitudinally thereof, a sleeve on said hub and clutched thereto by frictional engagement, and means actuated by the rotation of said shaft for sliding said pinion along the shaft and into engagement with the gear.

1,784,410. STALK CUTTER. CHARLES R. ALEXANDER, Ennis, Tex. Filed May 7, 1929. Serial No. 361,069. 3 Claims. (Cl. 55—61.)



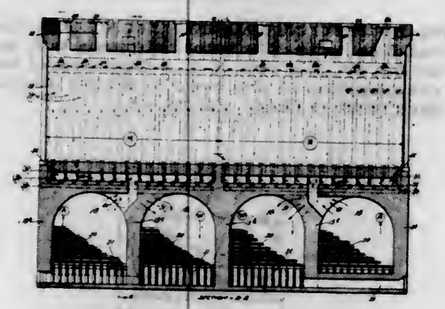
1. In an apparatus of the class described, a pair of spaced parallel co-extensive runners, a cross bar across the forward portions of the runners, blocks on the rear portions of the runners, sides mounted on the cross bars and the blocks one above each runner, a pair of cross bars across the sides, longitudinal bars connecting the ends of the last mentioned cross bars, a platform on the last mentioned cross bars, a seat on the platform, and a rotary reel cutting structure mounted across the runners and below the sides.

1,784,411. PROCESS OF PRODUCING A PIGMENT. DAVID V. AULT, Morton, Pa. Filed Feb. 4, 1929. Serial No. 337,528. 4 Claims. (Cl. 134—58.)



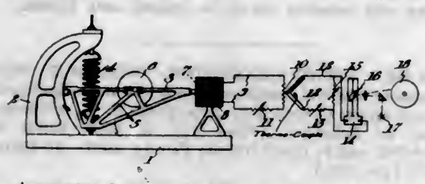
1. The process of manufacturing a pigment from a clay-like material containing sericite in a naturally-occurring, finely-divided condition which consists in drying such material and in separating the finely-divided sericite from gritty particles.

1,784,412. PRINTING MACHINE. HENRY V. BALL, Concord, Mass., assignor, by mesne assignments, to R. Hoe and Co., Inc., New York, N. Y., a Corporation of New York. Filed May 10, 1922, Serial No. 559,790. Renewed May 2, 1930. 1 Claim. (Cl. 242—58.)



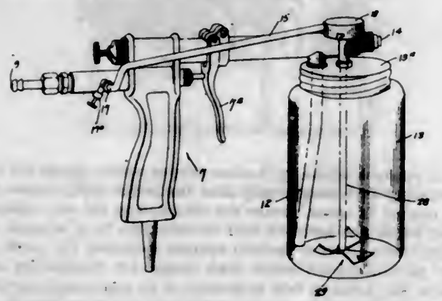
In a web-feeding mechanism, a running roll, a guide roller for the running web from said roll, a spare roll intermediate said running roll and guide roller, and fixed supports for the spindles of said rolls so related to each other that the running roll cannot be exhausted without the web-path therefrom engaging the periphery of the spare roll.

1,784,413. LADDER. MARTIN BAUER, Lakewood, Cleveland, Ohio. Filed Nov. 6, 1929. Serial No. 405,195. 9 Claims. (Cl. 228—58.)



5. In a ladder comprising side members having sockets therein and rungs connecting said side members and entering said sockets, means for reducing the dimension of the socket across the grain and in the direction of the length of the side member, the lateral dimension of said means being less than one-half of the circumference of said socket, whereby to leave a ventilation space at each side of the inserted rung end and to allow for spreading of the same.

1,784,414. COKING RETORT OVEN. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 2, 1923, Serial No. 610,107. Renewed April 1, 1930. 14 Claims. (Cl. 202—144.)

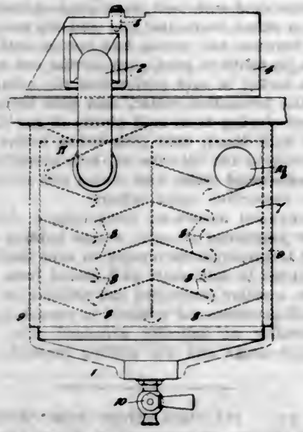


1. In a coking retort oven, in combination: a plurality of coking chambers alternating with substantially similar heating walls contiguous to such coking chambers and respectively constituted of vertical combustion flues; horizontal flues in each heating wall and respectively connecting a plurality of the combustion flues of their respective heating walls; the horizontal flues of a heating wall being also communicably connected with the corresponding horizontal flues of an adjacent heating wall; several main supporting walls below the coking and heating chambers and extending longitudinally of the oven and forming lengthwise of the oven tunnel structures and individually regulable and reversible regenerators between the adjacent supporting walls, each regenerator communicating with flues of both of two heating walls on opposite sides of a coking chamber and connected in pairs with combustion flues of a single heating wall; substantially as specified.

1,784,415. ELECTRICAL RECORDING SEISMOGRAPH. HUGO BENIOFF, Pasadena, Calif., assignor to Carnegie Institution of Washington, Washington, D. C., a Corporation. Filed Feb. 2, 1927. Serial No. 165,418. 4 Claims. (Cl. 177—351.)

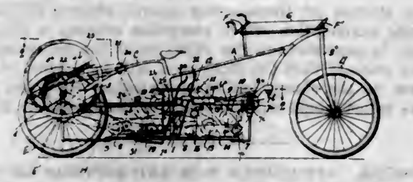
1. Apparatus for recording the kinetic energy of seismic disturbances, comprising the combination with means operated by such disturbances to generate a current having a voltage proportional to the velocity of the disturbed earth particles, of means energized by said current-generating means and effective to produce a response proportional to the square of the voltage impressed thereon, and an indicator in the output circuit of said means.

1,784,416. AGITATOR. HENRY F. W. BROCKMANN, San Francisco, Calif., assignor of one-half to Harry C. Scott, San Francisco, Calif. Filed Nov. 15, 1926. Serial No. 148,485. 2 Claims. (Cl. 259—122.)



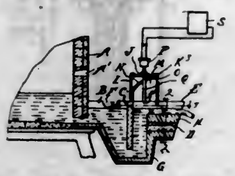
1. In a device of the type described, a propeller having a plurality of blades, one of said blades being inclined at a slight degree, and each succeeding blade thereafter being inclined at a greater degree, whereby each blade of the propeller will move the fluid a greater distance than the preceding blade when starting with the blade having the smallest angle.

1,784,417. ELECTRICAL INDICATING INSTRUMENT. IVAR W. BROGGER, Springfield, N. J., assignor to Tiffany Manufacturing Company, Newark, N. J. Filed Nov. 18, 1929. Serial No. 407,904. 11 Claims. (Cl. 171—95.)



6. An electrical indicating instrument including an insulator, a yoke non-rotatably carried on the insulator, a pair of cores rigidly fastened at opposite ends of the yoke, a bracket having arms at opposite ends extending into engagement with the insulator, an armature pivotally supported by the bracket adjacent the free ends of said cores, a pointer operated by the armature, windings on said cores, and means for making connections thereto, at least a part of said means acting to hold said bracket arms to the insulator.

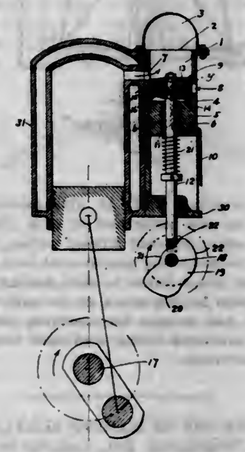
1,784,418. APPARATUS FOR SEPARATING FAT OR OTHER MATERIAL FROM GASES. GORDON WILLIAM FREDERICK CATLIN, St. Albans, England. Filed Jan. 8, 1929, Serial No. 331,131, and in Great Britain Feb. 3, 1928. 3 Claims. (Cl. 183—106.)



1. Apparatus for separating fat from gases, comprising a mixing chamber, spray nozzles for admitting fat to the mixing chamber, a gas inlet to the mixing chamber, two outlets for the mixture from the mixing chamber, a separating chamber for superfluous fat and gas, two oppositely disposed inlets to the upper portion of the separating chamber and extending from the outlets in the mixing chamber, a series of baffle plates arranged in the separating chamber, a gas exhaust outlet on the separating chamber, and a closable discharge outlet on the separating chamber for the fat separated from the gas.

1,784,419. BICYCLE MECHANISM. ANTONIO DEVITO, Brooklyn, N. Y. Filed Sept. 24, 1928. Serial No. 308,088. 3 Claims. (Cl. 208—34.)

1. In a bicycle having front and rear supporting wheels, a sprocket, a train of gearing operable from the sprocket, a pair of rotary disks on each side of the rear wheel driven by said gearing, a pair of reciprocating rods connected to the disks, and fly wheels located outside the said disks including gearing for operating the same and maintain the bicycle in motion.

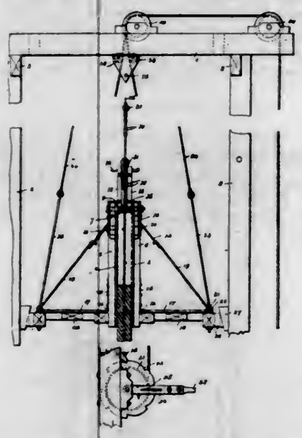


1,784,420. CONTINUOUS IRON-TEMPERATURE RECORDER. HARRY W. DIETERT, Detroit, Mich., assignor to United States Radiator Cor., Detroit, Mich., a Corporation of Michigan. Filed July 12, 1926. Serial No. 121,988. 8 Claims. (Cl. 73—32.)

7. In an apparatus of the class described the combination of a pouring spout having a depressed portion therein forming a reservoir, a gas collecting chamber arranged adjacent to the flowing metal directly above said reservoir, and a temperature responsive element within said chamber spaced a predetermined distance from the level of the molten metal during the pouring of the same.

8. In an apparatus of the class described, the combination with a delivery spout adapted to discharge molten metal, of a hood above said spout, a temperature responsive element within said hood and spaced a predetermined distance from the molten metal in said spout, and means for constantly maintaining a limited quantity of molten metal adjacent said hood for retarding variations in the temperature within said hood during the interval between successive pouring operations.

1,784,421. VALVE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. HARVEY H. ESLINGER, Hecktown, Pa., assignor to Eslinger Motors Company, a Corporation of Delaware. Filed July 2, 1924, Serial No. 723,630. Renewed May 14, 1930. 3 Claims. (Cl. 123—75.)

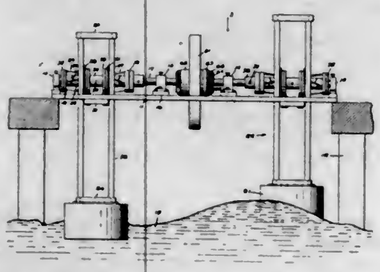


1. Valve mechanism for internal combustion engines including a valve cylinder having an oil passage through its wall and having at low level an intake and at intermediate level an engine port and at high level an exhaust and having at its inner end a valve chamber extending below the engine port, a solid piston valve having an oil duct extending radially through it and axially and radially through its stem and constituting the sole means for controlling said port and intake and exhaust and having a single packing ring adapted in low position of the valve to enter said chamber and seal the inlet and to uncover the engine port to exhaust, and said ring adapted in high position of the valve to seal the exhaust and to uncover the engine port and intake, and said ring in intermediate position of the valve adapted to span and cover the engine port and to receive and confine the explosion, and spring pressed cam means for reciprocating said valve with a dwell in its movement at each of said positions, said spring pressed cam means confined below said valve and protected by it from the heat of the exhaust and provisions for preventing rotation of the valve and insuring oil feed at low position of the valve.

1,784,422. PLANT FOR THE VERTICAL MOLDING OF CONCRETE WORK. HIPPOLYTE FABRE, Clamart, France. Filed Aug. 7, 1928, Serial No. 298,077, and in France Aug. 9, 1927. 1 Claim. (Cl. 25—131.)

Means for constructing a relatively thin vertical retaining wall of concrete, comprising cross pieces forming

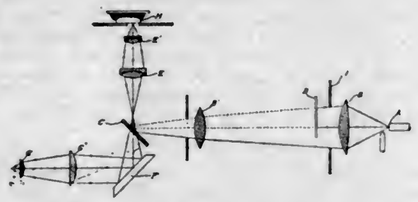
an overhead bridge, lifting cables operating from the bridge, a mold suspended from said cables and comprising superposed planks, means for stabilizing the mold, movable transverse spacing members between the uppermost planks, bolts for attaching the members to the planks, cams for adjusting the bolts to clamp the planks, a harpoon-shaped member depending from the cross piece and having hooks fastened to said planks at variable elevations in accordance with the progress of the construc-



tion of the retaining wall, an attendance-bridge pivotally mounted on the lower end of said planks and connected at its ends to said lifting cables, inclined telescoping stays between the planks and last named bridge to support and allow same to fold against planks, said attendance bridge having shoes at its ends provided with inclined faces, and wedges for insertion between the uprights of the overhead bridge and said inclined faces of the attendance-bridge.

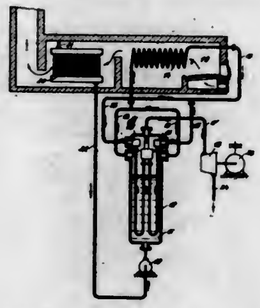
1,784,423. PROCESS OF MAKING ALKYL CHLORIDES. JOHN FREI, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 30, 1923. Serial No. 671,669. 17 Claims. (Cl. 260—162.)

1. The process of making an alkyl chloride which comprises heating above 110° C. a mixture of a water solution of hydrochloric acid and a lower alcohol in the presence of ferric chloride, while permitting the escape of the water vapors formed.



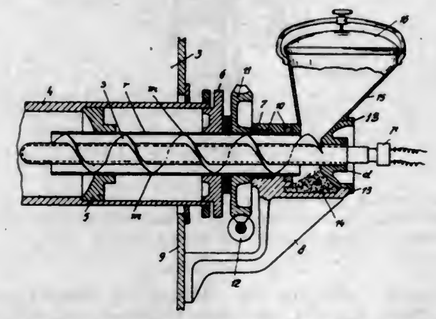
1,784,424. WAVE-MOTOR DRIVING MECHANISM. CHARLES E. GARWOOD, Avalon, Calif. Filed Aug. 8, 1928. Serial No. 298,162. 5 Claims. (Cl. 74—53.)

1. In a wave motor comprising, a revolubly mounted shaft, a member connected to the shaft for multi-directional movement in a plane to which said shaft is perpendicular, a pinion journalled upon the shaft, and a rack carried by said member in mesh with said pinion; a one-way engaging clutch actuated by said pinion and imparting rotational movement to said shaft, and comprising spaced collars rigid with said shaft upon opposite sides of the pinion, a collar journalled and slidably mounted upon said shaft between the pinion and one of said rigid collars, and a plurality of pins, each having one end loosely seated in a socket in said pinion and the other end in a socket in the journalled collar, said pins being helically disposed and sloping from said pinion in the direction of turning of said shaft, said pins being longer than the distances between the bottoms of their respective sockets when the associated collar and pinion are in engagement with their respective rigid collars.



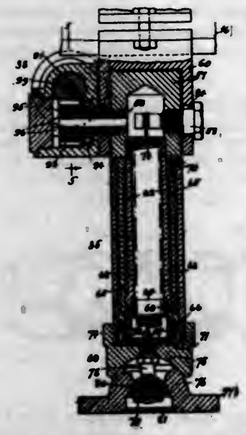
3. A mechanical movement comprising a shaft, a driving member journalled thereon, means holding said member against longitudinal movement on said shaft, a driven member secured to said shaft and spaced from said driving member, a collar journalled and slidable on said shaft between said members and adapted to engage one thereof, and a plurality of helically arranged pins interposed between said collar and the driving member.

1,784,425. ILLUMINATION FOR MICROSCOPY. HARRY S. GEORGE, Massapequa, N. Y., assignor to Electro Metallurgical Company, a Corporation of West Virginia. Filed June 30, 1924. Serial No. 723,396. 16 Claims. (Cl. 88—40.)



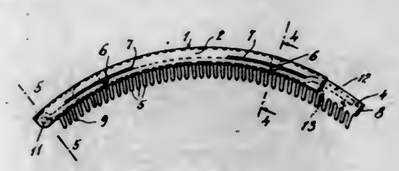
1. Method of illuminating opaque objects for microscopic examination which comprises causing a beam of light to pass through the objective of the microscope in such manner that the light rays will be caused to converge on the object, and stopping out of the beam light rays which would otherwise fall vertically on the object.

1,784,426. APPARATUS FOR AND METHOD OF GENERATING STEAM. HANS GLEICHMANN, Berlin-Siemensstadt, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed June 4, 1927, Serial No. 196,593, and in Germany June 9, 1926. 3 Claims. (Cl. 122—1.)



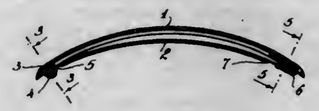
1. An apparatus for generating steam comprising a superheater and means for externally supplying heat to said superheater, a steam generating receptacle located outside of said external heat supply means, and a heat exchange device contained in said receptacle, said exchange device being connected at one end to the output side of said superheater, and at the other end to a steam main, said heat exchange device supplying to the liquid contained in the receptacle all of the heat necessary to evaporate the liquid, and a steam connection between the steam space of said receptacle and the input side of said superheater.

1,784,427. ROTARY TEMPERING FURNACE. ERNST GOERIG, Mannheim, Germany. Filed Aug. 6, 1928, Serial No. 297,583, and in Germany Aug. 12, 1927. 7 Claims. (Cl. 263—1.)



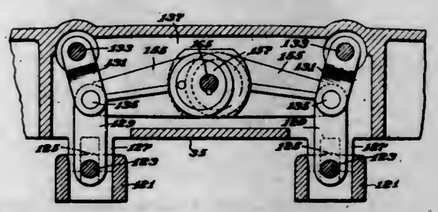
4. In a rotary case hardening furnace a tube with a rotary pipe fixed concentrically therein, a feed worm enclosed by said pipe and fixed to the same, a feeding receptacle communicating with the receiving end of said pipe and said worm and a pyrometer tube arranged within said tube and extending coaxially to the same and to the said worm.

1,784,428. HYDRAULIC JACK. BARNEY GOLDMAN, New York, N. Y. Filed Apr. 8, 1929. Serial No. 353,390. 4 Claims. (Cl. 138—9.)



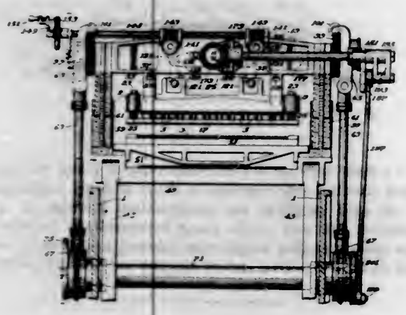
1. In a hydraulic jack the combination with a head adapted to fasten to an object, of telescopic tubular plungers swingingly mounted on the head, a fluid inlet leading into the head, a port in the head at predetermined times communicating with the plungers, a tubular piston slidingly arranged in the head adapted to swing the plungers downward and upward, a valve having a stem slidably arranged in the piston, said valve including means controlled by the position of the piston to cover or uncover the port by the actuation of the valve.

1,784,429. HAIR-WAVING DEVICE. ABRAHAM GOODMAN and JACOB GOODMAN, Brooklyn, N. Y. Filed Apr. 22, 1929. Serial No. 357,021. 5 Claims. (Cl. 132—41.)



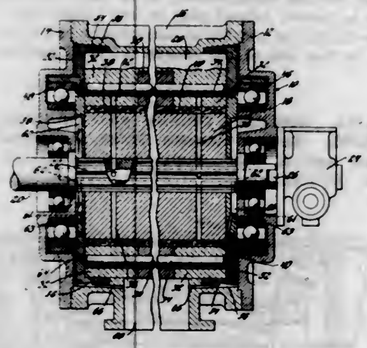
1. A hair waving device comprising a clasp having two spaced parallel side portions, a comb slidably supported on one of said portions for longitudinal movement, a bar pivoted at one end to the clasp intermediate its side portions and extending lengthwise thereof, and a catch on the clasp to hold the free end of the bar in closed position.

1,784,430. BARRETTE. ABRAHAM GOODMAN and JACOB GOODMAN, Brooklyn, N. Y. Filed Apr. 24, 1929. Serial No. 357,636. 2 Claims. (Cl. 132—48.)



1. A barrette comprising a bar curved in the direction of length, a rigid tongue of convexo-concave section curved lengthwise and having one end coiled inwardly to form a pivot about which it turns, a slot in the tongue adjacent the pivot, a hinge secured to one end of the bar loosely embracing the pivot and passing through the slot in the tongue, the slot being slightly wider than the width of the hinge to permit lateral play of the tongue with respect to the hinge, and a catch at the opposite end of the bar to hold the free end of the tongue in closed position.

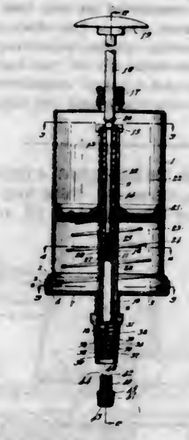
1,784,431. BISCUIT CUTTING AND EMBOSSING MACHINE. THOMAS LUTHER GREEN, Indianapolis, Ind. Filed Apr. 8, 1929. Serial No. 353,571. 21 Claims. (Cl. 107—26.)



2. A machine of the character described comprising, in combination, an embosser and a cutter adapted to emboss and cut material, a reciprocable cross-head carrying the embosser and cutter, spring means for retracting the embosser from the material energized on movement of the cross-head toward the material, a pair of toggles on the cross-head operable alternately to permit and prevent movement of the embossed by said spring means away from the material, a pair of eccentrics on the cross-head, connecting rods connecting the toggles with the eccentrics, and means for operating said eccentrics to cause them alternately to positively straighten and buckle the toggles.

1,784,432. BISCUIT CUTTING AND EMBOSSING MACHINE. THOMAS LUTHER GREEN, Indianapolis, Ind. Filed June 1, 1929. Serial No. 367,684. 19 Claims. (Cl. 107—26.)

3. A machine of the character described comprising, in combination, a reciprocable cross-head, an embosser carried thereby, toggles on the cross-head connected to the embosser, and means for straightening and buckling the toggles including eccentrics on the cross-head, connecting rods connecting the eccentrics with the toggles, and means for oscillating the eccentrics.

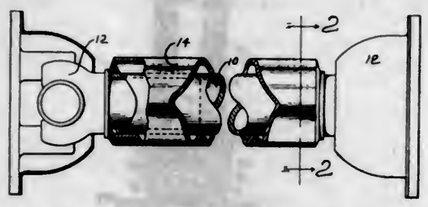


1,784,433. SUPERCHARGER OILING SYSTEM. DAVID GREGG, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed June 4, 1928. Serial No. 282,691. 14 Claims. (Cl. 184—6.)

1. In a lubricating system for a supercharger having a rotor having blades operating in a housing, a pump for moving the lubricant through the system, a lubricant passage through said rotor, an auxiliary passage leading from said rotor passage to conduct the lubricant to a rotor bearing, and means including a passage in the walls of said housing for conveying the lubricant from said auxiliary passage to the tip of the blades.

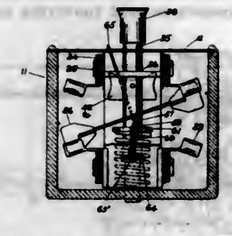
1,784,434. GREASE GUN. PETER GRESSER, Detroit, Mich. Filed Mar. 15, 1928. Serial No. 261,985. 6 Claims. (Cl. 221—47.4.)

1. A grease gun comprising a cylinder forming a pressure chamber, an outlet tube in communication with said chamber, a liner disposed in said tube near the outlet end thereof and extending into said cylinder, said liner being slotted at a point considerably inward of the forward end of said cylinder, a plunger slidable within said liner along the slotted portion thereof and adapted to obstruct said liner beyond said slotted portion.



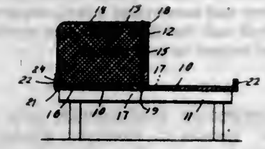
1,784,435. METHOD OF PREPARING RESISTANCE UNITS. LARS O. GRONDAHL, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 7, 1925. Serial No. 67,552. 5 Claims. (Cl. 201—76.)

5. The process of preparing a thermo-sensitive resistance unit which consists in forming a substantially flat copper blank with a bridge portion of reduced thickness intermediate its ends, heating the blank in the presence of air to change said bridge portion entirely to copper oxide but stopping the heat treatment before the end portions are entirely changed to copper oxides, and removing the oxide from the end portions of said blank.



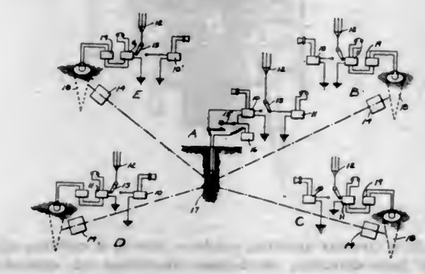
1,784,436. PROPELLER SHAFT. NEWTON F. HADLEY, Beverly Hills, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a Corporation of Delaware. Filed May 24, 1927. Serial No. 193,851. 10 Claims. (Cl. 64—29.)

1. A propeller shaft of the class described comprising, a tubular member, and a fluted tubular member around said tubular member engaging the outer periphery thereof.



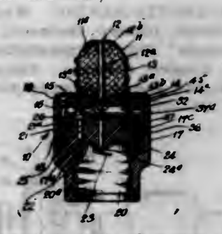
1,784,437. SINGLE-BUTTON ELECTRIC SWITCH. LEE H. HARLOW, Los Angeles, Calif., assignor of one-half to Grover C. Piper, Los Angeles, Calif. Filed Oct. 1, 1927. Serial No. 223,323. 10 Claims. (Cl. 200—67.)

10. A switch comprising in combination a frame having a pair of side plates, a plurality of fixed contacts secured to the frame, a plate pivotally mounted in the side plates and having an opening therethrough, moving contacts attached to said plate, a stem slidably mounted in the frame and extending through the opening in the plate, a dog pivotally mounted on the stem to engage the plate



and tilt same from one inclination to the opposite inclination, one of the said plates having a slot, a bracket having means connecting same through the said slot, an arm connected to the tilting plate, and a spring connected between the bracket and the said arm.

1,784,438. EXHIBITION BENCH. AUGUST HARTMANN, Montclair, N. J., assignor to Spratts' Patent, America, Limited, Newark, N. J., a Corporation of Great Britain. Filed July 27, 1928. Serial No. 295,634. 8 Claims. (Cl. 119—15.)

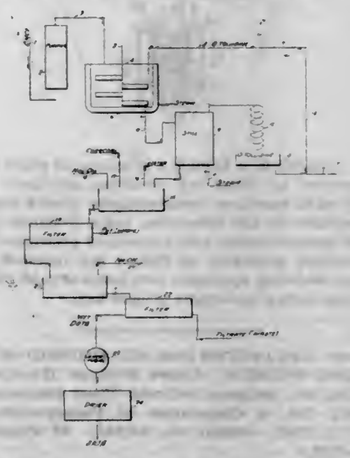


1. An exhibition bench comprising a floor, a back-board resting on the floor at a distance from one edge thereof, a skirting board resting on the floor along said edge, and partition means to subdivide the floor into a row of exhibition spaces, these partition means having portions engaging the back-board and other portions passing through the skirting board and entering the floor.

1,784,439. METHOD FOR MAKING SUBTERRANEAN SURVEYS. HARVEY C. HAYES, Washington, D. C. Filed May 15, 1928. Serial No. 277,968. 9 Claims. (Cl. 181—0.5.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. A method of surveying subterranean strata which comprises generating a train of complex compressional waves, reproducing the form of said waves on a record as they reach a point remote from the generating source and the analysis of the records of the complex waves into their components.

1,784,440. ELECTRIC-LAMP SOCKET. HARRY HERTZBERG, Brooklyn, N. Y., assignor, by mesne assignments, to The M. Propp Co. Inc., New York, N. Y., a Corporation of New York. Filed Nov. 30, 1926. Serial No. 151,629. 6 Claims. (Cl. 201—49.)

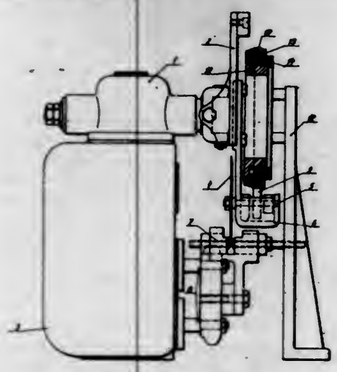


1. A dimming socket of the character described having a casing of insulating material molded with a socket portion having an end wall and a pocket in said wall, an adjustable resistance unit wedgingly fitted into said pocket, control means for varying the resistance of said unit including a movable contact arm, spaced terminal switch contacts and jumpers, one end of each jumper being connected to a contact, the other end of each of said jumpers clampingly engaging with said unit on wedging the latter in said pocket.

1,784,441. PROCESS FOR MANUFACTURING ORTHO-AMINO-ARYLMERCAPTANES. RICHARD HERZ, Frankfort-on-the-Main, and MAX SCHUBERT, Fechenheim, near Frankfort-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 21, 1928, Serial No. 263,584, and in Germany Mar. 26, 1927. 6 Claims. (Cl. 260—130.5.)

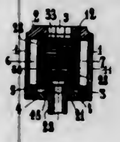
1. A process for manufacturing ortho-amino arylmercaptans which comprises treating an ortho-amino-arylsulfocyanogen compound of the general formula:

wherein Y means that the 4-position is either substituted or blockaded with an alkaline saponifying agent under exclusion of air.



1,784,442. METHOD OF MAKING SUBSTITUTED GUANIDINES. RALPH V. HEUSER, Elizabeth, N. J., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Mar. 5, 1925. Serial No. 13,208. 12 Claims. (Cl. 260—125.)

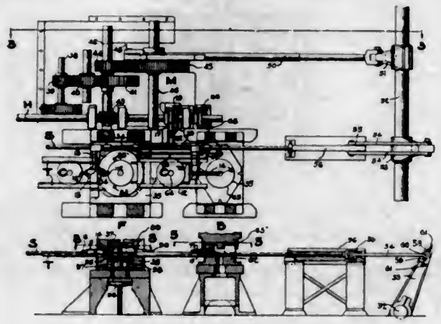
1. A method of making substituted guanidines which comprises bringing cyanogen chloride, free from substan-



tial amounts of chlorine and hydrocyanic acid, into contact with a secondary aryl-alkyl amine and causing a reaction to take place therebetween in one operation.

1,784,443. CIGARETTE-MAKING MACHINE. MAX PAUL ERNST HOHN, Dresden, Germany, assignor to the Firm "Universelle" Cigarettenmaschinen-Fabrik J. C. Muller & Co., Dresden, Germany. Filed Dec. 19, 1927, Serial No. 241,183, and in Germany Nov. 21, 1927. 4 Claims. (Cl. 131—37.)

1. A cutting device for cigarette making machines of the continuous rod type, comprising in combination a rotary cutter shaft, a driving wheel mounted on the said shaft, a rotating vibrating support for the cutter shaft, a stationary friction wheel so mounted as to be concentric with the axis of rotation of said support and capable of entering into engagement with the said driving wheel, whereby the rotary motion of the cutter shaft is produced by the said driving wheel rolling around the said friction wheel, means for radially adjusting the cutter shaft on the said support for allowing for a change in diameter of the cutter and means for adjusting the friction wheel for making up for the adjustment of the cutter shaft, as and for the purpose set forth.

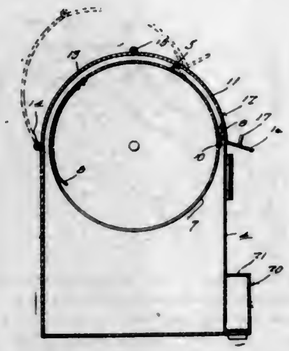


1,784,444. CYLINDER LOCK. ROBERT GEORGES MARIE HOMOLLE, Paris, France, assignor to Societe Bournisien Beau & Cie., Paris, France. Filed Aug. 18, 1927, Serial No. 213,909, and in France Sept. 6, 1926. 3 Claims. (Cl. 70—46.)

1. A cylinder lock having a plurality of plate tumblers characterized by offset key receiving apertures in some of said plate tumblers, symmetrically placed key receiving apertures in the remaining plate tumblers and projections symmetrically and oppositely positioned in said key receiving apertures so that a key inserted through said key receiving apertures will actuate said plate tumblers upon rotary movement of said key.

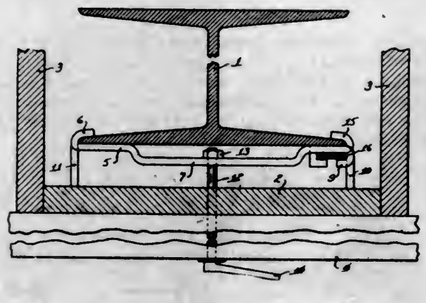
1,784,445. APPARATUS FOR AND METHOD OF FABRICATING WHEELS. JAMES WILLIAM HUGHES, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 3, 1925. Serial No. 34,743. 37 Claims. (Cl. 113—113.)

1. The method of fabricating vehicle wheels having in their completed form central formations requiring presentation to operations in a definite angular relation, which consists in preforming wheel body parts to form thereon a surface or surfaces concentric with the ultimate center of the wheel, and in conveying said wheel parts from operation to operation by means engaging said surface or surfaces, the while positively holding said wheel parts by engagement into said surface or surfaces against angular movement with respect to said conveying means.



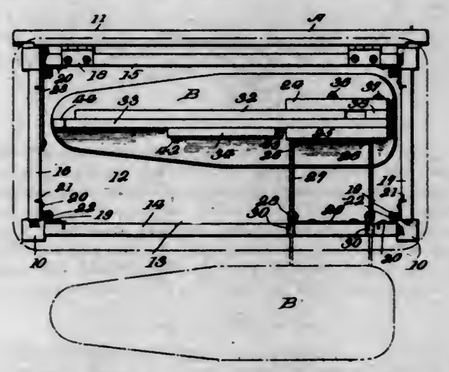
3. Apparatus for fabricating wheels comprising a plurality of machines adapted to operate upon a wheel part successively and including a pre-shaping machine to provide a surface or surfaces thereon arranged substantially at right angles to the plane of said wheel part, and conveying mechanism for moving said wheel parts from machine to machine and comprising means engaging said surface or surfaces and holding the same against angular movement with respect to said means.

1,784,446. DETECTOR MECHANISM FOR KNITTING MACHINES. ROBERT G. JENNINGS, Elmira, N. Y., assignor to The R. G. Jennings Yarn Cleaning Machine Co. Inc., Elmira, N. Y., a Corporation of New York. Filed Oct. 8, 1928. Serial No. 311,070. 25 Claims. (Cl. 66—166.)



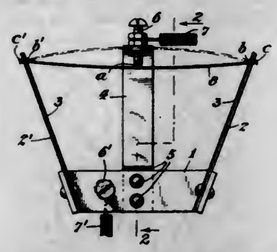
1. In a circular knitting machine having a knitting cylinder, hole detecting mechanism including an expander ring approximating the diameter of said cylinder and engaging the inner face of the cloth, an arcuate support outside the cloth, a series of resilient elements depending from said support to a point opposite said ring and spaced to engage between successive adjacent cylinder needle wales, and an electric circuit connecting said ring and said elements.

1,784,447. RURAL MAIL BOX. JAMES B. JOHNSON, Poplar, Minn. Filed Feb. 25, 1928. Serial No. 256,936. 1 Claim. (Cl. 232—49.)



In a mail box of the class described, a substantially rectangular opened top box provided at one end with an entrance opening, a hinged door for said entrance opening, locking means for said door, a horizontally disposed cylindrical drum rotatably mounted in the upper end portion of the box, said drum being provided with a relatively large opening on one side thereof, and said drum being adapted to receive mail for depositing the latter within said box, a hood for the open top of said box, said hood comprising a pair of hingedly connected sections of arcuate formation to correspond with the upper portion of the drum, one of said sections being hingedly connected to said box and the other of said sections being hinged to the drum for rotating the latter whereby said drum may be actuated upon the raising and lowering of said hood for receiving and discharging mail into said box.

1,784,448. HANGER FOR FORMS ON STEEL-BEAM CONSTRUCTION. FELIX KAHN, San Francisco, Calif. Filed Oct. 10, 1928. Serial No. 311,588. 6 Claims. (Cl. 25—131.5.)



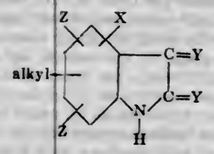
4. A device for hanging forms from beams comprising a member having means at one end for engaging one side of the beam and a longitudinal slot at the other end, one leg of said slotted end being bent downwardly to form a hook; a connecting member having means for engaging the other side of the beam, said connecting member lying within said slot and having a downwardly directed hook opposite to the hook of said slotted member; a wedge adapted to be driven between said hooks to clamp said members upon the beam; and means for removably securing one of said members to the form.

1,784,449. COMBINED TABLE AND IRONING BOARD. ALBERT HOWARD KENNEDY, Grove City, Pa., assignor to Adolph F. Lind, Kittanning, Pa. Filed Feb. 14, 1929. Serial No. 339,917. 1 Claim. (Cl. 68—10.)

The combination with a table having a hinged top and a compartment below the same, of an ironing board having on its under surface a pair of members arranged and spaced in parallel relation, a pivotal connection between the interior of said table compartment and said members to permit said board to be swung upwardly and outwardly to a position beyond the front of said table, a pair of supporting legs for said board, one of said legs when the board is swung outwardly being vertically disposed and the other arranged at an angle to the vertical leg and having sliding connection therewith, the upper ends of said supporting legs pivoted at separate points in the space between said members, a brace arranged at an angle between the ironing board and the inclined supporting leg and movably connected to each of said members, said brace being made in two sections with the adjacent ends of the sections having a hinged connection, and the adjacent ends of the section forming a brace abutting one another under pressure when the legs are in extended position.

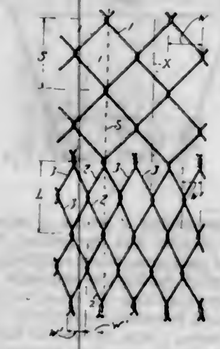
1,784,450. MECHANICAL MOVEMENT. EMIL KLAHN, New Vernon, N. J. Filed Feb. 25, 1926. Serial No. 90,521. 18 Claims. (Cl. 200—138.)

1. A switch comprising a frame, a plurality of arms rigidly secured thereto and projecting therefrom, the outer free ends of said arms being relatively movable with respect to each other during the operation of the switch, a snapping element spanning the space between said arms and having its ends mounted respectively in the free end portions of said arms, a stop positioned intermediate said free ends of said arms adapted to prevent said snapping element from assuming a sprung position equi-distant from a neutral center line with the other sprung position, means for effecting the relative movement of said arms with respect to each other and a pair of contact terminals adapted to be respectively connected to a source of electricity and normally insulated from each other when the circuit is open adapted to make and break by the movement of said snapping element from one position of rest to another.



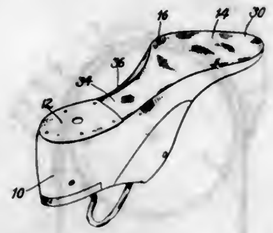
1,784,451. CHAIN ASSEMBLY. AUGUST F. KRAEMER, Providence, R. I., assignor to Louis Stern Company, Providence, R. I., a Corporation of Rhode Island. Filed July 12, 1929. Serial No. 377,738. 2 Claims. (Cl. 59—80.)

1. In a chain structure a series of box links pivotally connected together, said links having top end and side walls, bottom members extending inwardly from said side walls, and said end wall being folded back in loop form to extend beneath said bottom members and shaped to provide a bearing for the connecting pivot pin and a resilient tongue formed from the stock of said end wall and shaped to engage the pivot pin to resist its endways movement.



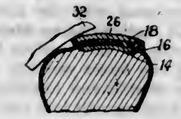
1,784,452. INDIGOID VAT DYESTUFFS FROM DIHALOGENO-ALKYLISATINS. CARL KRAUSS, Leverkusen, near Cologne-on-the-Rhine, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 23, 1926, Serial No. 143,796, and in Germany Nov. 25, 1925. 4 Claims. (Cl. 260—49.)

1. As new products the indigoid vat dyestuffs of the general formula:



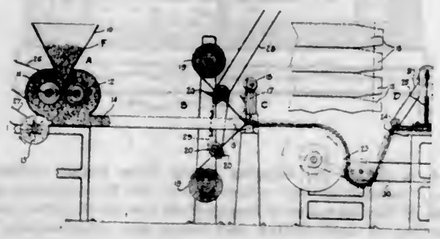
wherein Z represents a halogen atom having an atomic weight of between 35 and 80, X represents hydrogen or alkyl, one Y represents oxygen, the other Y the residue of a cyclo-keto-methylene compound, said products being in the dry state dark colored powders, dyeing textile materials from a generally yellow vat red to blue fast shades.

1,784,453. CHAIN LINK WIRE FABRIC. ARTHUR A. G. LAND, Chicago, Ill. Filed Dec. 7, 1928. Serial No. 324,464. 17 Claims. (Cl. 245—6.)



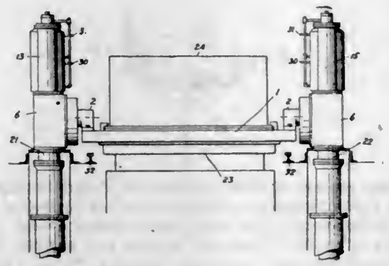
1. A chain-link wire fabric formed of interlinked zigzagged strands comprising main strands having the zigzag portions of consecutive strands directly interlinked in a portion of the fabric, certain of the main strands presenting non-contiguous zigzagged portions in consecutive strands in another portion of the fabric; and secondary strands interposed between the said non-contiguous portions of the said main strands.

1,784,454. LAST. CLARENCE I. LANDER, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 9, 1927. Serial No. 211,823. 5 Claims. (Cl. 12—133.)



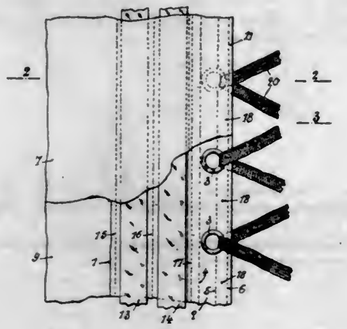
1. A last for shoes having in the margin of its bottom surface a shallow groove one side of the groove sloping inwardly and toward the body of the last from the extreme edge of the last bottom and extending from the breast line on one side of the shank along the shank to the forepart and along the shank to the breast line on the other side.

1,784,455. METHOD OF LEVELING SHOES. CLARENCE I. LANDER, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Aug. 9, 1927, Serial No. 211,823. Divided and this application filed Feb. 27, 1930. Serial No. 431,800. 4 Claims. (Cl. 12—142.)



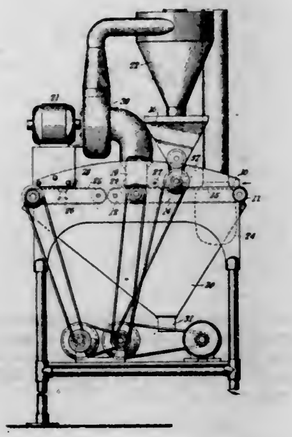
1. That improvement in methods of leveling shoes which consists in applying leveling pressure to the marginal portion of a shoe sole which is secured to the upper of the shoe by a line of fastenings while supporting said portion of the sole by means having an inclined surface, thereby causing the leveling pressure to force the said line of fastenings inwardly away from the edge of the sole.

1,784,456. METHOD AND APPARATUS FOR FILLING UPHOLSTERY. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 29, 1926. Serial No. 151,268. 6 Claims. (Cl. 112—2.)



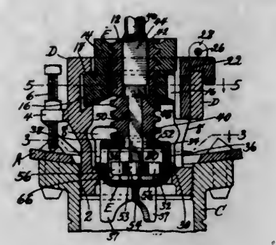
1. A machine of the character described comprising a blower for supplying comminuted filling material, means for supplying upholstery material, means for fashioning said upholstery material prior to filling into continuous tubes and for compacting said filling material therein, and means for cutting said tubes into predetermined lengths.

1,784,457. MOLDING MACHINE. WILFRED LEWIS, Haverford, Pa., assignor to The Tabor Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 7, 1929. Serial No. 338,080. 6 Claims. (Cl. 22—33.)



1. Rollover mechanism on trunnion plate machine to jar, rollover, and draw patterns comprising, in combination, a rollover plate having a trunnion stand and a trunnion of which the end is provided with a tongue vertical in jarring and pattern drawing positions, a trunnion bearing, a housing having a revoluble toothed wheel provided with a shaft having a tongue generally horizontal in said positions, an Oldham coupling ring having grooves on opposite faces and disposed at right angles and adapted to receive said tongues, a cross bar provided on the housing and adapted to lift said trunnion bearing to approximately align the trunnion and shaft for rollover and pattern drawing and to drop clear of said bearing for jarring, oppositely acting rollover plungers having racks engaging said toothed wheel, two-way limit stops on the housing for positioning the plate for pattern drawing, and draw plungers for raising and lowering the housing and parts carried thereby.

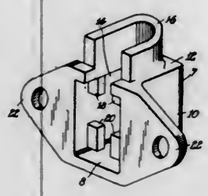
1,784,458. LACING DEVICE FOR CORSETS AND LIKE ARTICLES. JULES LINDAUER, Paris, France. Filed Nov. 9, 1928, Serial No. 318,114, and in France July 19, 1928. 5 Claims. (Cl. 2—39.)



1. In a lacing device for corsets and like articles, two pieces to be laced, a folded edge of the corset fabric and a folded edge of the lining of each of said pieces, the turned-in portions of said folded edges facing each other, an eyelet-carrying perforated band between said turned-in portions of said folded fabric and lining of each respective piece and covered by said folded edges, means for fastening said fabric, lining and band together, and means for fastening said fabric, lining and band between said successive eyelets near the fold of said folded edges.

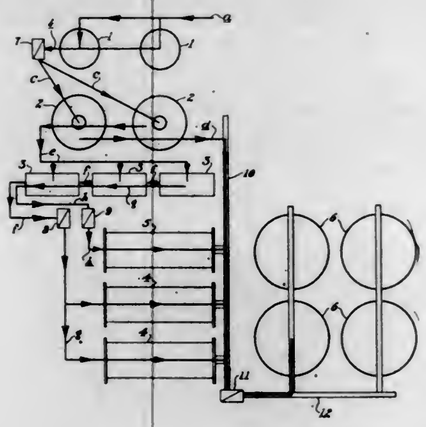
1,784,459. POWDERING MACHINE. SAMUEL LIPSIUS, New York, N. Y. Filed Sept. 19, 1928. Serial No. 306,850. 9 Claims. (Cl. 91—51.)

1. A powdering machine comprising a canvas conveyor, means for depositing powder on sheets on the conveyor, means for vibrating said conveyor to raise uncemented powder, a suction pipe having its inlet immediately above the canvas over said vibrating means and shaped for removal of substantially all the loose powder on said conveyor, and a grating between said conveyor and suction pipe inlet.



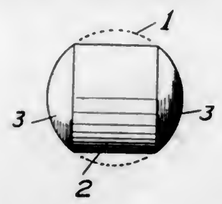
1,784,460. VALVE ASSEMBLY. JOHN J. McBAIDE, Bayonne, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed May 14, 1928. Serial No. 277,574. 28 Claims. (Cl. 251—36.)

10. In a valve assembly, a valve cage, a valve normally seated therein, a horizontally shiftable actuator in the cage, a rotatable valve screw supported by and vertically movable through the actuator and adapted to be engaged with and disengaged from the valve, said screw being shiftable on the valve upon shifting of the actuator, and means connecting said valve screw and valve for grinding



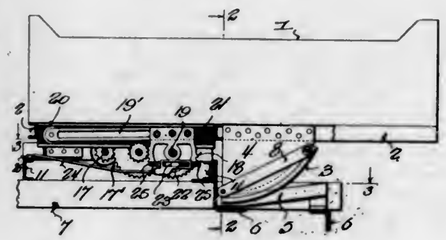
the latter on its seat after partial rotation of the valve screw and for lifting said valve from its seat following grinding thereof and upon continued rotation of the valve screw.

1,784,461. SECURING MEANS FOR INTERNAL-COMBUSTION ENGINES. JOHN J. McBRIDE, Bayonne, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 26, 1928. Serial No. 315,195. 4 Claims. (Cl. 248—14.1.)



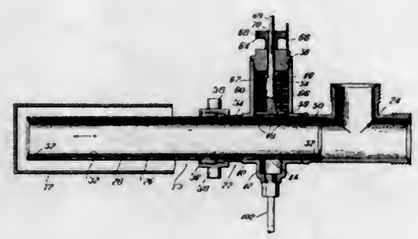
1. A device of the kind described comprising a hollow body portion having one open face and a slotted top portion, retaining lugs extending into the open face of the body portion, and attaching ears extending laterally from the body portion.

1,784,462. METHOD OF PRODUCING GROUND RAW MATERIAL FOR PORTLAND-CEMENT MANUFACTURE. JOHN A. MILLER, Nazareth, Pa., and EDMUND PAUL NEWHARD, Kingsport, Tenn. Filed May 10, 1927. Serial No. 190,345. 11 Claims. (Cl. 106—25.)



9. The process of dry grinding a mixture of raw materials for the manufacture of Portland cement, said mixture comprising at least two ingredients of different hardness such as limestone and shale, which consists in subjecting the mixture to a preliminary reduction operation, in then effecting a grading of the material into relatively fine particles and relatively coarse particles, and in separately fine grinding the two separate portions of the material, substantially as set forth.

1,784,463. PROCESS OF MAKING CYLINDRICAL ROLLERS. BUDD G. NICE, Hatboro, Pa. Filed Mar. 5, 1930. Serial No. 433,321. 2 Claims. (Cl. 29—148.4.)

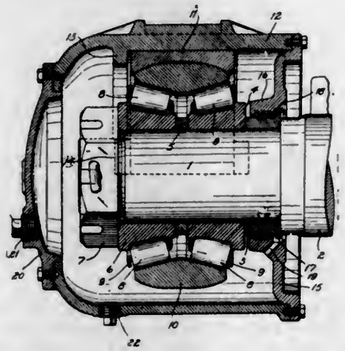


1. The process of making cylindrical rollers having ends of the form of segments of a sphere, which comprises making and hardening steel balls, and grinding a part of the surface of the balls included between two parallel planes into cylindrical form by passing the balls through a centerless grinder.

1,784,464. VEHICLE DUMP BODY. RALPH T. OSMAN, Mansfield, Ohio. Filed Nov. 8, 1928. Serial No. 317,963. 1 Claim. (Cl. 298—10.)

A device of the class described comprising a fulcrumed body, a vehicle frame, inverted V-shaped inclined tracks carried by said frame and arcuate inverted V-shaped rockers carried by said body and engaging said tracks to mount said body upon the frame for tilting movement.

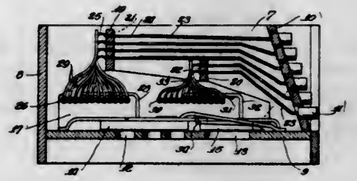
1,784,465. THERMOSTAT. BYRON J. PEPPER, Fort Wayne, Ind. Filed Jan. 30, 1925. Serial No. 5,754. 8 Claims. (Cl. 297—3.)



1. A thermometer comprising a bulb in the form of a tubular chamber exposed on the outside and the inside of the tube to the temperature to be measured, said chamber having an outer wall of lower expansivity and thermal conductivity than the inner wall, and means for passing material to be observed as to temperature, first over the outside and then through the inside of said bulb.

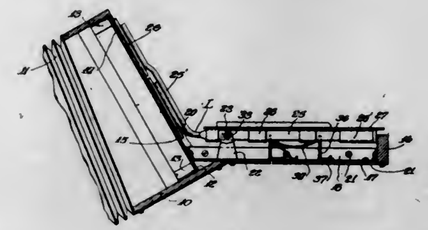
1,784,466. STEERING SIGHT ADAPTED TO BE FITTED TO THE MUD GUARDS OF MOTOR VEHICLES. OSCAR RENSONNET, Etterbeek-Brussels, Belgium, assignor to Henry Dujardin, New York, N. Y. Filed Dec. 26, 1929, Serial No. 416,720, and in Belgium Feb. 11, 1929. 3 Claims. (Cl. 116—31.)

1. An indicating device for the mud guards of automobiles comprising an upstanding member having a height materially elevating the upper end thereof above the mud guard of an automobile, and having means at its lower end for attaching the same flatwise against the outside edge of a mud guard.



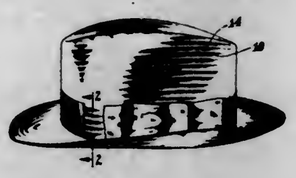
1,784,467. CAR-JOURNAL CONSTRUCTION. WILLIAM L. SCRIBNER, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Mar. 19, 1927. Serial No. 176,629. 7 Claims. (Cl. 308—180.)

1. A car journal construction comprising a journal box, an axle extending thereinto, a seat member slidably mounted in said journal box and provided with a seat on its inner surface that is curved lengthwise of the axle, a bearing cup having its outer surface curved to fit said seat, a bearing cone mounted on said axle and bearing rollers interposed between said cup and said cone, said journal box being provided with an internal rib and said inner box having end lugs engaging the ends of said rib to prevent rotation of said inner box.



1,784,468. BASS-KEY ACTION FOR ACCORDIONS. MARIO SOPRANI, Castelfidardo, Italy. Filed Feb. 3, 1930. Serial No. 425,477. 6 Claims. (Cl. 84—376.)

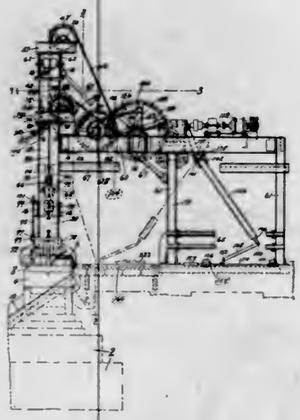
4. In a musical instrument of the class described, the combination of a plurality of valves, a plurality of rotatable rods arranged side by side in a common plane, an actuating arm on each rod, a stem for each valve in the path of one of said arms to be operated upon rotation of the rod, key bars terminating each in an abutment at its inner end, a guide for said key bars, a plurality of lever pins extending from each rod, the pins of all said rods



being deflected with their outer ends arranged in a common plane adjacent to and parallel with said guide, the abutment for each key bar being adapted for engagement with a plurality of adjacent lever pins, whereby when a key bar is actuated it will swing the associated lever pins to rotate the corresponding rods and cause actuation of the corresponding valves.

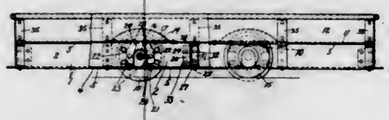
1,784,469. PIANO-KEY ACTION FOR ACCORDIONS. MARIO SOPRANI, Castelfidardo, Italy. Filed Feb. 3, 1930. Serial No. 425,476. 9 Claims. (Cl. 84—376.)

6. In a musical instrument of the class described, the combination of a key board, a fulcrum shaft on said board, a plurality of piano key levers fulcrumed on said rod, each lever being a length of wire having its outer end flattened and disposed in a plane at right angles with said board, a key body for each lever comprising a fingering top and a plurality of lugs extending therefrom having passageways therethrough for receiving the flattened end of the respective lever, and valves controlled by said key levers.



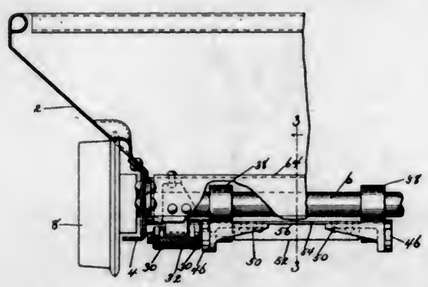
1,784,470. HAT. CARL STEINBERG, New York, N. Y. Filed July 26, 1930. Serial No. 470,848. 2 Claims. (Cl. 2—193.)

1. A hat comprising a crown and a brim and made of a flat braid, the braid being formed of a yarn composed of



a fluffy fibrous material and a resilient woody material spun together, the resilient woody material being of a character that it will normally retain the form into which it has been set and to readily return to said setting when distorted therefrom, whereby a straw hat effect is produced the form of which is maintained by the resilient woody component of the yarn, and a felt hat effect will be produced by the fluffy fibrous component of the yarn.

1,784,471. WHEEL-BREAKING MACHINE. EMIL C. STOLBERG, East Orange, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 14, 1929. Serial No. 339,997. 24 Claims. (Cl. 29—66.)



1. In a wheel breaking machine, an anvil to hold a wheel to be broken, a cage normally arranged adjacent the anvil to surround the wheel to be broken, a hammer, a pusher for forcing the wheel to be broken onto the anvil, means for elevating the hammer and cage, means for reciprocating the pusher, and actuating means common to the elevating and reciprocating means for operating said elevating and reciprocating means in predetermined sequence.

1,784,472. MINE CAR. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed May 22, 1925. Serial No. 32,094. 48 Claims. (Cl. 105—304.)

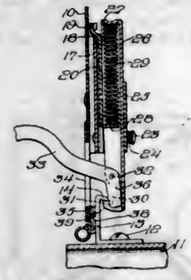
1. In a mine car, sills having vertical webs and inwardly and outwardly projecting flanges, a central floor portion secured to said inwardly projecting flanges, side floor portions secured to said outwardly projecting flanges, braces for said side floor portions secured to said sill webs and axle housings connecting said sill top flanges.

1,784,473. MINE CAR. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 20, 1929. Serial No. 408,501. 20 Claims. (Cl. 105—364.)

1. In a mine car having drop doors, wheels and axles, latches for one of said drop doors mounted on an axle, and means spacing said latches on said axle.

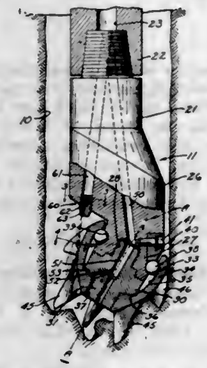
2. In a mine car having drop doors, wheels and axles, latches for one of said drop doors mounted on an axle, and means spacing said latches on said axle and serving as an abutment for said door.

1,784,474. ILLUMINATED ORNAMENTAL OBJECT. EDWIN BIRD WILSON, Forest Hills, N. Y. Filed Dec. 7, 1927. Serial No. 238,302. 4 Claims. (Cl. 240—10.)



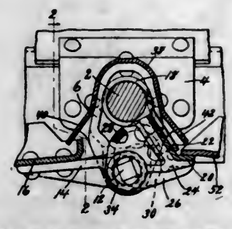
1. In an ornamental object, a plurality of profile members assembled by intersection to represent the object, apertures in the body of said members remote from the axis of intersection thereof and electric lamps positioned in said apertures, said lamps being held in position by means of a flat member having a slit therein for cooperating with the profile member, said slit coacting with the said member in such manner as to hold it at right angles adjacent to said lamp.

1,784,475. HOOD CATCH. WALTER D. YOUNG, Flint, Mich. Filed Nov. 14, 1928. Serial No. 319,842. 6 Claims. (Cl. 292—65.)



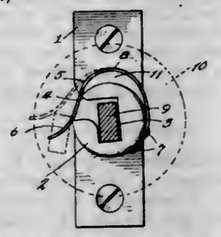
1. A catch of the class described comprising, in combination, a support adapted to be secured to a movable panel, a guide member pivotally secured to said support,

a slidable bolt carried by said guide member, spring means constantly urging said bolt in one direction with respect to said guide member, spring means constantly urging said



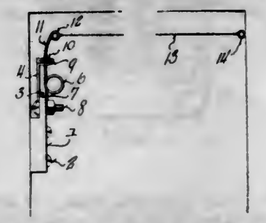
guide member in one direction relative to said support, a handle carried by said bolt, and a fixed member engageable by said bolt.

1,784,476. CLEANING DEVICE FOR ROTARY DRILLING TOOLS. JOHN A. ZUBLIN, Los Angeles, and ELMER T. SCOTT, Bell, Calif.; said Scott assignor to said Zublin. Filed Jan. 5, 1929. Serial No. 330,526. 11 Claims. (Cl. 255—71.)



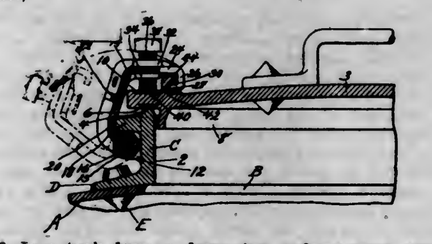
1. In a rotary bit, the combination of: a shank; a cutter rotatable on said shank and adapted to rotate as said shank rotates; and nozzle means for directing a flow of fluid tangentially against said cutter, said nozzle means comprising a nozzle body rotatably mounted in said shank and providing an eccentric orifice.

1,784,477. MINE CAR. LEOPOLD ALMQUIST, Jersey City, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 5, 1928. Serial No. 310,656. 14 Claims. (Cl. 105—253.)



1. In a mine car, a drop door pivotally mounted on the car, a latch for holding said door in closed position, a second drop door, a hinge for attaching said second door to the car comprising a rectangular hinge pin and a cam having an open-ended slot receiving said hinge pin and operated by said hinge pin to operate said latch.

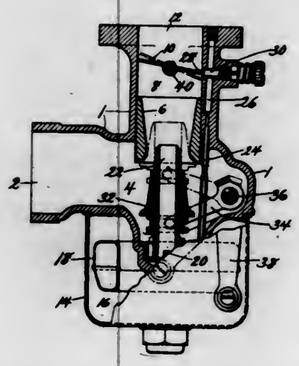
1,784,478. SHADE AND AWNING ROLLER BRACKET. JESS BEARDS and LOUIS L. TETELMAN, New York, N. Y. Filed May 6, 1930. Serial No. 450,289. 1 Claim. (Cl. 156—24.)



A bracket having a base and a shoulder thereon with a slot in the shoulder, used for shade, awning and other rollers, which bracket has a spring attachment wherein one end of the spring is mounted on and secured to the shoulder of the bracket by riveting, welding or bolting the same to the shoulder, and wherein the free end of the spring resiliently closes the mouth of the bracket slot.

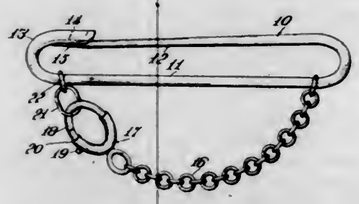
1,784,479. ALARM-CONTROL UNIT. EDWARD BELLMAN, Rockford, Ill. Filed Nov. 26, 1928. Serial No. 321,929. 2 Claims. (Cl. 200—54.)

2. In an alarm control unit, comprising a body portion formed of insulating material and having a longitudinal projecting flange at one end thereof, an L-shaped member having its stem portion adjustably connected to the flange on the insulated body, the lateral portion of said L-shaped member being spaced from the outer extremity of the flange and formed of an aperture, a coil spring member positioned between the lateral portion of the L-shaped member and the flange with one arm on the spring removably connected to the flange and the other arm on the spring extending through the aperture in the lateral portion of the L-shaped member, an eyelet formed at the outer end of the second arm on the spring and means cooperating with the eyelet for normally maintaining the second arm out of contact with the lateral portion of the L-shaped arm.



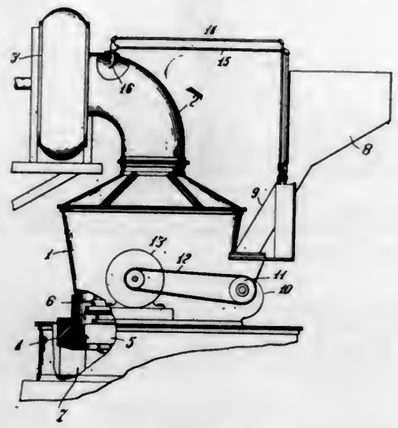
1,784,480. TANK-DOME COVER AND SECURING MEANS THEREFOR. JOHN BEYER, Bayonne, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 9, 1928. Serial No. 268,666. 6 Claims. (Cl. 220—55.)

6. In a tank dome, a dome ring, a dome cover, spaced lugs extending outwardly from the dome ring, a pintle in



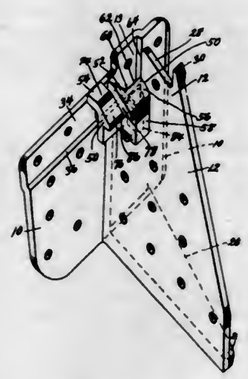
said lugs, a flange connecting said lugs and arranged above the latter, an arm pivotally connected at its lower end to the pintle and adapted to be swung upwardly to position the upper end thereof over the cover, a clamping member carried by the arm for engaging the cover, said arm being capable of vertical movement relative to the pintle when the clamping element is being urged to clamping position whereby said carrying element binds against the flange without transmitting the clamping strain to the pintle.

1,784,481. CARBURETOR. GEORGE M. BICKNELL, St. Louis, Mo., assignor to Carter Carburetor Corporation, St. Louis, Mo., a Corporation of Delaware. Filed May 5, 1927. Serial No. 189,034. 13 Claims. (Cl. 261—52.)



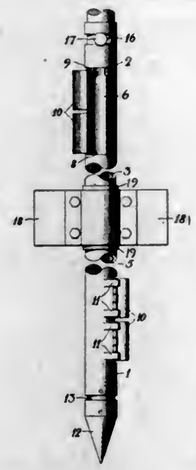
1. In a carburetor, a throttle valve and shaft rotatably supporting said valve, a crank for operating said shaft, a choke valve, a crank for operating said choke valve, a lever loosely mounted on said shaft and operatively engaging said throttle valve operating crank and adjustable means connecting said lever and said choke valve operating crank.

1,784,482. LINGERIE CLASP. MARIAN CRAWFORD, Chicago, Ill. Filed Oct. 7, 1929. Serial No. 397,801. 1 Claim. (Cl. 24—73.)



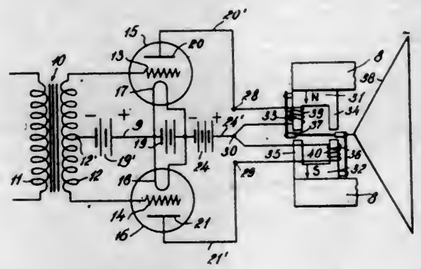
A device for retaining a lingerie strap on the wearer's shoulders comprising a garment clasp consisting of two substantially parallel bars united at one of the ends so as to permit the free ends to be flexed toward each other, the free end of one bar being tapered into a pin-point while the free end of the other bar is bent into hook form adapted to receive the pointed end of the other bar, and a link chain one end whereof is yieldingly secured adjacent to the end of one of the bars, while the other end of the chain is provided with a spring snap, and a link yieldingly connected at the opposite end of said bar and adapted to receive the spring snap, said chain being of length greater than the width of the garment strap to be encircled.

1,784,483. PNEUMATIC FEED REGULATING MECHANISM. PHILIP DAVIDSON, New York, N. Y., and JOE CRITES, Evanston, Ill., assignors to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 22, 1928. Serial No. 327,916. 16 Claims. (Cl. 83—44.)



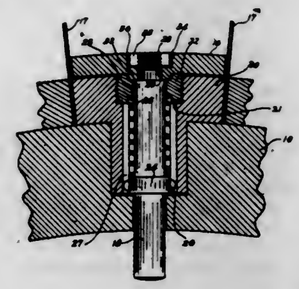
9. The combination with a pulverizing mill, exhausting means for withdrawing material from the mill in suspension in air, a feeder for the mill, and a variable speed motor for driving the feeder, of means for controlling the speed of the motor comprising a series of switches, a plurality of suction devices separately controlling the several switches, and means controlled by pressure variations in the mill for successively actuating the suction devices.

1,784,484. CAR CONSTRUCTION. WILLIAM F. DIETRICHSON, Webster Groves, Mo., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 21, 1929. Serial No. 401,161. 24 Claims. (Cl. 105—404.)



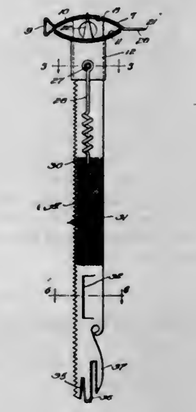
12. In a railway car, the combination of a side sill, an end sill, a corner post, a single piece bracket securing said sills and corner post together, said bracket comprising a front plate to which the end sill is secured, and a side plate extending from the front plate intermediate its side edges and to which the side sill is secured, said side plate defining an external and an internal angle, said corner post being arranged in the external angle and being secured to the front and side plates.

1,784,485. SAMPLER. ROBERT W. ELLMS, Baltimore, Md. Filed Mar. 12, 1930. Serial No. 435,294. 7 Claims. (Cl. 255—1.)



1. A sampling device comprising a tube having an opening in the side thereof, cutter flaps pivoted to one side of said opening, and extending substantially the length thereof, means to limit the opening angle of said flaps, said flaps, when closed, being adapted to partially cover said opening.

1,784,486. LOUD-SPEAKER AND CIRCUIT THEREFOR. CLAIR L. FARRAND, Forest Hills, N. Y., assignor to Farrand Inductor Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Feb. 26, 1929. Serial No. 342,899. 6 Claims. (Cl. 179—171.)

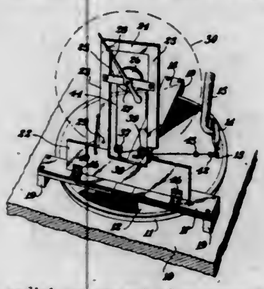


1. The combination of a loudspeaker having a motor comprising at least two poles each having a speech coil and an armature between the poles all arranged so that equal currents passing through the coils will produce like flux changes at the poles and result in no movement of the armature and so that unequal currents passing through the coils will produce unlike flux changes at the poles which result in a movement of the armature, an electric circuit for each of said coils, said circuits having a common path, a source of direct current in said common path whereby steady direct current from said source divides and flows through both of said coils to produce like flux cnanges at said poles resulting in no movement of the armature, and means in said circuits for producing fluctuating currents of unequal value in the speech coils which result in unlike flux changes at the poles and a consequent movement of the armature.

1,784,487. EJECTOR FOR CUTTING CYLINDERS. JOSEPH P. FEENEY, Kearny, N. J., assignor to Congoleum-Nairn, Inc., a Corporation of New York. Filed May 29, 1930. Serial No. 457,455. 4 Claims. (Cl. 164—28.)

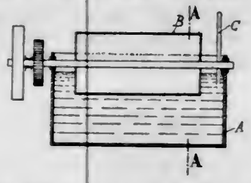
1. An ejector for linoleum cutting and inlaying mechanism comprising a block adapted to be secured in a cutting cylinder shell; a spindle slidable in said block, said spindle having a shouldered portion and an externally threaded stem portion adjacent its outer end; a perforated plate engaging the shouldered outer end of the spindle and provided with a nut-receiving recess; and an internally threaded nut interfitting said nut-receiving recess and engaging the threaded stem of said spindle.

1,784,488. COMBINATION TOOL. NATHAN JENKINS, Chicago, Ill. Filed Mar. 1, 1928, Serial No. 258,159. Renewed Oct. 24, 1930. 3 Claims. (Cl. 7—7.)



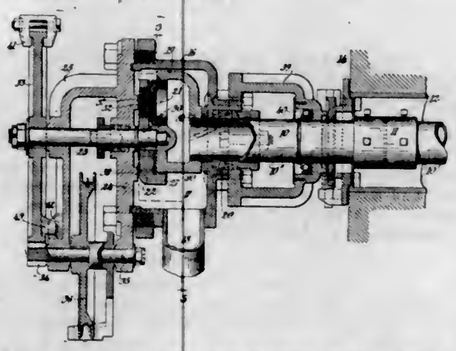
1. A multiple utility tool in which is combined a body constituting a handle and comprising a light metal bar having one end extended laterally and bowed outwardly to provide a fixed jaw, the ends of said laterally extended portion being formed to provide oppositely extending hammer and hatchet portions, and a second oppositely bowed jaw adjustably mounted on said bar relative to said fixed jaw, and means for securing said second jaw in abutting relation with said fixed jaw to provide a rigid head between said hammer and hatchet portions.

1,784,489. TEACHING ATTACHMENT FOR PHONOGRAPHS. WILLYS P. KENT, New York, N. Y. Filed May 8, 1928. Serial No. 275,993. 5 Claims. (Cl. 35—121.)



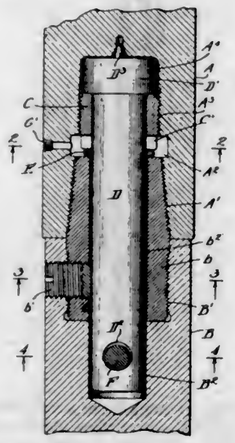
1. For use with a phonograph disc record and a phonograph reproducer for playing the same, a device com-

prising a chart element having indicia relating to the subject matter of the record, a pointer element, one of said elements being movable with respect to the other, and means for moving said movable element proportion-



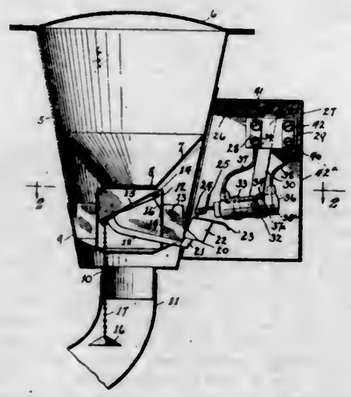
ately to the radial component of movement of the phonograph needle during the needle's traverse of the record, said means comprising a cable extending from the needle to a point over the center of the record and thence to said movable element.

1,784,490. PROCESS FOR THE RECOVERY OF THE TIN CONTAINED IN THE RESIDUES OF TIN-PLATE MANUFACTURE. JEHAN LALEY, Hayange, France, assignor to Les Petits Fils de Francois de Wendel & Cie., Paris, France. Filed Apr. 3, 1928, Serial No. 266,886, and in France Jan. 23, 1928. 2 Claims. (Cl. 75—55.)



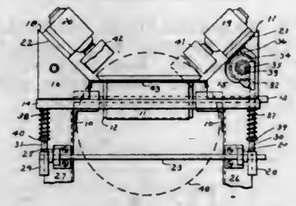
1. A process for the recovery of the tin contained in the residues of tin plate manufacture of the class referred to, which consists in causing a basic liquid in the hot state to act upon the oil and other impurities contained in said residues, in separating by screening the sludge from the tin and impure tin alloy which result from said treatment, and in treating separately the tin and impure tin alloy on the one hand in a furnace, and the sludge on the other hand by reduction in a furnace.

1,784,491. ROTARY SOOT CLEANER FOR BOILERS. FREDERICK W. LINAKER and THEODORE M. BRUBACK, Du Bois, Pa. Filed Oct. 20, 1926. Serial No. 143,027. 7 Claims. (Cl. 122—392.)



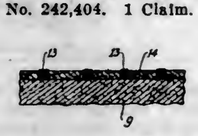
1. A soot cleaner comprising a rotary cleaner element, an enclosed valve for controlling admission of steam thereto, said valve movable relatively to the cleaner element and valve-operating means engaging the valve and adapted through the valve to rotate the element.

1,784,492. LOCK JOINT. LUTHER D. LOVEKIN, Wynnewood, Pa. Filed Sept. 4, 1926. Serial No. 133,550. 8 Claims. (Cl. 287—124.)



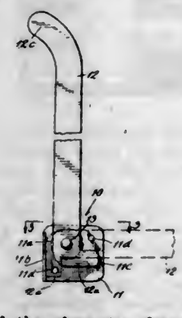
1. In a lock joint construction, a part formed with a socket comprising a tapered and threaded outer portion and an intermediate oppositely threaded portion, an externally threaded bushing screwed into said intermediate socket portion, a bolt having its head received in the inner portion of the socket and bearing against the inner end of said bushing and having its body portion extending through said bushing and projecting out of said socket, and a part having a tapered externally threaded portion screwed into said tapered socket portion and formed with an axial passage receiving said bolt, and means connecting said bolt and second part to prevent their relative rotation.

1,784,493. VALVE-CONTROLLED SWITCH FOR ELECTRIC GRINDERS. HENRY MEYER, Long Island, N. Y. Filed Aug. 23, 1928. Serial No. 301,670. 8 Claims. (Cl. 200—52.)



1. The combination of a conical hopper having an interior funnel, an auxiliary hopper below the funnel, a shaft and a pivoted balanced valve within the auxiliary hopper, a lever connected at one end to the valve and extending through the auxiliary and main hoppers, a tilting make and break mechanism included in an electric motor circuit mounted on the outside of the main hopper and in the path of movement of the opposite end of the lever whereby said circuit may be maintained closed during any open position of the said valve.

1,784,494. MACHINE FOR CUTTING ANGULAR ENDS. EDWARD J. O'NEILL, Syracuse, N. Y., assignor to Sterilek Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Sept. 27, 1928. Serial No. 308,835. 3 Claims. (Cl. 164—61.)



1. In a cutting machine of the class described, a cutting table, one or more cup shaped, knife-edged cutters mounted at an angle to the said cutting table, means for rotating and means for angularly raising and lowering said cutter or cutters in relation to the cutting table.

1,784,495. METHOD OF ORNAMENTING SURFACES. CORNELIUS J. O'NEIL, Oak Park, Ill. Filed Dec. 24, 1927. Serial No. 242,404. 1 Claim. (Cl. 41—39.)

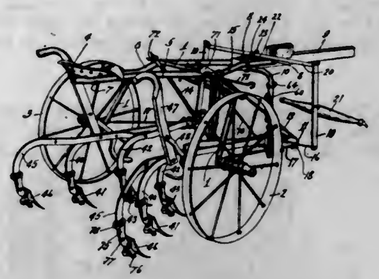
A method of ornamenting a surface which comprises defining the characteristic to be formed by moulding directly onto the surface through the interstices of a matrix a plastic material which sharply conforms to the margins of the interstices and fills the inequalities of the surface, allowing the material to become substantially brittle, coating said surface around the moulded characteristic with a sand-blast-resistant material, and subjecting the surface to a sand-blast.

1,784,496. CURTAIN-RETAINING DEVICE. HARRY BODSTEIN and ISIDORE NATHANSON, Brooklyn, N. Y. Filed May 16, 1930. Serial No. 452,824. 6 Claims. (Cl. 156—33.)

2. A device of the character described comprising a base plate, an arm, an eyelet rivet extending from one side of said plate for pivotally securing thereto said arm adjacent one end thereof, means adjacent said rivet for frictionally engaging said arm to retain the latter in an inoperative position, means for engaging said arm end for rigidly retaining the arm in an effective position, and means projecting from the other side of said plate for attaching the device to a support.

1,784,497. ORGANIC METALLO MERCAPTO SULPHONIC COMPOUND AND PROCESS OF MAKING SAME. WALTER SCHOELLER, ERICH BORGWARDT, and ADOLF FELDT, Berlin, Germany, assignors to Chemische Fabrik auf Actien (vorm. E. Schering.), Berlin, Germany, a Firm. Filed Apr. 26, 1927, Serial No. 186,815, and in Germany May 5, 1926. 3 Claims. (Cl. 260—11.)

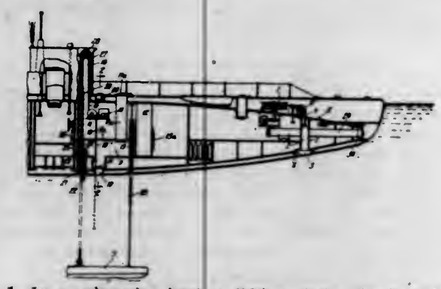
1. As new products organic metallic mercapto sulphonic compounds corresponding to the formula



$$X\cdot(NH\cdot CH_2\cdot SO_3Na)\cdot(S\cdot Me)\cdot(SO_2y)$$

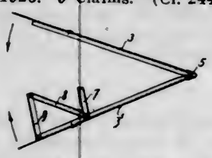
wherein X is an aliphatic, aromatic, or heterocyclic radical, Me a heavy metal and y either H or a metal.

1,784,498. PROCESS OF VULCANIZING RUBBER AND PRODUCT OBTAINED THEREFROM. WINFIELD SCOTT, Nitro, W. Va., assignor to The Rubber Service Laboratories Co., Akron, Ohio, a Corporation of Ohio. Filed Aug. 5, 1929. Serial No. 383,773. 20 Claims. (Cl. 18—53.)



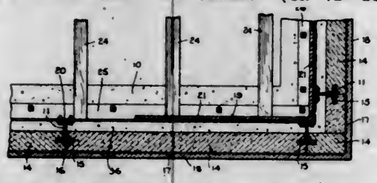
8. The process of producing vulcanized rubber which comprises heating rubber and sulfur in the presence of a mixture of accelerators, said accelerators comprising a reaction product of a dichloracetate and a mercapto-benzothiazole and a guanidine vulcanization accelerator.

1,784,499. CULTIVATOR. JOHN P. SEAHOLM, Moline, Ill., assignor, by mesne assignments, to Minneapolis-Moline Power Implement Company, Minneapolis, Minn., a Corporation of Delaware. Original application filed Oct. 5, 1925, Serial No. 60,374, Patent No. 1,607,646, dated Nov. 23, 1926. Divided and this application filed Mar. 12, 1926. Serial No. 94,112. 4 Claims. (Cl. 97—149.)



1. The combination in a cultivator of an arched axle, a pair of ground wheels journaled thereon, and a pair of seat supporting bars connected together at their rear ends and diverging forwardly to where they are provided with openings to receive said arched axle, said bars then converging forwardly and being connected to a guiding pole, the top portion of said arched axle having offset bends preventing lateral movement of the seat supporting bar on the axle.

1,784,500. RESCUE SUBMARINE. LAWRENCE Y. SPEAR, New London, Conn., assignor to Electric Boat Company, Groton, Conn., a Corporation of New Jersey. Filed Feb. 20, 1928. Serial No. 255,684. 9 Claims. (Cl. 114—16.6.)

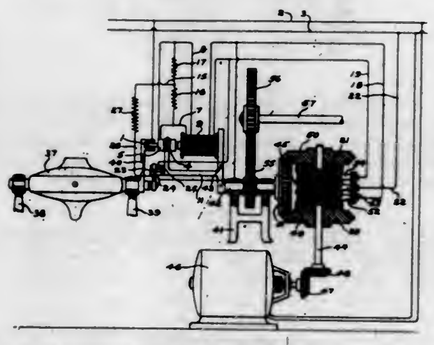


1. In a submarine boat, a lifting chain, the boat having an opening through the bottom of its hull, said chain operating through the opening and being disposed at the approximate centre of gravity of the ballast tanks, and means for limiting movement of the chain through said opening.

1,784,501. PROCESS OF MANUFACTURE OF WEDGE-SHAPED HOLLOW BODIES. LUDWIG STAIGER, Spandau near Berlin, Germany, assignor to the Firm Rohrbach Metall-Flugzeugbau, G. m. b. H., Berlin, Germany. Filed May 16, 1927, Serial No. 191,662, and in Germany May 18, 1926. 9 Claims. (Cl. 244—31.)

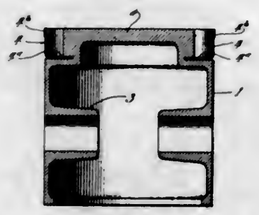
1. An aircraft rudder and the like in the form of a wedge shaped metallic hollow body having flat outer skins brought together and suitably connected at one edge, but separated at the other edge by a firmly joined longitudinal wall, firmly attached transverse reinforcing frame members arranged in the direction of flight, the latter including three web bars in zigzag fashion, one of which is attached to the inside of the longitudinal wall and joined to its girders by means of rivets driven parallel to the rudder covering skin with a more remote bar attached to the web girders by means of rivets driven at one end vertically and at the other parallel to the cover skin.

1,784,502. BUILDING CONSTRUCTION. JUNIUS H. STONE, Port Washington, N. Y. Filed Mar. 28, 1929. Serial No. 350,507. 13 Claims. (Cl. 72—16.)



11. In a building construction, the combination of vertically extending structural elements of rigid material, said structural elements individually having vertically extending flanges, blocks of wall material having vertically extending slots at their vertically disposed sides adapted to receive and embrace portions of said flanges, said blocks serving as wall material, layers of covering material serving as covering for the wall material and means for mechanically supporting the covering material from said structural elements.

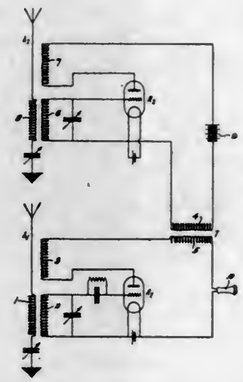
1,784,503. CEMENT-GUN NOZZLE. EDWARD C. SWANN, New York, N. Y., assignor to Cement Gun Construction Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 6, 1928. Serial No. 304,236. 15 Claims. (Cl. 91—44.)



1. A rubber liner for a cement gun nozzle, having a plurality of circularly spaced ribs on the inner surface of the liner.

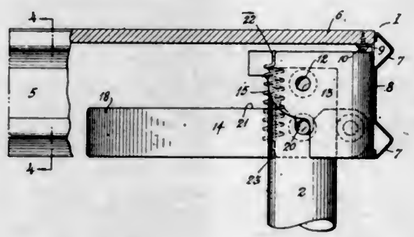
1,784,504. VARIABLE-SPEED CONTROL DEVICE. HARRY L. TANNER, Brooklyn, N. Y., assignor to Ford Instrument Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed May 5, 1926. Serial No. 106,917. 18 Claims. (Cl. 172—239.)

1. In a follow-up mechanism the combination of a bodily movable contact having vibratory movement distinct from its bodily displacement, a bodily movable contact associated therewith, said contacts adapted to be movable relatively to each other, and means actuated by one of said contacts for causing one of them to follow the movement of the other.



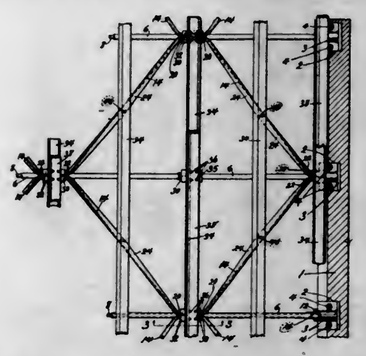
1,784,505. PISTON AND METHOD OF MAKING SAME. RALPH R. TEETOR, Hagerstown, Ind. Filed Sept. 7, 1926. Serial No. 133,737. 9 Claims. (Cl. 74—109.)

1. A ringless piston comprising a body having a reduced head part and a narrow space between said head part and the adjacent body part, and a separate, continuously formed thin steel sealing member unremovably secured to said body, said member being cup-shaped with its horizontal bottom portion extending into and fixed in said space, and its upstanding wall or flange part being substantially parallel with the wall of said body and having its upper edge portion extended radially to engage the cylinder wall, the relative proportions of the foregoing parts being such that the cylinder wall is engaged only by said radially extended portion.



UNIVERSAL LIBRARY OF ATLANTIS

1,784,506. RADIO RECEIVING SYSTEM. GEORG VON ARCO, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Filed Feb. 11, 1926, Serial No. 87,508, and in Germany Feb. 14, 1925. 5 Claims. (Cl. 250—20.)

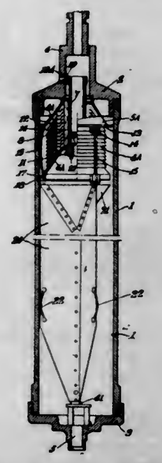


1. In a high frequency signalling system, a circuit comprising an electron tube arrangement adapted to oscillate under the influence of incoming oscillations, a second electron tube circuit having a plate circuit coupled to said first circuit and means comprising said first mentioned electron tube circuit for energizing the plate circuit of the second electron tube circuit solely from the high frequency oscillations generated by said first circuit when said first circuit is oscillating under the influence of oscillations remotely excited.

1,784,507. FOLDING TABLE. THOMAS STEELE WALKER, Newark, N. J., assignor to Isidor Leezenbaum, Newark, N. J. Filed June 21, 1928. Serial No. 287,207. 2 Claims. (Cl. 45—11.)

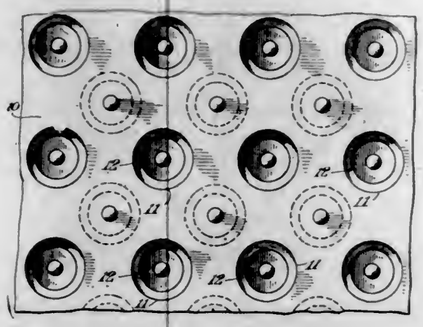
1. A folding table comprising a table top consisting of a side frame and a top panel, a bracket positioned within each corner of said table and underneath the top panel, a foldable leg pivotally mounted on each bracket and adapted to swing into a closed horizontal positon underneath the table top and within the confines of the side frame and into an open vertical positon, a horizontally projecting pin carried on the side of each of the said legs, an upper and lower pin-engaging shoulder carried by each of said corner brackets and spaced about 90° from each other, and a compound resilient latching means, operatively associated with each of said brackets and mounted in a concealed position underneath said table top for releasably holding said leg in either a closed horizontal position or an open vertical position, said latching means having a recesses to cooperate with the lower shoulder for engaging the projecting pin and for positively holding it when the leg is in a vertical position.

1,784,508. ROOF. CHARLES F. WALP, Berwick, Pa., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 8, 1929. Serial No. 345,350. 20 Claims. (Cl. 108—1.)



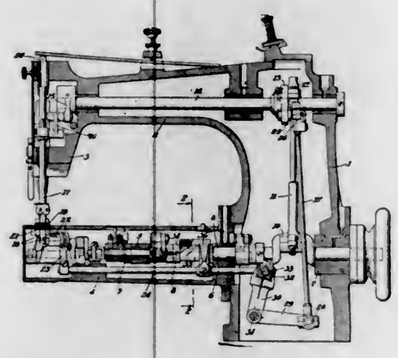
1. In a roof frame, spaced parallel rods, members extending diagonally between adjacent rods and having their ends parallel to and cooperating to receive said rods and purlin supports securing said members together and to said rods.

1,784,509. FILTERING AND DECOLORIZING PAPER OF ACID CHARACTER. WALTER S. BAYLIS, Los Angeles, Calif., assignor to Filtrol Company of California, Los Angeles, Calif., a Corporation of California. Original application filed Apr. 24, 1928, Serial No. 272,572. Divided and this application filed Aug. 5, 1929. Serial No. 383,657. 8 Claims. (Cl. 92—21.)



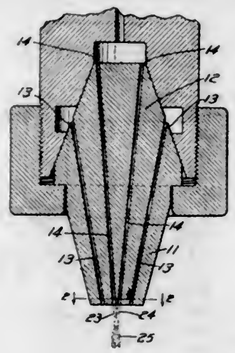
1. A filtering paper containing an acid-activated clay which contains free acid.

1,784,510. CENTRIFUGAL APPARATUS. RAOUL MAXIME BERLINE, Rueil, France, assignor to The Sharples Specialty Company, Philadelphia, Pa., a Corporation of Delaware. Filed May 7, 1929, Serial No. 361,146, and in Luxemburg May 7, 1928. 11 Claims. (Cl. 233—21.)



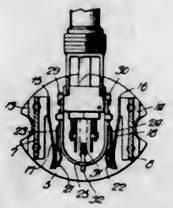
1. In a centrifugal apparatus a cylindrical bowl, dividing cones extending over a portion only of the bowl height and on the side opposite to the inlet of the liquid, means for assembling the dividing cones in a removable group, and springs, carried by this group and which, under the action of centrifugal force come to bear against the sides of the bowl so as to center the group in the bowl.

1,784,511. LAMINATED SHEET STRUCTURE. EDMUND B. CARNS, New York, N. Y., assignor to Cairns Development Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 31, 1927. Serial No. 179,988. 1 Claim. (Cl. 189—34.)



A laminated sheet structure comprising opposed sheets each having embossments with flat extremities said embossments of substantial truncated conical form, the embossments of each sheet bearing against the plane surface of the other sheet and fastened thereto, and said embossments of the opposed sheets lying in staggered relationship.

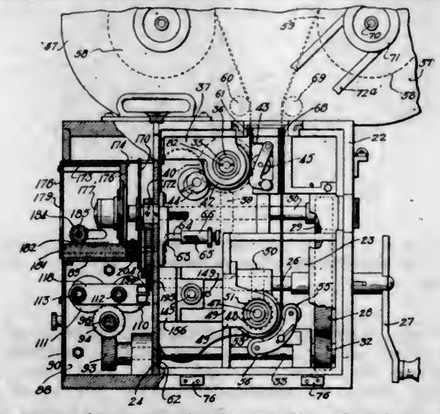
1,784,512. LOOPER-ACTUATING MECHANISM FOR SEWING MACHINES. ANDREW B. CLAYTON, Union, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Original application filed Jan. 28, 1928, Serial No. 250,111. Divided and this application filed Oct. 11, 1928. Serial No. 311,736. 3 Claims. (Cl. 112—200.)



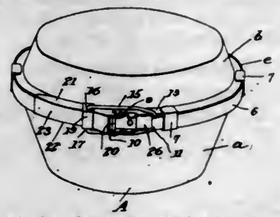
1. In a sewing machine, a frame comprising a standard, a bracket-arm, and a cylinder-bed, a main-shaft journaled in line with and extending into said cylinder-bed, a rocking and sliding looper-supporting shaft journaled in and lengthwise of said cylinder-bed below said main-shaft, operative connections between the main-shaft and looper-supporting shaft within the standard for sliding the looper-supporting shaft, an eccentric on the main-shaft within the cylinder-bed, and means embracing said eccentric for rocking the looper-supporting shaft.

1,784,513. METHOD OF CUTTING SLOTS IN METAL. CLARENCE J. COBERLY, Los Angeles, Calif., assignor to Kobe, Inc., Huntington Park, Calif., a Corporation of California. Original application filed Sept. 29, 1923, Serial No. 665,648. Divided and this application filed July 10, 1929. Serial No. 377,183. 4 Claims. (Cl. 148—9.)

1. A process of cutting keystone-shaped slots in metal which comprises: passing a cutting jet through said metal, said cutting jet being formed by a plurality of non-parallel jets so set as to cause said cutting jet to form the sides of the slot; and causing a relative movement between said metal and said jet.



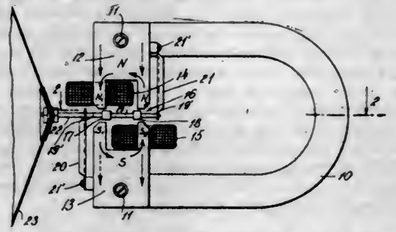
1,784,514. ELECTRIC SWITCH. VICTOR R. DESPARD, Valparaiso, Ind., assignor to McGill Manufacturing Company, Valparaiso, Ind., a Corporation of Indiana. Filed June 3, 1927. Serial No. 196,259. 2 Claims. (Cl. 200—67.)



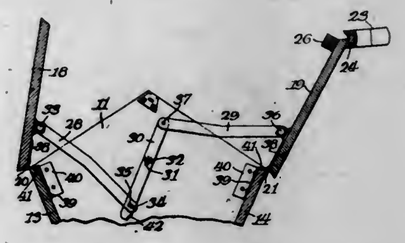
2. An electric switch comprising a support, spaced spring contacts mounted thereon, having their contact faces oppositely directed, a bridging member, means for moving said bridging member transversely to the direction in which said contacts face into and out of position connecting said contacts, and cooperating means on said contacts and member for throwing the arc caused by disconnecting said member and contacts outwardly at an angle to the direction of movement of said member, said means including spring fingers on said member adapted to engage said contacts and having the advancing edges thereof curved away from said contacts, said spaced contacts having convex contacting faces.

1,784,515. BINOCULAR NONSTOP-MOTION-PICTURE CAMERA. HARRY K. FAIRALL, Los Angeles, Calif., assignor to Multicolor Ltd., Los Angeles, Calif., a Corporation of California. Filed Nov. 21, 1925. Serial No. 70,489. 10 Claims. (Cl. 88—18.4.)

1. In a camera the combination of: film advancing means adapted to engage a film for intermittently advancing same; a pair of cranks each directly supporting and operating said film advancing means; and means for operating said cranks in order to operate said film advancing means so that each point in said film advancing means moves in a circular path and in a manner to intermittently advance said film.



1,784,516. CONTAINER AND MEANS FOR HOLDING SAID CONTAINERS IN COOPERATION. LUKE J. FAIRBANKS, Los Angeles, Calif. Filed Mar. 19, 1927. Serial No. 176,662. 2 Claims. (Cl. 220—61.)

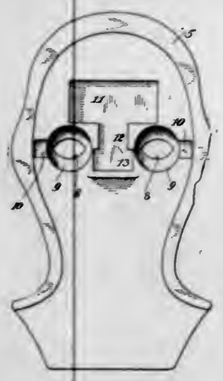


1. Means of the character disclosed, including a pan formed with a curved rim, an annular gasket, provided with a slotted portion to receive said curved rim, said gasket being provided with an annular concavity and whereby said gasket, due to said concavity, may center the said container upon the rim of a second container.

1,784,517. MOTOR FOR LOUD-SPEAKERS. CLAIR L. FARRAND, Forest Hills, N. Y., assignor to Farrand Inductor Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Sept. 25, 1928. Serial No. 308,224. 20 Claims. (Cl. 175—339.)

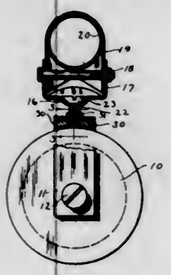
1. A motor for loud speakers comprising a reciprocating armature unit, a field magnet structure having at least one pair of poles forming at least one gap for the armature unit and an armature suspension comprising at least one flexible member at each end of the armature unit, each of said members being connected at one end to the armature unit and at its other end to a rigid support located to one side of the armature unit.

1,784,518. LID CONTROL FOR WORKBOXES. WILLIAM GILLOOLY, Streator, Ill., assignor to Metal Stampings Corporation, Streator, Ill., a Corporation of Illinois. Filed Jan. 23, 1929. Serial No. 334,521. 15 Claims. (Cl. 312—191.)



1. In a portable cabinet of the class described, the combination of a receptacle including side and end walls, a pair of lids for closing the top of said receptacle, said lids being hinged to oppositely disposed side walls of said receptacle so as to turn towards and from each other to closed and open position respectively, said lids, when in closed position, having their inner edges substantially abutting one another, a carrying part overlapping adjacent marginal portions of said lids and secured to one of said lids so as to be movable therewith, and means operatively connecting said lids for timing the closing movement thereof so as to cause closing of the lid carrying said part more slowly than the closing of the other lid, thereby permitting said carrying part to assume its overlapping position relative to the first closed lid.

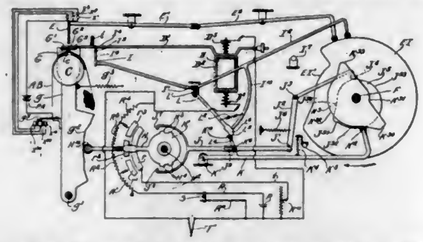
1,784,519. EYE MOUNTING FOR DOLLS. LEO J. GRUBMAN, Belle Harbor, N. Y. Filed Jan. 18, 1927. Serial No. 161,726. 24 Claims. (Cl. 46—40.)



1. In combination, a doll head having horizontal shoulders in its opposite sides adjacent the front wall thereof, an oscillatory eye setting having a shaft positioned with its ends above said shoulders and normally out of contact therewith, and eye members fixed on said shaft movable therewith towards and from the front wall of the doll head, said shoulders limiting downward vertical movement of the setting, and a member fixed to the front wall of the doll head having a part positioned rearwardly of the central portion of the shaft for engagement thereby to constitute a stop limiting the rearward movement of the shaft and the eye members relative to the doll head wall.

1,784,520. EYE MOUNTING FOR DOLLS. LEO J. GAUBMAN, Belle Harbor, N. Y. Filed Feb. 7, 1927. Serial No. 166,372. 26 Claims. (Cl. 46—40.)

1. In combination with a doll head, supporting and retaining means for an oscillatory eye setting mounted upon the front wall of said head, said means including a bearing fixed in relation to said wall and a movable latch part normally engaged with said bearing and vertically movable from its normal position to permit the axis of an eye setting inserted through the neck opening of the doll head to be mounted upon the bearing in operative relation to spaced eye openings in the head wall, and additional means yieldably holding the eye setting in its normal operative position on the bearing and out of contact with said latch means.

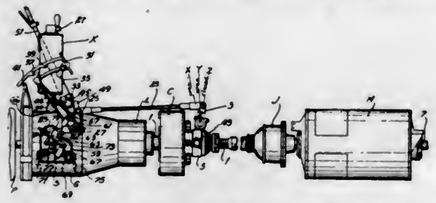


1,784,521. PULLEY MOUNT. JOSEPH M. GWINN, Jr., Buffalo, and RALPH E. OVERSMITH, Kenmore, N. Y., assignors to Consolidated Aircraft Corporation, Buffalo, N. Y., a Corporation of Delaware. Filed Oct. 22, 1928. Serial No. 314,140. 5 Claims. (Cl. 254—195.)

1. A pulley mount comprising a sheet metal portion of substantially U-shape adapted to hold a pulley wheel, a sheet metal supporting portion of substantially U-shape, and a member fixedly attached to the bight part of one of said portions and socketed universally in the bight part of the other portion to universally connect said portions.

1,784,522. METHOD OF AND APPARATUS FOR MEASURING. THOMAS R. HARRISON, Wyncote, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 21, 1929. Serial No. 294,177. 13 Claims. (Cl. 234—11.)

1. The improved method of measuring which consists in causing changes in the value of the quantity measured to deflect an element in proportion to said changes, and causing the deflection of said element to alter said proportion whenever the value of said quantity reaches either



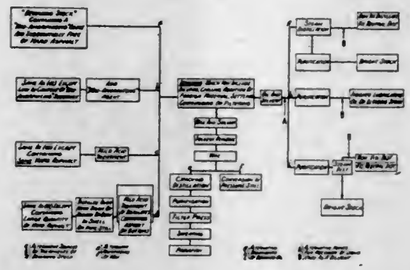
limit of any one of successive ranges of value of said quantity and thereby effect a reverse deflection of said element.

1,784,523. METHOD OF RUBBERIZING FIBROUS MATERIAL AND ARTICLE PRODUCED THEREBY. ERNEST HOPKINSON, New York, N. Y. Filed June 21, 1924. Serial No. 721,591. 15 Claims. (Cl. 91—68.)

6. The method of making rubberized fabric articles of manufacture which comprises relatively thickly covering normally penetrable fabric, without substantial penetration thereof, by a single coating operation with concentrated latex containing low temperature curing ingredients, and curing, thereby attaining a minimum loss of flexibility.

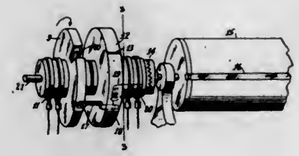
9. The method of making rubberized articles of manufacture which comprises superficially treating normally penetrable fibrous material with water repellant material to prevent substantial penetration thereof by water, then superficially coating it with a coating material embodying rubber in water dispersion, and drying.

1,784,524. AUTOMOTIVE DRIVE. THORVALD JENSEN, St. Louis, Mo., assignor to The Winther Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 19, 1926. Serial No. 96,109. 4 Claims. (Cl. 290—14.)



1. A vehicle drive comprising a prime mover, a generator connected therewith, a motor mechanically connected for driving the vehicle adapted to receive electrical energy from the generator, a mechanical connection between the generator and said mechanical connection of the motor, a clutch adapted to open the connection between the generator and said motor mechanical connection, means for opening and closing said clutch, a controller for reversing motor operation, an interlock between said controller and said clutch operating means adapted to prevent motor reversal when the clutch is closed and to prevent closing of the clutch after a motor reversal has been made and a switch for opening the motor-generator circuit, operated by said clutch operating means and adapted to close the circuit at a period when the clutch is open and open the circuit when the clutch is closed.

1,784,525. METHOD OF DEWAXING PETROLEUM OIL. LEO D. JONES, Philadelphia, Pa., assignor to The Sharples Specialty Company, Philadelphia, Pa., a Corporation of Delaware. Filed Oct. 7, 1925. Serial No. 61,125. 16 Claims. (Cl. 196—19.)

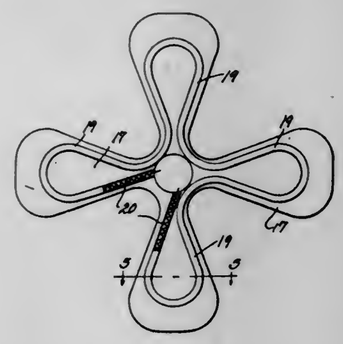


6. In the dewaxing of petroleum oil that contains crystalline wax and amorphous wax the step comprising

reducing the temperature of the oil and removing the wax which precipitates in amorphous form, while the oil con-

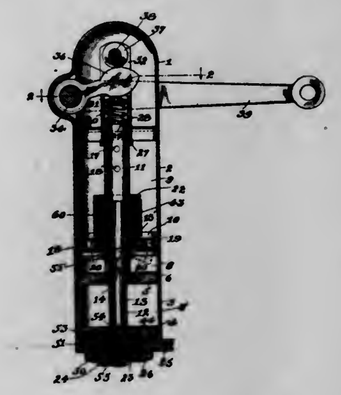
tains those impurities which naturally occur in petroleum oil and which cause all of the wax precipitated in the oil by reduction of temperature to be in an amorphous state.

1,784,526. PHASE-CORRECT COUPLING FOR PICTURE TRANSMISSION. AUGUST KAROLUS, Leipzig, Germany, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Jan. 26, 1928, Serial No. 249,636, and in Germany Feb. 11, 1927. 7 Claims. (Cl. 178—7.)



1. A system for correcting the phase adjustment of a transmitter and receiver drum for picture telegraphy systems which includes means for driving the drum of a picture receiving system in synchronism with a corresponding element of a transmitter system, means for stopping the rotation of the receiving drum during periods when phase adjustments thereof are to be made, means for adjusting and coordinating the phase of the receiver drum with that of the transmitter while said receiver drum is stationary, and means for positively driving and starting the receiver drum from a stationary position after proper phase adjustments have been made.

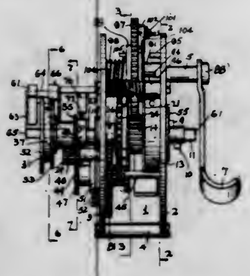
1,784,527. CAR SEAT. JOHN M. KNIGHT, Atlantic Highlands, and VICTOR WILLOUGHBY, Ridgewood, N. J., assignors to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 18, 1928. Serial No. 300,461. 18 Claims. (Cl. 155—96.)



1. In a car seat, a pedestal, a spider rotatably mounted on said pedestal, a member slidably mounted on said spider, a seat hinged to said member, locking means for said spider, locking means for preventing sliding of said member and means for operating said locking means and shifting said member on said spider.

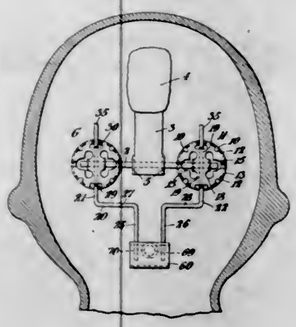
1,784,528. ELECTRIC HEATING APPARATUS. OTTO F. LIDKE and GEORGE E. LIDKE, Denton, Mich.; said Otto F. Lidke assignor of one-fourth to Lee A. Yoder, Romulus, Mich. Filed Oct. 4, 1929. Serial No. 397,175. 6 Claims. (Cl. 219—42.)

3. In an electric heating apparatus, a fan formed from two sheet metal plates secured together in face to face relation, each plate being formed with a continuous channel extending into each blade of the fan, the plates being welded together with the channels opening toward each other to form a continuous conduit between the plates, the ends of the conduit terminating adjacent the fan center, a flexible insulating tube positioned in and extending throughout the length of the continuous conduit, and an electric heating element extending through the insulating tube.



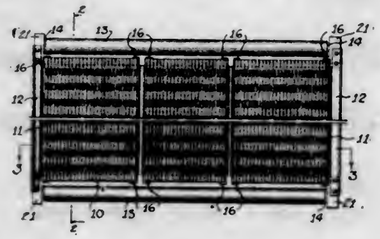
1,784,529. SHOCK ABSORBER. LOUIS L. LOMAR, Houston, Tex., assignor of forty-nine one hundredths to The Houston Company, Houston, Tex., a Corporation of Texas. Filed Aug. 26, 1926. Serial No. 131,684. 26 Claims. (Cl. 188—88.)

1. In a device of the character described, a casing adapted to contain a fluid, a partition dividing said casing into two chambers, an operating lever, said casing and lever being adapted to be attached to relatively movable parts of a vehicle, a piston within one of the chambers of said casing, a hollow piston rod operatively connecting said piston to said lever, said piston rod having ports



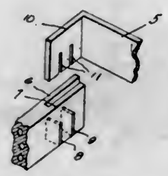
opening into both of the chambers of said casing and means to progressively retard the flow of fluid through said ports upon movement of said piston and piston rod.

1,784,530. COMBINATION FIRE-ALARM AND WATCHMAN'S RECORDING BOX. FRANCIS B. LOVE and BOYD H. SMITH, Shelby, Ohio, assignors to The Auto-Call Company, Shelby, Ohio, a Corporation of Ohio. Filed Feb. 17, 1925. Serial No. 9,829. 18 Claims. (Cl. 177—364.)



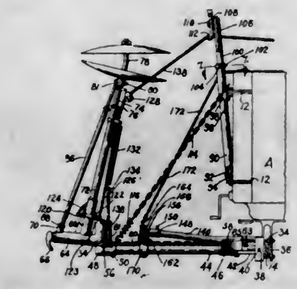
1. In a device of the class described, a set of contact elements connected in a first circuit, a set of contact elements connected in a second circuit, and mechanism for actuating said respective sets of contacts to transmit distinctive signals over said circuits, comprising an axially shiftable shaft, coding mechanism carried by said shaft and normally disposed in cooperable relation with said first set of contacts only, a motor for driving said contact mechanism, means for energizing said motor, separate means for energizing said motor and for simultaneously shifting said shaft to move said coding mechanism into cooperate relation with said second set of contacts only, and means for holding said shaft in shifted position throughout a complete operative cycle of the device.

1,784,531. EYE SET FOR DOLLS AND LIKE TOYS. SAMUEL MARCUS, Brooklyn, and ALEXANDER KONOFF, New York, N. Y., assignors to Markon Mfg. Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 1, 1927. Serial No. 216,804. 11 Claims. (Cl. 46—40.)



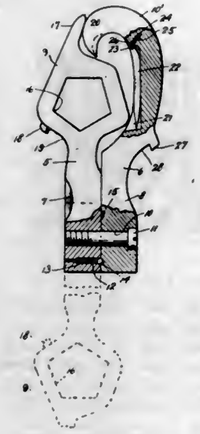
1. An eye set comprising a pair of eyes, a support for said eyes by means of which the eyes are oscillatable upon a common horizontal axis, a gravity controlled device for operating said eyes, the eyes each comprising a semi-spherical shell part and a rear wall part, the rear wall part having a pair of openings therethrough spaced away from each other, and said device having parts threaded through said openings free of the support for thereby connecting the device with the eyes, together with means for connecting the eyes with the support.

1,784,532. ELECTRODE FOR ELECTROLYTIC CONDENSERS AND THE LIKE. RALPH D. MERSHON, New York, N. Y. Filed July 18, 1923, Serial No. 652,248. Renewed May 2, 1930. 8 Claims. (Cl. 204—4.)



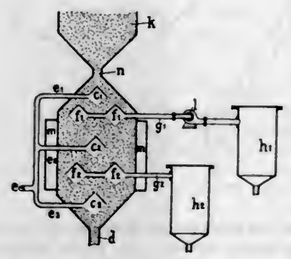
7. In an electrode for electrolytic apparatus, a corrugated plate of thin sheet aluminum, and metal stiffening members at the side edges of the plate parallel with the corrugations thereof and connected therewith to prevent vibration of the side edges of the plate.

1,784,533. TYPE-FORM STORAGE AND LOCK-UP FRAME. FREDERICK WILLIAM MULLER, Atlanta, Ga. Filed Feb. 12, 1929. Serial No. 339,410. 1 Claim. (Cl. 101—404.)



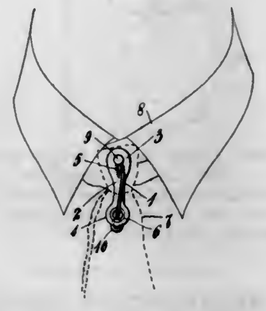
In a type form storage and lock up frame of the class described, a pair of longitudinally spaced parallel side members, having their opposite ends bifurcated longitudinally, transverse keeper plate embedded in said furcations and bridging the space between the furcations, and a pair of duplicate end members having laterally directed end portions removably receivable between the furcations, said end portions having spaced notches forming keeper seats for removable reception of said keepers.

1,784,534. TRACTOR PILOT STRUCTURE. ORR T. NICHOL, Omaha, Nebr., assignor to Nichol Manufacturing Company, Omaha, Nebr., a Corporation of Nebraska. Filed Nov. 19, 1929. Serial No. 408,269. 15 Claims. (Cl. 97—49.)



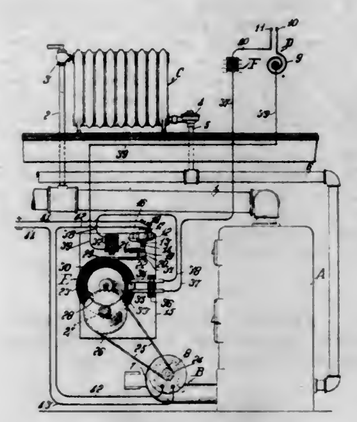
1. In a tractor pilot structure, a supporting member adapted to be attached to the front axle of a tractor, a pilot tongue pivoted thereto and extending forwardly therefrom, a pilot head pivoted to the forward end of said pilot tongue, a pilot arm, extending transversely from said pilot head, a pilot wheel on the outer end of said pilot arm, a steering connection between the front wheels on said front axle and said pilot tongue and means for maintaining said pilot head at substantially the same angle relative to the tractor throughout the entire swinging movement of said pilot tongue, said means comprising arms on said supporting member and on said pilot head and flexible members having their ends connected to said arms.

1,784,535. FIREMAN'S HOSE SPANNER AND SCALING HOOK. WAYNE OSTERBY, Astoria, Oreg. Filed Jan. 11, 1929. Serial No. 331,942. 2 Claims. (Cl. 7—1.)



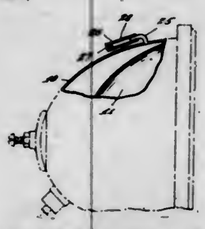
1. A tool of the character described comprising a pair of foldable tool sections pivotally connected at one end to each other, a scaling hook formed at the free end of one of said sections, a head at the free end of the other section, a projection extending outwardly from the head constituting a jimmy, one edge of said head and said projection cooperating to form a guard for the hook and adapted to accommodate the same when the sections are disposed in folded position.

1,784,536. PROCESS FOR REGENERATION OF ADSORPTION MATERIAL. VITALIS PANTENBURG, Frankfort-on-the-Main, Germany, assignor to American Lurgi Corporation, New York, N. Y., a Corporation of New York. Filed July 23, 1925, Serial No. 45,723, and in Germany Nov. 12, 1924. 3 Claims. (Cl. 252—4.)



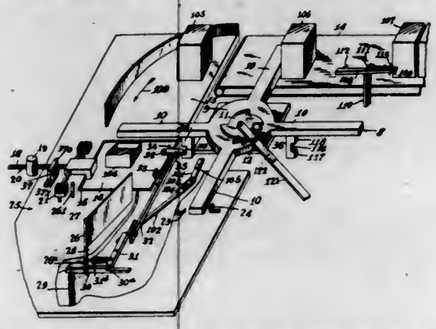
1. Process of regenerating adsorption material, which consists in passing a column of the material through a heat zone, passing an inert gas into the column near the end where the material enters the heat zone, and withdrawing gaseous products from the column intermediate the ends thereof.

1,784,537. NECKTIE HOLDER. WILLIAM G. RAU, Louisville, Ky. Filed Apr. 4, 1929. Serial No. 352,433. 4 Claims. (Cl. 24—56.)



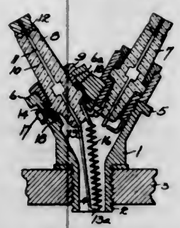
1. In combination with a collar, fastening means for said collar, and a necktie in front of said fastening means, an elastic tension element having one end part engaging said collar-fastening means and extending down behind said necktie, and a pin extending through a part of said necktie and then through the opposite end part of said tension element and then into a part of said necktie, whereby said tension element holds said necktie up in front of said collar-fastening means.

1,784,538. CONTROL APPARATUS FOR HEATING SYSTEMS. FRED I. RAYMOND, River Forest, Ill. Filed June 13, 1929. Serial No. 370,610. 9 Claims. (Cl. 236—78.)



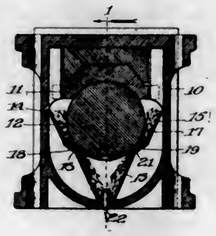
7. In a system for controlling temperature, means for changing the temperature, thermostatic means operating at a predetermined temperature for setting the temperature changing means in operation, and means operated by the temperature changing means for halting the operation thereof after a predetermined minimum period of time, said latter means being ineffective if the thermostatic means is still in the operative position.

1,784,539. LAMP. CHESTER S. RICKER, Waukesha, Wis. Filed Feb. 28, 1929. Serial No. 343,376. 4 Claims. (Cl. 240—41.)



3. In a lamp, a light source, a light-source enclosure including a reflector, and an outwardly opening check-valve the interior of said enclosure being sealed against communication with the atmosphere except through said outwardly opening check valve.

1,784,540. WEIGHT-CHECKING DEVICE. DAVID W. RIPLEY, Fresno, Calif., assignor to Sun-Maid Raisin Growers of California, Fresno, Calif., a Corporation. Filed June 27, 1927. Serial No. 201,947. 3 Claims. (Cl. 209—121.)

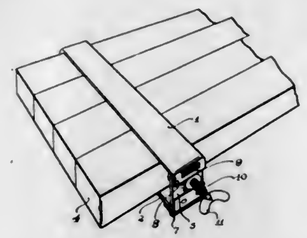


1. In a weight checking device the combination of a balancing scale having a platform, means for moving objects to be weighed upon and off said platform, a gate pivoted and positioned to selectively direct the movement of the object from the platform, said gate being held in one of said positions by means of a catch, means for tripping said catch attached to the scale platform and means for actuating the tripping means attached to the means for moving the object off the scale platform, and positioned so that said means for actuating the tripping means will not engage the tripping means when the scale platform is balanced, and that the tripping means will be engaged by the means for actuating the tripping means when said scale platform is not balanced.

1,784,541. HEATED SPARK-PLUG HOLDER. RENÉ ROUILLARD, Detroit, Mich. Filed June 19, 1929. Serial No. 372,138. 1 Claim. (Cl. 123—169.)

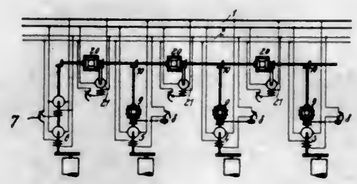
As a new article of manufacture, a spark plug holder consisting of a fitting one extremity of which is adapted to be secured to a cylinder, said fitting being provided with two branches, a removable heater extending through one branch and into the body of the fitting, and a second branch adapted to receive a spark plug in such a manner that the latter may be removed therefrom, said second branch being so positioned that the terminals of the spark plug will lie adjacent the main body of the fitting at its extremity remote from the cylinder so that fuel passing from the cylinder to the spark plug passes adjacent the heater before reaching said plug.

1,784,542. LUBRICATOR FOR RAILWAY JOURNAL BOXES. CHARLES B. ROYAL, Chicago, Ill. Filed Mar. 30, 1928. Serial No. 265,828. 2 Claims. (Cl. 308—87.)



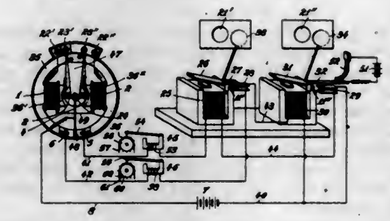
1. In a device of the character set forth, a railway journal box, provided with bottom and side walls, interior inclined walls connecting the bottom wall and side walls of said journal box, and end wall members connecting the lower portion of said interior walls so as to form therewith a lubricant compartment below the journal.

1,784,543. PRODUCTION OF ADSORBENTS. HEINRICH BERNHARD RÖDER, Frankfort-on-the-Main, Germany, assignor to Lurgi-Gesellschaft für Wärmtechnik m. b. H., Frankfort-on-the-Main, Germany. Filed Oct. 22, 1927, Serial No. 228,110, and in Germany Nov. 11, 1926. 7 Claims. (Cl. 252—2.)



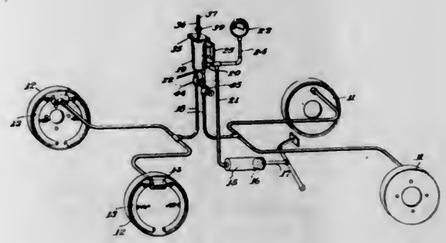
1. As a new adsorbent material, flue dust from all kinds of furnaces.

1,784,544. CLAMP. JOHN J. RUSSELL, Rochester, N. Y. Filed Mar. 6, 1929. Serial No. 344,708. 2 Claims. (Cl. 144—297.)



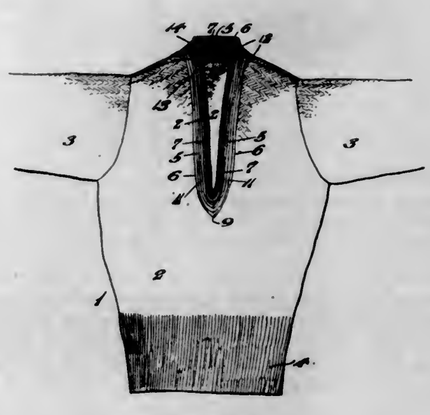
1. A clamp comprising two substantially parallel arms, a connecting piece securing the arms together at one end substantially in parallel relation, a movable connector between the other ends of the arms, hinged to one of the arms on an axis extending transversely of such arm to swing away from the other arm and open the space between them, and having a detachable connection with the other, and a clamping screw adjustably mounted on the connector.

1,784,545. DRIVE FOR PAPER MACHINES. FRIEDRICH SCHIEBUHR, Berlin-Charlottenburg, Germany, assignor to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed Feb. 14, 1929, Serial No. 339,818, and in Germany Feb. 10, 1928. 4 Claims. (Cl. 172—293.)



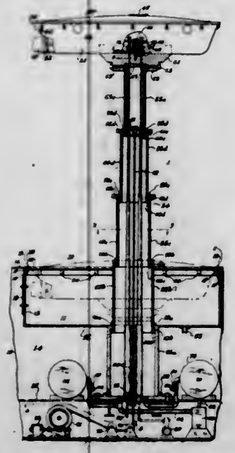
2. In a paper machine drive, in combination, section driving motors for the paper cylinders, field regulators for said section driving motors, a master shaft section for each section driving motor, differential drives interposed between adjacent master shaft sections, regulating means for the speed of the differential members of said differential drives connected with said drives, a differential drive interposed between each section driving motor and the respective master shaft section, and connecting means between the differential member of each sectional differential drive and the pertaining field regulator for individually controlling said section driving motors.

1,784,546. APPARATUS FOR CONTROLLING AND INDICATING EARTH LEAKAGES IN ALTERNATING-CURRENT LINES. MANFRED SCHLEICHER, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, Germany, a German Corporation. Filed Nov. 28, 1925, Serial No. 72,002, and in Germany Sept. 16, 1925. 7 Claims. (Cl. 177—311.)



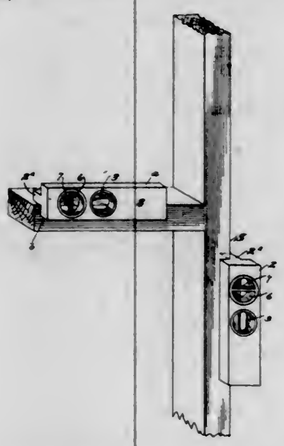
2. A relay for supervising alternating current lines in regard to earth leakages, comprising in combination a leakage detector having stationary field coils, an oscillatingly arranged system including a coil having small damping and being arranged in the field of said stationary coils, and a contact arm operated by said coil, said detector having terminals adapted to be connected to the lines to be supervised, a contact device consisting of two stationary contact elements arranged on opposite sides of the said detector contact arm and adapted to be individually closed by the latter, two electro-magnets having exciting coils, at least one movably arranged indicator armature operated by one of said electro-magnets, and electrical circuit connections including a source of current, one of said stationary elements and the exciting coil of one of said electro-magnets, and means including circuit connections controlled by the other stationary contact element for preventing said exciting coil from moving its armature into indicating position when said contact arm abuts against said other contact element.

1,784,547. HYDRAULIC BRAKE MECHANISM. CLARENCE CARL SCHMIDT, Reynoldsburg, and JOHN LOUIS RICHTER, Bexley, Ohio. Filed May 5, 1928. Serial No. 275,365. 1 Claim. (Cl. 188—152.)



A hydraulic braking system for vehicles comprising a pair of rear fluid operated braking elements and a pair of front fluid operated braking elements, conduits for conducting liquid to said braking elements, a cylinder having a pair of ports in one end, one of said ports being connected to the front liquid conduit and the other connected to the rear liquid conduit, valves in said conduits having means for indicating the size of the opening from the conduits to the said cylinder, a piston in said cylinder, a spring on one side of said piston, the other side of the piston being exposed to the liquid in the system, means for varying the tension of the spring, a second cylinder having a manually operable piston movable therein, a fluid conduit from the said last-named cylinder to the first-named cylinder for applying pressure to the latter, and means for indicating the pressure applied, substantially as set forth.

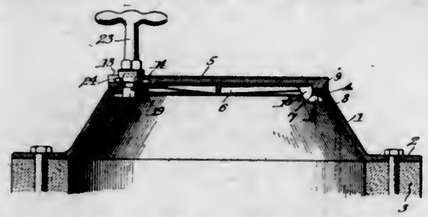
1,784,548. CORDED-EDGE KNIT NECKBAND FOR SWEATERS AND THE LIKE. CHARLES SEIDMAN, Philadelphia, Pa. Filed May 13, 1929. Serial No. 362,484. 2 Claims. (Cl. 2—90.)



1. A sweater having a neck-band of a continuously knit flattened tubular portion having a substantially unstretchable outer corded raised edge with double the number of threads therein, and means uniting said tubular portion to the body portion of the sweater.

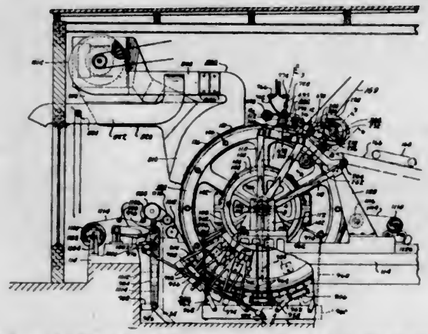
1,784,549. VESSEL AND AUXILIARY BOAT THEREFOR. EDWARD J. SHOEMAKER, Canton, Ohio. Filed Feb. 7, 1928. Serial No. 252,470. 5 Claims. (Cl. 114—16.7.)

1. A vessel, an independently navigable auxiliary submarine boat including means operable from within the boat for propelling and navigating the boat, a rigid connecting member extending between the vessel and the boat, and means for releasably engaging the boat with the connecting member.



1,784,550. DOUBLE-READING PLUMB LEVEL. JOHN SINNER and OSCAR A. SINNER, Los Angeles, Calif. Filed Nov. 14, 1927. Serial No. 233,177. 2 Claims. (Cl. 33—207.)

1. A carpenters' level having a body of T shaped cross-section presenting a web along both sides of which are re-entrant corner angles, said body having a window from front to back of the main or front part, and spirit glasses for multiple, plane indication arranged in the window.

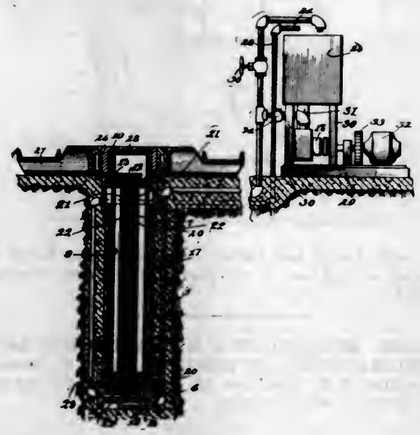


1,784,551. METER-BOX LID. MARION F. SMITH, Decatur, Ill., assignor to Mueller Co., Decatur, Ill., a Corporation of Illinois. Filed Nov. 26, 1927. Serial No. 235,932. 3 Claims. (Cl. 137—13.)

1. In a meter box, a top member, a lid resting thereon, an open ended recess in the lid having a groove extending about the wall at the opposite end of the recess, a locking means for clamping the lid and top member together rotatably mounted in the lid with its operating extremity disposed in said recess, and a key for turning the

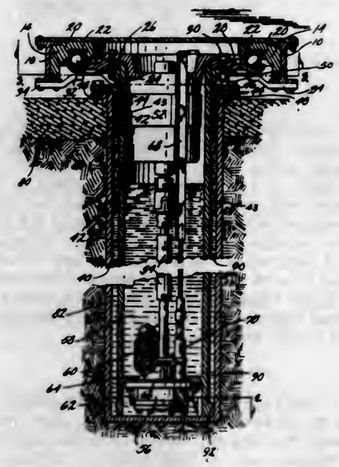
locking means engaging said operating extremity and having means engaging in said groove whereby the groove will act as a thrust receiving element in the turning of the locking member.

1,784,552. MACHINE FOR PRODUCTION OF PILE FABRICS. PAUL S. SMITH, Madison, and EMIL G. JEGOU, Montclair, N. J., assignors to Lea Fabrics Inc., Newark, N. J., a Corporation of Delaware. Filed Feb. 23, 1929. Serial No. 342,216. 71 Claims. (Cl. 154—1.)



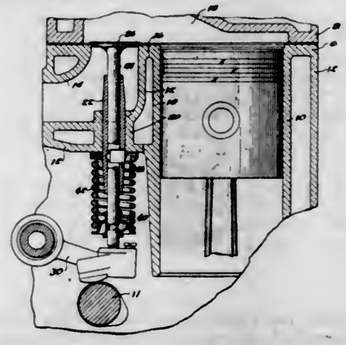
81. In a machine of the kind described, a cylindrical drum, "wires" mounted on the surface of said drum, means for driving said drum from a main drive shaft, an inserting mechanism having an inserting element for inserting pile element material between said "wires," means operatively connected with said main drive shaft for intermittently operating the said inserting element and means for moving the said element so that when engages with said "wires" the said element will be positively moved therewith.

55. In a machine of the kind described, a cylindrical drum having a series of spacing elements thereon, an inserting mechanism having inserting elements for inserting pile element material between said spacing elements, means for rotating the drum, means for operating the said inserting mechanism in synchronized relation with the rotation of said drum, means for mounting the inserting mechanism and the said means for rotating the drum so that the inserting elements and the drive portion of the said means for rotating the drum operate in the same plane, including the axis of the drum, thereby insuring the registration of the inserting elements with the spaces between said spacing elements irrespective of temperature changes or other factors tending to cause deviation.



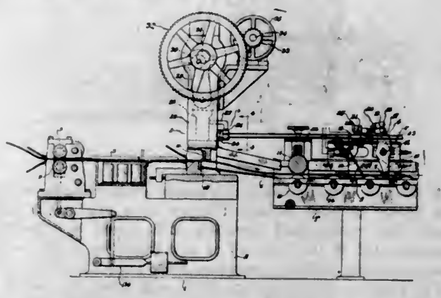
1,784,553. HYDRAULIC JACK. LOUIS C. STUKENBORG, Memphis, Tenn., assignor to Oildraulic Lift Company, Memphis, Tenn., a Corporation of Delaware. Filed July 8, 1927. Serial No. 204,326. 8 Claims. (Cl. 138—9.)

1. In a lifting jack, a vertically arranged cylinder, a fluid pressure raised piston mounted therein, a fluid holding receptacle, a continuously operating pump having communication with the receptacle, a pipe communicating with the pump having one end in communication with the lower end of the cylinder and its opposite end arranged to discharge into the receptacle, a manually controlled valve



in the pipe between its discharge end and its point of communication with the pump, said pipe serving to conduct fluid to the cylinder to elevate the piston when the valve is closed and to discharge the fluid into the receptacle when the valve is open whereupon the piston will descend.

1,784,554. ROTARY AUTOMOBILE LIFT STRUCTURE. LOUIS C. STUKENBORG, Memphis, Tenn., assignor to Oildraulic Lift Company, Memphis, Tenn. Filed June 14, 1929. Serial No. 370,765. 8 Claims. (Cl. 104—44.)



1. In a device of the class described, the combination of a cylinder having a lifting ram projecting therefrom and a packing means interposed between the cylinder and the ram, a superstructure rotatably mounted on the ram and adapted to engage and support an automobile or the like, a thrust bearing between said lifting ram and said superstructure, such bearing having a co-efficient of friction less than the co-efficient of friction between said packing means and said ram.

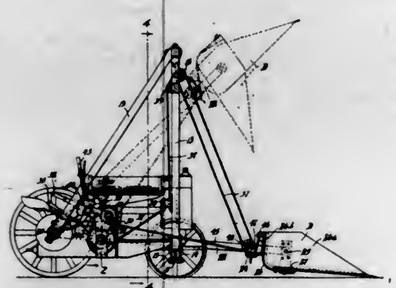
1,784,555. MEANS TO PREVENT VALVES FROM STICKING. CALEB E. SUMMERS, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich, a Corporation of Delaware. Filed Mar. 31, 1928. Serial No. 266,282. 5 Claims. (Cl. 123—188.)

1. Means to prevent gumming of lubricant on the bearing surfaces of valve parts of an internal combustion engine or the like, including in combination, a valve tappet chamber, a valve stem guide bushing projecting thru a wall of said chamber, and having a transverse opening of a diameter greater than that of the bore of the bushing drilled thru the side thereof and located below said wall to provide a space in direct communication with said tappet chamber, and a valve stem slidable in said bushing.

1,784,556. AUTOMATIC SHEARS. ARTHUR J. TOWNSEND, Canton, and EDWARD S. MILLER, Elyria, Ohio, assignors, by mesne assignments, to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Apr. 6, 1927. Serial No. 181,410. 14 Claims. (Cl. 164—49.)

1. Apparatus for shearing strip sheets from a strip continuously fed to the apparatus, including shearing means, arresting means on one side of the shearing means, stop means on the other side of the shearing means, the arresting means and stop means being adapted for bringing the moving strip to rest on both sides of the shearing means during the shearing operation thereof, control means for the arresting means and the shearing means, release means for the stop means, and means associated with the shearing means for actuating the release means.

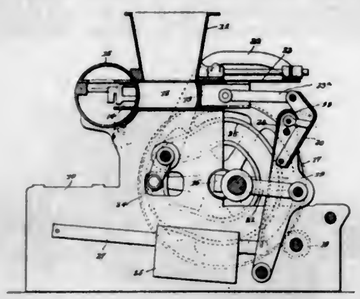
1,784,557. MOLDED INSULATION ARTICLE. WILLIAM C. TREGONING, Wauwatosa, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a Corporation of Delaware. Filed July 18, 1929. Serial No. 379,225. 9 Claims. (Cl. 173—362.)



6. In an electric lamp socket casing, in combination, a molded hollow body member of insulating material, said

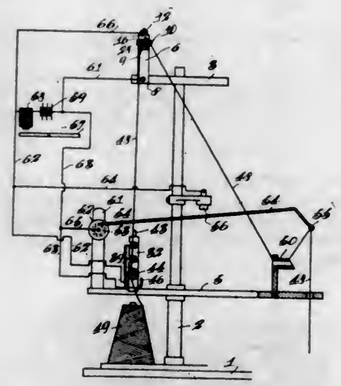
body member having a plurality of integral radial projections substantially flush with the upper edge thereof and equally spaced from each other, said body member having a non-radial slot extending from the upper edge thereof to provide for flexure of an adjacent portion of said

body member, the walls of said slot coacting to limit the inward flexure of said portion, and an additional radial projection on said portion adjacent to said slot, said last mentioned projection being unequally spaced from said first mentioned projections.



1,784,558. LOADING ATTACHMENT FOR TRACTORS. CORNELIUS UNDERLAND, Elkton, S. Dak. Filed Mar. 17, 1927. Serial No. 176,025. 1 Claim. (Cl. 214—140.)

A loading attachment for tractors comprising a swingable frame pivoted to said tractor on a horizontal axis, means for raising and lowering said frame, a collecting scoop pivoted to the free end of said frame on a horizontal axis extending slightly eccentric and inwardly of the center of gravity of said scoop when said scoop is loaded, a winding drum mounted on said tractor having its axis disposed adjacent the axis of said frame, a flexible member connecting said winding drum with a point disposed eccentrically of the axis of said scoop, a lever carrying a gear segment in mesh with a gear connected with said winding drum whereby said scoop may be swung to loading position and a pawl engageable with means on said drum for retaining said scoop in loaded position and for releasing said scoop to permit the same to dump by gravity when loaded.

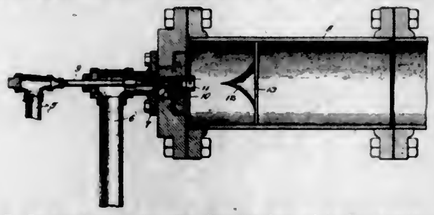


1,784,559. DOUGH-DIVIDING APPARATUS. FRANK H. VAN HOUTEN, Beacon, N. Y., assignor to Dutchess Tool Company, Beacon, N. Y., a Corporation of New York. Filed June 25, 1929. Serial No. 373,566. 6 Claims. (Cl. 107—15.)

1. The method of dividing dough which consists in delivering a quantity of dough from a hopper or reservoir to a compression box, moving a closure partially across the opening between said hopper and box, compressing the dough in said box and simultaneously returning a portion thereof to said hopper, and then fully closing said opening

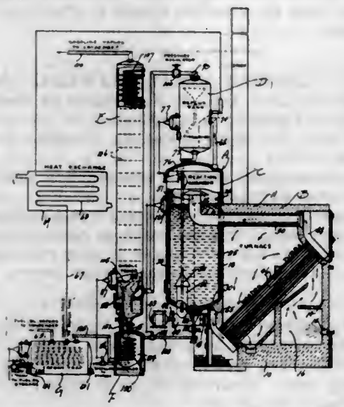
with said closure and further compressing the dough remaining in said box in the pocket of a dough receiving member.

1,784,560. ELECTRIC STOP MECHANISM FOR KNITTING MACHINES AND THE LIKE. JACOB WACHSMAN, Brooklyn, N. Y. Filed Jan. 15, 1929. Serial No. 332,644. 10 Claims. (Cl. 66—163.)



1. In stop mechanism under control of a travelling thread the combination with an electric circuit including an operating magnet and a source of electric energy to actuate the stop device of a machine; a bobbin stand, a primary circuit closer unit mounted on said stand and including circuit closing contacts normally held open by the unbroken thread and including means to close the contacts upon breaking or knotting of the thread, a second circuit closer unit located between said primary unit and the bobbin and adjacent to the bobbin to close the circuit upon breaking of the thread adjacent the bobbin and upon passage of the end of the thread from the bobbin.

1,784,561. DISTILLATION OF HYDROCARBON OILS. GEORGE W. WATTS, PHILIP L. KRAUEL, and THOMAS E. STOCKDALE, Whiting, Ind., assignors to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Apr. 3, 1925. Serial No. 20,414. 11 Claims. (Cl. 196—85.)



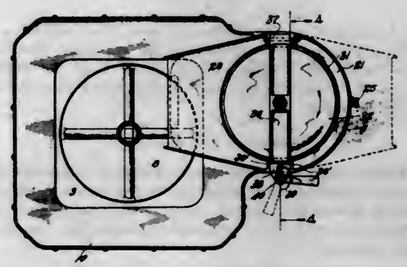
1. The method of distillation of hydrocarbon oils comprising supplying superheated steam to a gradually expanding passage, the temperature of the steam being reduced as it travels therethrough, supplying oil to the at least partially expanded steam where the temperature of the steam is less than 900° F., discharging the steam and oil carried thereby into a conduit at reduced pressure, said conduit being of substantially larger cross section than

the passage, and causing the mass of vapors and oil to pass in steady flow through said conduit without substantial separation of oil and vapor therein.

7. In apparatus for the distillation of hydrocarbon oils, an expanding nozzle provided with a constricted throat, means for passing superheated steam through the throat of said nozzle, and means for supplying oil within the nozzle to the steam after the steam passes the throat of said expanding nozzle.

1,784,562. METHOD AND APPARATUS FOR OIL CRACKING. JOSEPH H. WELCH, Tulsa, Okla. Filed July 6, 1927. Serial No. 203,857. 7 Claims. (Cl. 196—59.)

1. The herein described method of treating hydrocarbons which consist in heating a hydrocarbon at a cracking temperature, withdrawing hydrocarbon from the heating zone in the vapor phase, passing the hydrocarbon in the vapor phase in finely divided condition thru a body of heated liquid hydrocarbon, centrifugally acting upon the vapor to release entrained oil and carbon particles therefrom, passing the hydrocarbon vapor through a heated body of hydrocarbon liquid, fractionating the hydrocarbon vapor to produce a desired hydrocarbon vapor, and condensing said hydrocarbon vapor.



1,784,563. SELF-DEFENSE FIREARM. JOHN H. WESTLUND, Marshalltown, Iowa. Filed Dec. 24, 1928. Serial No. 328,128. 8 Claims. (Cl. 42—1.)

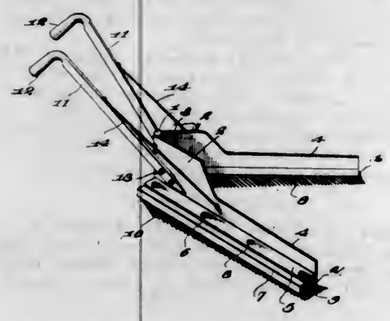
1. A self-defense firearm, comprising a casing adapted to be mounted on the person, a revolver having a barrel projecting outwardly of the casing and also having a trigger arranged in substantially horizontal position, said revolver being carried in inverted position in the casing with the trigger uppermost, and a draft member attached to said trigger and extended over the shoulder of the wearer, whereby a raising of the shoulder will lift said trigger for cocking and firing the revolver.

8. In a firearm having a revolving cylinder for holding a plurality of cartridges, and a removable pin on which said cylinder is mounted, a safety means comprising a sheet of substantially non-inflammable material mounted on said pin in front of said cylinder, said sheet adapted to be punctured by a bullet when the firearm is discharged and to prevent the spread of flame from such discharge.

1,784,564. LAUNDRY MACHINE. ALPHEUS W. ALTORFER, Peoria, Ill., assignor to Altorfer Bros. Company, East Peoria, Ill., a Corporation of Illinois. Filed Mar. 25, 1927. Serial No. 178,182. 18 Claims. (Cl. 210—75.)

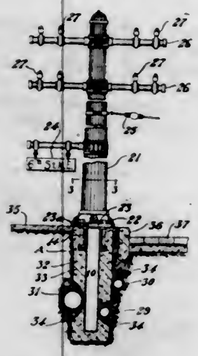
1. In combination, a centrifugal extractor, a driving element comprising a short upstanding grooved operating shaft, and a substantially shallow connecting member disposed exteriorly on the lower end of said extractor and having an axially disposed splined opening for slidably and detachably connecting said member and element in operative relation.

1,784,565. BOUQUET PIN. LAURITZ W. ANDERSEN, Waterbury, Conn. Filed Apr. 26, 1929. Serial No. 358,186. 14 Claims. (Cl. 24—6.)



1. A bouquet pin comprising a bar member, a U-shaped clip secured at its center to the rear face of said bar, the outer ends of the arms of the clip being bent outwardly and toward the bar, to provide a stem receiving mouth on the clip and to present a smooth surface to the material on which the pin may be secured, and means at the rear face of the bar for securing it to a garment.

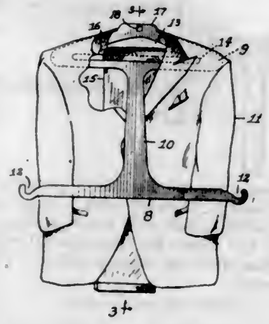
1,784,566. PROCESS FOR TREATING COTTON AND OTHER VEGETABLE PULPS OR FIBERS OF A POROUS ABSORBING NATURE. CLARENCE W. ANDREWS, Burlington, N. C. Filed Oct. 5, 1929. Serial No. 397,756. 10 Claims. (Cl. 92—13.)



1. A method of treating vegetable matter to remove tobacco oils from smoke, comprising steaming the vegetable matter, subjecting the vegetable matter to immersion in hot caustic soda solution and thereafter boiling the mass in water, then drying the cotton and thereafter treating the vegetable matter successively with boric acid and milk of magnesia.

1,784,567. SWEEPER. JOSEPH LAFAYTTE AULTMAN, Gadsden, Ala. Filed Sept. 8, 1928. Serial No. 304,698. 4 Claims. (Cl. 15—160.)

1. A sweeper of the character described including two sections, means for connecting the sections, and brush heads connected to and carried by each of the sections, each of the brush heads having forwardly and inwardly directed bristles.

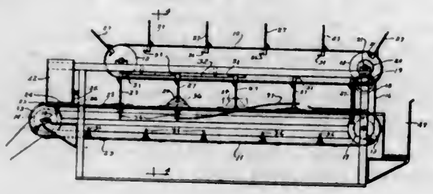


1,784,568. ANCHORAGE FOR POLES. LAWRENCE D. BALE, Cleveland, Ohio, assignor to Union Metal Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Apr. 26, 1929. Serial No. 358,279. 4 Claims. (Cl. 189—29.)

4. An anchorage for a pole and the like including a longitudinally extending anchoring stub, channel members attached to the upper end of said stub, and strut members located substantially parallel with the longitudinal axis of the stub extending between and engaging both flanges of said channel members providing means for connection with pole attaching means.

1,784,569. GARMENT HANGER. JOHN H. BARTLETT, Jr., Oshkosh, Wis., assignor to The Oshkosh Trunk Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Jan. 17, 1930. Serial No. 421,366. 4 Claims. (Cl. 223—61.)

1. A garment hanger having all portions in the same plane and comprising, a cross-bar at one end, a shoulder portion at the other end, and a mid-section rigidly connecting the cross-bar to the shoulder portion, said mid-section being relatively narrow, so that a garment hung on the shoulder portion may have its depending portions all on the same side of the cross-bar, said shoulder portion having a pair of substantially parallel slots therein extending cross-wise of the hanger to permit another garment when folded transversely on itself to engage the shoulder portion between the slots and lie on the same side of the cross-bar as the depending portions of the first garment, said hanger having a length less than the



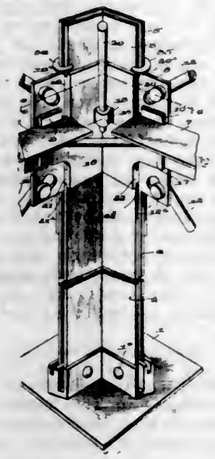
full length of the depending portions of the garments thereon, so that the latter will automatically fold over the cross-bar when inverting the hanger to bring the cross-bar uppermost.

1,784,570. COATING METAL ARTICLES. FREDERICK M. BECKET, New York, N. Y., assignor to Electro Metallurgical Company, a Corporation of West Virginia. Filed Oct. 29, 1928. Serial No. 315,931. 8 Claims. (Cl. 91—70.1.)

1. A cementation mixture comprising a silicofluoride and a corrosion-resisting metal.

8. The process of forming a coating on a ferrous article which comprises heating the article in contact with a mixture containing a silicofluoride and an alloy containing iron, chromium and silicon until cementation occurs.

1,784,571. MACHINE FOR REFOLDING PAPER TRAYS OR THE LIKE. SAMUEL BERGSTEIN, Middletown, Ohio, assignor to The Interstate Folding Box Company, Middletown, Ohio. Filed Dec. 31, 1929. Serial No. 417,695. 9 Claims. (Cl. 93—53.)



1. A machine for refolding knocked-down paper containers including means for partially opening the containers and means for effecting inverse folds of portions thereof as they are moved progressively on said machine.

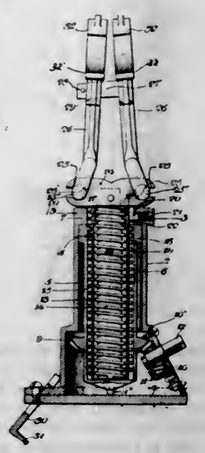
2. A method of packaging consisting in opening knocked-down paper containers and moving them progressively, in moving the contents into the containers, and in wrapping the containers and contents into a package in like progressive order.

1,784,572. DERRICK. JAMES W. BROWN, Tulsa, Okla. Filed Oct. 31, 1927. Serial No. 230,026. 3 Claims. (Cl. 189—19.)

1. In a derrick, leg sections and girts having an interlocked connecting member, comprising inner and outer clamping parts, recesses at predetermined points in said leg sections and girts, lugs on the adjacent faces of said

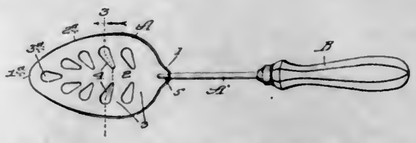
clamping parts adapted to engage and interlock with said recesses, and means for securing said clamping parts together in said interlocked relation.

3. In a derrick, a plurality of abutting angle-leg sections, vertical slots in the adjacent horizontal edges of each of said sections, and a common connecting member comprising a central angular portion, each end of which projects outwardly in a flange, a wing on the end of each flange lying parallel to the respective arm of said angular portion, the adjacent vertical slots in said sections being adapted to engage said flanges with said angular portion lying against the inner surface of the leg section and the wings lying against the outer surface.



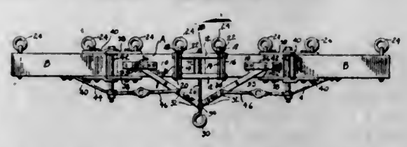
1,784,573. GREASE CUP. CLYDE G. BUTLER and FRANK C. WOELFER, Jr., Cincinnati, Ohio, assignors to The Cincinnati Ball Crank Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 27, 1927. Serial No. 242,802. 1 Claim. (Cl. 184—5.)

A device of the class described, comprising, a grease cup having an outlet extending from its lower end, a hollow thin wall piston in said cup, a spring urging said piston downwardly to force the grease through the outlet, said piston having a spherical head and a skirted body portion in sliding engagement with the wall of the grease cup, said piston having an internal shoulder formed in its spherical head for engagement by the spring, and means for maintaining the spring under compression against the piston.



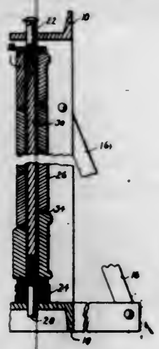
1,784,574. JACK. JOHN M. CANTWELL, Tarrytown, N. Y. Filed June 18, 1926. Serial No. 116,780. 16 Claims. (Cl. 254—102.)

1. In a screw lifting jack, the combination of a supporting casing, a pair of telescopic lifting screws within said casing, the outer telescopic screw having slabbed portions at its top and bottom communicating with a longitudinal key way, and a spring pressed plunger carried at the upper end of the casing and cooperating at different times with said slabbed portions and key way, and



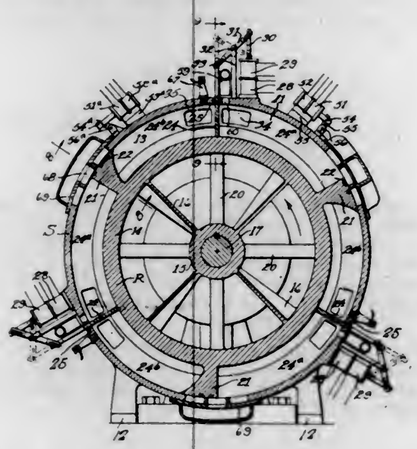
means for lifting one of said screws without rotating it and for then rotating it thereby to lift the other screw and including a rotatable tubular sleeve also housed entirely within and extending substantially from end to end of said casing, and gear mechanism connected adjacent to the lower end of said sleeve for rotating said sleeve.

1,784,575. BEATER SPOON. GUSTAV A. CARLSON, Chicago, Ill., assignor to The Boye Needle Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 2, 1929. Serial No. 396,756. 1 Claim. (Cl. 259—144.)



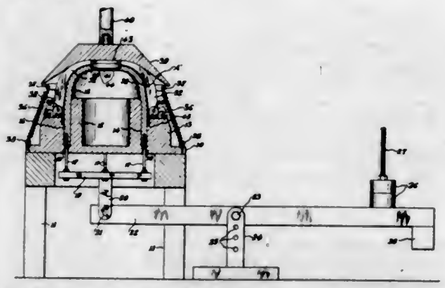
A beater-spoon comprising a handle-equipped single bowl-member having a flat bottom and an upcurved marginal rim-portion extending completely around the bowl-member, said bowl-member having slots therein formed partially in the flat bottom and partially in the upcurved rim-portion.

1,784,576. FLEXIBLE HINGED DRAWBAR FOR HARROWS. NELS CHRISTIANSEN and CHRIS MORTENSEN, Ringsted, Iowa. Filed Aug. 26, 1929. Serial No. 388,431. 6 Claims. (Cl. 55—84.)



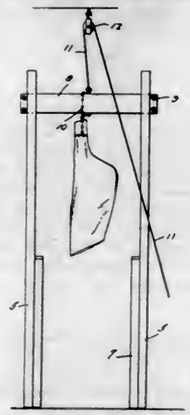
1. In a hinged draw bar for harrows, a main bar, and a pair of wing bars, said wing bars and main bar being provided with upwardly curved plate extensions forming hinge members at adjacent ends, pin means for pivotally connecting said hinge members at their ends, said pins having forwardly extending ends from the hinge members, and a draft hitch device having a turn-buckle connection with said forwardly extending pins.

1,784,577. DISPLAY RACK FOR ORNAMENTAL TILES. ALLEN B. COLEMAN, Des Moines, Iowa. Filed Aug. 19, 1929. Serial No. 387,014. 3 Claims. (Cl. 211—169.)



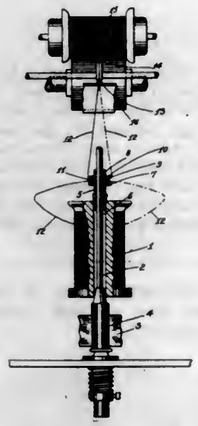
3. In a display rack for tile and the like, a vertically disposed rectangular supporting frame, a display frame adapted to carry removable tile displays, a pivot member projecting from one horizontal member of said display frame loosely through the corresponding member of the supporting frame, and a threaded pivot member adapted to be extended loosely through the opposite horizontal member of the supporting frame and to be removably seated in the corresponding horizontal member of the display frame, for removably pivotally mounting the display frame in the supporting frame.

1,784,578. ROTARY ENGINE. RALPH E. CORNWELL, Pasadena, Calif. Filed Jan. 4, 1928. Serial No. 244,496. 1 Claim. (Cl. 123—14.)



A rotary engine comprising a stator, a rotor in the stator co-operating therewith to provide an annular passage between the two and having a piston disposed in said passage, a second abutment in the stator mounted for movement to occupy one position in which it clears said passage to permit the passage of the piston, and another position in which it spans the passage so as to co-operate with the piston during rotation of the rotor to form a compression chamber in the passage in advance of the piston, said stator having an intake port through which fuel is adapted to be admitted to the compression chamber for compression by the piston when approaching the stator abutment, the stator having a by-pass chamber provided with ports, one of which communicates with the compression chamber and constitutes an inlet to permit the passage of compressed fuel from the compression chamber into the by-pass chamber, and the other of which communicates with the combustion chamber and consitutes an outlet to permit the discharge of fuel into the combustion chamber from the by-pass chamber, valves for controlling said ports, electro-magnetic means for actuating said stator abutment and valves in a predetermined sequence in timed relation to the movement of the rotor, and means for igniting fuel discharged from the by-pass chamber into the combustion chamber behind the piston to exert a power impulse against the latter and thereby effect rotation of the rotor, said actuating means for the inlet and outlet valves comprising a pair of rings mounted for rotation, and to one of which the inlet valves are fixed while to the other of which the outlet valves are fixed, and electro-magnetic means for oscillating the rings in one direction or the other to accordingly open or close the respective valves, the electromagnetic means for opening and closing each valve comprising solenoids, arranged in end-to-end relation to each other and having a core in common.

1,784,579. FORMING DIE. ROWLAND JOHN CURTIS, Dover, Ohio, assignor to The Reeves Manufacturing Company, Dover, Ohio, a Corporation of Ohio. Filed Oct. 10, 1928. Serial No. 311,617. 19 Claims. (Cl. 153—75.)



1. Forming apparatus including a longitudinally movable central die, curved fingers movably mounted adjacent to the die, means for moving the fingers toward the die, and means for simultaneously longitudinally moving the die relative to the fingers, to form a sheet metal article upon the die.

1,784,580. MEANS FOR TENDERING MEATS. PERCY J. DEACON, Lakeworth, Fla. Filed Feb. 2, 1928. Serial No. 251,398. 1 Claim. (Cl. 17—25.)

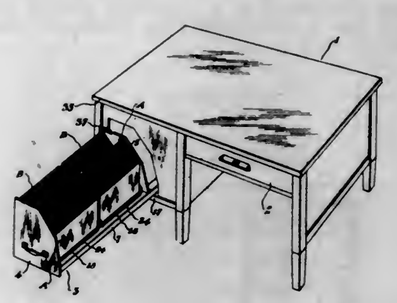
In an apparatus of the class described, a pair of vertical spaced standards, each standard including a pair of spaced bars, stop forming members extending upwardly from the lower ends of the standards at the space between the bars of each standard, the upper ends of said stop forming members terminating at the intermediate portion of said standard to form stops, a cross bar arranged for vertical sliding movement between the spaced standards, the ends of the cross bar being disposed between the spaced bars of each standard, said cross bar being of a length greater than the distance between the outer sides of the standards, horizontally disposed rollers extending laterally from the opposite sides of the projecting ends of the cross bars for engagement with the outer sides of the bars of the respective standards, means for suspending a cut of meat from the intermediate portion of the cross bar, elevating means for the cross bar, said cross bar being adapted to strike the upper ends of the stop forming members when the elevating means is released to limit the downward sliding movement of the cross bar and impart a sudden jerk to the meat suspended from said cross bar for the purpose described.

1,784,581. MANUFACTURE OF YARNS OR THREADS, AND APPARATUS THEREFOR. WILLIAM ALEXANDER DICKIE, THOMAS HEWITT PLATTS, and LEONARD LATHAM, Spondon, near Derby, England, assignors to Celanese Corporation of America, a Corporation of Delaware. Filed Oct. 22, 1927, Serial No. 228,047, and in Great Britain Sept. 28, 1927. 10 Claims. (Cl. 117—26.)

1. Process of twisting yarn by winding the yarn from a rotating yarn package at a linear speed lower than the peripheral speed of the yarn package, said process comprising causing the yarn to follow a path lying in a surface composed firstly of a balloon-shaped surface extending from the yarn package to a circle above the package and concentric with the axis of the package, secondly, a surface extending between the said circle and a second circle of larger diameter concentric with the axis of the package, and thirdly, a surface extending between the second circle and a point above and supstantially in alignment with the axis of the yarn package, the yarn being sharply diverted on the first part of its path to the second part and from the second part to the third part, whereby the constraint imposed on the yarn to cause it to pass from the first part of its path to the second part, and from the second part to the third part prevents the twist imparted to the yarn from running back to the yarn package.

3. Apparatus for twisting yarn, comprising a spindle forming a support for a yarn package, means for rotating the spindle, a winding device, means for rotating the winding device at a lower peripheral speed than the yarn package, a light floating member surrounding the said spindle above the yarn package, an annular shoulder carried by the spindle above the said floating member, the floating member and the annular shoulder presenting bearing surfaces that sharply divert the yarn on its passage from the yarn package to the winding device, and a yarn guide above and substantially in alignment with the yarn package spindle.

1,784,582. FLEXIBLE STRUCTURE. FRIEDRICH DÖPPENSCHMITT, Pforzheim, Germany. Filed Jan. 31, 1928, Serial No. 250,756, and in Germany Apr. 19, 1927. 3 Claims. (Cl. 63—3.)

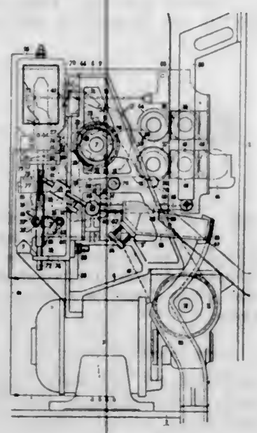


2. In a flexible structure of the character set forth, in combination, a flexible supporting member, a plurality of relatively narrow cross members endwise hooked over said supporting member in close formation, and stiffening means interposed between said supporting member and said cross members.

1,784,583. PROCESS OF MAKING ACETIC ACID. HENRY DREYFUS, London, England. Filed Oct. 22, 1926, Serial No. 143,516, and in Great Britain Nov. 7, 1925. 9 Claims. (Cl. 260—116.)

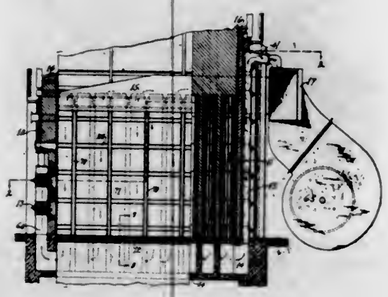
2. A process for the manufacture of acetic acid, which comprises heating methyl alcohol together with carbon monoxide under substantially atmospheric pressure in the presence of a catalyst comprising a metal capable of forming an acetate which decomposes with the formation of acetic acid at a temperature under 450° C.

1,784,584. FILING APPLIANCE. WILLIAM E. DUNNING, Alliance, Ohio, assignor to The McCaskey Register Company, Alliance, Ohio, a Corporation of Ohio. Filed Aug. 20, 1928. Serial No. 300,768. 10 Claims. (Cl. 45—2.)



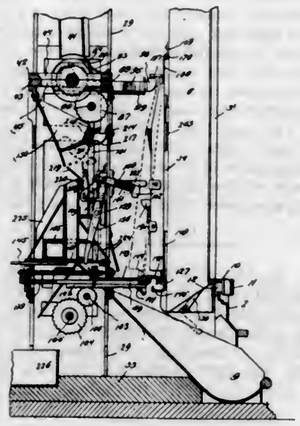
1. The combination with a drawer and the like, of a filing appliance including a frame pivotally mounted in the drawer, a plurality of holders extending longitudinally of the drawer having pivotal mountings in the frame extending longitudinally of the drawer for swinging transversely of the drawer, and means for normally holding the holders in upright echelon arrangement.

1,784,585. COIN-CONTROLLED SALES APPARATUS. FRITZ ELLER, Berlin-Wannsee, Germany. Filed Dec. 15, 1927. Serial No. 240,292. 6 Claims. (Cl. 174—10.)



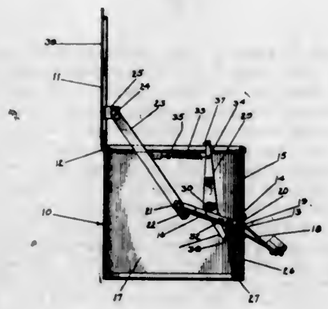
3. A system for printing tickets, comprising a printing apparatus, driving means therefor, means for coupling

said printing apparatus and driving means, means operative at the end of a printing operation for setting said coupling means into non-coupling position, an electromagnet and its armature, a member tending to lock said coupling means in non-coupling position, a device adapted when energizing said electro-magnet and operating its armature



to throw said locking member out of locking engagement with said coupling means and to release said locking member upon continued movement of said armature, said device being mounted for yielding upon return movement of the armature, and coin controlled means for energizing said electromagnet.

1,784,586. FURNACE. FREDERICK P. FAIRCHILD, White Plains, N. Y., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Feb. 5, 1926. Serial No. 86,273. 16 Claims. (Cl. 110—72.)

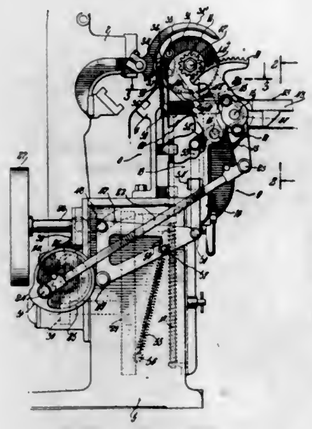


1. In a furnace, a wall having a plurality of vertically disposed air ducts therein, each duct comprising a plurality of sections set end to end with the top thereof free to move upwards relatively to the wall, the top section having an opening and the lower section having an opening leading to the combustion space of the furnace, and means forming an air-tight joint between each two sections.

1,784,587. COIN-CONTROLLED VENDING MACHINE. JOHN H. FARRAR, Memphis, Tenn., assignor to Stephen J. Graham, Tuckerman, Ark. Filed Dec. 1, 1927. Serial No. 237,045. 34 Claims. (Cl. 194—85.)

16. A vending machine comprising in combination, a holder for the material to be dispensed, dispensing means associated with the holder, a master coin controlled unit, a supplemental unit, carried by the holder cooperating means betwen the units to effect the actuation of the dispensing means, and additional mechanism controlled by the supplemental unit for automatically returning change when a coin of a higher denomination than the price of the material purchased is inserted in the machine.

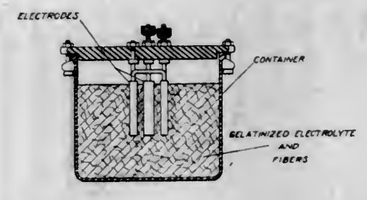
1,784,588. MOP HOLDER. AZARIA M. GREEN, Minneapolis, Minn. Filed June 17, 1929. Serial No. 371,437. 4 Claims. (Cl. 206—1.)



1. A mop holder comprising a casing adapted to receive the head of a mop, a hinged cover upon said casing and having an opening to allow passage of the handle of said mop, fastening means for retaining the cover in closed position upon the casing, and devices for releasing the cover from said casing and for moving said cover to open position.

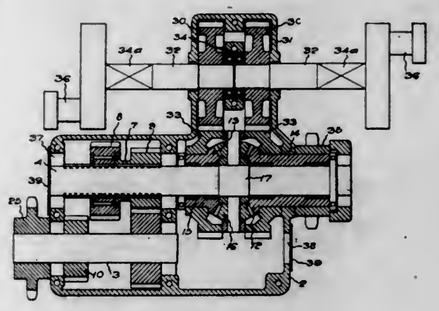
1,784,589. WORK-HOLDING IMPLEMENT. HARRY GREENBERG, Dover, N. J. Filed May 11, 1929. Serial No. 362,438. 1 Claim. (Cl. 113—99.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

A work holding implement including a handle, a blade secured to the handle and formed in a series of steps, the outer steps adapted to position socket members, and a coupling securable to the largest step and having an internal flange spaced from the adjacent step.



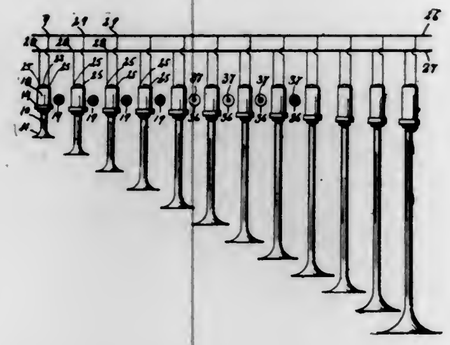
1,784,590. DELIVERY MECHANISM FOR SIGNATURE-STITCHING MACHINES. FREDERICK J. GREENE, Racine, Wis., assignor to The Christensen Machine Company, Racine, Wis., a Corporation of Wisconsin. Filed Oct. 11, 1928. Serial No. 311,813. 6 Claims. (Cl. 270—37.)

1. In a signature stitching machine or the like, a delivery mechanism including an end supporting member, a saddle along which signatures are conveyed to the delivery mechanism, and means for guiding the signatures past the end supporting member to permit them to extend therebeyond prior to being discharged from the machine by the delivery mechanism.



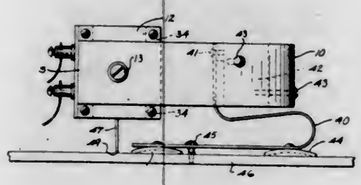
1,784,591. [WITHDRAWN.]

1,784,592. DRY BATTERY ELECTROLYTE REENFORCING MEANS. GEORGE W. HEISE and ERWIN A. SCHUMACHER, Lakewood, Ohio, assignors to National Carbon Co., Inc., a Corporation of New York. Filed May 28, 1928. Serial No. 281,287. 2 Claims. (Cl 136—116.)



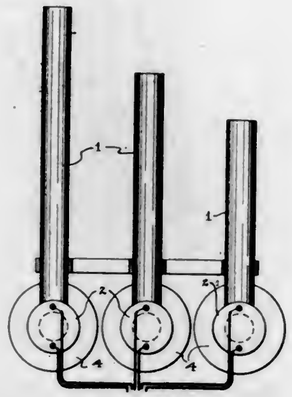
1. In a cell, a zinc anode, a copper cathode, a copper oxide depolarizer cooperating with the cathode, a caustic alkali electrolyte incorporated in a gel cooperating with the anode and cathode, and cellulosic reenforcing fibers dispersed in the body of the gel.

1,784,593. GEAR TRANSMISSION. FREDERIC W. HILD, Los Angeles, Calif. Filed Aug. 13, 1925. Serial No. 49,901. 7 Claims. (Cl. 74—57.)



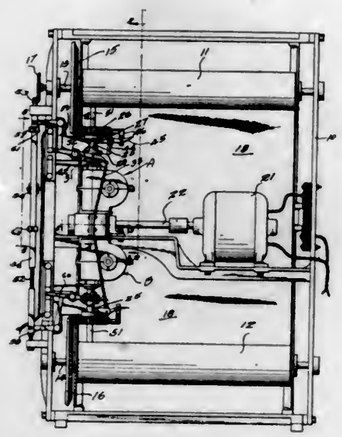
5. In a transmission mechanism, a differential device comprising three elements, two driving members connected to the first and second elements, respectively, of the differential device, and two driven members connected to the second and third elements, respectively, of the differential device, whereby the ratio of the torque exerted on the two driven members is proportional to the ratio of the power supplied by the two driving members, and a variable-speed gear set for regulating the proportion of the ratio of the torque exerted on the two driven members to the ratio of the power supplied by the two driving members.

1,784,594. LOUD-SPEAKER. MILLER REESE HUTCHISON, Llewellyn Park, West Orange, N. J., assignor, by mesne assignments, to Acoustic Products Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 9, 1926. Serial No. 87,073. 6 Claims. (Cl. 181—27.)



1. Acoustic apparatus comprising a plurality of individual units, each unit comprising a sound chamber containing fluid, tuned to a different note and an energy transfer device acoustically connected to each of said chambers, and means for connecting said devices directly to a common channel carrying a complex wave made up of a plurality of said notes.

1,784,595. ACOUSTIC DEVICE. MILLER REESE HUTCHISON, Llewellyn Park, West Orange, N. J., assignor, by mesne assignments, to Acoustic Products Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 18, 1927. Serial No. 169,185. 3 Claims. (Cl. 179—114.)



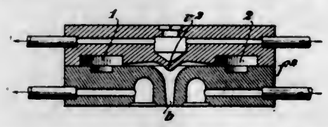
1. A device for vibrating an object including, in combination, a vibrating element and electrical means for vibrating the same in response to electrical waves of sound frequency, said vibrating element being adapted to vibrate about a mean position, an arm attached to said vibrating element, resilient means for holding said vibrating element displaced from its mean position to cause the projection of said arm, a support for all of said devices adapted to rest upon the surface to be vibrated, said projecting arm being adapted to project beyond said surface by an amount equal to the displacement of said vibrating element from its mean position.

1,784,596. CLOSED-END RESONATING HORN. MILLER REESE HUTCHISON, Llewellyn Park, West Orange, N. J., assignor, by mesne assignments, to Acoustic Products Company, New York, N. Y., a Corporation of Delaware. Filed May 24, 1927. Serial No. 193,812. 4 Claims. (Cl. 181—27.)

1. In an acoustic device, a tube closed at one end and having an opening at the other end, said opening having a flaring horn applied in communication therewith, and means in said tube adjacent said opening for general sound waves.

1,784,597. DISPLAY DEVICE. ARVID W. JOHNSON, Los Angeles, Calif. Filed Dec. 1, 1927. Serial No. 236,965. 13 Claims. (Cl. 40—31.)

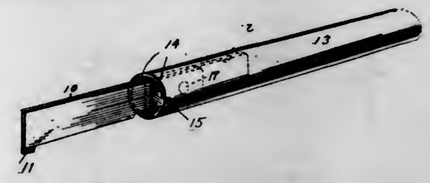
1. A display machine comprising a web divided into panels having display matter thereon, rolls between which said web travels, it being wound upon one roll and unwound from the other; a transmission mechanism including three aligned clutch elements normally out of clutching engagement, gearing connecting the first clutch element and a roll, a shaft, a prime mover for said shaft, the intermediate clutch element being connected to rotate with said shaft and being longitudinally movable on said shaft, the third clutch element being longitudinally movable to engage said intermediate clutch element and actuate the latter to engage said first clutch element, keeper means to longitudinally move said intermediate clutch element, said keeper means tending to move said intermediate clutch element out of engagement with said first clutch element and into engagement with said third clutch element, a trigger to hold said keeper means in position with said intermediate and first clutch elements in clutch engaging position, means to trip said trigger actuated by said web at the end of travel of a panel, and cam means operated by rotation of said third clutch element to move said third clutch element into engagement with said intermediate clutch element and the latter into engagement with said first clutch element.



1,784,598. PROCESS FOR THE PRODUCTION OF THYMOL. HANS JORDAN, Berlin-Steglitz,; WALTER SCHOELLER, Berlin-Westend; and REINHARD CLERC, Berlin, Germany, assignors to the Firm: Chemische Fabrik auf Actien vorm. E. Schering, Berlin, Germany. Filed Aug. 15, 1927, Serial No. 213,204, and in Germany Feb. 22, 1927. 3 Claims. (Cl. 260—154.)

1. The process of producing 3-methyl-6-isopropyl phenol comprising heating the product obtained by condensing a crude cresol (being substantially a mixture of m- and p-cresol) and acetone in the presence of an acid condensing agent to effect decomposition thereof, treating the decomposition product with hydrogen in the presence of a hydrogenation catalyst until two atoms hydrogen have entered into combination, and subjecting the resulting mixture of thymol and p-thymol to careful fractional distillation.

1,784,599. METHOD OF PRODUCING PHENOLS. HANS JORDAN, Berlin-Steglitz; WALTER SCHOELLER, Berlin-Westend; and REINHARD CLERC, Berlin, Germany, assignors to the Firm: Chemische Fabrik auf Actien vorm. E. Schering, Berlin, Germany. Filed Aug. 15, 1927, Serial No. 213,206, and in Germany Nov. 16, 1926. 6 Claims. (Cl. 260—154.)



1. The method of producing saturated phenols comprising acting at a temperature between 180° and 320° C. with hydrogen under pressure in the presence of a hydrogenation catalyst on a product obtained by condensation in the presence of an acidic condensing agent of an alkyl phenol and an aliphatic ketone.

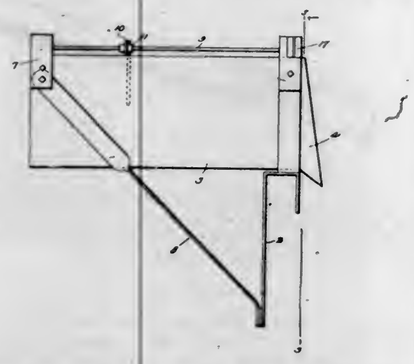
1,784,600. CASTING UNDER PRESSURE. SIEGFRIED JUNGHANS, Baden, Germany. Filed July 24, 1928, Serial No. 295,056, and in Germany Dec. 20, 1927. 3 Claims. (Cl. 22—68.)

1. A multi-part pressure casting mold, comprising a pair of mold sections, one section having a charging channel therein and branch channels in the sections terminating at one end into a mold chamber and the other end into the charging channel at right angles thereof; and a distributing member in the other mold section opposite the charging channel and having a depression adjacent thereto in each charging channel forming shock and connecting surfaces for the purpose of reducing the speed, pressure and temperature of the jet of molten metal to prevent injury to the mold chamber.

1,784,601. PUTLOG. THOMAS HAVELOCK KINGSTON, West Somerville, Mass., assignor to Builders' Patent Scaffolding Company, a Partnership composed of Frank G. Kingston, A. R. Kingston, C. C. Pimm, and Mabel G. Kitchen, West Somerville, Mass. Filed Mar. 5, 1929. Serial No 344,504. 3 Claims. (Cl. 304—39.)

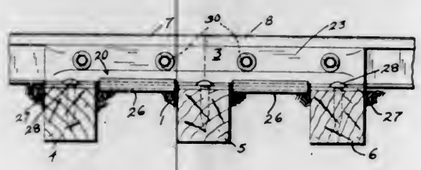
1. A putlog comprising a tubular body and a wall-engaging member having a shank that extends into such body said wall-engaging member being flat and thin enough for insertion between adjacent bricks in a wall.

1,784,602. VALVE FOR OIL-WELL PUMPS. CARROLL P. KIRKPATRICK, Fellows, Calif., assignor of one-half to R. M. Smith, Fellows, Calif. Filed Jan. 14, 1928. Serial No. 246,791. 1 Claim. (Cl. 103—225.)



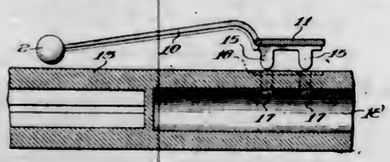
In an oil well plunger valve, a stem having an abutment, a member having an oil conducting bore through which the stem slidably extends, the member being arranged below the abutment and being limited in its upward sliding movement thereby and having an abutment formed adjacent to its lower end and a port in its wall below the abutment for the passage of oil, a cup-shaped member stationary with respect to the stem and slidably receiving said member for controlling the flow of oil through said port, the cup-shaped member being engageable with the abutment of the first mentioned member for limiting the sliding downward movement thereof, and means for adjusting the cup-shaped member on the stem whereby to provide for variation of the area of the port controlled by said cup-shaped member.

1,784,603. FROZEN-CREAM CUTTER. EMMETT DELBERT LAMPHERE, Jr., West Rutland, Vt. Filed Jan. 16, 1929. Serial No. 332,981. 1 Claim. (Cl. 107—21.)



A frozen-cream cutter of the character described comprising a horizontally disposed container of substantially semi-circular cross-section having one end open, a substantially U-shaped bracket rigidly secured to the open end portion of the container and constituting supporting means therefor, a pair of vertically extending blocks, rigidly

mounted on the upper end portion of the bracket and projecting above the container, horizontally disposed shoulders on the blocks, a pair of blocks rigidly mounted on the rear end portion of the container and projecting upwardly thereabove, guide rods disposed in spaced parallelism to the opposite side of the container and having their oppo-

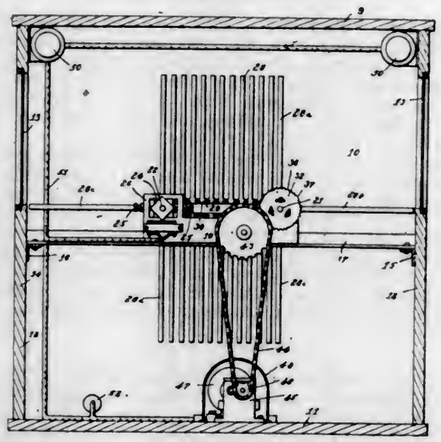


site ends rigidly connected to the first and second named pairs of blocks, a bar extending transversely over the container having its opposite end portion slidably mounted on the rods, a follower rigidly mounted on the bar and depending therefrom into the container and a transversely extending knife pivotally mounted on one of the shouldered blocks for swinging movement into the container.

1,784,604. RAIL JOINT. JOHN A. LARSON, San Jose, Calif. Filed Jan. 27, 1930. Serial No. 423,623. 4 Claims. (Cl. 238—218.)

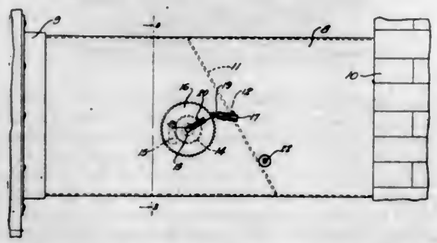
4. In a rail joint, a base plate arranged to have the bases of the rails rested and supported thereon, side plates associated with said base plate and arranged to be bolted together through and against the rails, portions of one of said plates being bent to hook under the base plate between rail ties adjacent the joint, and members on said last named plate extending outwardly therefrom over the rail bases and base plate and lying upon said rail ties.

1,784,605. CLIP. JOHN P. LYNN, Chicago, Ill., assignor to Dur-O-Lite Pencil Co., Chicago, Ill., a Corporation of Illinois. Filed July 20, 1929. Serial No. 379,659. 20 Claims. (Cl. 24—11.)



1. In combination, a body and a pocket clip, said clip having projecting lugs and said body having openings into which said lugs enter with a tight drive fit.

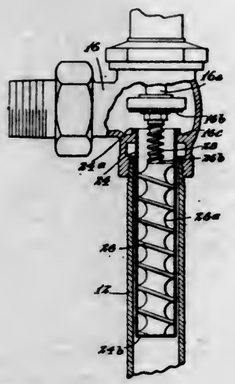
1,784,606. RAILWAY TIE. DONALD B. MACNEIR, New York, N. Y. Filed Sept. 28, 1929. Serial No. 395,918. 3 Claims. (Cl. 238—115.)



1. In a railway tie construction, a pair of spaced opposed concrete blocks, eyes extending from said concrete blocks and anchored therein, and a tie rod having its ends respectively connected to said eyes.

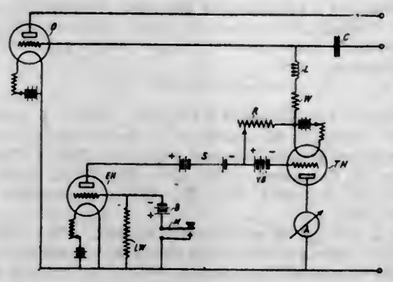
1,784,607. AUTOMATIC EXHIBITOR. PARLEY E. MCFARLAND, Rockford, Ill., assignor to Jesse L. Wortham, Rockford, Ill. Filed Mar. 27, 1929. Serial No. 350,180. 12 Claims. (Cl. 40—98.)

1. An automatic exhibitor comprising a cabinet having windows at each end, means for supporting the operating mechanism therein, a plurality of parallelly spaced rigid display holders arranged to be moved between concealed storage positions and display positions before said windows, endless chains adapted to fixedly support said display holders in both the storage and display positions said chains being movable to transport the holders from position to position, and automatic means for intermittently driving said chains to move successive holders into the display positions and hold them motionless thereat for a predetermined period of time.



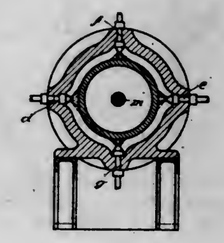
1,784,608. AUTOMATIC PIPE DAMPER. ROY L. MEYERS, Janesville, Wis. Filed Jan. 21, 1929. Serial No. 333,969. 5 Claims. (Cl. 236—93.)

1. The combination with a pipe, of a disc-shaped damper centrally pivotally mounted therein and inclined from



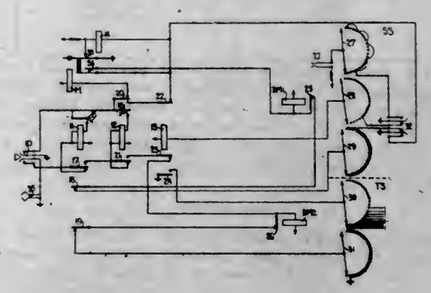
vertical when in closed position, a contractile and expansile thermostatic member within the pipe, and mechanism between the thermostatic member and the damper for transmitting certain movements of the thermostatic member to the damper.

1,784,609. HEATING SYSTEM. ALBERT W. MOULDER, Warren, Ohio, assignor to General Fire Extinguisher Company, Providence, R. I., a Corporation of Delaware. Filed Mar. 25, 1927. Serial No. 178,364. 2 Claims. (Cl. 137—75.)



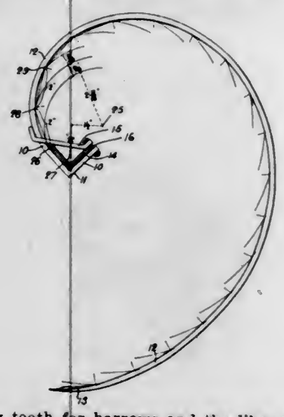
1. Means for controlling the flow through a radiator having a feed pipe and valve comprising a tube adapted to be inserted through said valve into said pipe; and a core within said tube having a helical groove along its surface; the tube and core being organized to constitute the path of flow, thereby to increase the frictional resistance of this part of the pipe.

1,784,610. MODULATING SYSTEM. JOHANNES JACQUES NUMANS, Eindhoven, Netherlands, assignor to Radio Corporation of America, a Corporation of Delaware. Filed May 21, 1927, Serial No. 193,201, and in the Netherlands May 22, 1926. 6 Claims. (Cl. 179—171.)



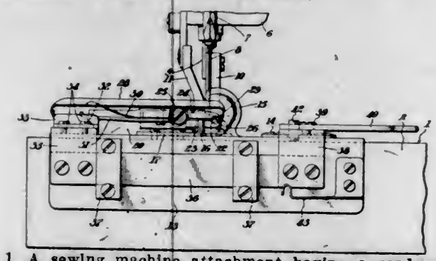
6. In a circuit arrangement for modulating oscillations an oscillation tube, a grid leak for said tube comprising an inductance a fixed resistance and a variable resistance all connected electrically in series, an auxiliary triode, a source of potential connected between the grid and the cathode of said auxiliary triode, a modulating means adapted to vary the internal resistance of said auxiliary triode and means controlled thereby for varying the value of said variable resistance in accordance therewith.

1,784,611. METHOD OF PRODUCING BODIES CONSISTING OF A PLURALITY OF THIN ALTERNATELY CONDUCTING AND INSULATING LAYERS. MICHAEL POLANYI, Berlin-Zehlendorf-Mitte, and STEPHAN VON BOGDANDY, Berlin-Dahlem, Germany. Filed July 6, 1928, Serial No. 290,868, and in Germany July 7, 1927. 8 Claims. (Cl. 175—41.)



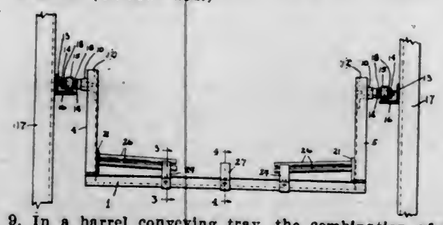
1. The method of manufacturing a body suitable as electric condenser and consisting of a plurality of thin, alternately conducting and insulating layers, which consists in precipitating the substances to be superposed in quick succession upon a common support.

1,784,612. TESTING DEVICE FOR IMPULSE SENDERS. THOMAS PHILIP PREIST, Cheshire, England, assignor to Associated Telephone and Telegraph Company, Kansas City, Mo., a Corporation of Delaware. Filed Nov. 5, 1928, Serial No. 317,231, and in Great Britain Nov. 30, 1927. 8 Claims. (Cl. 179—175.)



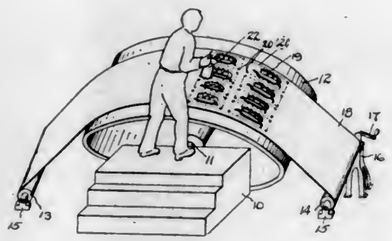
1. In an impulse speed-testing mechanism for telephone systems, an impulse sender to be tested, a standard impulse sender, a separate stepping switch controlled by each of said senders, means for operating both of said senders simultaneously to step their associated switches, means responsive to a predetermined time interval for stopping said switches, and means for measuring the required impulse speed by determining the difference in the positions of said switches.

1,784,613. SPRING TOOTH FOR HARROWS AND THE LIKE. ARTHUR W. REYNOLDS, Leonardsville, N. Y., assignor to The Babcock Manufacturing Company, Leonardsville, N. Y., a Corporation of New York. Filed July 17, 1928. Serial No. 293,361. 28 Claims. (Cl. 55—36.)



1. A spring tooth for harrows and the like, comprising a heel portion, a point portion, and a resilient body portion extending between the two and conforming in shape to a smooth curve having a regularly increasing radius of curvature.

1,784,614. SEWING-MACHINE ATTACHMENT. RUDOLPH J. SAILER, Townley, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Aug. 13, 1929. Serial No. 385,553. 9 Claims. (Cl. 112—139.)



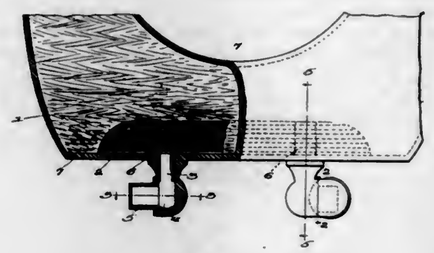
1. A sewing machine attachment having a cord-guide comprising separable jaws in their closed position together defining a cord-receiving aperture, means for holding said jaws in their closed position, manually controlled means for opening said jaws, and an edge-folder disposed to fold the margin of a body material about a cord passed between said jaws.

1,784,615. BARREL-CONVEYING TRAY. KARL F. SNOW, Brecksville, Ohio, assignor to The C. O. Bartlett & Snow Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 11, 1930. Serial No. 427,625. 9 Claims. (Cl. 198—131.)

9. In a barrel conveying tray, the combination of interconnected side and bottom members; stub shafts having rollers mounted thereon, extending laterally from said side members and adapted to engage a conveyor chain; a plurality of longitudinally spaced oppositely inclined barrel supporting bars mounted in said tray adapted to engage the chime rings of such barrel; and means associated with said bottom member, extending laterally therefrom and positioned intermediately said barrel supporting bars for preventing such barrel from rolling from the tray.

1,784,616. STENCILING APPARATUS. EDWARD R. VAN BERGEN, Cleveland, Ohio. Filed Nov. 21, 1928. Serial No. 320,937. 10 Claims. (Cl. 101—121.)

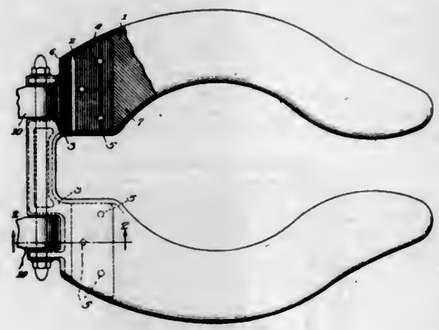
1. In a device of the class described, an element formed with a plurality of stencil apertures, means for moving said element past an operator, and means for securing to the side of said element remote from the operator, a piece of material to be treated.



1,784,617. TRISAZO DYES AND PROCESS OF PRODUCING THE SAME. HAROLD E. WOODWARD, Penns Grove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed May 31, 1928. Serial No. 282,046. 11 Claims. (Cl. 260—72.)

1. The process of preparing a trisazo dye which comprises diazotizing an amino-azo compound prepared from an aromatic amino sulphonic acid and an aromatic amino compound to which coupling can take place in the position para to the amino group, coupling the resulting diazo azo compound to an aromatic amino compound to which coupling can take place in the positin para to the amino group, diazotizing and coupling the resulting diazo disazo compound to a compound of the class consisting of para-amino-benzoyl derivatives of, and para-amino-benzoyl-para-amino-benzoyl derivatives of amino-naphthol sulphonic acids.

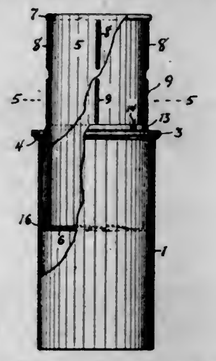
1,784,618. YEAST MANUFACTURE. JOHN H. BARRINGTON, Baltimore, Md., assignor, by mesne assignments, to Standard Brands Incorporated, Dover, Del., a Corporation of Delaware. Filed Nov. 16, 1923, Serial No. 675,204. Renewed Apr. 29, 1930. 11 Claims. (Cl. 195—20.)



10. A process of manufacturing yeast, which includes using as mash materials both molasses and grain; during the mashing souring at least a portion of the mash materials with lactic-acid-forming bacteria until a substantial excess of lactic acid is obtained; propagating the yeast with aeration in a diluted portion of an extract obtained from the mash materials; adding a yeast-nutrient ammonium salt of an inorganic acid to the propagating liquid during the propagating period in such amounts and at such times as to maintain in the propagating liquid an acidity above that at which infection thereof will occur, but below that which materially inhibits the growth of the yeast, and slowly adding the remainder of the extract from the mash materials.

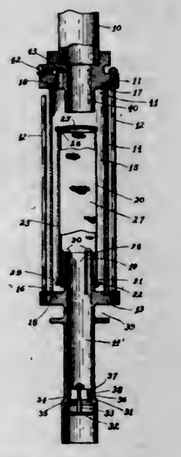
1,784,619. TOILET SEAT. JOSEPH W. BISHOP, Muskegon Heights, Mich., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 13, 1928. Serial No. 269,736. 17 Claims. (Cl. 4—236.)

1. A toilet seat composed of plastic composition, an insert enclosed by said seat and extending transversely thereof, an outwardly projecting hinge member integral with said insert, said plastic composition extending about said insert and outwardly over said hinge member and presenting an unbroken surface at the points of juncture of said hinge member and said seat, and standards supporting said hinge member for pivotal movement.



1,784,620. TOILET SEAT. BYRON C. BOOTH, Muskegon Heights, Mich., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 2, 1927. Serial No. 230,537. 17 Claims. (Cl. 4—237.)

1. A toilet seat comprising seat wings having cores, a metallic insert for each of said cores imbedded in said cores and having an irregular surface for preventing withdrawal of said inserts, a hinge element integral with said inserts and a coating of a plastic composition covering said cores and said hinge element and having an uninterrupted surface at the points of juncture of said inserts and said hinge element.

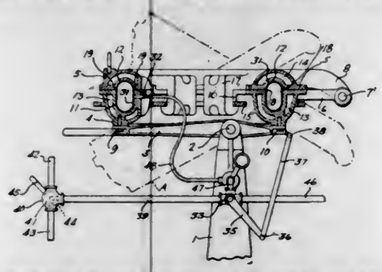


1,784,621. FLOWER HOLDER. CHARLES AUGUSTUS BOYER, Winona Lake, Ind. Filed July 22, 1929. Serial No. 379,949. 6 Claims. (Cl. 47—41.)

3. A flower holder consisting of a shell, and a cylindrical cup having a closed bottom with an outwardly extending perimeter, the open end of the cup having an external bead, and the cylindrical wall of the cup having longitudinally extending ribs spaced from its closed end, said cup having thereon a loose collar provided with recesses in its inner wall and adapted to be seated in the top of the shell and

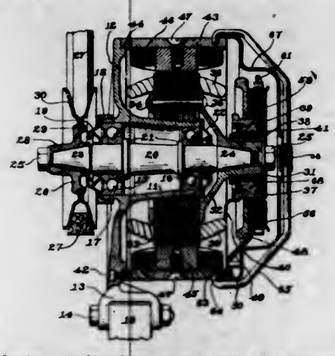
close the top thereof about said cup, and supporting said cup in elevated position by engaging said projections when the ribs are out of alinement with said recesses.

1,784,622. GASOLINE FILTER. MARTIN E. E. DARDANI, Fairfield, Conn., assignor, by mesne assignments, to The New England Filter Corporation, Fairfield, Conn., a Corporation of Connecticut. Filed June 21, 1924. Serial No. 721,416. 2 Claims. (Cl. 210—165.)



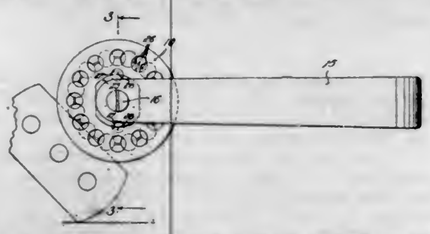
1. A device of the character described, comprising an enclosed chamber; a filter device located in the chamber; a pocket in the chamber located between the bottom of the chamber and the bottom of the filter device; an outlet for the chamber having an orifice located in elevated relation with respect to the lower end of said filter device; and a siphon having a receiving-end between the filter device and said outlet and having a discharge-end within the outlet and below the level of the filter device.

1,784,623. MOLDING APPARATUS FOR PNEUMATIC TUBES, TIRES, AND THE LIKE. WALTER L. FAIRCHILD, New York, N. Y. Filed Sept. 2, 1925. Serial No. 54,054. 6 Claims. (Cl. 18—38.)



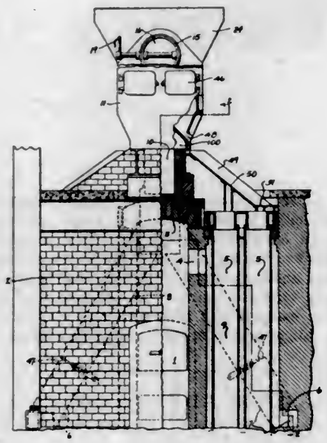
1. In apparatus of the class described, in combination, a mold comprising a pair of mating sections having complementary vulcanizing channels, said mold sections when positioned in mating relation forming a continuous circular vulcanizing chamber adapted to receive a tube to be vulcanized, means for mounting said mold assembly so that it can swing upon a horizontal axis, means for in-

troducing a fluid into the tube within said vulcanizing chamber to expand it within said vulcanizing chamber, means to suck said fluid from said tube when the latter has



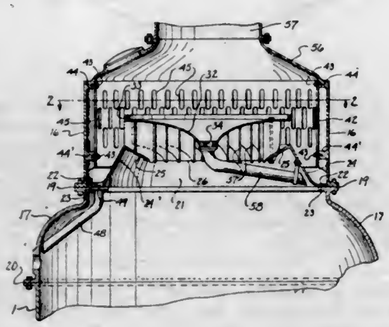
been expanded within the mold, and means for automatically introducing a vulcanizing gas into said tube when the mold assembly is moved upon its horizontal axis.

1,784,624. GENERATOR. HENRY FORD, Dearborn, Mich., assignor to Ford Motor Company, Dearborn, Mich., a Corporation of Delaware. Filed Nov. 26, 1928. Serial No. 321,795. 1 Claim. (Cl. 171—252.)



In a device of the character described, a sleeve, an annular flange extending radially from said sleeve near one end thereof, a cylindrical generator shell mounted on the said flange, pole members mounted within said shell, a shaft extended through said sleeve and journalled therein, an armature of bell shape mounted on the rear end of said shaft and extended to position to receive a portion of said sleeve and to co-act with said pole members, a commutator ring mounted on said armature, a brush ring mounted on said shell, a plurality of brush members mounted on said brush ring in position to co-act with said commutator, a quick detachable cover for said shell adapted to receive and enclose said commutator and brush assemblies, and driving means secured to the other end of said shaft.

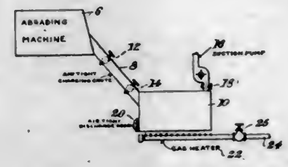
1,784,625. BLADE EDGER. FRIEDRICK GRAFFENBERGER, Milwaukee, Wis. Filed Sept. 11, 1929. Serial No. 391,857. 8 Claims. (Cl. 76—87.)



1. A blade edger comprising a pair of co-axial disks rotatable as a unit and cooperating to form an inwardly tapered peripheral gap for receiving the blade to be edged, each disk having a circular series of recesses adjacent said gap, the recesses in each disk being staggered with respect to those in the other disk and in overlapping relation therewith.

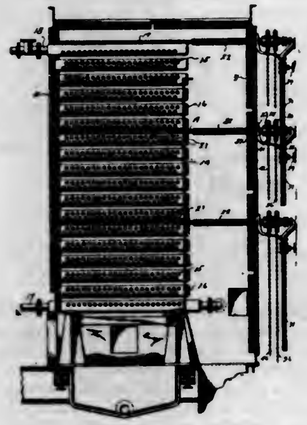
1,784,626. BONE-CHAR-DRYING APPARATUS. JAMES HAMILL, East Orange, N. J., and JOHN FREDRICK TADDIKEN, Forest Hills, N. Y. Filed June 25, 1925. Serial No. 39,445. 2 Claims. (Cl. 34—34.)

1. A predrier for a char revivifying apparatus including in combination a chamber, means for feeding char downwardly therethrough, a plurality of spaced apart heating flues adapted to divide the downwardly travelling char into a plurality of thin streams, fins extending from said heating flues to define passages for air currents, and means for passing external air through the chamber in intimate contact with the char for the purpose of removing the evaporated moisture and gaseous impurities.



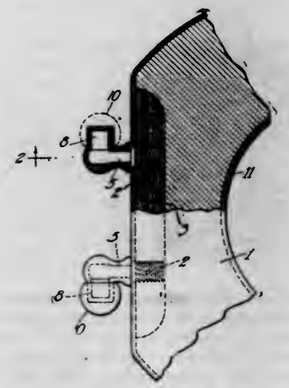
1,784,627. APPARATUS FOR SEPARATING MOISTURE FROM VAPOR. JAMES HAMILL, East Orange, N. J. Filed Mar. 18, 1924. Serial No. 700,173. 9 Claims. (Cl. 183—80.)

1. An apparatus for separating entrained liquid from the vapor generated in an evaporator including in combination a chamber for the passage of the travelling



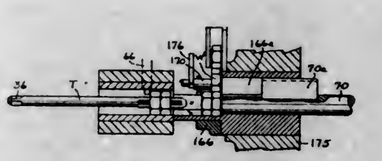
column of vapor and entrained liquid, means for deflecting said column away from its normal direction of flow, means for increasing the velocity of the vapor and entrained liquid and for directing it along a curved path in the chamber, and means along the periphery of said path for collecting the liquid separated from the vapor by the centrifugal action without diverting the vapor from its curved path.

1,784,628. METHOD OF REMOVING OIL FROM THE SHELL OF THE CASHEW NUT. EDWARD R. HUGHES, Morristown, N. J., assignor to The Harvel Corporation, a Corporation of New Jersey. Filed Nov. 29, 1926. Serial No. 151,510. 7 Claims. (Cl. 87—6.)



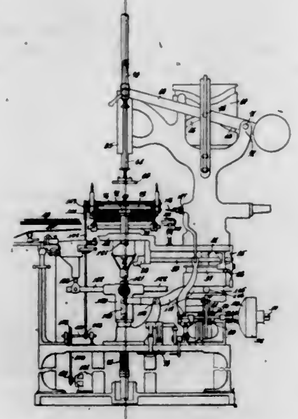
1. The method of removing the liquid from the cellular structure within the shell of the cashew nut which consists in subjecting the nuts to a sudden change from about normal temperature to about the charring temperature to produce an explosive pressure in said cellular structure whereby the liquid therein is forced out from the shell, and cooling the nut and liquid before charring can take place.

1,784,629. HEATING-SURFACE-CLEANING DEVICE. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Sept. 26, 1923. Serial No. 664,944. 11 Claims. (Cl. 122—392.)



1. In a device for cleaning the surfaces of uniformly spaced tubes exposed to gases, a rotatably mounted tubular element extending across the tubes and having openings to direct jets of cleaning fluid against such tubes, the distance between said openings along said element being a multiple of the distance between two adjacent tubes, means to rotate said element, a member rotatable with said element and arranged to be rotated relatively thereto, means to rotate said member relatively to said element and connections between said element and said member to move said element lengthwise by such relative rotation.

1,784,630. TOILET-SEAT HINGE. GEORGE JOHNSON, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 19, 1928. Serial No. 320,418. 11 Claims. (Cl. 4—237.)



1. The combination of a toilet seat body, an insert embedded in and extending across the rear of said body, a hinge lug having a sliding connection with said insert, said connection permitting lateral movement only of said lug, the material of said body engaging said lug and preventing it from sliding laterally with respect to said insert and means supporting said lug for pivotal movement with said body.

1,784,631. NUT-TAPPING MACHINE. DANIEL KELLEHER, Berea, Ohio, assignor to The Foote-Burt Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 21, 1927. Serial No. 227,677. 14 Claims. (Cl. 10—133.)

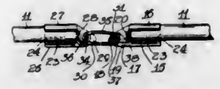
1. In a metal cutting machine, a cutting tool, adapted to simultaneously operate upon a plurality of pieces of work, means for holding the work to be operated upon by said tool, actuating means for effecting relative rotation between the work holding means and tool, a mechanism adapted to align and hold a plurality of pieces of work for presentation to the work holding means in offset relation to the work holding means in the direction of the axis of alignment, and means for simultaneously feeding such aligned plurality of pieces of work from said mechanism to the work holding means.

1,784,632. LID-WRAPPING MACHINE. HORACE B. KLEINSMITH, FRANK RODGERS NEELY, and FRED W. DOLL, Allentown, Pa., assignors to A. H. Balliet Corporation, Allentown, Pa., a Corporation of Pennsylvania. Filed June 16, 1927. Serial No. 199,230. 11 Claims. (Cl. 93—54.)

5. In a machine for wrapping lids, a downwardly movable upper plunger and block, a resiliently supported lower plunger and form, a front flap turn-up device, and a transversely movable downwardly pressing front turn-in roller adapted to turn-in the turned up front flap and roll it on to the bottom of the lid.

1,784,633. SHEET-METAL TOY CONSTRUCTION. HERMAN L. KRAEFT, Cleveland, Ohio, assignor to Murray Ohio Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 17, 1929. Serial No. 400,252. 6 Claims. (Cl. 46—48.)

6. In a toy of the class described, a sheet metal shell forming the toy body, a rudder member, said member having a forwardly projecting lug adapted to freely enter an elongated opening in the shell when the rudder member is out of edgewise contact with said shell, said lug having a forward projection in the plane of the rudder, adapted to contact with the interior of the shell adjacent said opening to lock the rudder to the shell, whereby the lug will not require bending over in order to obtain a locking effect when the rudder member is in edgewise contact with the shell, and means associated with the shell and coacting with said lug to keep the rudder member in substantially perpendicular edgewise contact with the shell.

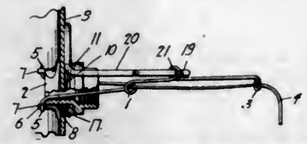


1,784,634. TOY CONSTRUCTION. HERMAN L. KRAEFT, Cleveland, Ohio, assignor to The Murray Ohio Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 19, 1930. Serial No. 429,577. 3 Claims. (Cl. 46—48.)

1. In a toy of the class described, an elongated hollow body having an opening therein, transverse frame members within said body, a cover for said opening having a lip portion adapted to underlie a portion of the body, said

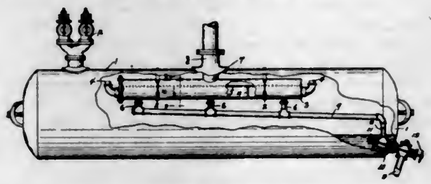
cover adapted to be supported by the frame members and resilient means adapted to retain the cover in position relative to the body.

1,784,635. JEWELRY. JACQUES KREISLER, New Rochelle, N. Y., assignor to Jacques Kreisler & Co., New York, N. Y. Filed Sept. 7, 1929. Serial No. 390,905. 1 Claim. (Cl. 24—232.)



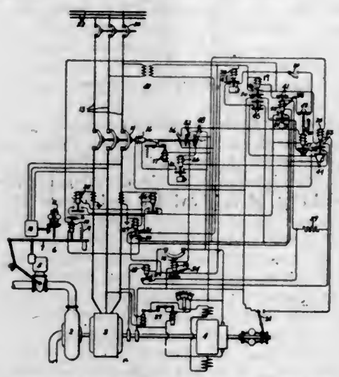
A terminal snap for a wrist watch band comprising separate sections of cord to be separably coupled together, and comprising two sections, each section thereof being provided with a longitudinally fluted upper wall to partly embrace an end of each cord, a clamping jaw mounted in each section for engaging the sections to the cords, the sides of the sections being projected forwardly to provide parallel ears, one section having a projecting tongue disposed between its ears and provided with an eye in the end thereof, the other section having a tongue disposed between its ears and turned upwardly at the end to form a hook to engage the eye from underneath, a pintle pin supported between the ears of the second section, and a pivoted tongue mounted on the pin in the second section and provided with a downwardly turned hook end to spring over the first hook to hold the eye loosely between the two tongues.

1,784,636. VALVE STRUCTURE. OSCAR J. LEINS, Milwaukee, Wis., assignor to Claus Manufacturing Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 23, 1928. Serial No. 256,307. 3 Claims. (Cl. 251—152.)



1. In a valve structure including a barrel having a bore with which an inlet and an outlet communicates and a plug rotatable in the barrel bore to control the flow of fluid from the inlet to the outlet, one end portion of the plug being reduced in diameter, a pin inserted through the plug at the inner portion of said reduced end with its ends inwardly of the circumference of the plug inwardly of said reduced end, said pin being located within the barrel bore, a washer member engaging the end of the barrel adjacent the reduced end of the plug, a stop carried by the washer member and extended into the barrel bore to lie within the path of the plug carried stop, and a projection extended from the washer member and engageable in a notch in the adjacent barrel end to prevent rotation of the washer member with respect to the barrel.

1,784,637. PIPE CONNECTION. PETER J. LINDGREN, Denver, Colo., assignor to John W. Horner, Denver, Colo. Filed Apr. 28, 1927. Serial No. 187,390. 7 Claims. (Cl. 285—50.)

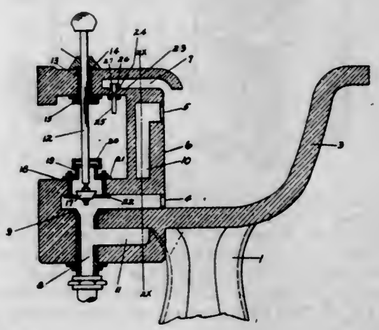


1. In an accessory pipe connection, stationary means having a cylindrical apertured exterior surface, a one piece threaded apertured member completely insertable through the aperture to the interior of said stationary means and adapted to be placed completely within and to bear against the interior surface thereof, an adjusting member having a threaded inwardly projecting portion for engagement with the apertured member and provided with a circular grooved spinning face, and sealing means, including a metallic seal member adapted to fit said spinning face and between said face and said stationary means and formed substantially to the contour of said stationary means on the face adjacent thereto, the adjustment of said engagement being adapted to force the sealing means against the stationary means and to spin a seat upon said seal member in the groove of said spinning face.

1,784,638. DRY PIPE FOR STEAM BOILERS. FRANK J. MARTIN, Weirton, W. Va. Filed Apr. 22, 1929. Serial No. 357,004. 5 Claims. (Cl. 122—491.)

4. In combination with a steam boiler having an outlet, a tank within the boiler having an outlet connected to the boiler outlet and having steam inlets at its ends, a horizonal perforated baffle plate in the tank, a series of outlets for the water of condensation leading from the bottom of the tank, and draining means connected to each of said outlets and extending outward from the boiler.

1,784,639. CONTROL SYSTEM. BARCLAY F. MEADOR, Kansas City, Mo., assignor to General Electric Company, a Corporation of New York. Filed Feb. 7, 1929. Serial No. 338,267. 10 Claims. (Cl. 171—118.)

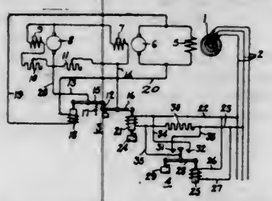


5. In combination, a load circuit, a generator connected to said circuit, a voltage regulator for said generator, automatic switching means for controlling the connection between said generator and load circuit, and means controlled by the voltage and current output of said generator for effecting the operation of said automatic switching means to disconnect said generator from said circuit and to render said automatic switching means inoperative to reconnect said generator to said circuit when a predetermined abnormal voltage occurs due to a failure of said regulator and for effecting only the operation of said automatic switching means to disconnect said generator from said circuit when said predetermined abnormal voltage occurs due to a sudden decrease in load demand on said circuit.

1,784,640. POPPET VALVE. WARREN NOBLE, Detroit, Mich. Filed Sept. 15, 1927. Serial No. 219,814. 6 Claims. (Cl. 123—188.)

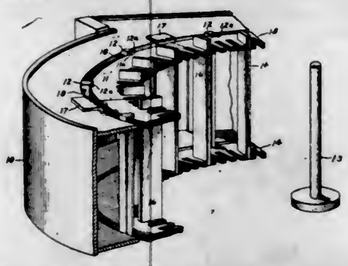
1. In a poppet valve for internal combustion engines, a head composed of a binary alloy of silver and a metallic hardening agent wherein the silver predominates to an extent wherein its inherent co-efficient of heat conductivity is characteristic of the alloy, and wherein the hardening agent imparts wear resisting properties to the head.

1,784,641. LAVATORY OR WASHSTAND. WILLIAM H. OLDFIELD, Rochester, N. Y. Filed Apr. 6, 1929. Serial No. 353,112. 2 Claims. (Cl. 4—197.)



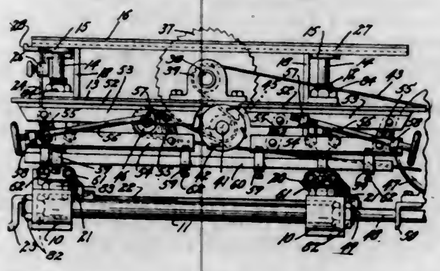
2. A lavatory having a basin, a housing back of the basin, the front of the housing forming the back of the basin and having an upper and lower drain opening therein, the back of the housing having an opening therein with a deck above and a deck below the opening, a vertical drain extending in the lower deck, a valve stem and a stuffing box at the top of the vertical drain in the lower deck, adapted to close it at the top, an opening in the upper deck for the valve stem immediately over the opening in the lower deck, said valve stem being exposed between the two decks and the stuffing box being exposed above the lower deck and the valve stem being exposed above the upper deck, a valve and a valve seat in said vertical drain, a horizontal drain connecting the lower opening of the basin directly with the vertical drain above the valve seat, an offset drain connecting the overflow opening of the basin with the vertical drain in the lower deck below the valve seat.

1,784,642. ELECTRICAL REGULATOR. ROBERT D. PARRY, Northway, England, assignor to General Electric Company, a Corporation of New York. Filed May 11, 1928, Serial No. 277,036, and in Great Britain May 16, 1927. 13 Claims. (Cl. 171—119.)



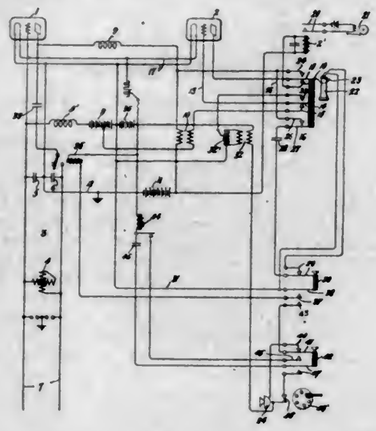
1. In combination, a dynamo-electric machine, an excitation circuit therefor, circuit controlling means in said excitation circuit, a regulator operable in accordance with

variations in an electrical characteristic of said dynamo-electric machine for controlling said circuit controlling means, and means operable in accordance with an electrical characteristic of said dynamo-electric machine for chang-



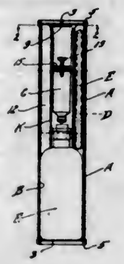
ing the time of response of said regulator when the departure of said electrical characteristic exceeds a predetermined amount above or below a predetermined normal value.

1,784,643. METHOD OF MAKING STATORS FOR DYNAMO-ELECTRIC MACHINES. HENRY G. REIST, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 14, 1928, Serial No. 261,629. Renewed May 3, 1930. 9 Claims. (Cl. 29—155.5.)



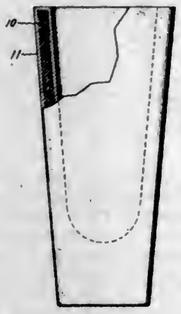
1. The method of attaching a lamination supporting rib to the frame of a dynamo-electric machine, comprising arranging the rib in spaced relation to the frame and in such relation to the axis of the machine that the laminations arranged on the rib will form the desired air gap in the completed machine, tack welding gussets to the frame and to the rib, and then welding the gussets to the frame and to the rib.

1,784,644. WOODWORKING MACHINE. EUGENE TEUTSCH, Denver, Colo. Filed Sept. 24, 1927. Serial No. 221,676. 8 Claims. (Cl. 144—1.)



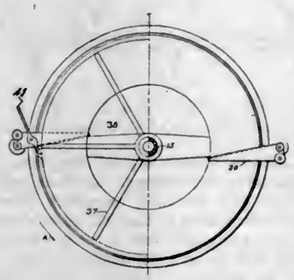
1. Frame construction for saw tables comprising base members; standards arising from said base members and adapted to support a table top; parallel, horizontal base tubes connecting said base members; bars extending into the extremities of said hollow base tubes; cross members slidably mounted on said bars and arranged to carry a motor; and means for moving said cross members along said bars and maintaining them in any desired position thereon.

1,784,645. SIGNALING SYSTEM. WILLIAM A. TOLSON, Rexford, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 22, 1928. Serial No. 287,552. 8 Claims. (Cl. 250—6.)



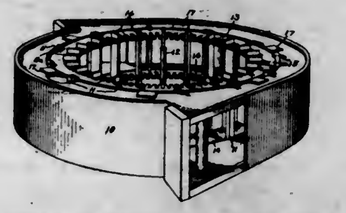
1. In combination, a plurality of electron discharge devices, each of said devices having an anode and a cathode, means connecting said devices in cascade relation, a plurality of signal devices one of said devices being connected in the anode circuit of one of said discharge devices and means for connecting another of said signal devices in the anode circuit of a second of said discharge devices, means for supplying high frequency current received from a remote point to said second discharge device to cause desired actuation of said signal devices, an oscillatory circuit associated with said second discharge device whereby oscillations may be produced and means including said first discharge device for modulating the oscillations produced.

1,784,646. PACKAGE OF DENTAL SUPPLIES. WILLIAM A. WEAVER, Shaker Heights, Ohio. Filed Mar. 8, 1929. Serial No. 345,386. 10 Claims. (Cl. 132—84.)



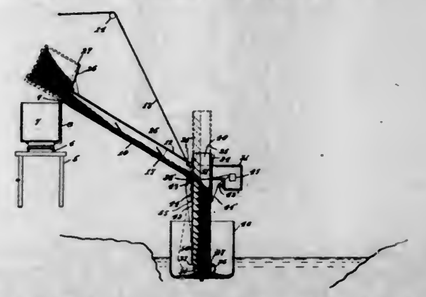
1. A package of dental supplies comprising a substantially tubular container structure having upper and lower closed ends attached thereto, a bottle of liquid arranged within said container structure in abutting relation with the lower end thereof and having a neck extending toward the upper end thereof, a one-piece spacing and supporting tube arranged within said container structure in spaced relation to the side wall thereof and having its upper end portion terminating adjacent the upper closed end of said container structure and having its lower end portion resting on said bottle and telescoping its neck and being held against said bottle and in such telescopic relation by the upper end of said container structure, and a tube of tooth paste arranged in and fitting said spacing and supporting tube between said bottle neck and the upper closed end of said container structure.

1,784,647. METHOD OF MAKING CRUCIBLES. WILLIS R. WHITNEY, Niskayuna, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 3, 1926. Serial No. 146,047. 4 Claims. (Cl. 25—156.)



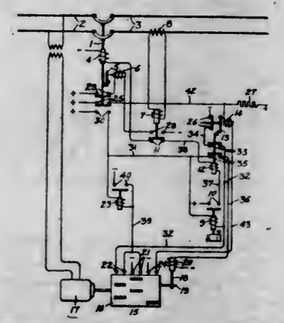
1. The method of making a crucible having an inner heating resistor and an outer heat refractory lining which consists in molding the crucible from a mixture of heat refractory material and powdered resistance heating material, and then burning the resistance heating material out of an outer layer of the heat refractory material so as to leave an inner heating resistor.

1,784,648. AUTOMATIC LAPPING MACHINE. HERBERT J. WILLS, Niagara Falls, N. Y., assignor to The Carborundum Company. Filed Dec. 26, 1928. Serial No. 328,556. 5 Claims. (Cl. 51—156.)



1. An automatic lapping machine for approximately cylindrical parts comprising in combination a lower operating plate with plane upper surface and having a central outlet opening, an upper floating plate with plane lower surface, a lapping bar held in a predetermined position between said lower and upper plates, said lapping bar having a grooved grinding surface whose generating lines are parallel to said plane surfaces of said plates and are inclined to the adjacent radii of said plates, means for rotating said lower plate to revolve approximately cylindrical objects to be lapped against the grinding surface of said lapping bar as well as against the upper plate, the rotation of the lower plate being in such a direction that the frictional forces exerted by the lower plate on the objects to be lapped have components toward the central opening of the lower plate, means for adjusting the height of said upper plate above said lower plate, and means for adjusting the angular position of said lapping bar in a plane parallel to the plane surfaces of the plates which contact with the cylinders, whereby the time of travel of the cylindrical parts from the circumference of the lower plate to the central opening thereof may be varied.

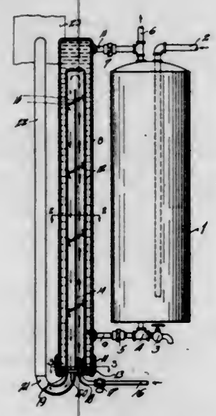
1,784,649. STATOR FOR DYNAMO-ELECTRIC MACHINES AND METHOD OF MAKING THE SAME. ALEXANDER P. WOOD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 14, 1928. Serial No. 261,542. 2 Claims. (Cl. 29—155.5.)



1. The method of making a stator for dynamo-electric machines, comprising providing a frame, arranging lamination supporting bars in spaced relation to said frame, placing laminations on said bars so that the same are in such position that the laminations supported thereon will be at such radial distance from the axis of the stator as to form the desired air gap in the completed machine, and then welding said bars in this position to said frame.

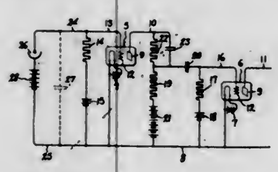
1,784,650. APPARATUS AND METHOD OF TRANSFERRING COKE AND COAL OR THE LIKE. HENRY ADAMS, Plainfield, N. J. Filed Oct. 26, 1927. Serial No. 228,841. 25 Claims. (Cl. 214—45.)

1. A method comprising dividing material to be lowered into separate inclined streams; and gradually lowering and laterally compressing the streams to retard the flow, while maintaining the major part of the upper face of the stream substantially unengaged.



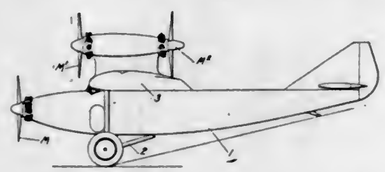
1,784,651. AUTOMATIC RECLOSING-CIRCUIT-BREAKER SYSTEM. ARVID E. ANDERSON, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 7, 1927. Serial No. 204,096. 17 Claims. (Cl. 175—294.)

1. In an automatic reclosing circuit breaker system, a circuit breaker, means for effecting the opening of said



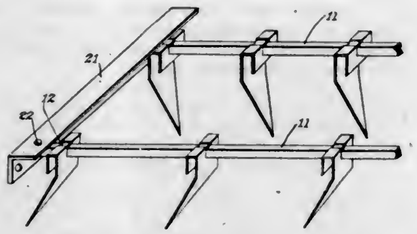
circuit breaker, electroresponsive means arranged when energized to effect the closing of said circuit breaker, means responsive to the opening of said circuit breaker for effecting the completion of an energizing circuit for said electroresponsive means immediately after said circuit breaker is opened, lockout means for effecting the opening of said energizing circuit immediately after each completion thereof, and means for maintaining said lockout means in a position to maintain said energizing circuit open for a predetermined time so as to prevent the immediate reclosure of said circuit breaker in case it is opened by said opening means immediately after its first reclosure.

1,784,652. WATER HEATER. EDWIN L. BADGER, Spokane, Wash., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 15, 1926, Serial No. 135,558. Renewed May 31, 1928. 3 Claims. (Cl. 122—156.)



1. A water heater comprising a tank having inlet and outlet connections, an interior flue forming an annular water space, a vertical partition within said flue and baffle plates thereon, an exterior flange on the flue and a screw cap on the tank for said flange, a removable head at the lower end of the tank and flue having an outlet and an outlet pipe connected thereto for gases, and a burner located in an opening in said head and enclosed within the lower end of the flue.

1,784,653. AMFLIFIER. ALDA V. BEDFORD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 20, 1928. Serial No. 320,701. 7 Claims. (Cl. 179—171.)

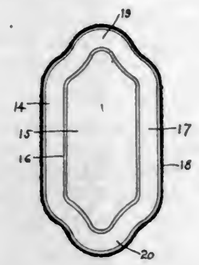


1. The combination of an electric valve provided with input and output circuits, means including a device possessing capacitance arranged to apply a variable voltage to said input circuit, and impedance means connected in said output circuit for neutralizng the effect of variation in the frequency of said input voltage on the current of said output circuit.

1,784,654. AIRCRAFT. ROMULUS BRATU, Paris, France. Filed Nov. 5, 1928, Serial No. 317,443, and in France Nov. 12, 1927. 1 Claim. (Cl. 244—14.)

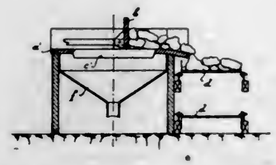
In an aeroplane having a nacelle and a supporting plane therefor, the combination of an engine having a pulling propeller disposed in the front end of said nacelle, a second engine having a pulling propeller disposed in the same vertical plane with respect to said first engine, and a third engine having a pushing propeller coaxially disposed with respect to the line of action of said second engine, the axis of said coaxially disposed engines forming an angle of substantially 8° with the axis of said nacelle and upwardly inclined with respect to the first mentioned engine, whereby the line of travel of said aeroplane is unaffected upon stopping of any one of said three engines.

1,784,655. HARROW AND TOOTH THEREOF. GERALD J. BUDD, Venice, Calif. Filed Aug. 29, 1927. Serial No. 216,131. 7 Claims. (Cl. 55—37.)



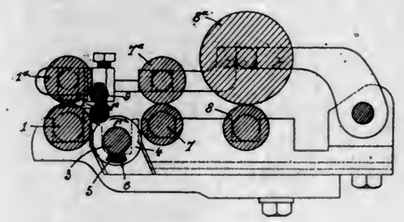
1. A harrow tooth formed of heavy flat metal the shank having an aperture therethrough and bent into U-shape at such aperture and the blade angularly disposed as to the shank and terminating in a point, in combination with a key, said key being adapted to pass through the U-shaped portion and above a portion of the frame member when passed through the U-shaped portion and thereby hold the tooth attached to the frame member.

1,784,656. FILM CUT-OUT. HENRY E. BUTLER, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 12, 1929. Serial No. 370,209. 3 Claims. (Cl. 200—118.)



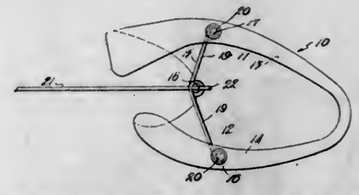
1. A film cutout comprising a metal piece, a second metal piece having a centrally disposed struckout portion, an insulating film separating said pieces, an insulating member which engages the second-named metal piece, and a flange on the first named metal piece which overlies the insulating member to hold the metal pieces in fixed assembled relation.

1,784,657. RUG. CHARLES DE BENEDICTIS, Palisades, N. J. Filed Sept. 4, 1929. Serial No. 390,256. 2 Claims. (Cl. 28—1.)



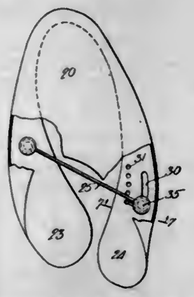
1. As a new article of manufacture, a rug having a rectangularly shaped body terminating in scalloped ends providing sinuous stiffening curved portions adapted to prevent said ends curling, said rug having a fringed border attached thereto, substantially as specified.

1,784,658. APPARATUS FOR AGGLOMERATING AND ROASTING MINERALS. ALEXANDRE DE SAMSONOW, Brussels, Belgium, assignor, by mesne assignments, to Societe pour l'Enrichissement et l'Agglomeration des Minerals, Societe Anonyme, Brussels, Belgium. Filed Dec. 23, 1927, Serial No. 242,197, and in Belgium Jan. 4, 1927. 2 Claims. (Cl. 266—21.)



1. Means for discharging treated material from mineral roasting agglomerating and like apparatus having a grating comprising a receiver for treated material disposed adjacent said grating and a movable rear wall to said furnace, said rear wall being movable across the grating to the receiver.

1,784,659. DRIVING MEANS FOR THE ROLLERS OF SPINNING MACHINES. PAUL DEVAUX, Juvisy, France. Filed May 14, 1929, Serial No. 362,894, and in France Mar. 30, 1929. 8 Claims. (Cl. 19—130.)

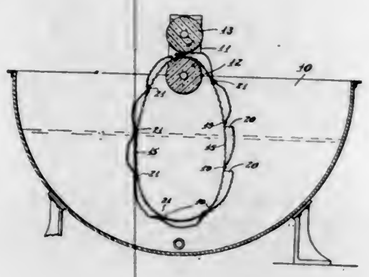


1. In a drawing mechanism for textile fibres, a pair of drawing rollers, a driving shaft close to the lower drawing roller, magnets on said shaft and rotatable therewith, a small roller of magnetic substance resting on said shaft, close to the nip of said drawing rollers, and means for exerting a pressure upon the textile fibres passing over said small roller.

1,784,660. EXPANSIBLE TOE FORM. WILLIAM J. DE WITT, Auburn, N. Y., assignor to Shoe Form Co. Inc., Auburn, N. Y., a Corporation of New York. Filed Dec. 20, 1928. Serial No. 327,399. 2 Claims. (Cl. 12—128.2.)

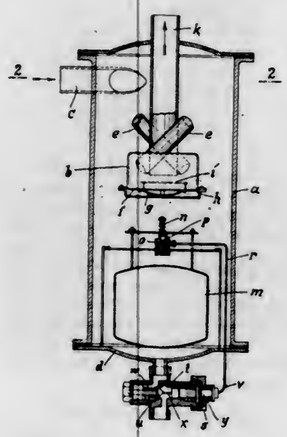
1. In a shoe form comprising a shell having flanges at the bottoms of its side walls, a single normally resilient brace connecting said flanges, said brace being provided with a loop intermediate its ends, and a thrust bar pivotally secured to said loop.

1,784,661. SHOE FORM. WILLIAM J. DE WITT, Auburn, N. Y., assignor to Shoe Form Co., Inc., Auburn, N. Y., a Corporation of New York. Filed Oct. 24, 1929. Serial No. 402,121. 5 Claims. (Cl. 12—128.5.)



1. A shoe form comprising a hollow toe member of resilient material, the walls thereof being flanged, a crossbar pivotally attached at one end to the flange of one wall, the flange of the other wall having an arcuate longitudinally extending slot and an arcuate longitudinally extending series of holes, the slot forming a guide for the free end of the bar whereby upon the pivotal movement of the crossbar the free end thereof moves relative to the slot and the walls of the toe member are expanded or contracted, and a tongue carried by the crossbar for engaging one of the holes and thereby holding the crossbar against such pivotal movement.

1,784,662. SHOE FORM. WILLIAM J. DE WITT, Auburn, N. Y., assignor to Shoe Form Co., Inc., Auburn, N. Y., a Corporation of New York. Filed Mar. 3, 1930. Serial No. 432,587. 11 Claims. (Cl. 12—128.1.)

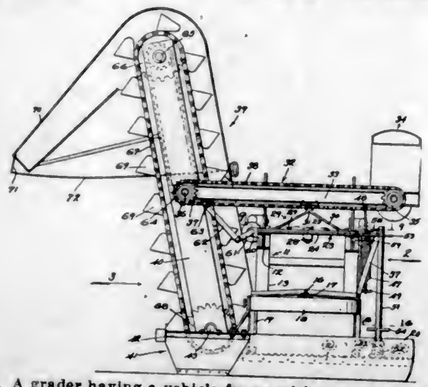


1. In a shoe form comprising side walls, the ends of which walls make the heel of the form, a tab projecting from one of said ends, the other end being provided with at least one slot with which the tab engages, and means to limit the movement of the tab in the slot in one direction.

1,784,663. WASHING MACHINE. JOHN H. DRAPER, Canton, Mass. Filed July 10, 1930. Serial No. 466,903. 3 Claims. (Cl. 68—22.)

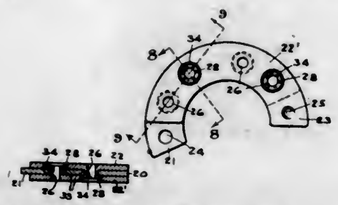
1. A washing machine comprising a receptacle for fluid, squeeze-rolls above said receptacle, and an endless flexible belt passing between said rolls, said belt having transverse rows of pockets in side by side staggered relationship.

1,784,664. SEPARATOR. FRIEDRICH EICKHOLT, Geisweid, Germany. Filed Nov. 7, 1928. Serial No. 317,775, and in Germany Nov. 10, 1927. 9 Claims. (Cl. 183—85.)



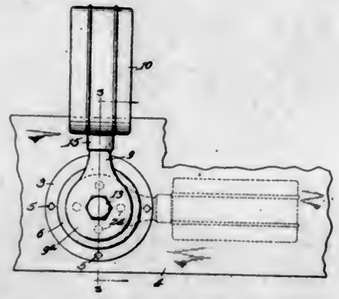
1. An apparatus for separating foreign matter from a fluid medium, comprising an outer receptacle having an intake, an inner receptacle within the outer receptacle having an outlet and a downwardly displaceable valve bottom, an intake connection from the outer receptacle, with its discharge end disposed within the inner receptacle between said outlet and said valve bottom and pointed in a direction to supply fluid for causing the operation of said valve bottom.

1,784,665. FUEL BRIQUETTE. JAMES STEWART FORD and FREDERICK MURRAY, Greymouth, New Zealand. Filed Mar. 6, 1929. Serial No. 344,914, and in New Zealand Nov. 30, 1928. 2 Claims. (Cl. 44—15.)



1. Fuel briquettes including the following: slack coal, one hundred tons; molasses, five tons; water, three and two-thirds tons.

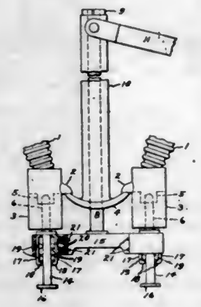
1,784,666. LOADING ATTACHMENT FOR ROAD GRADERS. GEORGE GARDNER, Redlands, Calif. Filed May 21, 1928. Serial No. 279,246. 28 Claims. (Cl. 37—108.)



1. A grader having a vehicle frame with a scraper blade, a carrier frame mounted on the vehicle frame and having an engine at one end, an elevator at the other end of the frame, and means to drive the elevator from the engine, the elevator lifting dirt moved by the blade.

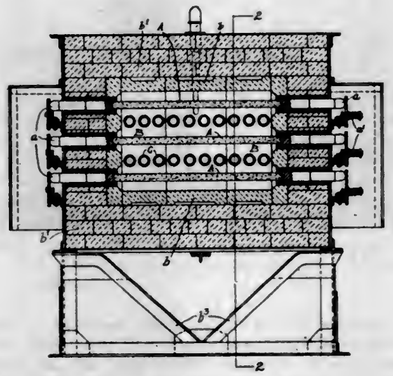
1,784,667. SPLIT SEGMENTAL WASHER. ALEXIS F. GILLET, Omaha, Nebr., assignor to Jubilee Manufacturing Company, Omaha, Nebr., a Corporation of Nebraska. Filed Aug. 2, 1929. Serial No. 383,135. 2 Claims. (Cl. 85—51.)

1. A split segmental washer composed of sections comprising side and intermediate plates having means to attach companion sections together, and tangs punched in opposite directions from the side plates through the intermediate plate and upset upon the intermediate plate.



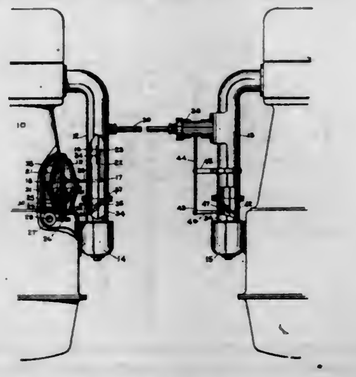
1,784,668. AUTOMOBILE RUNNING-BOARD LAMP. WILLIAM A. GULLETTE, Wheeling, W. Va., assignor of two-thirds to S. K. Frank, Wheeling, W. Va., and one-third to Chas. A. Dick, Wheeling, W. Va., as trustee for John E. Stevenson, Val G. Gundling, and Chas. A. Dick. Filed Feb. 5, 1930. Serial No. 426,062. 5 Claims. (Cl. 240—8.26.)

1. A support of the character mentioned comprising a hollow pedestal adapted for mounting on the running board



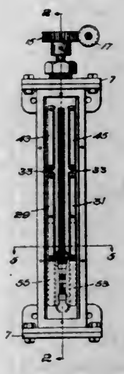
of an automobile, said pedestal having an upper closed end, a rotary cap plate overlying said closed end, a bracket arm surmounting and normally rotatable with said cap plate, adjustable tension means securing said cap plate and said arm in axial relation to said pedestal, and interengageable means between said cap plate and said pedestal whereby the former is held in any of a plurality of positions against chance rotary movement.

1,784,669. ELECTRIC SWITCH. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 26, 1925. Serial No. 52,670. 6 Claims. (Cl. 200—150.)



1. An electric switch comprising a pair of spaced contact members, an explosion chamber surrounding each member, an operating rod, a bridging member secured thereto, a pair of contact rods, and a lost motion connection between each of said contact rods and said bridging member comprising a spring pressed plate carried by the bridging member and a plurality of rollers arranged between the plate and the contact rod.

1,784,670. ELECTRIC FURNACE. ARTHUR IMBERY, Halifax, England, assignor to Globar Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Oct. 8, 1928, Serial No. 310,981, and in Great Britain Oct. 10, 1927. 9 Claims. (Cl. 266—1.5.)

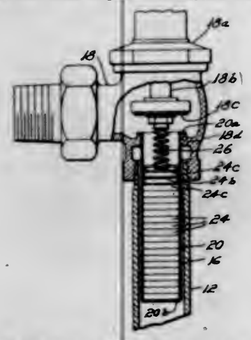


1. In an electrical furnace an enclosed chamber, a plurality of rigid resistors each extending substantially across said chamber, and a plurality of muffles also extending across said chamber, the middle portion of each muffle being equidistant from a plurality of said resistors distributed around it.

1,784,671. THROTTLE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. FERDINAND JEHLE, Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 27, 1929. Serial No. 343,083. 1 Claim. (Cl. 123—52.)

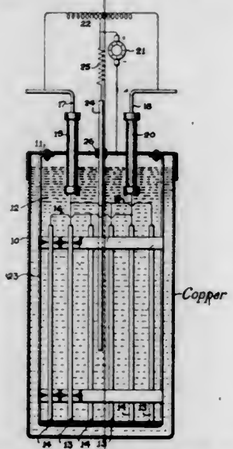
The combination with a pair of internal combustion engine fuel supply systems, of a movable member subjected on one side to the fluidic pressure existing in one of said systems and on its opposite side to the fluidic pressure existing in the other of said systems, a throttle valve for one of said system operatively connected to said member, and a manually controlled throttle valve and a governor-controlled valve for the other of said systems.

1,784,672. LIMIT SWITCH. CHARLES R. KELTY, Milton, Mass. Filed Feb. 8, 1926. Serial No. 86,679. 17 Claims. (Cl. 200—47.)



1. In a switch, opposed extended contact surfaces, a brush to travel therebetween, ends of the surfaces being deflected toward each other across the path of the brush to resist travel of the same, one of said elements being laterally yieldable to permit the brush to pass said ends, means to advance the brush and a resiliently yieldable device supporting the brush therefrom.

1,784,673. ADJUSTING UNIT FOR HEATING SYSTEMS. ALBERT J. LOEPSINGER and IRA W. KNIGHT, Providence, R. I., assignors to General Fire Extinguisher Company, Providence, R. I., a Corporation of Delaware. Filed Mar. 25, 1927. Serial No. 178,365. 3 Claims. (Cl. 137—111.)

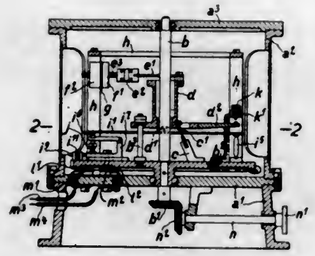


1. Flow impeding means for a hot water heating system comprising in combination, a tube adapted to be inserted

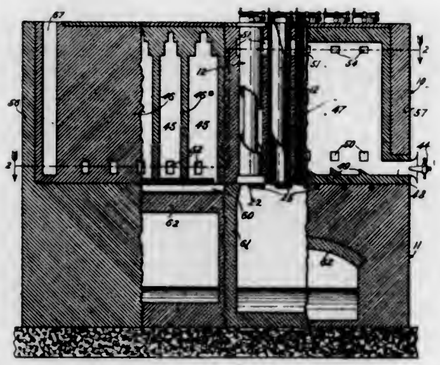
in the local piping circuit of a radiator so that the water flowing through the radiator passes through said tube; a multiplicity of disks each having a perforated body portion extending across said tube and having a marginal flange fitting against the wall thereof and resting against the next adjacent disk to provide a space between the disks;

alternate disks having a central perforation through their body portions and the intervening disks having marginal perforations through their body portions whereby the water passing through the perforations repeatedly suffers impacts and deflections; the said spaces between the disks having capacity of flow at least equal to the capacity of flow through the perforations.

1,784,674. FILM FORMATION AND OPERATION OF ELECTROLYTIC CONDENSERS AND OTHER APPARATUS. RALPH D. MERSHON, New York, N. Y. Filed July 14, 1923. Serial No. 651,478. 18 Claims. (Cl. 175—315.)



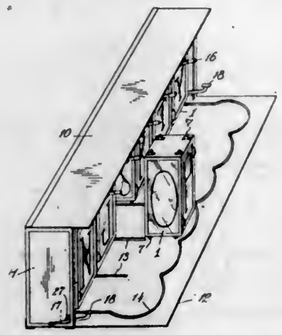
1. Electrolytic apparatus of the class described having an electrolyte and inactive parts made of non-filming metal, and means for passing unidirectional current through the electrolyte to electroplate injurious metals out of the same.



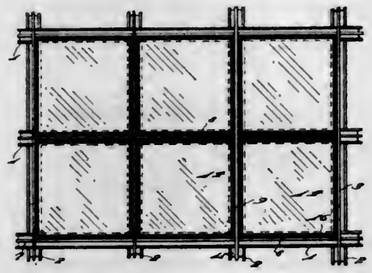
6. In electrolytic apparatus of the class described, a copper containing vessel or tank, an electrolyte therein, and filmed anodes immersed in the electrolyte.

1,784,675. GOVERNOR SWITCH FOR ELECTRIC MOTORS. FRANZ MEYER, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Nov. 19, 1927, Serial No. 234,473, and in Germany Nov. 24, 1926. 3 Claims. (Cl. 200—80.)

1. A speed regulator for electric motors, comprising a base member, a vertical shaft rotatably supported in this base member, means adapted to actuate this shaft, a frame connected to this shaft, a metal band fixed on the frame and on the flyball weight in such a way that its flat side lies vertically, a switch comprising two parts adapted to coact with each other, one of the said two parts being connected with the said flyball weight, while the other is connected with the said frame, springs disposed in the said frame in such a position that their sagging direction falls into the direction of the axis of the said shaft, and means adapted to transmit forces from the flyball weight onto the said springs.



1,784,676. APPARATUS FOR CARBONIZING COAL. JOHN MITCHELL, Clinton, Ind., assignor to Charcolite Corporation, Clinton, Ind., a Corporation of Indiana. Filed Aug. 7, 1925. Serial No. 48,756. 5 Claims. (Cl. 202—114.)

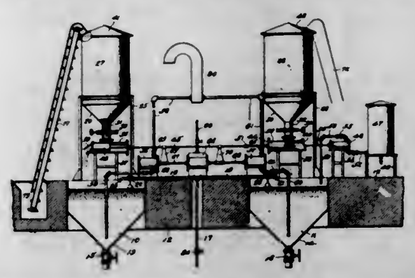


1. In apparatus of the character described, a plurality of upright carbonizing elements, each comprising two concentric tubular members having their side walls spaced apart and closed at the lower end to form a bath chamber and containing a saline heating bath, the inner member having removable closures at the top and bottom thereof, and means for applying heat externally of said elements comprising a supporting structure having upright division walls forming separate heat chambers for each of said elements intermediate the upper and lower ends thereof.

1,784,677. SECTIONAL ILLUMINATED SIGN. BENJAMIN A. MORTON, New York, N. Y. Filed Aug. 15, 1928. Serial No. 299,715. 6 Claims. (Cl. 40—132.)

1. In a display sign the combination of a supporting frame, a plurality of sign-bearing members each having a daylight sign face and an artificially illuminated sign face, said faces being respectively movable into and out of place in said frame, and means for locking said sign members in place in said frame.

1,784,678. VAULT LIGHT, FLOOR LIGHT, OR SKYLIGHT. LOGAN WILLARD MULFORD, Long Island City, N. Y. Filed June 26, 1930. Serial No. 463,955. 3 Claims. (Cl. 94—34.)



1. In a vault light, floor light or skylight, fabricated metal bars arranged substantially parallel to provide load carrying capacity, sets of other fabricated bars interconnected at an angle with the other bars to form glass receiving openings, seats on the bars to support the glass within the openings, the glass extending for substantially its entire depth in juxtaposition to the surfaces of the surrounding bars, such bars extending substantially to the tread surface, and a sealing compound surrounding the glass and interposed between it and the bars.

1,784,679. CORD TIE. JOHN T. H. PATERSON, Chicago, Ill. Filed Mar. 5, 1929. Serial No. 344,298. 3 Claims. (Cl. 24—30.5.)

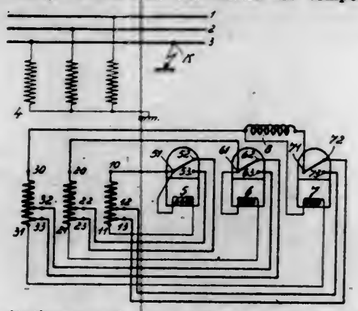
1. A bag or sack closure fastener, for a bag or sack having a drawstring, comprising a plate having an opening therein adapted to slidably mount the same on the drawstring and having portions bent to form wedging jaws to frictionally grip the drawstring when the bag is closed and the plate slid against the bag.

1,784,680. METHOD OF AND SYSTEM FOR GENERATING FIRE-EXTINGUISHING FOAM. DUNCAN W. PATTERSON, Douglaston, N. Y., assignor, by mesne assignments, to American La France and Foamite Corporation, a Corporation of New York. Filed Sept. 20, 1921. Serial No. 501,945. 8 Claims. (Cl. 169—15.)

3. A system for continuously generating fire-extinguishing foam comprising a main water supply, two receptacles each open to atmosphere when in use and means for conducting part of said water supply to one receptacle and the rest to the other, in combination with means acting continuously and in constant ratio with respect to the rate of water supply for continuously introducing into the water stream in one receptacle a chemical powder and a foam-stabilizing material and into the other a reacting chemical powder, a mixing conduit, and means for separately conducting said streams from said receptacles to said mixing conduit.

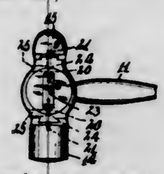
5. The method of continuously producing fire extinguishing foam which comprises, providing two separate streams of water each flowing from a source of supply toward a common point of discharge, substantially simultaneously and continuously introducing a solid reagent and a foam stabilizing material into one stream and another-solid reagent into the other stream, said last mentioned reagent being capable upon solution of reacting with a solution of the first mentioned reagent to produce a non-combustible gas, said reagents being introduced to the respective streams from separate exterior sources in constant proportions with respect to each other and to the rate of water supply, separately conducting said streams from the places of reagent introduction to a remote place of use, and comingling the streams, the introduction of the reagents to the separate streams being in amounts sufficient to render the solutions thereof of foam producing strength, the comingling of the streams effecting a reaction to thereby produce a stable gas-filled foam capable of floating on oil.

1,784,681. TRACTION ATTACHMENT FOR VEHICLE WHEELS. FRANKLIN RIGHTMIRE, Paterson, N. J. Filed Dec. 8, 1927. Serial No. 238,482. 7 Claims. (Cl. 152—14.)



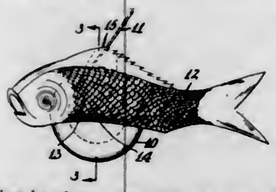
1. A vehicle traction attachment of the class described including a cross-chain having increasing gage from its mid-portion toward each end thereof but having each of its links formed with its end portions of substantially equal gage.

1,784,682. ARC-GROUND SUPPRESSOR. ROBERT SCHIMPF, Berlin-Schlachtensee, Germany, assignor to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed Apr. 12, 1929, Serial No. 354,595, and in Germany Apr. 19, 1928. 4 Claims. (Cl. 175—294.)



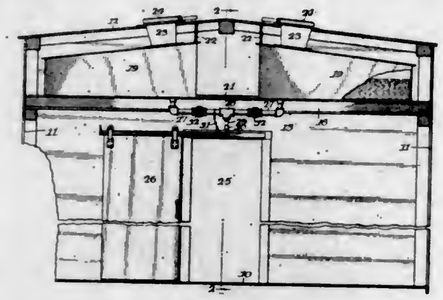
1. An arc-ground suppressor for electrical net works comprising in combination, means for compensating the

capacitative ground current, automatic switching devices dependent upon the voltages between the lines of the net work and ground, and phase shifting connections between the switching devices and the means for compensating



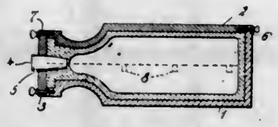
the capacitative ground current, the actuation of a switching device operating to so shift the voltage phase of the means for compensating the capacitative ground current that the ohmic ground current is also compensated at least in part.

1,784,683. SLEDGE HAMMER. FREDERICK SCHWEIGERT, New York, N. Y. Filed May 6, 1929. Serial No. 360,701. 1 Claim. (Cl. 145—29.)



In a sledge hammer having a central portion and striking ends the latter being detachably connected with said central portion by tongue and groove joints, plates slidably mounted in the central portion and formed with reduced latch ends engaging apertures in said striking ends, and a spring consisting of a central portion riveted on the central portion of the hammer head and having ends turned at right angles to the central portion and directed thru cavities in central portion of the aforementioned hammer head and engaged beneath the inner end of said plates for urging said plates into engagement.

1,784,684. PULLING HAND TOP. CODIE D. BELL, New York, N. Y. Filed Oct. 11, 1929. Serial No. 398,828. 3 Claims. (Cl. 46—40.)



1. A pulling hand top, comprising a casing of any shape and design rotatively supporting a slightly projecting member arranged for receiving a wound cord having its free end extended thru the casing and said member upon being unwound from the cord under the influence of gravity automatically rewinds thereon due to its momentum making it appear as though the casing travels up and down due to stretching and contracting of the cord, said casing consisting of two hinged sections with trunnions supporting said member, and said member consisting of a pair of discs connected by an adjustable shaft, a spring urging the discs apart, and means for holding the sections of the casing in adjusted pivoted position for determining the distance between said discs.

1,784,685. POULTRY CAR. ISRAEL V. EDGERTON, Chicago, Ill., assignor to Palace Poultry Car Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 9, 1928. Serial No. 252,975. 2 Claims. (Cl. 119—12.)

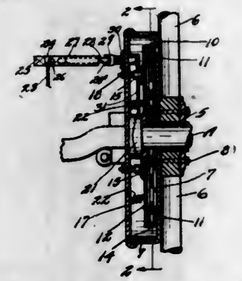
1. A poultry car, comprising a central state-room, poultry compartments at the ends of said state-room with tiers of coops therein and a longitudinal center aisle between said tiers, and a pair of water tanks disposed above said state-room on opposite sides of the median longitudinal vertical plane of the car, the inner walls of said tanks being spaced apart to form a passageway for the circulation of air over the top of the state-room and between the aisles of the poultry compartments.

1,784,686. PROCESS AND APPARATUS FOR PRODUCING WAX BOTTLES. DANIEL FAUERBACH, West Easton, Pa., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed June 23, 1927. Serial No. 200,793. 15 Claims. (Cl. 18—26.)

7. The method of producing hollow elongated objects, which comprises charging an elongated mold with molten material, and permitting said mold to cool while causing said mold to revolve in a circular path in a single plane about a substantially horizontal axis, said plane being at right angles to said axis, the longitudinal axis of said mold being maintained in a plane parallel to said first named axis, and at an angle with respect to said first named axis, said angle being not substantially over 45°.

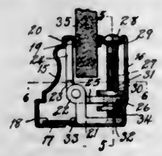
13. An apparatus for producing hollow elongated objects comprising the combination of a substantially horizontal shaft, an arm laterally projecting therefrom, a mold support fixed to said arm, an elongated mold carried by said support, said support being constructed and arranged to maintain the longitudinal axis of said mold at an angle with respect to the axis of said shaft, said angle being not substantially over 45°, and means for rotating said shaft.

1,784,687. GARMENT-MAKING MACHINE. NICHOLAS GIANCOLA, St. Louis, Mo., assignor of one-half to Robert L. McLaran, St. Louis, Mo. Filed Oct. 3, 1928. Serial No. 309,913. 7 Claims. (Cl. 223—20.)



1. In a machine of the character described, a frame, an angular hollow pedestal comprising a vertical portion having its lower end attached to said frame and a horizontal portion projecting forwardly from the upper end of said vertical portion, a rod supported by and at the extremity of said horizontal portion of said pedestal for vertical reciprocating movements, a rigid arm supported

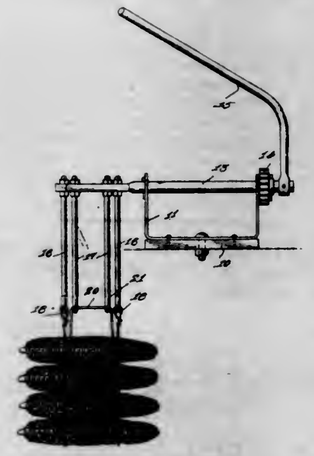
on said frame below and in axial alinement with said rod, a spring at the forward end of said horizontal portion of said pedestal actuating said rod upwardly in a direc-



tion away from said arm, and power mechanism connected with said rod for moving said rod toward said arm in opposition to said spring.

1,784,688. BRAKE. HENRY C. GOHLKE, Port Hope, Mich. Filed Dec. 23, 1927. Serial No. 242,030. 2 Claims. (Cl. 188—71.)

2. A friction brake for automotive vehicles comprising a non-rotatable plate, having a hub formed with a cam shaped edge, a rotatable casing spaced therefrom and having a friction disc secured thereto, inwardly projecting lugs on the said plate, a disk mounted thereon, bearings on said disk and in which the ends of the lugs are slidably mounted, a friction element on said disk, a shifter sleeve interposed between said plate and casing and formed with a hub having a cam shaped edge, means mounted on said plate for rotating said shifter sleeve, and including a longitudinally extendible shaft having universal joints at the ends thereof, and resilient means for connecting said plate and disk.

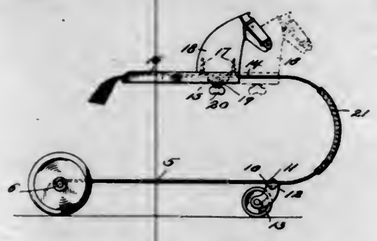


1,784,689. STORE-FRONT CONSTRUCTION. FRED HIMMEL and ISIDORE HIMMEL, New Haven, Conn., assignors to The Himmel Brothers Company, New Haven, Conn., a Corporation. Filed Jan. 2, 1930. Serial No. 417,865. 3 Claims. (Cl. 20—56.4.)

1. A store-front construction, comprising inner and outer members, the outer member formed with a pocket,

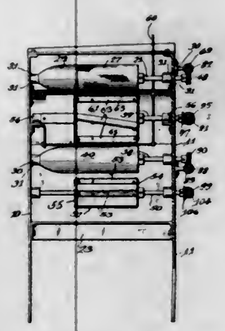
an anchoring-plate seated in the inner member and formed with knuckles, a clamping-member pivotally connected with said knuckles, said clamping-member formed with an arm extending into engagement with a pocket in the outer member and with a yoke at substantially right angles thereto, a screw swiveled in the said anchoring-plate and projecting beyond the wall of the inner member, and a nut on said screw with which the said yoke is engaged.

1,784,690. SEED-CORN STRINGER. MARTIN HOLUM, Hazel Run, Minn. Filed Aug. 5, 1929. Serial No. 383,770. 1 Claim. (Cl. 139—19.)



In a device of the class described, a bracket, a pair of spaced parallel shafts journaled thereon for partial rotation in opposite directions, flattened portion formed on corresponding extremities of each shaft and projecting an appreciable distance beyond said brackets a pair of hook-like fingers depending from the flattened portion of each shaft, with the fingers of each pair of equal length and arranged one in advance of the other, and the fingers of one shaft spaced apart a greater distance than the fingers of the other shaft, said fingers being adapted to suspend a piece of twine therefrom in the form of looped strands, and means for imparting rotation to said shafts to cause said fingers to alternately cross each other and assume parallel positions, and instantly cross said strands for the purpose specified.

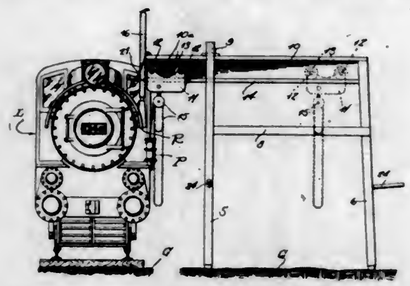
1,784,691. ROAD-SURFACING MACHINE. HENRY A. INGALLS, Bakersfield, Calif. Filed Mar. 26, 1929. Serial No. 350,020. 1 Claim. (Cl. 37—145.)



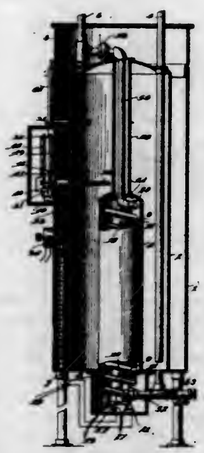
In a machine of the character described, a frame to be drawn over the ground and having parallel side members, a vertically adjustable leveling bar situated transversely of said side members, and guide walls fixed to said side members for engagement with said adjustable ground leveling bar, the walls engaging one side of said adjustable ground leveling bar terminating in spaced relation to the base of said side members for permitting engagement of the dirt with said leveling bar, and said side members having apertures positioned below said last named walls for the passage of dirt therethrough.

1,784,692. TOY. JOSEPH E. KLINE, Port Huron, Mich. Filed June 1, 1929. Serial No. 367,712. 1 Claim. (Cl. 208—165.)

A toy including a wheel-carried U-shaped flat spring, one arm of which is longer than the other and constitutes the base, a stamped metal seat provided on its under side intermediate of the ends thereof with a spring-receiving loop, the shorter arm of the spring being slidable through said loop and bearing against the under side of the seat, and a thumb binding screw carried by the loop and engaging the spring to secure said seat in adjusted position thereon.



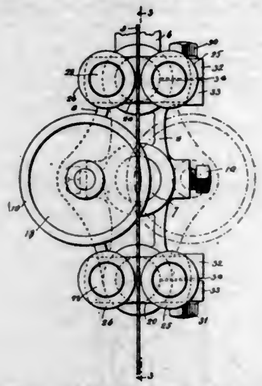
1,784,693. SAUSAGE-CASING MACHINE. JOSEPH S. KROB, Chicago, Ill. Filed May 25, 1928. Serial No. 280,595. 9 Claims. (Cl. 17—43.)



1. A device of the class described including a supporting structure, a pair of rotatably mounted shafts adjacent the upper end of said supporting structure having rollers mounted thereon, means for forcing said rollers toward each other whereby to yieldingly hold the peripheries of said rollers in engagement, another pair of rollers mounted in said supporting structure below said first named pair of rollers and aligned therewith, means for supporting said second named pair of rollers, means for forcing said rollers toward each other to yieldingly hold the peripheries of said rollers in engagement, and rotary members disposed between said first named pair and said second named pair of rollers having cutting members thereon disposed to act on a member stretched between said first named pair and said second named pair of rollers, and an additional pair of rotary members mounted below said second named pair of rollers having scraping elements provided thereon, said scraping elements acting on the member being drawn through said supporting structure by said first and second named pairs of rollers.

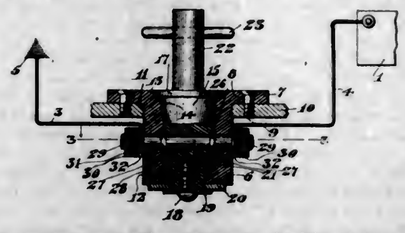
1,784,694. WORK-HANDLING CRANE FOR LOCOMOTIVE APPURTENANCES. JOSEPH KWIATKOWSKI, Perth Amboy, N. J. Filed July 5, 1928. Serial No. 290,572. 1 Claim. (Cl. 104—126.)

In a hoisting apparatus for the purpose specified, comprising a supporting frame and a horizontal projecting beam adapted to sustain suitable hoisting mechanism, a vertical tubular member secured to the forward end of said beam, a vertically adjustable bar slidably mounted in said tubular member, and provided at its lower end with a grooved block to engage with a pipe line or rail on a locomotive engine and rest thereon, said tubular member and said adjustable bar being formed with holes to receive a holding pin and said beam being formed with a socket to seat said pin and hold the adjustable member in place.



1,784,695. ELECTRIC WATER HEATER. WALTER S. LANG, Kendallville, Ind., assignor to The Lang Electric Mfg. Company, Kendallville, Ind., a Corporation of Indiana. Filed June 4, 1928. Serial No. 282,698. 13 Claims. (Cl. 219—39.)

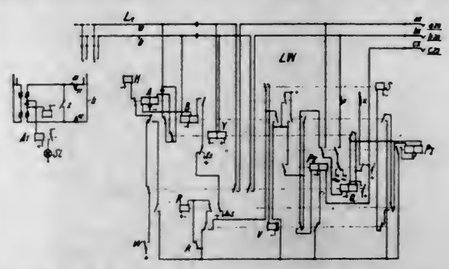
1. A water heater comprising a water tank, a heating unit comprising a water coil communicating at its extremities with the bottom and top of the tank, and a heating element situated between the convolutions of the coil and extending from one extremity to the other; and a heating chamber situated within the water tank, containing the heating unit and constituting a hot core for the volume of water in the tank.



1,784,696. BAND-SAW HOLDER. FREDAICK LEHMBECK, New Providence, N. J. Filed Dec. 16, 1927. Serial No. 240,553. 3 Claims. (Cl. 143—161.)

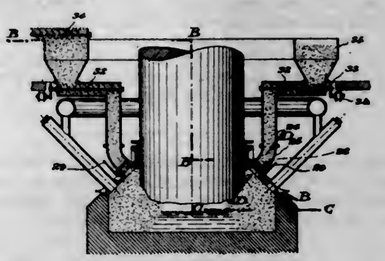
1. A guide for band saws and the like, comprising a support, a shaft engaged with said support at one end, a main cross-head carried at the other end of said shaft, swingable auxiliary cross-heads journaled in the opposite ends of said main cross-head and extending transversely thereof, a pair of roller supporting shafts journaled in each of said auxiliary cross-heads, a guiding roller mounted on each of said roller supporting shafts, said main cross-head being formed with an offset portion in the plane of the transverse center of the same, and a bearing roller journaled in said offset portion between and adjacent the guide rollers and

having a portion of its peripheral edge projecting beyond the longitudinal center of said main cross-head for the engagement of the outer side face thereof with the back edge of a saw operating between said guiding rollers.



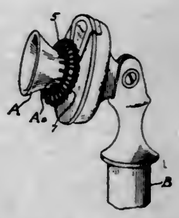
1,784,697. CURRENT CONTROLLING OR INSULATING DEVICE FOR IGNITION SYSTEMS. EUGENE MARTIN, Freeport, and JOHN JOSINSKY, Bayside, N. Y. Filed Oct. 18, 1927. Serial No. 226,993. 1 Claim. (Cl. 200—164.)

A current controlling device for ignition systems comprising a body of non-conducting material provided at its top with an apertured lateral flange for the passage of holdfast devices to fixedly secure said body in position, said body formed with a centrally disposed tapered opening having the wall thereof intermediate its upper and lower ends provided with a pair of diametrically disposed recesses, said wall at its top being off-set to provide a shoulder, said body further having a pair of oppositely disposed, endwise aligning channels disposed concentrically with respect to said recesses and extending from the latter to the outer periphery of said body, a pair of oppositely extending binding posts mounted in said channels and each having its inner end provided with a head seated in a recess and flush with the wall of said opening, said posts projecting from said body and carrying means on their outer ends for coupling the sections of the battery lead therewith, a tapered, rotatable plug of insulation extending through said opening and provided with a flange seated against said shoulder, a contact member mounted in and extending transversely through said plug, having its ends flush with the periphery of the latter for engaging said head to electrically connect said posts together, and means carried by said plug and coacting with the flange for coupling the plug to said body.



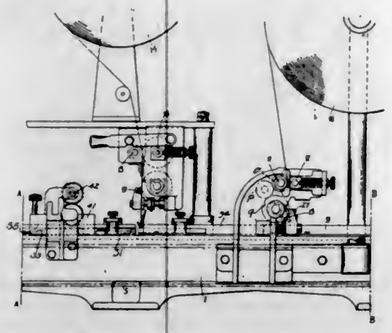
1,784,698. TELEPHONE SYSTEM. FRIEDRICH MERK, Frankfort-on-the-Main, Germany. Filed Dec. 8; 1927, Serial No. 237,556, and in Germany Dec. 4, 1926. 15 Claims. (Cl. 179—27.)

1. In a telephone system having calling and called subscribers' lines, a tool operator's position having incoming toll lines and automatic switches controlled by either a calling subscriber or the toll operator for establishing a connection to a called line characterized by the fact that said switches are provided with means for automatically



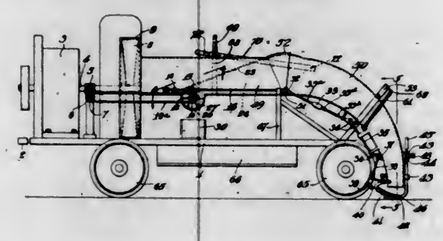
signalling the calling and called subscribers in case the line called by the toll operator is busy and for thereupon automatically breaking the connection to the other subscriber.

1,784,699. AUTOMATIC CHARGING OF ELECTRIC FURNACES. PAUL LOUIS JOSEPH MIGUET, St.-Julien-de-Maurienne, France. Filed Mar. 20, 1929, Serial No. 348,646, and in France Dec. 6, 1928. 8 Claims. (Cl. 266—1.5.)



1. Apparatus for feeding material to a circular electric furnace comprising a plurality of tubes arranged around the periphery, a plurality of feed hoppers mounted one above each tube, a screw conveyor at the base of each hopper to convey the material forward to the tube and a second screw conveyor to feed the material into the hopper.

1,784,700. SANITARY TELEPHONE DEVICE. CARL MILLER, New York, N. Y. Filed Aug. 29, 1929. Serial No. 389,257. 2 Claims. (Cl. 179—185.)

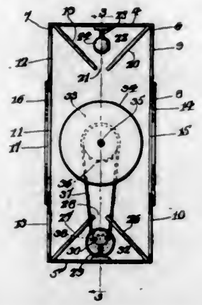


1. The combination with a telephone transmitter having a mouthpiece of conical shape provided with openings near the base thereof, of an annular ring of spring wire coiled to form a tubular structure and adapted to be snapped over the mouthpiece and to grip the base thereof, said ring having another ring of absorbent material enclosed thereby and chargeable with a vaporizable disinfectant, the vapor emitted by a ring so charged being adapted to penetrate into the mouthpiece through said base openings.

1,784,701. MEANS FOR PACKING CIGARETTES AND LIKE ARTICLES. WALTER EVERETT MOLINS, Deptford, London, England. Filed May 2, 1927, Serial No. 188,285, and in Great Britain May 6, 1926. 8 Claims. (Cl. 93—2.)

1. In a package making machine, the combination with the machine bed, of means operable to move an article along the bed, means for feeding and locating a strip of rigid material transversely to the path of said article, means operable to fold the strip around three sides of the article, means for feeding and locating a strip of wrapping material transversely to the path of said article with the longer dimension thereof disposed at right angles to the longer dimension of said reinforcing strip, and means for forming said wrapping material into an open ended U shaped block ended container with the reinforcing strip disposed around three inner side walls of the same.

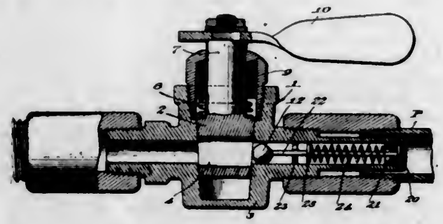
1,784,702. CRANBERRY GATHERER. JAMES E. MORANO, Hammonton, N. J., assignor of one-third to Anthony De Marco, Hammonton, N. J. Filed Apr. 20, 1927. Serial No. 185,232. 4 Claims. (Cl. 56—330.)



1. In a cranberry gatherer, a wheel supported frame having a conduit mounted thereon and provided with a vacuum chamber, the forward end of the conduit having a pivoted section disposed to partly telescope within said conduit, said pivoted section being positioned over the front end of the machine and having a suction nose to lift the vines of the bog, means carried by the pivoted section and associated with and adjacent the suction nose to ride over the bog and thereby govern the position of the suction nose with reference to the vines of the bog, means for combing the berries from the vines, whereby they may be drawn into the conduit at the suction nose, means for cutting the twigs and keeping the combing means clean, screening rods in the rear of the vacuum chamber to screen the twigs from the berries, the rear portion of the vacuum chamber having an offset compartment, a beater in said compartment for removing the cranberries from the vacuum chamber, said compartment having a discharge opening for the cranberries, and means at the lower portions of the screening means for chopping the twigs allowing them to be drawn beyond the screening means.

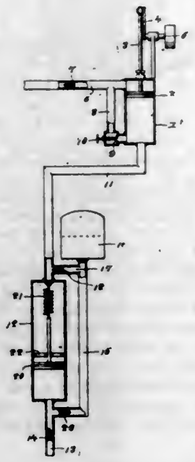
1,784,703. VULCANIZATION ACCELERATOR. HAROLD A. MORTON, Akron, Ohio. Filed Apr. 12, 1927. Serial No. 183,233. 16 Claims. (Cl. 18—53.)

8. An accelerator of vulcanization consisting of a condensation product of alpha ethyl beta methyl acrolein and an amine, neutralized by abietic acid.



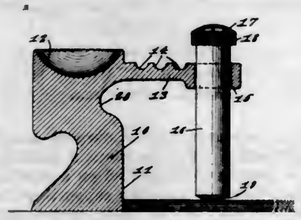
16. A vulcanizable rubber compound comprising rubber, sulphur, zinc oxide and a condensation product of alpha ethyl beta methyl acrolein and aniline.

1,784,704. SIGN. WILLIAM F. MORTON, Portland, Oreg. Filed Jan. 16, 1930. Serial No. 421,240. 4 Claims. (Cl. 40—133.)



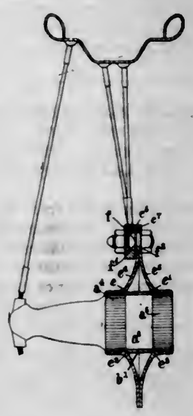
1. A sign structure of the illuminable type comprising a housing having at the top and bottom of its front and at the top and bottom of its rear light emitting portions consituting the matter to be displayed, an upper pair of inclined, oppositely disposed depending reflectors opposing the light emitting portions at the top of said front and rear of said housing, a light source arranged between said reflectors, said reflectors spaced from each other at their bottoms to provide a passage for the light rays emanating from said source, a lower pair of inclined, oppositely disposed, upstanding reflectors opposing the light emitting portions at the bottom of the front and rear of the housing, a light source arranged between the reflectors of the lower pair, said lower pair of reflectors spaced from each other at their tops to provide a passage for the light rays emanating from the light source therebetween, and a rotatable light ray color changer and reflector element journaled in the sides of said housing and positioned in spaced relation to and opposing said pairs of reflectors, the said reflectors inclining inwardly away from said light emitting portions.

1,784,705. AUXILIARY AIR-PRESSURE STOP. EMIL J. OLSEN, North St. Paul, Minn., assignor of one-fourth to Emelia Olsen, one-fourth to Corrine Olsen, and one-fourth to Vernon Olsen, St. Paul, Minn. Filed Oct. 18, 1928. Serial No. 313,319. 1 Claim. (Cl. 277—24.)



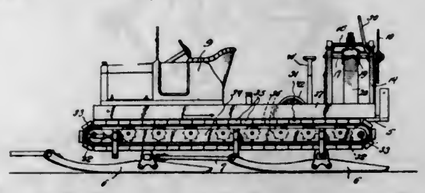
In a valve of the character described, a casing having a bore and three tubular members projecting therefrom and communicating with the bore, one of the members forming an inlet, a rotary plug valve in the bore of the casing and having three passages and a recess in its periphery opposite one of the passages, a valve seat and guide in the inlet member of the casing, the seat being near its outer end and the guide adjacent its inner end, a disc valve in the outer end of said tubular member and having a stem extending through the valve sent and guide and provided with a stop, a spring on the valve stem between the valve seat and stop, and a ball loose in the inlet member between the end of the valve stem and the plug valve, whereby the disc valve will be held open until the ball enters the said recess which will be closed.

1,784,706. PUMP. JACOB M. PHILLIPS, Pillow, Pa. Filed Nov. 4, 1929. Serial No. 404,702. 1 Claim. (Cl. 103—44.)



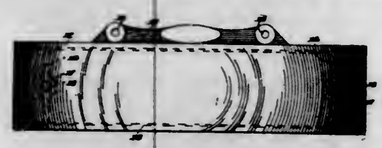
A pump system comprising a cylinder, an imperforate piston therein, means for operating the piston, a pipe connected with the top of the cylinder and having a check valve therein, a branch pipe connecting said pipe with the bottom of the cylinder, a spring pressed valve in the branch pipe, means for adjusting the tension of the spring thereof, a second cylinder, a pipe connecting the bottom of the first cylinder with the top of the second cylinder, an imperforate piston in the socend cylinder, a spring connecting the piston rod thereof with the top of the cylinder and tending to hold the piston in raised position, a well pipe connected with the bottom of the second cylinder and having a check valve therein, a compression chamber, a pipe connecting the same with the well pipe and a pipe connecting the pipe which is connected with the compression chamber with the pipe which connects the two cylinders together, said pipe containing a check valve.

1,784,707. PAPER WEIGHT. WILLIAM C. PORTER, Bogalusa, La. Filed Nov. 15, 1929. Serial No. 407,479. 2 Claims. (Cl. 120—82.)



1. A paper weight comprising a base member having a flat outer face against which loose leaves may be aligned and straightened in pile formation, a bridge piece carried by and outwardly projecting from the base member having a vertically disposed opening adjacent its outer end, and a weight member of cylindrical formation mounted for vertical reciprocating action within said opening and for engagement with the uppermost of the piled leaves.

1,784,708. ROTATIONAL-DRIVING CONNECTION. JOHN VERNON PUGH and GILBERT THOMAS BAYLISS, Coventry, England; said Bayliss assignor to said Pugh. Filed Nov. 14, 1928, Serial No. 319,436, and in Great Britain Nov. 21, 1927. 6 Claims. (Cl. 287—52.09.)

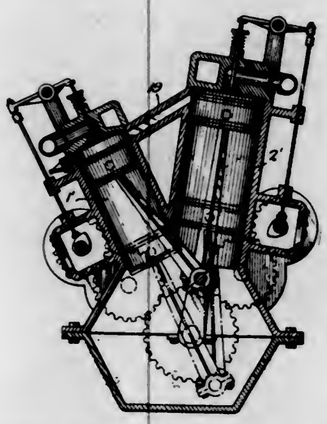


1. A two way drive torque-transmission coupling comprising a rotatable element, having an engaging region of non-circular cross section, not less than two members with apertures complementary to said engaging region positioned thereon and having faces adjacent one another, radially corresponding but circumferentially slightly displaced apertures through said faces and wedging means in said displaced apertures to cause rigid gripping of the engsging region by said members.

1,784,709. PORTABLE SAWING MACHINE. HENRY RICH, Elmo Township, Otter Tail County, Minn. Filed July 2, 1929. Serial No. 375,377. 2 Claims. (Cl. 143—43.)

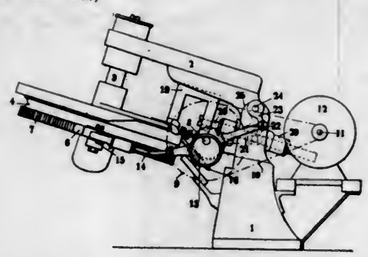
1. In a portable sawing machine, a platform having an endless log feeding conveyor along one side thereof, a motor mounted on said platform and having a rearwardly projecting drive shaft, a vertically swinging saw frame pivoted upon the rear portion of said drive shaft and extending transversely of the platform over the rear end of said conveyor, a saw carrying shaft journaled on the free end of said saw frame, a guide for the frame and means for bracing the frame against lateral movement, means to operatively connect said saw carrying shaft to said drive shaft, and means operatively connecting said conveyor to said drive shaft, said last named means embodying a normally released clutch for maintaining the conveyor out of operation and having manually operable means for engaging the same to throw the conveyor into operation.

1,784,710. REAR-VISION MIRROR. VICTOR E. SHOWALTER, Elgin, Ill., assignor to Elgin National Watch Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 14, 1929. Serial No. 339,875. 5 Claims. (Cl. 88—1.)



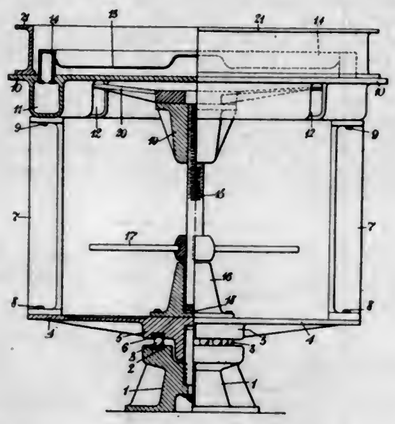
1. A metal rear vision mirror comprising an integral arcuate reflecting wall and chordal reinforcing walls, one of said chordal reinforcing walls having a projecting flange whereby the mirror may be attached to a support.

1,784,711. PROCESS OF RECOVERING CRESOL FROM AQUEOUS SOLUTIONS OF SAME. HERMANN SUIDA, Modling, near Vienna, Austria. Filed July 6, 1926, Serial No. 120,861, and in Austria July 13, 1925. 1 Claim. (Cl. 260—154.)



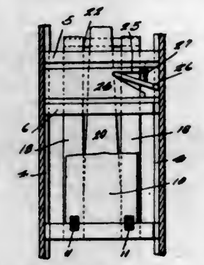
The process of recovering cresol from aqueous solutions of same, comprising treating the solution with trichlorethylene, separating the solution of cresol and trichlorethylene from the water, and distilling off the trichlorethylene from the resulting solution of cresol and trichlorethylene.

1,784,712. INTERNAL-COMBUSTION ENGINE. LEO SINGLETON TISDALE, New Albany, Miss. Filed July 21, 1928. Serial No. 294,360. 1 Claim. (Cl. 123—53.)



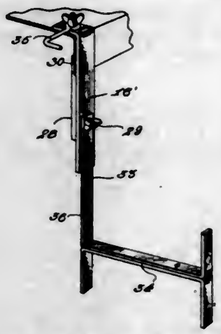
An internal combustion engine comprising a plurality of cylinders arranged in pairs, with one cylinder of each pair of greater diameter than the other cylinder of the pair, a piston in each cylinder, a crank shaft, connecting rods connecting the cranks of the shaft with the pistons, the connecting rod for each large piston being of greater length than the connecting rod for each small piston whereby each large piston will be moved upwardly to a point close to the top of its cylinder, while each small piston will have its upward movement terminate a distance from the top of its cylinder, the cranks being arranged with the cranks for the small pistons beyond dead center when the cranks of the large pistons are on dead center, exhaust means connected with the top of each large cylinder, inlet means connected with the top of each small cylinder, an unobstructed passage connecting the top of each small cylinder with a large cylinder a distance from the top of said large cylinder, said passage being closed by the large piston on the upward movement of the same and the upward stroke of each small piston terminating short of the passage and means in each small cylinder for firing the explosive mixture when the large piston is on dead center and the small piston is beyond dead center.

1,784,713. LINKING MACHINE. JEAN BAPTISTE VALTON, Troyes, France, assignor to Société les Fils de Valton & Cie., Troyes, France. Filed June 6, 1928, Serial No. 283,316, and in France June 18, 1927. 2 Claims. (Cl. 112—25.)



1. A knitted fabric sewing machine, comprising a frame, a crown supported by this frame, a main driving shaft which continuously rotates, a comb on the periphery of this crown, a ratchet wheel fixed to the crown, an eccentric strap on the said main shaft, a rod rigid with this eccentric strap, a pawl actuated by the said rod and acting on the ratchet wheel, a rotary loop-forming hook rigid with the said main shaft and co-axial with the same, a secondary shaft receiving from the main shaft an angular reciprocating movement, a crank shaft arm rigid with the secondary shaft, a needle-carrier terminated by a yoke and receiving the movement of the said crank arm, a needle secured on one of the branches of this yoke and radially moving relatively to the crown.

1,784,714. APPARATUS FOR PREPARING CASTING MOLDS. BERNARDUS LEBUINUS MARIA VAN DER LANDE and GERRIT KOMEN, Deventer, Netherlands. Filed Mar. 26, 1928, Serial No. 264,918, and in the Netherlands Aug. 27, 1927. 3 Claims. (Cl. 22—9.)

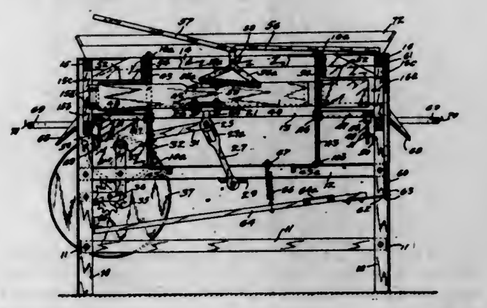


1. A molding apparatus for the purpose described comprising in combination a pattern plate, a molding box carried thereon, a pattern block carried on a stem concentric with the pattern block, a turntable supporting the pattern plate, molding box and central stem, means for rotating the turntable, and means for rotating the centre stem to adjust the pattern block relatively to the pattern plate to vary the depth of the mold.

1,784,715. IRONING BOARD. LEO E. WATTS, Enid, Okla., assignor to John F. Holtzen, Enid, Okla. Filed Sept. 4, 1929. Serial No. 390,302. 5 Claims. (Cl. 68—10.)

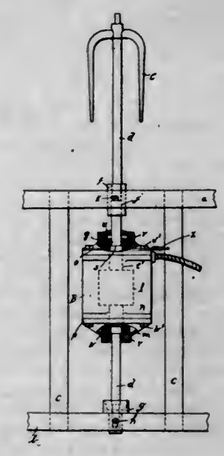
1. A means for the purpose described, the combination of a casing having vertical runways on the inner sides of opposed walls thereof, a body disposed and movable in said runways, a bar slidable in said body into one of said runways and having a notch at the other end thereof, a rod extending into the notch and into the other runway, and a spring urging said rod in one direction to bind the bar and rod in the runway to hold the body in adjusted position, and a board operatively connected with said body.

1,784,716. OIL-CAN SUPPORT AND OIL STOVE. GEORGE W. WEST, West Warwick, R. I. Filed May 7, 1928. Serial No. 275,821. 1 Claim. (Cl. 248—20.)



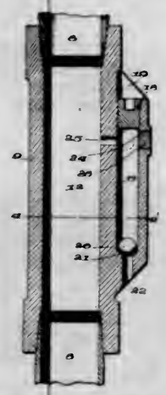
A can support for use upon oil burning stoves comprising a plate member having an offset upper end engageable with the upper and outer side of the stove, a locking plate carried by the plate member having a reduced portion extended behind the side of the stove body oppositely disposed to that of the depending portion of the plate member, an L-shaped plate member having one end pivotally connected with the plate member, a U-shaped member carried upon the shorter leg of the L-shaped member having the arms therefor oppositely disposed with relation to that of the shorter leg of the L-shaped member, and a hook carried by the plate member engageable with the longer leg of the L-shaped member to sustain same and the U-shaped member in position for use.

1,784,717. SPRING CLIP. JAMES BARNES, Glasgow, Scotland. Filed Nov. 8, 1929, Serial No. 405,791, and in Great Britain June 1, 1929. 1 Claim. (Cl. 24—81.)



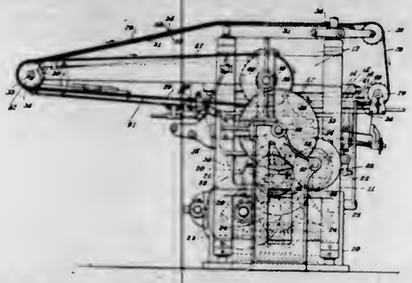
In a spring-clip, comprising two clips adapted to be connected together, one limb of each clip being bent over to form a loop, and a U-shape member adapted to have one of its legs pivotally received by the loop of one clip and its other leg pivotally received by the loop of the second clip.

1,784,718. POTATO-CUTTING MACHINE. JOHN A. BERGREN and CHARLES G. BERGREN, Lake Park, Minn., assignors to Bergren Manufacturing Company, a Corporation. Filed Aug. 16, 1926. Serial No. 129,463. 10 Claims. (Cl. 146—169.)



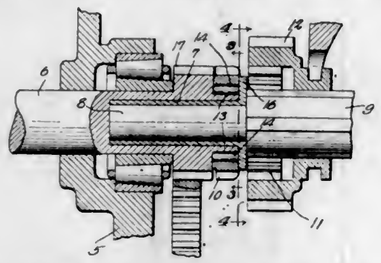
1. A potato cutting machine having in combination, a cutting head, spaced members forming a substantially V-shaped open-bottomed trough adjacent and extending to said cutter head for supporting the potatoes to be cut, a plunger movable in fixed relation to said trough for pushing a potato through said cutter head, and a guard plate above said plunger and extending across the same with its edge in close proximity thereto and above the end of said trough remote from said cutter head for removing potatoes from the top of said plunger as said plunger moves away from said cutter head, whereby said potatoes will drop into said trough.

1,784,719. MEANS FOR DRIVING SPINDLES IN TEXTILE-SPINNING MACHINES. JOSEPH BERLINERBLAU, Warsaw, Poland. Filed Dec. 14, 1927, Serial No. 240,049, and in Great Britain Dec. 15, 1926. 4 Claims. (Cl. 118—43.)



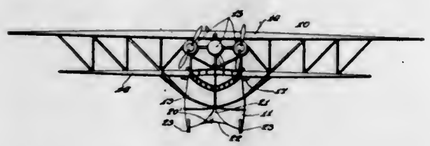
1. In a spinning machine, a frame, a spindle in the frame, an electric motor including a rotor and a casing, the rotor being mounted on the spindle, a shoulder on the spindle supporting the casing, and a resilient connection between the frame and the casing preventing turning of the latter.

1,784,720. STAGE-LIFT FLOWING DEVICE. ALEXANDER BOYNTON, San Antonio, Tex. Filed Dec. 10, 1926, Serial No. 153,950. Renewed Aug. 16, 1928. 6 Claims. (Cl. 103—232.)



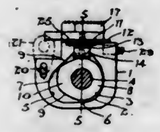
1. A stage lift flowing device for wells comprising a body having a flow passage and a valve chamber, one end of said valve chamber being provided with a tapered valve seat and an inlet port, the other end of the chamber being threaded, a plug in the threaded end of the chamber, opposite walls of said chamber being provided with substantially aligned horizontal openings, one of which constitutes a port, a plug in the other one of the aligned openings, the said second-named port being provided with a vertical valve seat, and a ball valve engageable with said vertical seat.

1,784,721. PRESS FOR OPERATING UPON SHEET MATERIAL. ALFRED BREDENBERG, Champlain, N. Y., assignor of one-half to The Sheridan Iron Works, Champlain, N. Y., a Corporation of New York, and one-half to T. W. & C. B. Sheridan Company, New York, N. Y., a Corporation of New York. Filed Mar. 8, 1928. Serial No. 260,186. 3 Claims. (Cl. 101—4.)



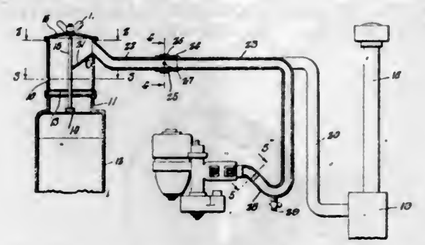
1. In a power operated platen press for performing pressing operations upon leather, cardboard or analogous sheet material, of the class wherein is a work feeding carrier for advancing successive portions of the sheet material between the opposing press members and an automatic mechanism for actuating such work feeding carrier; such actuating mechanism comprising in combination, a crank member, and a star member driven thereby, said members constituting an intermittent drive device and having connections from the star member for shifting the carrier and work between pressing operations, together with a fast-and-slow transmitting gear taking its motion from the same power source as the pressing operation and connected to drive said crank member and timed to advance the latter at the slow speed while engaged with the star member and at the fast speed while disengaged therefrom, whereby the carrier shifting and work advancing period of each cycle is relatively prolonged and the period of rest shortened.

1,784,722. CLUTCH CONSTRUCTION. JAMES R. CARICKHOFF, Lexington, N. C. Filed Nov. 22, 1928. Serial No. 321,218. 1 Claim. (Cl. 192—48.)



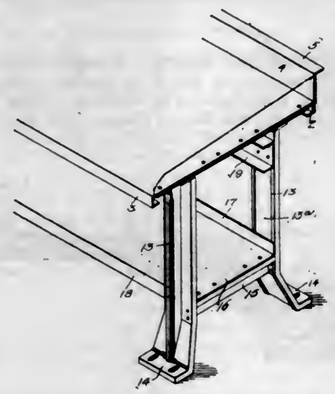
In a transmission, a clutch shaft, a tubular bushing within the free end of the clutch shaft, said bushing having a flange resting against one end of the clutch shaft, a direct drive high speed clutch member on the clutch shaft, said clutch shaft having recesses formed in one end thereof, roller clutch members in the recesses and engaging the direct drive high speed clutch member for locking the direct drive high speed clutch member to the clutch shaft, said flange of the bushing covering the recesses, a drive shaft having one end thereof disposed in the bushing to rotate therein, and means for transmitting movement of the drive shaft to the direct drive speed clutch member.

1,784,723. AIRCRAFT. MANUEL HERRERA DE HORA, New York, N. Y. Filed Oct. 17, 1928. Serial No. 313,145. 2 Claims. (Cl. 244—2.)



1. In an aircraft, a buoyant hull having a bottom stepped transversely at intervals and being upturned in curved formation to the bow of the craft, said bottom having a tapered pocket formed therein and extending from the bow to the first step thereof, said pocket being transversely curved and terminating at its forward end in a restricted throat and at its rear end in an open mouth.

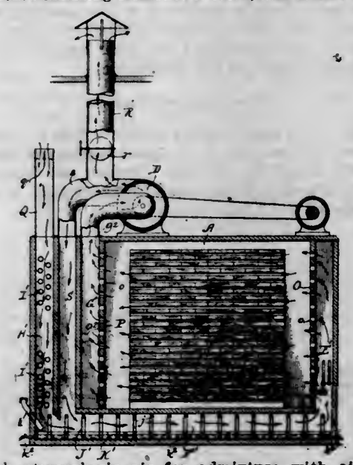
1,784,724. SEWING-MACHINE FEED. JOHN GARDE, Toronto, Ontario, Canada. Filed May 18, 1928. Serial No. 278,728. 3 Claims. (Cl. 112—15.)



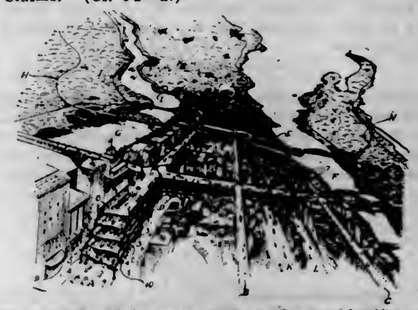
2. A sewing machine feed, comprising in combination, a cam, a carrier flexibly supported and engaging said cam and lifted vertically thereby, said carrier being oscillatable with respect to said cam and having a vertical slot at one side thereof, a horizontally mounted shaft, a downwardly extending crank arm on said shaft having a pin loosely arranged in said slot and engaging the side walls thereof to reciprocate said carrier laterally, said pin being adapted to engage the end walls of said slot during the vertical movement of said carrier to impart an oscillating movement thereto about said cam, and adjustable means for rocking said crank shaft.

1,784,725. HUMIDIFYING DEVICE. CARL J. GUSTAFSON, Aberdeen, S. Dak. Filed Sept. 27, 1929. Serial No. 395,685. 1 Claim. (Cl. 123—25.)

In a humidifying device for internal combustion engines comprising a housing having a perforated bottom seated within the filling neck of a radiator therefor, a false bottom of like construction arranged at spaced intervals to the housing bottom, air inlet and discharge pipes having connection with the housing at spaced heights, a baffle plate carried by and obliquely disposed between the connections of the pipes in advance of the inlet pipe to facilitate mixing and dampening of the air with the water vapor collecting within the housing, and means carried by the housing having connection with the radiator to prevent displacement of the housing while in use.



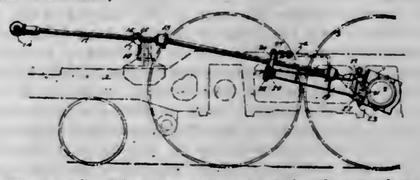
1,784,726. WORKBENCH. HOWARD T. HALLOWELL, Jenkintown, Pa., assignor to Standard Pressed Steel Company, Jenkintown, Pa., a Corporation of Pennsylvania. Filed Apr. 4, 1927. Serial No. 180,907. 2 Claims. (Cl. 45—31.)



1. The combination in a metallic work-bench, of a top made of sheet metal having an inturned downwardly extending flange at front and back; a back plate secured to the back flange; end pieces having flanges at their lower edges; and legs secured to the top and flanges of the end pieces near the edges thereof.

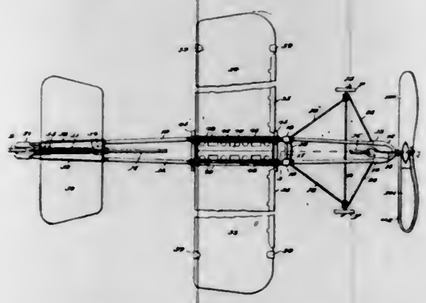
1,784,727. METHOD OF AND APPARATUS FOR CONDITIONING LUMBER AND OTHER MATERIALS. GORDON D. HARRIS, Stamford, Conn., assignor to The Industrial Dryer Corporation, Stamford, Conn., a Corporation of Connecticut. Filed Apr. 14, 1926. Serial No. 101,869. 16 Claims. (Cl. 34—19.)

1. Drying apparatus embodying a humidifying chamber, a liquid tank therein, and a series of moisture diffusing elements dipping into the tank and by capillary action tending to saturate said elements with liquid, said moisture diffusing elements operating to diffuse water vapor for admixture with air adapted to flow within said humidifying chamber, combined with a work chamber, means for circulating air by drawing it through the humidifier and the moisture diffusing elements therein, and means for feeding fresh atmospheric air for admixture with air to be circulated by such circulating means, and means for heating the fresh air prior to admixture with the recirculated air and means for evenly distributing the flow of air through the working chamber.



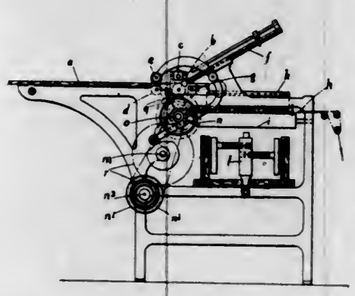
1,784,728. TRANSIT APPARATUS. JOHN A. HARRISS, New York, N. Y. Filed Apr. 29, 1927. Serial No. 187,429. 2 Claims. (Cl. 94—1.)

1. In multiple highway structures, the combination of a plurality of superimposed road surfaces sufficiently above initial level to provide clearance for vehicular traffic on the initial level, supporting means for said superimposed surfaces, and means of approach from the initial level to each of said superimposed surfaces independently of the other for avoiding traffic interference on one level incident to access to another, said several means of approach having surfaces substantially parallel to each other.



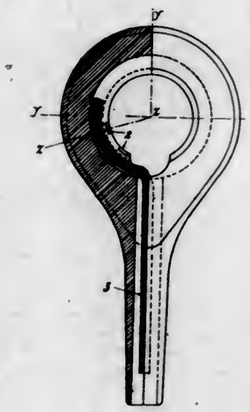
1,784,729. VALVE GEAR. JOHN S. KEEN, Philadelphia, Pa. Filed Dec. 30, 1929. Serial No. 417,525. 3 Claims. (Cl. 105—118.)

1. The combination in valve gears for locomotives, of an axle; a gear wheel on the axle; a shaft at right angles



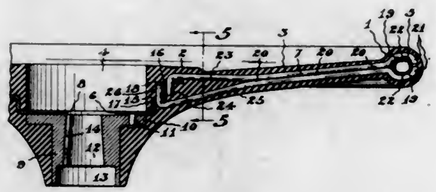
to the axle, and having a pinion thereon meshing with the gear wheel; a housing enclosing the gear wheel and the pinion, and forming a bearing for the shaft, said shaft being connected to the valve mechanism of the locomotive; a torque rod pivotally connected to the housing, so that the housing will have a limited amount of lateral movement; and a link connecting the outer end of the torque rod with the frame of the locomotive.

1,784,730. TOY AIRPLANE LANDING GEAR. HARRY T. KINGSBURY, Keene, N. H. Original application filed June 19, 1929, Serial No. 372,128. Divided and this application filed Jan. 7, 1930. Serial No. 419,112. 5 Claims. (Cl. 46—50.)



1. In a toy airplane, longitudinally extending body spars having ears mounted thereon, and an undercarriage comprising front and rear parts and including means to force the upper ends of such parts resiliently away from one another, the upper portions of said parts being engaged by said ears and held in engagement therewith by such resilience.

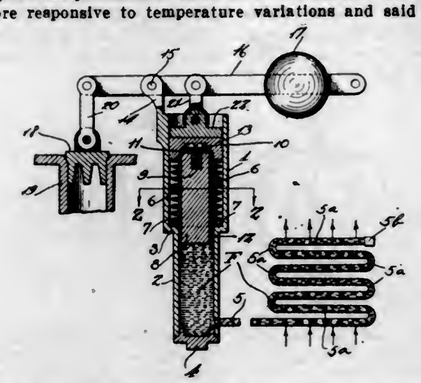
1,784,731. PAPER-FOLDING MACHINE. OSCAR KLEINSCHMIT, Leipzig-Plagwitz, Germany, assignor to Gebrüder Brehmer, Maschinenfabrik, Leipzig-Plagwitz, Germany. Filed Nov. 8, 1929, Serial No. 405,804, and in Germany Dec. 13, 1928. 1 Claim. (Cl. 270—67.)



In a paper folding machine, a main driving shaft, sheet conveying mechanism, a control shaft, variable change speed gearing between the main driving shaft and the control shaft whereby the speed of the said control shaft may be varied according to the size of the sheet to be folded, buckling folding rollers for receiving the paper and subjecting the same to the first folding operation, a cone pulley on the main driving shaft whereby a constant speed of rotation is imparted to the sheet conveying mechanism, a lay shaft, and a cone pulley on the lay shaft coacting with the first mentioned pulley whereby a variable speed is imparted to the control shaft by which the feed, subsequent folding and stacking operations are regulated.

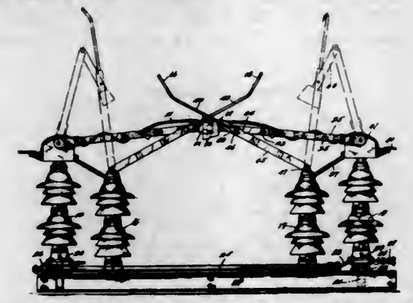
1,784,732. APPARATUS FOR LUBRICATION BY MEANS OF CAPILLARY ELEMENTS. MARCEL KOEHLER, Levallois-Perret, France, assignor to Société Anonyme: Graissage "Alcyl," Levallois-Perret, Seine, France. Filed May 24, 1928, Serial No. 280,283, and in France June 2, 1927. 4 Claims. (Cl. 184—64.)

4. A coupling device for capillary lubricating systems comprising an internally grooved thimble having an inlet orifice communicating with said groove, a wick disposed in said orifice extending into said groove, and a plurality of pairs of integral retaining lugs formed on said thimble adjacent said groove for retaining said wick in said groove.



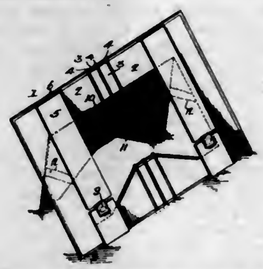
1,784,733. STEERING WHEEL. HERMAN T. KRAFT, Akron, Ohio, assignor to The H. A. Husted Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 12, 1929. Serial No. 399,208. 7 Claims. (Cl. 74—33.)

1. In a composition steering wheel, metallic spoke reinforcements embedded in the spokes thereof, a metallic hub reinforcement embedded in the hub thereof, each of said spoke reinforcements being secured to said hub reinforcement at axially and laterally spaced points, and a body of composition material molded around all of said reinforcements.



1,784,734. HYDROTHERMOSTATIC VALVE CONTROL. JAMES J. LAWLER, Mount Vernon, N. Y. Filed Jan. 31, 1929. Serial No. 336,554. 7 Claims. (Cl. 236—99.)

1. In a hydrothermostatic valve control, a casing, an expansible tube in the casing closed at its upper end with the lower open end secured to the side wall of the casing, between the upper and lower ends of the casing forming a chamber between the upper end of the tube and the lower end of the casing, a thermostatic tube communicating with the lower end of the casing with a fluid filling the chamber and tube, and a core insert in the expansible tube occupying the major interior area thereof to render the fluid more responsive to temperature variations and said core

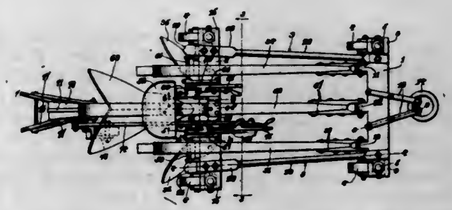


depending below the lower end of the expansible tube to be impinged by the body of fluid in the lower end of the chamber.

1,784,735. ELECTRIC SWITCH. JOEL S. LAWSON, St. James, N. Y., assignor to Memco Engineering & Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed July 17, 1925. Serial No. 44,294. 4 Claims. (Cl. 200—48.)

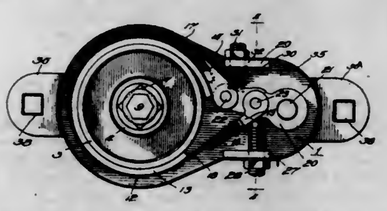
1. A high tension electric switch, comprising a pair of pivoted radius members inclined toward each other in closed circuit position, arcing horns carried by said radius members and engaging each other in circuit closing position, but moving upward and away from each other on movement of the radius arms to open circuit position, in combination with a toggle system comprising a contact arm connected to the radius arms and substantially horizontal in closed circuit position, but displaced to inclined position with the contact end downward on movement of the parts to open circuit position.

1,784,736. EASEL SUPPORT. SIDNEY LEAR, Germantown, Pa. Filed July 2, 1929. Serial No. 375,562. 4 Claims. (Cl. 281—33.)



1. The combination in an easel support, of a body portion having a center longitudinal hinge; and an easel section transversely hinged to the body portion on a line crossing the longitudinal hinge line of the body portion, so that when the easel section is extended it will lock the body portion in the open position.

1,784,737. MANUFACTURE OF MICA TUBES AND SHEETS. ARTHUR LLOYD, London, England, assignor to Bakelite Limited, London, England, a British Company. Filed Aug. 1, 1928, Serial No. 296,767, and in Great Britain Aug. 15, 1927. 2 Claims. (Cl. 154—2.6.)

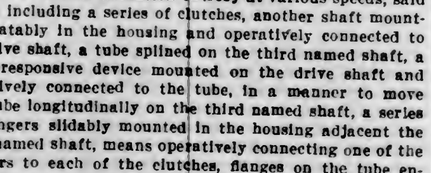


1. A new article of manufacture being a sheet containing mica in which the binder between the mica constituents of the article is a condensation product from a phenol, a urea, and an aldehyde.

1,784,738. COMBINATION PLOW. GEORGE P. LUCIUS, Ruleville, Miss. Filed Mar. 8, 1930. Serial No. 434,317. 10 Claims. (Cl. 97—91.)

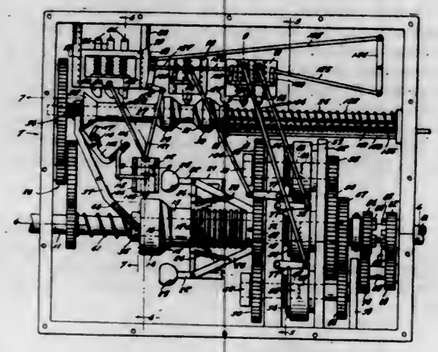
1. In a combination plow, a front and a rear axle, a pair of side members connecting the axles and coacting therewith to provide the frame of the plow, a plurality of supporting beams pivotally connected with the front axle and extending across the rear axle, an earth working element carried by each beam, means for individually adjusting the beams to regulate the depth of cut of the earth working elements independently, and means for independently swinging the beams about their pivots to selectively move the earth working elements into inoperative position.

1,784,739. RECOIL CHECK. MILLARD BOWEN LUCKER, Benton Harbor, Mich., assignor to Auto Specialties Manufacturing Company, a Corporation of California. Filed July 2, 1928. Serial No. 290,020. 7 Claims. (Cl. 188—130.)



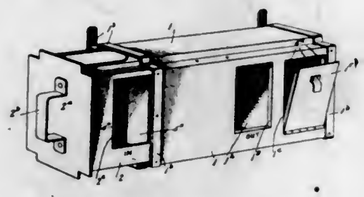
1. In a device of the character described, a rotatable drum, a stationary pivot, a rigid swinging anchor mounted at one end on said pivot and having its free end extending toward the drum, a brake band on the drum, and a connection between each end of the band and the anchor at a point between the pivotal axis of the anchor and the drum, the connection between one end of the band and the anchor being nearer the drum than the connection between the other end of the band and anchor.

1,784,740. ADHESIVE. GUSTAVE S. MATHEY, Elizabeth, N. J., assignor to Johnson & Johnson, New Brunswick, N. J., a Corporation of New Jersey. Filed June 3, 1927. Serial No. 196,404. 1 Claim. (Cl. 87—17.)



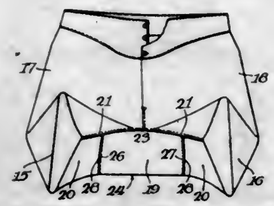
The method of treating rubber latex for use as an adhesive, which consists in subjecting refined latex emulsion to repeated concentration effort in the presence of an agent giving an alkaline reaction, adding a germicidal agent, heating the stock in the presence of preservatives and then cooling it to reduce it to a jelly-like mass, and straining the cold mass to liquefy it so that it will not jell again.

1,784,741. CAR RERAILER. EDMOND J. MCCARTY, Chicago, Ill. Filed Oct. 25, 1929. Serial No. 402,483. 3 Claims. (Cl. 104—268.)



1. A car replacer, including a body engageable with the rail ties in contiguity to the rail and equipped with a lateral extension at each end projecting over the ball of the rail and extending beneath the latter.

1,784,742. AUTOMATIC TRANSMISSION. CHARLES GOODYEAR MITCHELL, Miami, Fla. Filed Aug. 4, 1930. Serial No. 473,009. 3 Claims. (Cl. 74—97.)

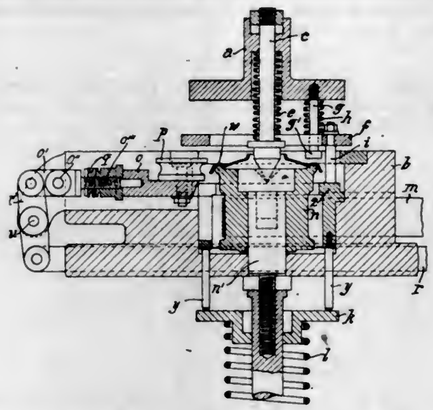


1. A transmission for vehicles of the character described comprising a housing, a drive shaft extending rotatably into the housing, said drive shaft connected to the engine of the vehicle, a driven shaft extending rotatably into the housing, means for selectively coupling the driven shaft to the drive shaft for actuation thereby at various speeds, said means including a series of clutches, another shaft mounted rotatably in the housing and operatively connected to the drive shaft, a tube splined on the third named shaft, a speed responsive device mounted on the drive shaft and operatively connected to the tube, in a manner to move said tube longitudinally on the third named shaft, a series of plungers slidably mounted in the housing adjacent the third named shaft, means operatively connecting one of the plungers to each of the clutches, flanges on the tube engageable with the plungers for actuating the same in a manner to engage and disengage the clutches.

1,784,743. RECEIVING AND DISPENSING CABINET. HARRY A. MONTGOMERY, Louisville, Ky., assignor to Sani-Loc Cabinet Company, Louisville, Ky., a Corporation. Filed Apr. 1, 1929. Serial No. 351,752. 19 Claims. (Cl. 232—41.3.)

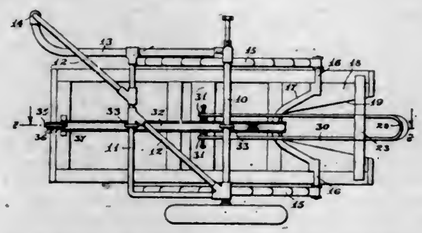
1. A receiving and dispensing cabinet comprising an outer casing having an outlet opening; a telescoping inner casing having an inlet opening; means for aligning articles successively inserted through the inlet opening upon each telescopic operation, each successive article moving the aligned column towards the outlet opening and taking the position of the next preceding article; and automatically operated means for preventing access to the articles between the inlet and outlet openings when uncovered.

1,784,744. UNDERWEAR OR ATHLETIC PANTS. FRANK H. NEGLEY, South Bend, Ind., assignor to Wilson Brothers, Chicago, Ill., a Corporation of Illinois. Filed Jan. 25, 1929. Serial No. 334,900. 3 Claims. (Cl. 2—224.)



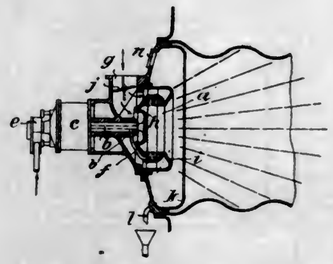
1. Drawers and the like for men and boys of substantially non-elastic fabric, having a closed back, seat and crotch and comprising a pair of main body and leg sections having fly-forming offsets at their upper front portions with spaced, substantially straight front edges below said offsets and having extensions at the lower portions of their rear edges that are united by inseams to the lower portions of said front edges, and a unitary insert section forming the central portions of the back and seat and the entire crotch portion of the garment and having a broad, convex front edge united to the front edges of said main section by a seam of inverted U-shape, both the side edges of said insert being united to the rear edges of said main sections and to the upper edges of the said extensions thereof by seams the lower front portions of which are substantially horizontal and terminate at said inseams, the latter and the inverted U-shaped seam at the broad front edge of the insert section being disposed in front of the crotch and substantially in the plane of the front of the garment, substantially as described.

1,784,745. MEANS FOR EFFECTING ROTARY OPERATIONS IN STEP PRESSES. ERNST BRUNO NIER, Beierfeld, Germany. Filed Oct. 29, 1926, Serial No. 145,044, and in Germany Nov. 7, 1925. 5 Claims. (Cl. 153—59.)



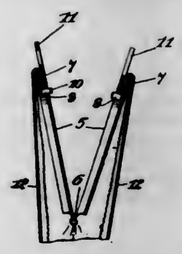
1. In a press having a row of tools adapted to perform drawing, punching, stamping, or similar operations, apparatus for producing hollow, dished, cover-shaped, or similar bodies, comprising devices capable of vertical operations, and a device capable of rotational operation, said

last named device being adapted for drawing, rolling, beading, flanging, and the like, and means for controlling and



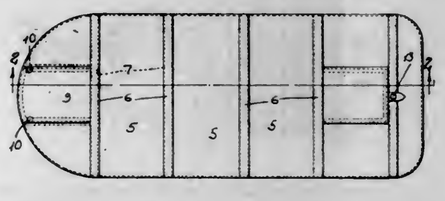
operating said devices, whereby vertical rectilinear operations and a horizontal rotary operation may be performed simultaneously in a single machine.

1,784,746. TRUCK. GROVER PARKER, Red Bank, N. J. Filed Apr. 25, 1930. Serial No. 447,333. 12 Claims. (Cl. 208—45.)



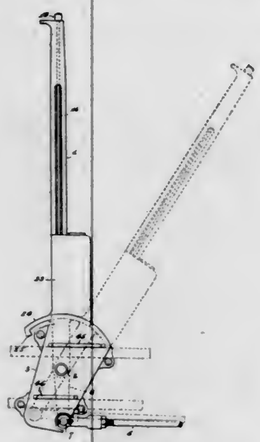
1. A service truck for motor cycles or the like, including a truck body, and a wheel receiving stirrup carried thereby, said stirrup being vertically adjustable with respect to said body, the floor of said body being cut away to provide for the extension therethrough of a wheel carried in said stirrup.

1,784,747. FUEL BURNER. BRUNO PECKELHOFF, Rahlstedt, near Hamburg, Germany. Filed Nov. 1, 1928, Serial No. 316,486, and in Germany Nov. 9, 1927. 2 Claims. (Cl. 158—77.)



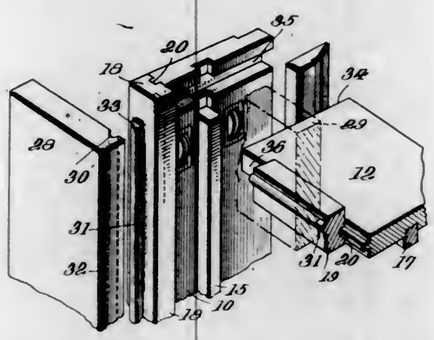
1. In a fuel burner, the combination with a rotating annular cup of substantially U shaped cross-section having the legs of the U directed toward the axis of rotation of the cup for receiving and retaining liquid fuel therein, of means for causing a blast of air to impinge on the surface of the fuel to effect gasification of the same, whereby the lighter and more readily gasifiable particles of fuel only are subjected to the action of the impinging blast of air, said means comprising a fan and a plurality of outwardly directed nozzles located within said cup and rotatable therewith.

1,784,748. HAND BAG AND FRAME THEREFOR. FRANK J. QUIGAN, Jackson Heights, N. Y. Filed Oct. 12, 1929. Serial No. 399,113. 9 Claims. (Cl. 150—29.)



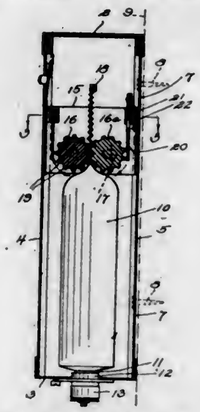
8. In a handbag frame comprising U-shaped members hinged together, each member being channelled inwardly to provide spaced inner and outer walls extending upwardly and outwardly, whereby the upper and outer ends of the handbag fabric can be passed over the outer surfaces of the outer walls of the channels and over the top edges of such walls and secured in position in such channels; latching means carried by the undersides of said frame members, said latching means being independent of the securing means for the handbag fabric.

1,784,749. BATHTUB ATTACHMENT. WALTER RAPALSKI, Philadelphia, Pa. Filed Oct. 8, 1929. Serial No. 397,025. 1 Claim. (Cl. 4—162.)



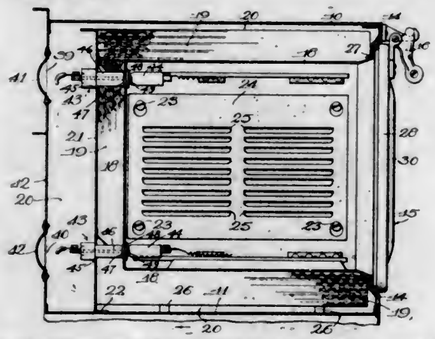
In a bath tub attachment, a flat water proof fabric sheet adapted to be placed over a bath tub to occupy a position in a horizontal plane at the upper edge of the tub, said sheet having a plurality of spaced parallel cross pockets therein extending the complete width of the sheet, reinforcing rods in the pockets of the same length as the width of the sheet adapted to rest at their ends on the upper side edges of the tub to support the sheet in a horizontal plane, said sheet having head and faucet openings, respectively in opposite ends thereof, an adjustable buckle strap carried by the sheet, a coil spring attached at one end to the buckle strap and a hook on the other end of the spring adapted to be engaged with the grid of the overflow opening of the tub to retain the sheet in position on the tub.

1,784,750. EMERGENCY-BRAKE LEVER AND LOCK. JOSEPH RATTO, Brooklyn, N. Y. Filed Oct. 26, 1928. Serial No. 315,175. 4 Claims. (Cl. 70—132.)



1. An emergency brake lever and lock, including a swinging lever, a rack, a housing for said rack, means carried by the lever for closing the opening in the housing, a catch carried by the lever, manually-actuated means for moving the catch to disengaged position, and key-operated means for locking the catch against actuation.

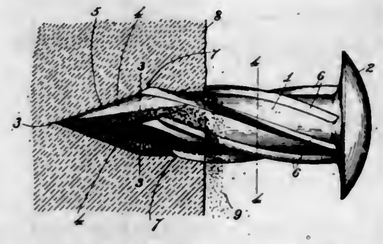
1,784,751. WINDOW FRAME. LEYLE BURROWS REEB, Roselle, N. J. Filed Sept. 19, 1928. Serial No. 306,992. 1 Claim. (Cl. 20—11.)



In a window or like frame having longitudinal and horizontal jamp members, longitudinal blind stops carried by the outer edges of said longitudinal jamb members and of a length similar to said members, a horizontal blind stop carried by the outer edge of the horizontal jamb member, said blind stop being of a length equal to the width of the window openings and having its ends in abutment with the longitudinal blind stops at a point below the upper ends of said stops, tongues arranged centrally of the width of the outer faces of said blind stops, the tongues of the longitudinal blind stops ending short of the outer ends of said stops, the tongues of the horizontal blind stop extending throughout the length of this stop, longitudinal and horizontal outer window casing members provided with grooves in their inner faces, the longitudinal window casing members being of a length of the tongues of the longitudinal blind stops, the grooves of the outer window casing members interlocking with the tongues of the blind stops for automatically positioning the outer casing members, and the horizontal outer casing member of a length equal to the entire width of the window frame and abutting that portion of the upper ends of the longitudinal blind stops which carry no tongues.

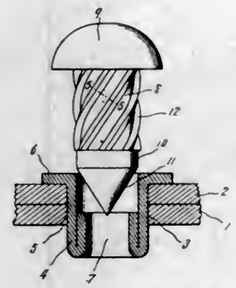
1,784,752. COLLAPSIBLE-TUBE HOLDER. JOHN I. RIES, Chillicothe, Ohio. Filed July 26, 1928. Serial No. 295,434. 1 Claim. (Cl. 221—60.)

In a device of the character described, a longitudinally slotted casing having a removable top wall and a bottom wall provided with an opening, a threaded member positioned within said opening and arranged for the connection with the threaded neck portion of a collapsible tube, a tube collapsing member comprising a frame slidably mounted within said casing, a pair of intermeshing corrugated rollers journaled for rotation within said frame, an operating member attached to one of said rollers and extending through the slot of the casing, elongated bearings formed in said frame for one of said rollers, a detent carried by said frame and positioned for engagement with the roller having the elongated bearing for holding the rollers in their intermeshing relationship with each other, said detent may also be slid from out of engagement with said rollers permitting the rollers to be separated for the insertion and removal of the collapsible tube, and means carried by said detent and engaging said frame for holding said detent in an active and inactive position with respect to the rollers.



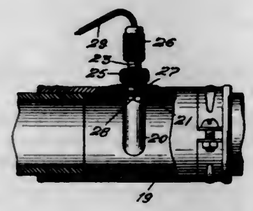
1,784,753. ELECTRIC OVEN CONSTRUCTION. FREDERICK W. ROGERS, Beaver Dam, Wis., assignor to Malleable Iron Range Company, a Corporation of Wisconsin. Filed July 30, 1928. Serial No. 296,304. 7 Claims. (Cl. 126—275.)

1. An oven structure provided with an outer casing and a lining, said lining having the forward portions of



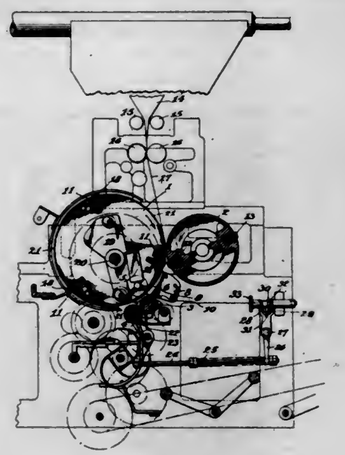
the top, bottom and side walls thereof flared outwardly at the door opening, said flared portions terminating in flanges, a door for said opening having an outer member and a lining spaced therefrom, said lining having flared portions terminating in a perimetrical flange, said flared portions and flange of said door being respectively adapted to contact closely with the flared portions and flange of said oven lining when said door is closed, and a heat insulating gasket between said outer door member and said perimetrical flange to reduce heat conduction through said flange to the outer surface of the door.

1,784,754. ART OF ANCHORAGE IN MASONRY. HEYMAN ROSENBERG, New York, N. Y. Filed Apr. 12, 1923. Serial No. 631,592. 1 Claim. (Cl. 72—101.)



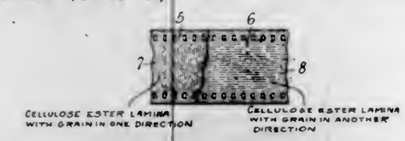
In the art of anchorage in hard masonry such as cement, concrete, brick, or natural stone, forming an entering opening in masonry of less length than the length of the portion of the anchorage device to be inserted, axially inserting an anchorage device in said opening, the body of said anchorage device being of less diameter than that of the opening and having ribs outstanding beyond the lateral limits of the opening, and delivering a series of hammer taps on the exposed portion of the anchorage device axially thereof for advancing the anchorage device with a succession of jumps corresponding to the number of taps, the taps being delivered of such character as to allow the crumbled material of the masonry to find its way out along the anchorage device in the valleys between the ribs.

1,784,755. ANCHORAGE DEVICE. HEYMAN ROSENBERG, New York, N. Y. Filed Dec. 16, 1925. Serial No. 75,831. 8 Claims. (Cl. 85—37.)



1. Anchorage means comprising a sleeve-rivet and a pin having an end portion of a diameter substantially equal to the diameter of the bore of the rivet, the pin having a rib extending generally longitudinally of the pin and outstanding therefrom beyond the extended lines of the surface of the end portion for causing the rib to enter the material of the rivet when the pin is forced into the rivet longitudinally, the rib sufficiently approximating parallelism with the longitudinal axis of the pin for permitting the pin to be so driven into the rivet and for causing the rib to enter the rivet approximately longitudinally with respect to itself when the pin is so driven.

1,784,756. MOUNTING FOR TEMPERATURE RESPONSIVE ELEMENTS. HERMAN SCHLAICH, Long Island City, N. Y. Filed Oct. 10, 1928. Serial No. 667,708. 9 Claims. (Cl. 73—52.)

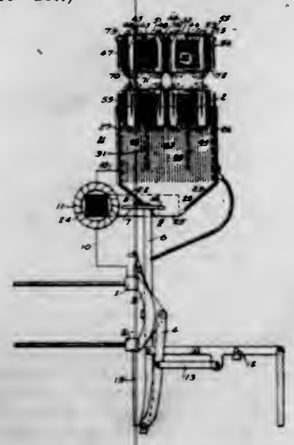


7. In a heat indicator, a temperature responsive element adapted to be mounted in a hose connection of an engine-cooling system, comprising an element shell of small diameter provided with an end of relatively larger diameter terminating in a stem, a tube permanently sealed in the stem and a clamping means associated with the stem, said element adapted to be inserted through a hole in said hose and to clamp the wall of said hose between the large diameter shell end and the aforesaid clamping means.

1,784,757. FOLDING OR OTHER DEVICE. DAVID J. SCOTT, Plainfield, N. J., assignor to Isabella Scott and David J. Scott, executors of the estate of Walter Scott, deceased, doing business under the name of Walter Scott & Company, Plainfield, N. J. Filed Feb. 21, 1930. Serial No. 430,244. 23 Claims. (Cl. 270—65.)

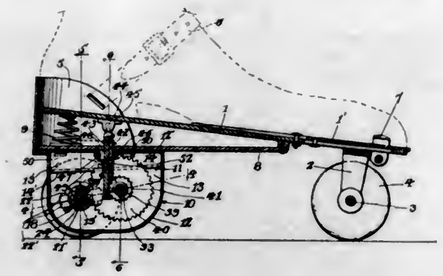
1. In a folding device, a rotating sheet-carrying cylinder, a folding blade periodically projecting from said cylinder, a pair of folding rolls located in spaced relation to the exterior of the cylinder to receive sheets, delivered by the folding blade, from the cylinder, and a safety-gate in such spaced relation to the cylinder, at a point in advance of the location of the folding rolls, as to prevent an excess of material carried by the cylinder from passing between said cylinder and safety-gate and thence to the folding rolls.

1,784,758. CELLULOSE FILM. SAMUEL E. SHEPPARD and JAMES G. MCNALLY, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 2, 1929. Serial No. 336,984. 9 Claims. (Cl. 95—9.)



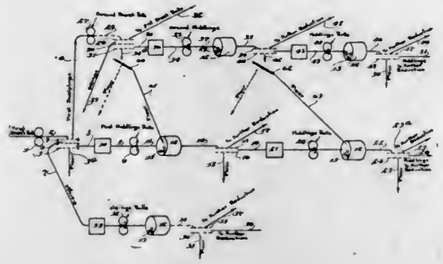
1. A substantially flat laminated cellulose ester film comprising at least two laminæ having the grain of one lamina at an angle to the grain of the adjacent lamina.

1,784,759. HAND BAG. JACOB SIMS, Brooklyn, N. Y. Filed Aug. 11, 1930. Serial No. 474,344. 7 Claims. (Cl. 150—29.)



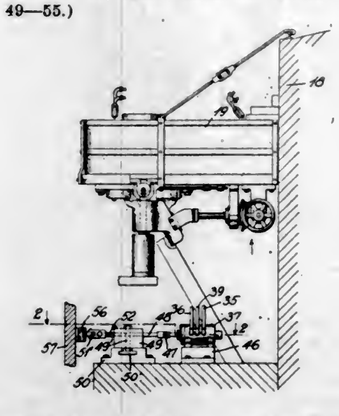
6. In a handbag, the combination of two metal channel members pivoted together constituting the frame of said bag, and a flap acting as a closure for said bag having one end thereof compressed within one of said channel members, the continuation of said flap constituting one of the sides of the body of said bag.

1,784,760. CIRCUIT BREAKER. JOSEPH SLEPIAN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 6, 1927. Serial No. 181,289. 41 Claims. (Cl. 200—147.)



1. Circuit-interrupting means comprising a pair of members between which an arc may be drawn and deionizing means adjacent the arc path comprising a plurality of metal plates disposed to subdivide the arc into a series of short arcs and of such configuration as to provide a recurrent path for said short arcs.

1,784,761. ROLLER SKATE. JERRY T. SMITH, Washington, D. C. Filed Apr. 10, 1930. Serial No. 443,112. 2 Claims. (Cl. 208—174.)



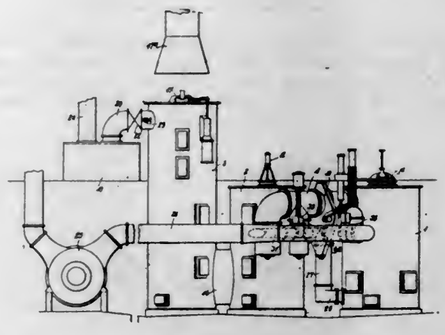
1. In a roller skate, a pair of plates mounted for relative reciprocation, a housing secured to one of said plates, a web carried by the other of said plates, a rotatable axle upon which the housing is mounted and provided with a ground wheel, a tension element normally forcing said plates apart, said plates being relatively movable toward each other against the action of the tension element, tongues formed on the web and extending beneath the plate to which the housing is secured to provide stop means for limiting the diverging movement of the plates, gearing mechanism mounted within the housing for driving the axle, and means operable by the relative reciprocation of said plates for actuating the gearing mechanism.

1,784,762. PROCESS OF AND APPARATUS FOR MILLING FLOUR. LOUIS E. SMITH, Minneapolis, Minn., assignor, by mesne assignments, to Hart-Carter Company, Peoria, Ill., a Corporation of Delaware. Filed Mar. 29, 1930. Serial No. 439,959. 19 Claims. (Cl. 83—42.)

1. The process of milling flour which consists in subjecting the whole grain to a crushing compression to crack the bran and break down the endosperm, some of which endosperm is pressed into the form of flakes, in repeatedly subjecting the middlings portion of the resulting stock to a multiplicity of non-uniform compressional impacts whereby the endosperm and flakes thereof are further reduced to or toward flour form without materially disintegrating the bran flakes, and in separating the bran from the flour.

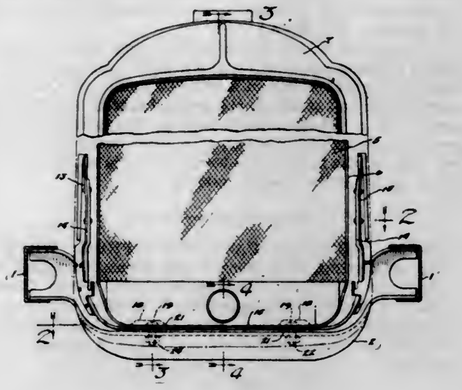
1,784,763. GLASSWORKING APPARATUS. MERTON A. STEELMAN, deceased, Vineland, N. J., by Anna M. Steelman, administratrix, Vineland, N. J., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Original application filed June 16, 1916, Serial No. 101,878. Renewed Oct. 29, 1924. Patent No. 1,603,994, dated Oct. 19, 1926. Divided and this application filed Dec. 19, 1925. Serial No. 76,534. 5 Claims. (Cl. 49—55.)

1. Glass working apparatus comprising a feeder for molten glass provided with a discharge outlet and with a fluid-pressure operated shear arranged to reciprocate beneath said outlet, a forming machine provided with molds arranged to receive mold charges from said feeder, a valve for actuating said shear, spaced members for operating said valve, means associated with said forming machine for successively engaging said spaced members, and means for changing the relative spacing of said members and for thereby changing the interval between the reciprocating movement of said shear.



1,784,764. GAS RANGE. ARTHUR STOCKSTROM and ALMER H. BRODBECK, St. Louis, Mo., assignors to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Aug. 22, 1929. Serial No. 387,730. 9 Claims. (Cl. 126—37.)

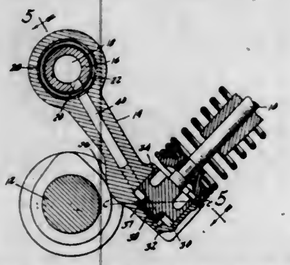
1. A range having a top portion, a swinging cover therefor, the rear and lower end of the swinging cover adapted to move vertically and the lower front end to move horizontally, for the purpose described.



1,784,765. WATER-GAS PROCESS. THOMAS W. STONE, Fort Wayne, Ind., assignor to The Western Gas Construction Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Nov. 22, 1923. Serial No. 676,308. 6 Claims. (Cl. 48—208.)

2. In making water gas the method which consists in: introducing a blast of air through the fuel bed of a generator to bring the fuel bed to incandescence and to produce air blast gases and passing the air blast gases successively in separate parallel streams through a single shell carburetter and a single shell superheater and burning the air blast bases therein; shutting off said air blast and introducing a flow of steam successively through the superheater, carburetter and incandescent fuel bed of said generator, to generate water gas in said generator, and passing the water

gas generated back through said carburetter and superheater to a gas receiver; and, before again introducing a blast of air, then reversing the direction of flow of steam through said elements and introducing a flow of steam successively through the superheater, carburetter and fuel bed of the generator to generate water gas before again bringing the fuel bed to incandescence, and passing the water gas generated back through said carburetter and superheater to a gas receiver.



1,784,766. RADIATOR MOUNTING. SAMUEL A. STRANAHAN, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 23, 1928. Serial No. 287,836. 2 Claims. (Cl. 180—68.)

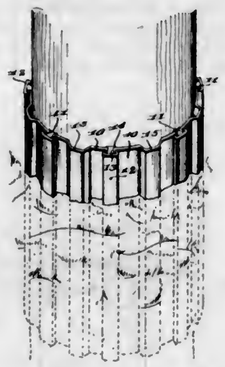
1. In a motor vehicle, an adjustable mounting for rigidly securing a radiator on a chassis frame, in proper relation with its associated parts, including in combination with a chassis frame member having an elongated slot and a radiator including a shell and a radiating unit having an assembly retainer strap extending in part across the underside of the bottom tank of the unit, of a supporting bar interposed between said retainer strap and the chassis frame member and secured to the shell, said bar and strap having therein registering keyhole slots extending angularly in relation with the elongated slot of the frame member,

a depression in the bottom wall of the lower tank directly over and extending thruout the length of the keyhole slots to provide clearance space thereabove, a headed fastening stud, whose head is adapted for insertion upwardly thru the enlarged portions of the keyhole slots into said clearance space, and whose shank is slidable in the angularly disposed slots to permit adjustment of radiator position, and a nut threaded on the lower end of the shank to clamp the parts in adjusted position.

1,784,767. HYDRAULIC VALVE MECHANISM. CALEB E. SUMMERS, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 24, 1928. Serial No. 301,764. 18 Claims. (Cl. 123—90.)

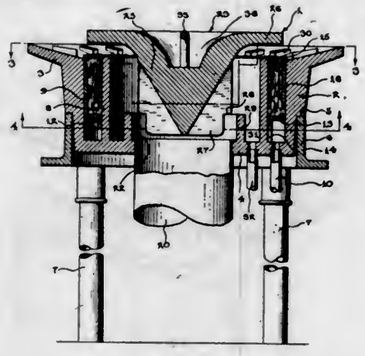
1. The combination of a pivoted actuating member, an actuated member, and an hydraulic slack adjuster carried by the pivoted member and adapted to engage one of said members for taking up slack in the system, means for supplying the slack adjusting device with oil through the pivot of said actuating member and a cut off valve in said pivot for cutting off communication with the reservoir during the actuating stroke of the mechanism.

1,784,768. PROCESS FOR PRINTING WOOL WITH ESTER SALTS OF LEUCO COMPOUNDS OF VAT DYESTUFFS. WALTER TAUSSIG, Frankfort-on-the-Main, Germany, assignor to Durand & Huguenin, Basel, Switzerland, a Corporation of Switzerland. Filed Oct. 12, 1928, Serial No. 312,209, and in Germany Oct. 13, 1927. 4 Claims. (Cl. 8—5.)



1. A process which comprises printing woolen fabrics with a printing paste containing a thickening agent and a solution of an ester-salt of a leuco compound of a vat dyestuff, drying and steaming the printed fabrics and treating them with a strong mineral acid in combination with a persulfate as oxidizing agent, this latter being admixed at any stage of the process and being incapable of staining the white parts of the woolen fabrics.

1,784,769. MOLD FOR CASTING SULPHUR. WILHELM VON DIETERICH, Honningen-on-the-Rhine, Germany, assignor to the Firm Rhenania-Kunheim Verein Chemischen Fabriken Aktiengesellschaft, Berlin, Germany, a Corporation of Germany. Filed July 23, 1926, Serial No. 124,523, and in Germany Feb. 1, 1926. 3 Claims. (Cl. 18—47.)

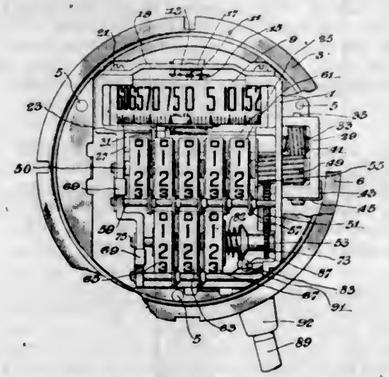


1. A metallic mold for casting sulphur comprising a tube made of material resistant to sulphur, said tube having a normally closed slit running the length of the tube, whereby the tube diameter may be increased, and means spaced from the slit to hold the edges of the slit of the tube close together.

1,784,770. METAL REENFORCEMENT FOR TIMBER POLES. ANDREW J. WILEY, Boise, Idaho. Filed Jan. 29, 1930. Serial No. 424,292. 2 Claims. (Cl. 20—100.)

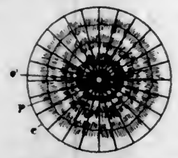
1. In a metal reenforcement for fixing timber poles in the ground, a tubular body formed to provide a plurality of separable sections, securing lugs having the form of acutely angled out-turned flanges formed along the opposite longitudinal edges of each of the said sections, a chenneled member adapted to be interlocked with the lugs at the edges of adjacent sections to form a completed body, said sections having freedom of motion longitudinally of the body with respect to adjacent sections and elongated locking elements having substantially the same cross sectional shape of the channel in said member and engageable through the latter to clamp said lugs between the same and the opposite side walls of the channel, said body being employed to reenforce the strength of a timber pole weakened through decay at the ground line by firmly grasping the sound part of the pole both above and below the zone of decay.

1,784,771. OIL BURNER. MYRON W. WOOD, Sioux City, Iowa. Filed May 3, 1927. Serial No. 188,457. 2 Claims. (Cl. 158—96.)



1. An oil burner comprising a bowl shaped body having an outwardly and upwardly flaring flange at its upper end and provided with a central opening in its bottom, an upstanding flange surrounding said opening, an inner vertical wall extending upwardly from the bottom of said body and spaced laterally from the inner face of the side walls of said body to form a wick receiving chamber, an air supply pipe connected to discharge into said burner through said central opening and a combined air and flame deflector having laterally spaced depending vanes resting on the flange surrounding the central opening of said body to support the deflector and to prevent swirling of the air currents.

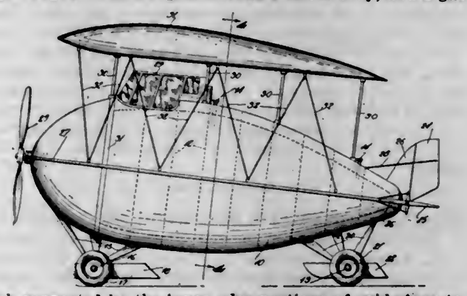
1,784,772. GRATE KEY. GEORGE ZIEGLER, Bogota, N. J. Filed Jan. 11, 1928. Serial No. 245,981. 3 Claims. (Cl. 110—40.)



1. A grate key, comprising a body having a top structure formed with a flat face, said top structure having spaced parallel transverse grooves in its face and curved inclined grooves in one side merging into said parallel grooves, said inclined grooves extending from the top to the bottom of said top structure, the depth of said curved inclined grooves being less than half of the thickness of said top structure.

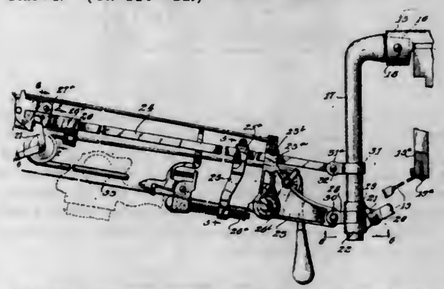
1,784,773. ODOMETER. JOSEPH ZUBATY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Mar. 11, 1926. Serial No. 94,097. 3 Claims. (Cl. 235—144.)

1. A reset mechanism for figure wheels or the like comprising a shaft, a wheel thereon, driving means therefor, means slidable on the shaft in constant driving engagement with the wheel and having a gear movable into and out of driving relation with the driving means, means for moving said slidable means including a reset spindle having a gear element thereon engaging, when in one position, the gear of the slidable means.



1,784,774. ELASTICALLY-DEFORMABLE PARACHUTE. LUIGI AVORIO, Rome, Italy. Filed Jan. 3, 1928, Serial No. 244,293, and in Italy Aug. 5, 1927. 4 Claims. (Cl. 244—21.)

1. In parachutes of the class comprising a cap with holes elastically constrained so as to produce the variation of their size, the combination, with a cap having holes of elastically variable size, of elastic means suitably distributed over the surface of the cap and adapted to secure the stretching and the shrinking of the cap itself in accordance with the variations of the air pressure encountered thereby.



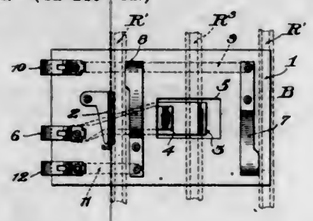
1,784,775. AIRSHIP. LOUIS BALAZINSKI, East Port Chester, Conn. Filed Oct. 3, 1929. Serial No. 397,050. 9 Claims. (Cl. 244—5.)

1. In an air ship, an ovate hollow body, an exterior platform on the equatorial zone of said body constituting stiffening means against lateral deformation, annular rings extending around the inner surface of the body wall at right angles to the longitudinal axis of the body, and a gas

tank supported by the inner edge portions of said rings to hold flotation gas, said rings dividing the space between the body wall and gas tank into storage compartments.

1,784,776. CASH CARRIER. JAMES L. BALDWIN, Chicago, Ill. Filed Aug. 6, 1930. Serial No. 473,434. 15 Claims. (Cl. 186—11.)

1. A cash carrier comprising a support, a sending unit for the cash receptacle extending therefrom, a bracing bar leading from the support, and sending unit elements depending from the bracing bar and perforated to fit the same, said bracing bar being of non-circular cross-section, and the form of said perforations being to correspond.

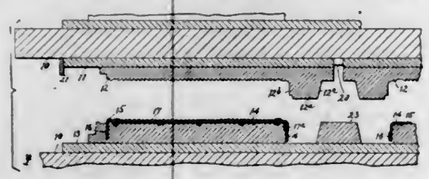


1,784,777. SHEET PILING. CAMILLE BEAUJEAN, Brussels, Belgium, assignor to Société Anonyme D'Ougrée Marikaye, Ougree, Belgium. Filed Oct. 4, 1928, Serial No. 310,403, and in France Feb. 29, 1928. 2 Claims. (Cl. 61—60.)

1. Sheet piling formed by the juxtaposition of Z-shaped members each formed by rigidly connecting before hammer-

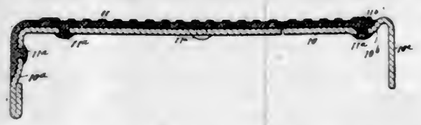
ing two U-members arranged alternately at each side of the axis of the sheet piling and the two opposing arms of which are in the extension of each other, flat members arranged between said opposing arms and in alignment therewith, H-shaped members having trapezoidal cavities or hollowed out portions connecting said arms and the flat members, and an H-member with trapezoidal hollows arranged at the end of one of the two free arms; and flat members and H-members similar to those above described assembled rigidly before hammering, arranged in alignment between the arms of the consecutive Z-members and connecting these.

1,784,778. AUTOMATIC SIGNALING MEANS FOR TOY TRACKS. HARRY S. BECKER, River Forest, Ill., assignor to American Flyer Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 14, 1928. Serial No. 261,637. 3 Claims. (Cl. 246—81.)



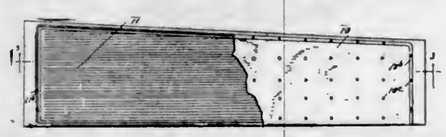
1. Railway signaling means comprising, in combination with the rails and a source of current, a contact device located adjacent to each rail adapted to be engaged by a wheel passing over the rail to close a signal circuit, said contact devices being disalined laterally with respect to one another to secure a maximum number of circuit closings by a minimum amount of travel of a vehicle over the rails at any given rate of speed.

1,784,779. FOLDING TOP. JOSEPH BOCA, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 31, 1927. Serial No. 230,027. 7 Claims. (Cl. 296—112.)



1. In a top of the class described, a main supporting bow pivoted to the vehicle, a secondary bow pivoted to the main bow, a third bow, a link pivoted to the secondary bow and a third bow, and a second link pivotally secured on one face of the secondary bow and on the opposite face of the third bow to serve as a stop to limit the pivotal movement of the said bows.

1,784,780. VULCANIZING PRESS. BUDD BRONSON, Lakewood, Ohio, assignor to The Ohio Rubber Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 1, 1927. Serial No. 230,272. 9 Claims. (Cl. 18—16.)

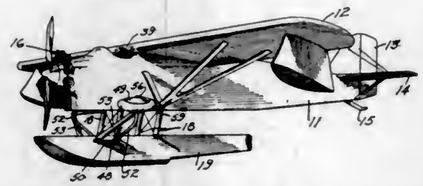


1. A press for molding and securing plastic material onto the top and side of a metal body comprising upper and lower mold members, one being held in fixed position on a platen of the press and adapted to receive the metal body and the other being laterally movable and adapted to be so moved in the closing operation as to engage and press between it and the other member the top and side of the metal body and secure the plastic material thereto.

1,784,781. COMPOSITE STEEL AND RUBBER ARTICLE. BUDD BRONSON, Lakewood, Ohio, assignor to The Ohio Rubber Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 22, 1927. Serial No. 241,771. 6 Claims. (Cl. 280—169.)

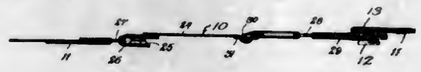
1. A running board for motor vehicles comprising a sheet metal running board body flanged downwardly at its front margin and formed with a depression which is carried down into the front flange, and a covering of rubber molded and vulcanized to the body and filling the depression.

1,784,782. COMPOSITE RUNNING BOARD. BUDD BRONSON, Cleveland, Ohio, assignor to The Ohio Rubber Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Dec. 22, 1927, Serial No. 241,771. Divided and this application filed Oct. 13, 1930. Serial No. 488,517. 2 Claims. (Cl. 280—169.)



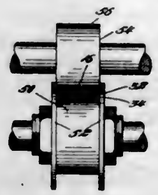
1. A running board having a sheet metal body formed of hot-passed steel with surface roughness inherent to hot-passed steel and having a covering of rubber molded and vulcanized to the body and uniformly attached thereto by its adherence with said roughened surface of the metal.

1,784,783. VENTILATING DEVICE. ALBERT CAUCHEMONT, Paris, France. Filed Feb. 28, 1929, Serial No. 343,294, and in France Mar. 7, 1928. 2 Claims. (Cl. 98—66.)



1. A ventilating device of the type described comprising an outer set of elements disposed in cage formation each of said elements having a flange at each end thereof, said flanges being so disposed that the opposite edges of two adjacent elements form an outwardly converging passage for the ingress of the wind, a second set of elements within the first set and concentrically disposed with reference thereto, each element of said second set comprising two members set at an angle to each other, said angle diverging outwardly and the contiguous members of two adjacent elements of said second set being so placed as to form an outwardly converging passage which opens behind an element of said first set, whereby the egress of air through the last named passage is made easier and may take place from the right and from the left.

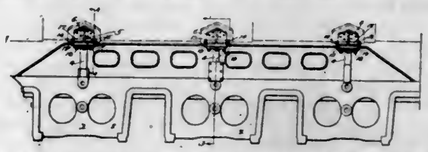
1,784,784. AMPHIBIAN PLANE. DONALD WILLS DOUGLAS, Santa Monica, Calif., assignor, by mesne assignments, to Douglas Aircraft Company, Inc., Los Angeles, Calif., a Corporation of Delaware. Filed Apr. 23, 1927. Serial No. 186,006. 19 Claims. (Cl. 244—2.)



1. In an airplane the combination of: a main structure; a water landing-gear movable relative to said main structure; a land landing-gar movable relative to said main structure, said land and said water landing-gears being relatively movable; and means for moving said water landing-gear into alighting position and said land landing-gear from alighting position and vice versa.

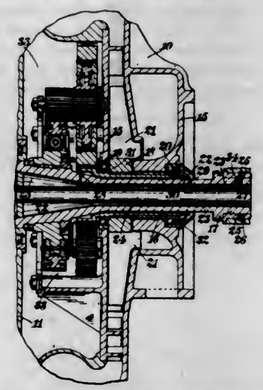
1,784,785. CONNECTER DEVICE FOR CUFFS OF KNICKERS. CHARLES DOUGLIS, Lawrence, N. Y. Filed Oct. 16, 1929. Serial No. 400,046. 1 Claim. (Cl. 2—228.)

In combination, a garment provided with a cuff having free ends, one end of which is provided with a link member, an attaching element carried by the opposite cuff end, a connecting device for connecting the ends of said cuff, the said connecting device comprising an end member engageable with the attaching element carried by the one cuff end, a link connected to said end member, an elastic member having one end looped through the last mentioned link, an adjustable element secured to the free end of said loop and mounted to slide on the said elastic member to vary the length of the said loop, a looped member secured to the opposite end of said elastic member and engaging the link carried by the one cuff end and detachable connecting means carried by the last mentioned looped member for holding the loop in closed position.



1,784,786. WOVEN WIRE AND METHOD OF ITS MANUFACTURE. MOISE H. DURAND, Attleboro, Mass., assignor to Charles D. Blaikie, doing business as Smith, Richardson Co., Attleboro, Mass. Filed June 20, 1928. Serial No. 287,023. 9 Claims. (Cl. 245—10.)

8. The method of making a wire mesh, which comprises the bending over of the edges of the wire mesh and then rolling the wire mesh and bent over edges between rollers to flatten both the bent over portions and the main body of the mesh to a uniform thickness and to form a substantially solid metallic selvage.

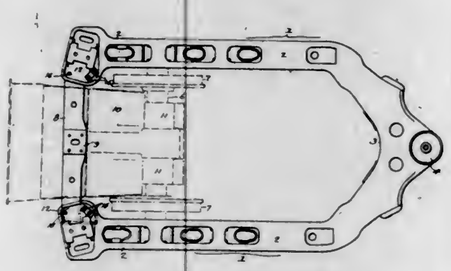


9. A woven wire fabric having an inturned edge, said edge being of substantially the same uniform thickness as the center body portion of the fabric.

1,784,787. LOCOMOTIVE BOILER SUPPORT. EDWARD O. ELLIOTT, Jenkintown, Pa. Filed Dec. 6, 1929. Serial No. 412,211. 5 Claims. (Cl. 105—43.)

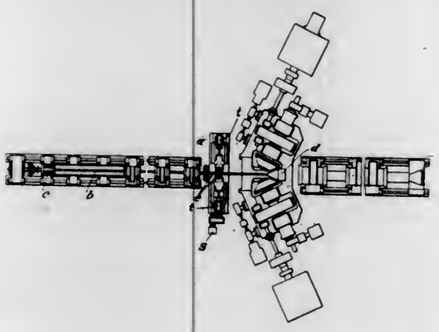
2. The combination in a locomotive, of a main frame; a boiler support extending above the main frame having a longitudinal flange; pads arranged at intervals on the flange; and saddles arranged to be secured to a boiler and to slide on the pads.

1,784,788. LUBRICATION OF INTERNAL-COMBUSTION ENGINES. ALFRED HUBERT ROY FEDDEN, Bristol, England, assignor to The Bristol Aeroplane Company Limited, Bristol, England, a British Company. Filed Mar. 8, 1928, Serial No. 260,091, and in Great Britain Apr. 6, 1927. 3 Claims. (Cl. 184—6.)



1. Means for lubricating a rotary internal combustion engine equipped with a compressor and having a hollow crank shaft, comprising a sleeve spaced from and sealed within the crank shaft to provide an annular lubricant chamber therein, said crank shaft having a radial opening therein leading to the annular chamber for supplying lubricant thereto, and a centrifugally opened check valve in said opening of the crank shaft, said crank shaft also having radial openings therethrough for supplying the lubricant to parts to be lubricated.

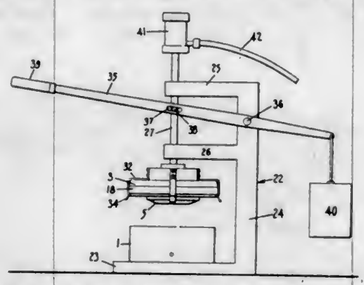
1,784,789. MATRIX FOR TYPOGRAPHICAL MACHINES. ISAO FUJII, Komazawa-Machi, Ebara-Gun, Tokyo-Fu, Japan. Filed Mar. 18, 1929, Serial No. 348,092, and in Japan Mar. 17, 1928. 3 Claims. (Cl. 199—65.)



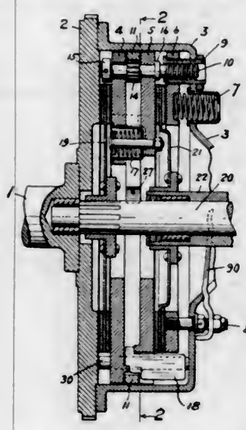
1. A matrix for a typographical machine, including a body, which is substantially polygonal in its general outline and of suitable size and thickness, and provided with a number of characters of various kinds indented thereinto at the polygonal faces, and is formed with a top notch having distributor teeth and a central hole for receiving a distributor and elevator bars and projections positioned between every two consecutive indented characters substantially as described.

1,784,790. ENGINE TRUCK ON WHICH BOOSTERS ARE MOUNTED. HARRY GLAENZER, Philadelphia, Pa. Filed Jan. 25, 1930. Serial No. 423,472. 2 Claims. (Cl. 105—174.)

2. The combination of an integral frame consisting of two side members and a front cross member, the rear ends of each side member being enlarged and having a depending portion with a detachable rear rail enlarged at the ends and having a horizontal and a vertical bearing face; and vertical and horizontal bolts securing each end of the detachable rail to the ends of the side members of the frame.



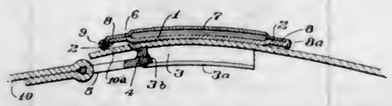
1,784,791. ROLLING MILL. KARL GRUBER, Rheydt, Germany. Filed Jan. 27, 1928, Serial No. 249,882, and in Germany June 14, 1927. 8 Claims. (Cl. 80—13.)



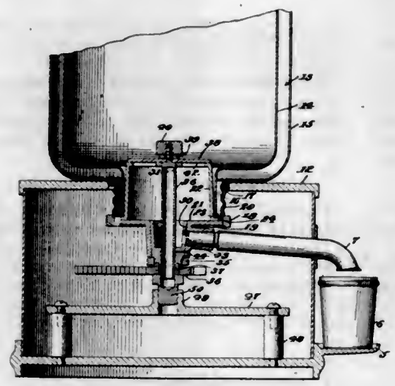
8. Apparatus for expanding and smoothing metal tubes comprising a pair of rolls, a mandrel cooperating with said pair of rolls, a mandrel stem on the entering side of said pair of rolls by which said mandrel is carried and a coupling securing said mandrel stem in place, in combination with means for displacing the mandrel stem toward the exit side of the rolls and returning the same to the coupling, spring actuated locking bolts adapted to lock the mandrel stem to the coupling by engaging a slot in said mandrel stem, and means for disengaging said locking bolts substantially as described.

1,784,792. APPARATUS FOR MAKING INSULATORS. KENT A. HAWLEY, Baltimore, Md., assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Apr. 18, 1929. Serial No. 354,915. 8 Claims. (Cl. 25—3.)

1. In an apparatus of the character described, a sectional mold adapted to have plastic clay placed therein, a sectional die having a central opening and adapted to cooperate with said mold for shaping the clay and for extruding a portion thereof through the opening, and a second die adapted to engage said extruded portion for shaping the same.

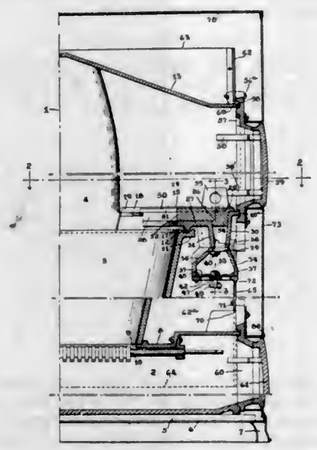


1,784,793. DOUBLE AUTOMATIC CLUTCH. JOHN A. PRIOR, Philadelphia, Pa., assignor of one-half to Samuel P. Howe, Camden, N. J. Filed Aug. 13, 1929. Serial No. 385,493. 6 Claims. (Cl. 74—97.)



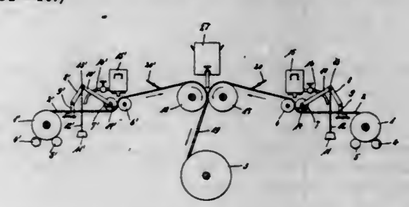
1. A clutch including a driving member, a driven shaft, a driven member directly connected to said driven shaft, a second driven member, gearing interposed between said second driven member and said driven shaft, centrifugal means for shifting engagement tebween said second driven member and said driving member to engagement between said driving member and said driven member at a higher speed of rotation than the shift in the opposite direction.

1,784,794. BELT BUCKLE. ARTHUR ROSENBERG, Boston, Mass., assignor to A. Rosenberg & Co., Boston, Mass., a copartnership composed of Arthur Rosenberg and Philip Rosenberg. Filed Dec. 26, 1929. Serial No. 416,322. 1 Claim. (Cl. 24—163.)



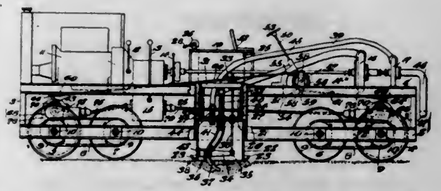
A belt buckle embracing in its construction a front plate provided with inwardly inclined lateral flanges provided with inturned ledges forming a fulcral support for a belt-attaching and securing bail, said front plate having its interior portion depressed below the level of its marginal portions to form a shallow pocket, a cover hinged at one end to the front plate and having separate inwardly turned side flanges adapted to engage and grip over the overhanging marginal portions of the front plate, said cover being also provided at its free end with an inwardly projecting lip adapted to engage the adjacent end edge of the front plate.

1,784,795. LIQUID-DISPENSING DEVICE. ERIC K. SKONBERG, Brooklyn, N. Y., assignor to Therm-O-Mat Dispenser, Inc., a Corporation of New York. Filed May 26, 1930. Serial No. 455,589. 5 Claims. (Cl. 221—112.)



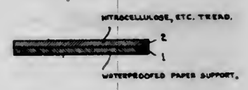
1. In a liquid dispensing device, a main liquid reservoir, a measuring container located within said reservoir, one end of said container having a liquid inlet opening, a valve associated with said container end for controlling said opening, a hollow tubular member extending through said container and engaging said valve, said tubular member provided with an air outlet at one end opening into said container end and a liquid outlet associated with the opposite end of said container.

1,784,796. HEATING APPARATUS. MAX M. SUPPES, Elyria, Ohio, assignor to The Fox Furnace Company, Elyria, Ohio, a Corporation of Ohio. Filed Mar. 15, 1929. Serial No. 347,201. 13 Claims. (Cl. 126—67.)



1. A heating apparatus comprising a heat-emitting element including a fire-pot, a combustion chamber and an ash-receptacle, a casing surrounding said element and spaced therefrom to form a vertical air passage, said casing having an opening, a fuel-charging throat having an inlet registering with said opening in the casing and connected to said fire-pot, a secondary air inlet through the wall of said fuel-charging throat, and a casing having an internal air preheating chamber communicating with said secondary air inlet and having an inlet communicating with the space between said heating element and said first-named casing.

1,784,797. METHOD OF COATING AND IMPREGNATING WEBS OF FLEXIBLE MATERIAL. EMIL WEINHEIM, New York, N. Y. Filed June 17, 1929, Serial No. 371,389, and in Germany July 13, 1925. 3 Claims. (Cl. 154—40.)



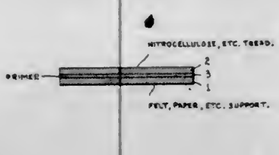
1. The method of making webs from several layers comprising treating each layer separately with a compound, combining the several layers into a single web, and applying a compound between said layers.

1,784,798. FILTER-SAND WASHING MACHINE. MORRIS L. BAYARD and MINOR HARVEY, Philadelphia, Pa. Filed May 2, 1928. Serial No. 274,376. 3 Claims. (Cl. 210—128.)

1. In a filter sand washing machine of the character stated, a chassis, front and rear buoyant driving wheels, actuating means therefor, front and rear buoyant driven wheels, driving connections common to said driving and driven wheels, and means positioned intermediate said front and rear wheels for agitating and washing said sand.

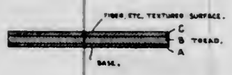
1,784,799. FLOOR-COVERING MATERIAL AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Nov. 23, 1926. Serial No. 150,387. 9 Claims. (Cl. 91—68.)

4. The process of making floor coverings which comprises sheeting onto wax-containing paper a plastic adherent tread layer comprising nitrocellulose, plasticizer and filler.



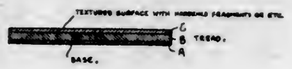
5. A reversible floor covering comprising a backing carrying a cushioning tread of wax-containing nitrocellulose on at least one face of said backing.

1,784,800. FLOOR COVERING AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Nov. 19, 1926. Serial No. 149,528. 18 Claims. (Cl. 91—70.)



1. The process of making floor covering which comprises sheeting on a web of saturated felt saturated with a waterproofing agent of the asphalt type at least one thread layer of a composition comprising nitrocellulose, plasticizer, a volatile solvent mixture, wax and a filler; and drying at a temperature above that at which wax dissolves freely in said volatile solvent mixture.

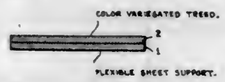
1,784,801. FLOOR COVERING AND METHOD OF MAKING SAME. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Dec. 2, 1926. Serial No. 152,310. 9 Claims. (Cl. 91—70.)



2. A non-oily waterproofing agent saturated paper support, carrying on the tread side an adherent figured coating comprising pigment, nitrocellulose and a small proportion of wax.

1,784,802. TEXTURED FLOOR COVERING AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Dec. 2, 1926. Serial No. 152,309. 11 Claims. (Cl. 91—68.)

1. As a floor covering, a flexible sheeting support carrying a sheeted nitrocellulose tread composition of non-uniformly textured surface.

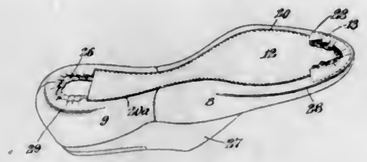


1,784,803. LIGHT-COLORED FLOOR COVERING AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Dec. 2, 1926. Serial No. 152,308. 12 Claims. (Cl. 91—68.)

1. As a floor covering a flexible wax-containing paper support carrying a nitrocellulose tread composition of textured white surface.

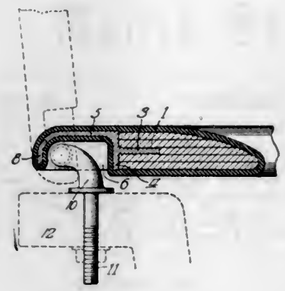
2. A process of making a floor covering comprising sheeting a light colored nitrocellulose composition upon a substantially waterproofed backing, and rolling thereinto hardened plastic fragments whereby a textured effect is obtained.

1,784,804. VARIEGATED FLOOR COVERING AND METHOD OF MAKING SAME. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Dec. 3, 1926. Serial No. 152,520. 10 Claims. (Cl. 91—70.)



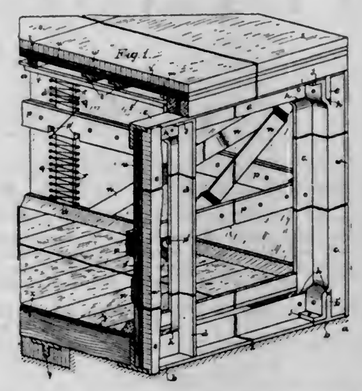
1. As a floor covering a waterproofed flexible sheeting support carrying a sheeted nitrocellulose tread composition of color-variegated surface.

1,784,805. FLOOR RUG AND PROCESS OF MAKING SAME. BORIS N. LOUGOVOY, Montclair, N. J., assignor to Ellis-Foster Company, Montclair, N. J., a Corporation of New Jersey. Filed Dec. 13, 1926. Serial No. 154,655. 21 Claims. (Cl. 91—70.)



1. A floor covering comprising a highly waxed paper support impregnated with a wax which is substantially free from dark color, such support carrying a nitrocellulose tread composition adherent thereto.

1,784,806. SHOE AND METHOD OF MAKING SAME. ABRAHAM L. FRIED, New York, N. Y. Filed Apr. 22, 1929. Serial No. 357,028. 6 Claims. (Cl. 12—142.)



1. The process of forming a shoe comprising forming the heel and toe portions of the upper and lining the same, sewing a sole member thereto throughout a portion of their length and attaching thereto a combined shank stiffener and counter member to form an upper unit, positioning said unit on a last, and then fastening unattached portions of the upper to the sole member and the combined shank stiffener and counter member.

1,784,807. TOILET SEAT. BYRON C. BOOTH, Muskegon Heights, Mich., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 11, 1927, Serial No. 232,627. Renewed Sept. 12, 1930. 8 Claims. (Cl. 4—237.)

1. The combination of a toilet seat having a cavity in the rear portion thereof closed on all sides except at the bottom of the seat, and a standard extending into said cavity and supporting said seat for pivotal movement.

1,784,808. BUILDING STRUCTURE. ALFRED LEYLAND, Taddington, near Buxton, England. Filed May 26, 1927. Serial No. 194,335. 3 Claims. (Cl. 189—1.)

1. In a metal framework for buildings, frame members adapted to be erected at an angle to each other, one of said members having an upstanding portion, the other member being partly split and bent at its end to receive said portion, and a flange on said bent end secured to said first named member.

CARNEGIE LIBRARY OF ATLANTA

Patents Nos. 1,784,809 to 1,785,724

THE OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 401—No. 3 TUESDAY, DECEMBER 16, 1930 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual index, $11.50; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,568,692, A. A. Pollock, Dynamo-electric machine, decided October 2, 1930, claim 1.

Pat. 1,626,431, J. A. Seede, Electric furnace, decided October 9, 1930, claims 4, 5, and 6.

Pat. 1,747,224, W. W. Carpenter, Telephone-exchange system, decided November 22, 1930, claims 1, 2, 3, 4, 5, and 7.

Design Pat. 71,531, W. R. Root, Bottle, decided September 27, 1930.

Decisions

Decision leaflets of the Official Gazette are sold as a separate publication—

Single numbers ..... 5 cents
Subscription per year $2.50

Drawings

Rule 38

38. When there are drawings, the description will refer to the different views by figures and to the different parts by letters or numerals (preferably the latter).

Rule 52—Extract

(f) The different views should be consecutively numbered. Letters and figures of reference must be carefully formed. They should, if possible, measure at least one-eighth of an inch in height, so that they may bear reduction to one twenty-fourth of an inch; and they may be much larger when there is sufficient room. They must be so placed in the close and complex parts of drawings as not to interfere with a thorough comprehension of the same, and therefore should rarely cross or mingle with the lines. When necessarily grouped around a certain part, they should be placed at a little distance, where there is available space, and connected by short lines with the parts to which they refer and by short broken lines when the number or letter refers to parts shown in dotted lines. They should not be placed upon shaded surfaces, and when it is difficult to avoid this, a blank space must be left in the shading where the letter occurs, so that it shall appear perfectly distinct and separate from the work. If the same part of an invention appear in more than one view of the drawing it must always be represented by the same character, and the same character must never be used to designate different parts.

It is suggested that numerals or letters be used without exponents.

Rule 72

Rule 72. After the completion of the application the Office will not return the specification for any purpose whatever. If applicants have not preserved copies of the papers which they wish to amend, the Office will furnish them on the usual terms.

The drawing may be withdrawn only for such corrections as cannot be made by the Office; but a drawing cannot be withdrawn unless a photographic copy has been filed and accepted by the Examiner as a part of the application. Permissible changes in the construction shown in any drawing may be made only by the Office and after an approved photographic copy has been filed. Sketches filed to show proposed changes in construction must be in permanent ink. (See Rule 30.) Substitute drawings will not be admitted in any case unless required by the Office.

Interference Defined

Rule 93. An interference is a proceeding instituted for the purpose of determining the question of priority of invention between two or more parties claiming substantially the same patentable invention. In order to ascertain whether any question of priority arises the Commissioner may call upon any junior applicant to state in writing the date when he conceived the invention under consideration. All statements filed in compliance with this rule will be returned to the parties filing them. In case the applicant makes no reply within the time specified, not less than ten days, the Commissioner will proceed upon the assumption that the said date is the date of the oath attached to the application. The fact that one of the parties has already obtained a patent will not prevent an interference, for, although the Commissioner has no power to cancel a patent, he may grant another patent for the same invention to a person who proves to be the prior inventor.

Condition of Applications Under Examination at Close of Business December 5, 1930

(Total number of applications awaiting action, excluding Trade-Mark Division, 109,125; Trade-Mark Division, 1,291. Oldest new case, Feb. 10, 1930; oldest amended, Feb. 9, 1930.)

Room No.	Divisions, Examiners, and Subjects of Inventions	Oldest new application awaiting office action	Oldest amended application awaiting office action	No. of applications awaiting action

DECISIONS IN PATENT AND TRADE-MARK CASES

Commissioner's Decision

EX PARTE KELVINATOR CORPORATION

Decided October 21, 1930

TRADE-MARKS—RENEWAL—ENTIRE FEE MUST BE FILED PRIOR TO EXPIRATION OF REGISTRATION.

Where a request to renew a trade-mark registration was filed within the period fixed by the statute but was accompanied by only a portion of the statutory fee, the other portion not being paid until after the expiration of the original term, *Held* that the complete request was not filed within the time fixed by the statute and therefore could not be accepted.

ON PETITION.

Mr. Lewis D. Burch for the applicant.

ROBERTSON, *Commissioner:*

This is a petition that the request for renewal, together with the fee of $10 filed September 5, 1930, be accepted as a complete request for renewal, notwithstanding the fact that the $5 balance of the fee was not paid until October 13, 1930. The term of the registration expired September 6, 1930, and it is alleged that through inadvertence a fee of $10 was sent with the request for renewal of September 5, 1930, instead of $15 as required by the amended statute.

Registrations are in force for a fixed time and expire on a definite date unless renewed (see section 12 of the Trade-Mark Act of 1905). The statute provides for the filing of requests for renewal of certificates of registration "on payment of the renewal fees required by this act" and that statute, as amended April 11, 1930, provides that the fee "on filing" an application for renewal shall be $15. A payment of only a portion of the fee prior to the expiration of the original term of registration can not be regarded as a compliance with the statute.

Where the time for taking an action is fixed by statute, including the payment of the fee, such action can not be regarded as complete unless all the parts, including the entire fee, have been filed in this Office within such period (see *Plymouth Cordage Co.* v. *Hoover & Allison Co.*, 12 T. M. Reporter 269; *Ex parte Regal Shoe Co.*, 385 O. G. 270).

The petition is denied.

U. S. Court of Customs and Patent Appeals

IN RE DUNN

No. 2,333. Decided May 28, 1930

[40 F.(2d) 767]

PATENTABILITY—METHOD OF CLEANING WELLS.

A claim for a method of cleaning wells *Held* patentable over the prior art.

LENROOT, *J.*, dissenting.

APPEAL from the Patent Office. Reversed.

Mr. Harry F. Riley and *Mr. Arthur C. Browne* for Dunn.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GRAHAM, *P. J.:*

This is an appeal from the decision of the Board of Appeals affirming the decision of the Examiner in rejecting claim 7 of appellant's application for a patent, Serial No. 109,702, filed May 17, 1926. Other claims were involved, but by allowance and elimination the only one left for our consideration is, as has been said, claim 7. This claim is as follows:

7. The method of cleaning wells comprising supplying a charge of water into detritus in the well, loosening the detritus and commingling the detritus with the water by means of air delivered through the water into the detritus from above the detritus, and propelling the water and detritus from the well by means of a following volume of air under pressure.

Appellant has invented a method of cleaning the detritus out of the bottom of an oil well, which has been shot, which he claims is different from any method heretofore practiced, and which produces new and useful results. In this process he inserts tubing into the casing of said well downward to a point where it is above and clear of the said detritus. He then injects water into the cavity containing the detritus until it rises above the end of the tubing. This being done, he then discharges compressed air into and through this tubing, into the water above the detritus. He claims that by discharging the air in this manner into the water, the detritus is stirred up, mixed with the water, and more readily forced upward around the tubing and out of the well through the surrounding casing. He claims the art heretofore has been to insert the tubing into the detritus and then inject the compressed air, and this, he claims, will not produce the same result.

Both the Examiner and the Board reject claim 7 on reference to "Richards' Compressed Air Practice—article on pages 293 and 294, entitled 'The air blast foundation sinking'—McGraw Hill Book Co., New York, 1913."

It is agreed in the briefs of both the solicitor of the Patent Office and counsel for appellant, that the portion of Richards' which is held to be a reference, is as follows:

The Air Blast in Foundation Sinking.—A contracting company in New York city is making a specialty of the use of the air blast as an aid in sinking building foundations. In this work the foundations are sunk to rock which is overlaid by varying depths of gravel or other compacted material. A recent undertaking was the construction of the foundations for a large twelve-story building where the rock was below the surface at depths ranging from 17 to 50 ft. When completed the foundation consists of a series of reinforced concrete structures, these being formed of groups of 12-in. steel pipe filled with concrete among which are distributed vertical reenforcing rods of steel.

The pipes used are in lengths of 12 or 14 ft. and in the deepest parts three or four of these are required, one above the other. Each pipe, after being properly located in a vertical position, is driven down a few feet by an air-operated pile-driving hammer, placed upon the top of it.

The pipe having been thus driven a certain distance the hammer is lifted off by a derrick, the pipe is filled with water, a compressed-air pipe is thrust down as far as it will go and also a test rod which is used to ascertain when the solid rock is reached.

On the street close to the work is located a 20-in. steam actuated air-compressor and a large receiver. The compressor is speeded up and when the receiver is filled to the highest working pressure, all the air is suddenly turned into the foundation pipe, blowing out the water, the dirt and the stones.

It will be observed that Richards teaches in this excerpt that the compressed air pipe should be

thrust down into the bottom of the hole made for a building foundation "as far as it will go." If this method were applied to an oil well containing detritus, the compressed air pipe would be sunk through the water and into the detritus as far as it could be forced. Appellant illustrates this very aptly by drawings contained in his brief, and the correctness of these drawings is not controverted by the Patent Office.

The argument is made that the language of the claim "by means of air delivered through the water into the detritus from above the detritus," might well be covered by the Richards' disclosure, for Richards draws his air from a tank in the air "above the detritus." It is manifest, from appellant's drawings and specifications, that this is not the sense in which his disclosure should be understood. He pictures and describes a process in which his air pipe is carried from the surface, down into the water, and discharges its air into the water at a point therein above the surface of the detritus. This is, plainly, his disclosure.

In our judgment, the teaching of Richards is not anticipatory of the method used by the appellant here. The appellant makes a point of the proposition that he does not permit his air pipe to enter the detritus. Richards does. There is, therefore, this essential difference in the process.

The question of whether the process suggested by appellant is operative is not involved here. His claim 7 was not rejected on that ground, but on the reference above stated. Being of the opinion that Richards did not anticipate the appellant in claim 7, it follows, therefore, that the decision of the Board of Appeals should be and is, reversed, and a patent will issue on said claim 7, as requested.

Reversed.

LENROOT, *J.*, dissents.

U. S. Court of Customs and Patent Appeals

IN RE POWELL

No. 2,347. Decided May 28, 1930

[40 F.(2d) 571]

PATENTABILITY—SPRING SHACKLES FOR AUTOMOBILES.

A claim for a spring shackle for automobiles *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Thomas L. Wilder and *Mr. J. Preston Swecker* for Powell.

Mr. T. A. Hostetler for the Commissioner of Patents.

LENROOT, *J.*:

This is an appeal from a decision of the Board of Appeals of the Patent Office, affirming the decision of the Examiner rejecting claim 2 of appellant's application. Said claim reads as follows:

2. A connecting device of the class described and including a bolt adapted to be passed through the shackle bolt opening of a perch iron, connecting links embodying substantially wide members having circular end portions, tubular members mounted on the bolt, a bolt passing through the shackle bolt opening at the end of a spring, tubular members on the last mentioned bolt, said circular members being fitted over the ends of the bolts, and substantially wide cushioning members on the tubular members and housed by the circular members.

The references cited by the Patent Office are: Lord, 1,452,693, April 24, 1923; Taylor, British, 202, January 15, 1877.

The application discloses spring shackles of the type in use in automobiles to connect the ends of the spring to the frame or to the axle of the car. Relatively wide links are used and rubber bushings serving as substantial cushioning means are employed in both eyes of each of the links around the pivot pin thus cushioning the spring relative to the frame or axle.

The Board of Appeals held that the device disclosed by the Taylor patent is similar to that shown in appellant's application except that the Taylor device has two additional elements viz.: a transverse connector extending from one link to the other in each pair of links, and circular cavities in the ends of the links closed at the outer ends, thus forming cuplike cavities instead of open-end cylindrical cavities as shown by appellant's application. It should be added that applicant shows a third element not shown by Taylor, viz., a sleeve described in the claim as "tubular members mounted on the bolt".

In its decision, the Board of Appeals said:

The brief points out these differences between Taylor's shackle and the one disclosed here and alleges important differences in results, especially in case of twisting stresses on the mechanism. On examination of the claim we are unable to see that these differences in detail are positively in the claim. The clauses of the claim directed to the links merely require "connecting links embodying substantially wide members having circular end portions" and "said circular members being fitted over the ends of the bolts." It is very clear that neither of these expressions exclude a connecter between the links nor require that the circular openings be open at both ends. A cup shaped cavity is a circular opening.

We have however considered the claim in the scope discussed in the brief but still find no patentable novelty set forth in the features involved. A careful study of the case discloses no special mention of any importance in either of these details and we are unable to find any. It is believed on the contrary that Taylor's structure is a matter not only of advantage or preference but of necessity over that shown here. It seems that the open ended links marked 16 and 22 in Figs. 4 and 1 respectively would be likely to creep off of the rubber bushings due to oscillating movement when the car was in use. There is nothing to retain them. This of course would be a dangerous condition and leads to one reason for the closed ends and connecting bolt of Taylor's shackle which prevents such possible accident.

We have further considered the question with the view of possible advantage of an open-ended cavity and unconnected links, but are unable to find any unobvious results. It is possible that unconnected links would be free for more lateral swing and thereby allow more twisting effect between frame and spring, but is this desirable?

As a mechanical feature it is believed that twisting movement of the links is objectionable and should be avoided. No unexpected result is accomplished by omitting the connecter of Taylor's shackle. It is further a matter of common knowledge that the shackles in common use are of both types some of separate links and some with connected links. No invention is found in omitting the shackle or leaving the ends of the cavities open in Taylor's device.

The matter of a sleeve on the pivot pins is independent of the other features and since it is found to be old in the similar shackle of Lord no patentable novelty is found in associating these features.

We are unable to find patentable novelty in the case and the rejection of the claim is clearly warranted. The rejection is affirmed.

All of the expert tribunals of the Patent Office concurred in rejecting the claim because of lack of patentable novelty. In such cases it is incumbent upon one appealing therefrom to make out a clear case of error to obtain a reversal. *In re Ford*, 17 C. C. P. A. —— 38 F. (2d) 525; 396 O. G. 704.

Appellant has not convinced us that the Board of Appeals erred in its conclusion, but on the contrary we are convinced, from a careful examination of the record, that it was right. We are fully in accord with the decision of the Board, above quoted, and further discussion is unnecessary.

The decision of the Board of Appeals of the Patent Office is affirmed.

Affirmed.

1,695,415. (See 1,473,976.)

1,701,911. (See 1,466,701.) 1,716,033. (See 1,473,976.)

1,720,301, 1,720,302, E. F. Suter, Hair drying, filed Oct. 21, 1930, D. C., S. D. N. Y., Doc. E 56/118, *Eugene, Ltd.*, v. *The Charles Arnoo Co., Inc.*

1,720,302. (See 1,720,301.)

1,723,729, M. Goldberg, Appliqué fabric, filed Oct. 16, 1930, D. C., S. D. N. Y., Doc. E 56/91, *M. Goldberg* (*Dormont Co.*) v. *A. Sharkey* (*Perforated Pattern Co.*)

1,728,879. (See 1,173,079.) 1,764,938. (See 1,483,976.)

1,771,166, M. E. Davis, Process for applying paints or cements to skived articles, filed Oct. 22, 1930, D. C., N. D. Ohio, E. Div., Doc. 3557, *H. E. Moyses et al.* v. *The Buxbaum Co.*

1,772,991, J. R. Fehr, Refrigerating apparatus, filed Oct. 17, 1930, D. C., W. D. N. Y., Doc. 359, *Frigidaire Corp.* v. *Fedders Mfg. Co., Inc.*

Re. 15,313, D. D. Morton, Arc welding system and operating same; 1,648,560, same, Electric-arc welding; 1,648,563, same, Electric-arc welding apparatus, filed Oct. 16, 1930, D. C., N. D. Ohio, E. Div., Doc. 3552, *Automatic Arc Welding Co.* v. *The Lincoln Electric Co.*

Re. 15,733, Kesten and Osborne, Automatic brakes for electric elevators and method of operating same, appeal filed Oct. 17, 1930, C. C. A., 2d Cir., Doc. 11146, *Otis Elevator Co.* v. *Atlantic Elevator Co., Inc.*

Re. 16,322. (See 1,405,773.)

Re. 16,589, A. K. Schaap, jr., Liquid-level gauge; 1,623,832, J. D. Durant, Indicator for fuel-supply tanks, D. C., E. D. Mich., S. Div., Doc. 2424, *The Schaap-Durant Control Corp.* v. *King-Sceley Corp.* Dismissed under Equity rule 57, Oct. 20, 1930.

Re. 17,131, O. S. Caesar, Heating apparatus for automotive vehicles, C. C. A. 8th Cir. (St. Louis), Doc. 8964, *United Motors Service, Inc.*, v. *Tropic-Aire, Inc.* Appeal dismissed Oct. 13, 1930.

Re. 17,514, McCabe and Schoenholz, Pocketbook top, filed Oct. 16, 1930, D. C., S. D. N. Y., Doc. E 56/92, *McCabe & Schoenholz, Inc.*, v. *Grand Metal Products Corp.*

Des. 82,055, A. F. Reilly, Pocket lighter, filed Oct. 18, 1930, D. C. Conn. (New Haven), Doc. E 2094, *Evans Case Co.* v. *The Savitt Co.*

Disclaimers

1,617,413.—*Louis A. Mortimer,* New York, N. Y. TELEPHONE SYSTEM. Patent dated February 15, 1927. Disclaimer filed November 28, 1930, by the assignee, *Western Electric Company, Incorporated.*

Hereby enters this disclaimer to the said claims of said Letters Patent which are in the following words, to wit:

"9. In a telephone system, a first exchange, a second exchange, a transmission line, automatic switches at said second exchange, means at said first exchange for controlling said switches over one side of the line, a source of alternating current at said first exchange, means at said first exchange for controlling said side of the line to transmit signaling impulses thereover comprising a relay, a key for applying alternating current from said source to said relay to cause it to alternately respond and release in accordance with said alternating current, a second source of battery and contacts included in said side of the line and controlled by said relay to cause the line to be alternately opened and closed and means at the second exchange in said side of the line responsive to said signaling impulses.

"10. In a telephone system, a first exchange, a second exchange, a transmission line, a subscriber's line, a signaling device thereat, automatic switches at said second exchange, means at said first exchange for controlling said switches over one side of the transmission line, a source of alternating current at said first exchange, a means for controlling said side of the line to transmit signaling impulses thereover comprising a relay, a key for applying alternating current from said source to said relay to cause it to alternately respond and release in accordance with said alternating current, a second source of battery and contacts included in said side of the line controlled by said relay to cause the line to be alternately opened and closed and means responsive to said impulses of current over said side of the line for actuating said signaling device at said subscriber's line."

1,712,855.—*Maurice A. Thorne,* South Bend, Ind. BRAKE. Patent dated May 14, 1929. Disclaimer filed December 1, 1930, by the assignee, *The Studebaker Corporation.*

By this disclaimer therefore restricts the scope or meaning of claims 1, 2, 3, 4 and 7 of the said patent to a brake structure having but a single continuous and uninterrupted flexible secondary portion of substantially greater length than the rigid primary portion of the brake.

1,744,261.—*Maurice B. Cooke,* Plainfield, N. J. PROCESS AND APPARATUS FOR FRACTIONAL DISTILLATION. Patent dated January 21, 1930. Disclaimer filed December 2, 1930, by the assignee, *The Atlantic Refining Company.*

Enters this its further disclaimer, to wit:

Petitioner disclaims from the scope of all the claims of said Letters Patent No. 1,744,261 all processes and systems of fractionation in which there is passed countercurrent to and in contact with the vapors, or in which the liquid oil cooled includes, an extraneous oil or an oil other than reflux oil as defined in the aforesaid former disclaimer.

1,752,660.—*Leon S. Brach,* East Orange, N. J. LIGHTNING ARRESTER. Patent dated April 1, 1930. Disclaimer filed November 24, 1930, by the patentee, assignee, *L. S. Brach Manufacturing Corp.*, consenting.

Hereby enters this disclaimer to the following claims, to wit:

"1. In a lightning arrester, a pair of electrodes anchored at one end and having their free ends arranged in overlapping relationship, and a circular piece of carborundum supported by and between said overlapping ends which are formed to contact with the carborundum over a certain portion of its surface and then gradually deflect from the carborundum to form auxiliary air gaps around the carborundum.

"2. In a lightning arrester, an insulator, a pair of metallic members forming electrodes carried by the insulator and extending in substantially the same plane toward each other so their ends overlap, said ends being formed to provide a grip therebetween and a piece of silicon carbide supported in said grip by and between said over-lapping ends, at least one of which arcuately encircles said carbide piece."

"6. In a lightning arrester, a pair of electrodes with means for making connection thereto, said electrodes comprising flat metallic members extending toward each other and having their free ends formed to provide a grip, and a cylindrically formed piece of carborundum supported between said formed ends in said grip and forming a high resistance between said electrodes, said ends being formed to act as auxiliary gaps for heavy discharges.

"7. In a lightning arrester, an insulator having a recess therein, a single pair of terminal studs carried by the insulator and located one at each end of the recess and extending through the top wall thereof, a current-conducting member fastened to each of said studs within the recess and extending toward each other and having their ends formed in overlapping relationship to provide a grip, and a piece of high resistance material held in said grip."

1,776,372.—*Richard Howland Ranger,* Newark, N. J. AIR-DRIVEN MOTOR CONTROL. Patent dated September 23, 1930. Disclaimer filed November 28, 1930, by the patentee, assignee, *Radio Corporation of America,* assenting.

Hereby enters this disclaimer to claim 4 in the said specification which is in the following words, to wit:

"In a motor speed regulation system, a motor and a constant period vibrating device associated therewith for controlling the speed of said motor."

Changes in Classification

Order No. 3,170, December 1, 1930, directs:

In *class 240, Illumination* (Division 30), abolish the following subclasses, with their definitions:

1	**Miscellaneous.**
2	**Combined light and structure**
3	Arena,
4	Furniture,
5	Oven,
6	Show case,
6.4	Portable, self-contained, electric.
7.1	**Vehicle lighting**
7.12	Locomotive headlight and number-plate illuminators,
7.15	Locomotive headlight and signal illuminators,
7.2	Carriage lights,
7.25	Exterior and interior illuminators,
7.3	Steps and platform illuminators,
7.35	Dome lights,
7.4	Berth lights,
7.45	Trolley-car dashboard lights,
7.5	Ship's running lights,
7.55	Bicycle lights.
7.6	Self electric generators,
	Automobile
8.1	Combined with fender,
8.11	Combined with radiator,
8.12	Combined with hub,
8.14	Combined instrument-board and trouble lights,
8.16	Instrument lights,
8.18	Trouble lights,
8.2	Side lights
8.22	Parking,
8.24	Lighted upon turning of car,
8.26	Running-board lights,
8.28	Motor-meter lights,
8.3	Tail-end lights.
10.5	**Portable, self-contained, electric lamps.**
9	**Systems.**
10	**Decorative lights.**
11	**Lanterns**
12	Barrel illuminators,
13	Candle type,
15	Dark,
16	Jack-o'-lanterns,
17	Lamp-chimney type;
17.5	Electric safety,
18	Miners' safety
19	Locks.
20	Photographic,
22	Signal
23	Color screen,
24	Rotatable,
25	Street,
26	Submarine,
27	Tubular
28	Bases,
29	Domes,
30	Globe operators'
31	Combined lifting and swinging,
32	Lifting,
33	Swinging,
34	Tubes,
35	Angle,
36	Collapsible,
37	Convertible,
38	Hand
39	Color screen,
40	Frames,
41	Projectors
44	Adjustable light or reflector,
45	Dimmers
45.2	Shutter slats,
45.4	Curtain.
45.6	External pivoted,
48	Vibratory,
48.2	Screen
48.4	Lens,
48.6	Bulb,
49	Revolving,
50	Bases,
51	Domes.
52	**Light supports**
53	Convertible,
54	Combined guard and holder,
55	Campaign torch,
57	Vehicle
58	Bicycle,
59	Body attached
60	Cap.
61	Dirigible
62	Automatic;

and establish in lieu thereof the following subclasses and definitions:

1	**Miscellaneous.**
1.1	**Daylight lamps.**
1.2	**Aviation lights.**
1.3	**Photographic lights.**

1.4 **Operating-table lights.**
2 **Combined light and structure**
2.1 Dial illuminator,
2.11 Weighing-machine illuminator,
2.12 Phonograph illuminator,
2.13 Door knob and keyhole illuminator,
2.14 Sewing-machine illuminator,
2.15 Liquid-gage illuminator,
2.16 Combined fan and lamp,
2.17 Telephone illuminator,
2.18 Inspection lamps,
2.25 Self-luminous articles,
3 Arena
3.1 Color projector,
4 Furniture
4.1 Mirrors,
5 Oven,
6 Show case,
6.4 Portable, self-contained, electric
6.41 Portable firearms,
6.42 Canes, umbrellas, and similar articles,
6.43 Clocks and watches,
6.44 Spirit-level illuminator,
6.45 Toilet-case illuminator,
6.46 Implement illuminator.
7.1 **Vehicle lighting**
7.12 Locomotive headlight and number-plate illuminators,
7.15 Locomotive headlight and signal illuminators,
7.2 Carriage lights,
7.25 Exterior and interior illuminators,
7.3 Steps and platform illuminators,
7.35 Dome lights,
7.4 Berth lights,
7.45 Trolley-car dashboard lights,
7.5 Ship's running lights,
7.55 Bicycle lights
7.6 Self electric generators,
7.7 Aircraft mounted,
Automobile
8.1 Combined with fender
8.11 Combined with radiator,
8.12 Combined with hub,
8.14 Combined instrument-board and trouble lights,
8.16 Instrument lights,
8.18 Trouble lights,
8.2 Side lights
8.22 Parking,
8.24 Lighted upon turning of car,
8.25 Light shifted upon turning of car,
8.26 Running-board lights,
8.28 Motor-meter lights,
8.3 Tail-end lights,
8.4 Light indicators for headlights,
8.41 Light indicators for tail lights.
9 **Systems.**
10 **Decorative lights**
10.1 Rotative.
10.5 **Portable, self-contained, electric lamps**
10.6 **Battery**
10.61 Battery-supported lamp,
10.62 Imitation-firearm type,
10.63 Hand-lantern type,
10.64 Imitation-candle type,
10.65 Flat casing,
10.66 Tubular casing,
10.67 Angular head,
10.68 Direct battery contact,
10.69 Focusing.
11 **Lanterns**
11.1 Acetylene,
11.2 Electric
11.3 Safety,
11.4 Vapor or gas tube,
12 Barrel illuminators,
13 Candle type,
15 Dark,
16 Jack-o'lanterns,
17 Lamp-chimney type,
18 Miners' safety
19 Locks,
20 Photographic,
22 Signal
23 Color screen,
24 Rotatable,
25 Street,
26 Submarine,
27 Tubular
28 Bases,
29 Domes,
30 Globe operators
31 Combined lifting and swinging,
32 Lifting,
33 Swinging,
34 Tubes,
35 Angle,
36 **Collapsible,**
37 Convertible
37.1 Automatic light substitution,

Lanterns—
38 Hand
39 Color screen,
40 Frames,
41 Projectors
41.1 Indirect lighting,
41.15 Surgical or dental spotlights,
41.2 Combined with lateral beam projector,
41.25 Reflector and multiple filaments,
41.3 Reflector and lens,
41.35 Reflectors
41.36 Corrugated, faceted, or fluted,
41.37 Varied focus, axis, or vertex,
41.38 Catadioptric,
41.4 Anti-glare lenses,
41.5 Combined closure and reflector fasteners,
41.55 Casing closures,
41.6 Tiltable or rotatable reflector and bulb unit
41.61 Electromagnetic,
41.62 Pneumatic,
44 Adjustable light or reflector,
44.1 Adjustable reflector,
44.2 Adjustable light source
44.25 Electromagnetic,
44.26 With sighting device,
44.27 Combined with switch,
45 Dimmers
45.2 Shutter slats,
45.4 Curtain,
45.6 External pivoted,
47 Ventilating and cooling,
48 Vibratory,
48.2 Screen
48.4 Lens,
48.6 Bulb,
49 Revolving,
50 Bases,
51 Domes.
52 **Light supports**
52.1 Quick attachable,
52.2 Suction cup,
52.3 Handles and bails,
52.4 Imitation candles.
52.5 Flash-light supports,
52.6 Vase attached,
53 Convertible,
54 Combined guard and holder,
55 Campaign torch,
57 Vehicle
57.1 Hand lantern holders,
58 Bicycle,
59 Body attached
60 Cap,
61 Dirigible
61.1 Marine and aircraft searchlights,
Head lamps
61.2 Manually and automatically operated
61.3 Gear actuator,
61.4 Flexible actuator,
61.5 Link and lever actuator,
61.6 Manually rotatable and tiltable,
61.7 Manually rotatable,
61.8 Manually tiltable,
61.9 Electromagnetically operated,
61.10 Fluid-pressure operated,
61.11 Spot lamps
61.12 Directly actuated,
61.13 Intermediate operator,
62 Automatic
62.1 Locomotive,
62.2 Operated by centrifugal force,
62.3 Fluid pressure,
62.4 Electromagnetic,
62.5 Steering-post control
62.51 Gear,
62.52 Link and lever
62.53 Pin and slot,
62.54 Telescopic,
62.6 Stub-axle control
62.61 Gear,
62.62 Link and lever
62.63 Pin and slot,
62.64 Telescopic
62.65 Pin and slot,
62.7 Tie-rod control
62.71 Gear,
62.72 Link and lever
62.73 Pin and slot,
62.74 Telescopic
62.75 Pin and slot.

In *class 240, Illumination* (Division 30), establish the following subclass and definition, the patents contained in this subclass having been taken from class 240, subclass 106, **Refractors**:

Refractors
106.1 Lenses.

(Note.—The definitions for these subclasses will be published in Classification Bulletin No. 62.)

TRADE-MARKS

OFFICIAL GAZETTE, DECEMBER 16, 1930

[VOL. 401. No. 3]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 306,598. DISPERSIONS PROCESS, INC., New York, N. Y. Filed Oct. 10, 1930.

DISPERSITE

For Rubber Dispersed in a Water Medium.
Claims use since Sept. 11, 1930.

Ser. No. 306,656. THE MIDLAND COAL CORPORATION, Cincinnati, Ohio. Filed Oct. 11, 1930.

Kroll-Litz

For Coal.
Claims use since July 29, 1929.

CLASS 2

Receptacles

Ser. No. 304,313. M. B. CLAFF & SONS, INC., Randolph, Mass. Filed Aug. 7, 1930.

AUTOMATIC PROCESS
CLAFFBOX
M. B. CLAFF & SONS

The applicant hereby disclaims all words shown on the drawing except the applicant's corporate name.
For Paper Boxes.
Claims use since Dec. 1, 1929

Ser. No. 307,387. CURTIS MANUFACTURING COMPANY, doing business as Curtis Pneumatic Machinery Company and Curtis Saw Company, Wellston Station, Mo. Filed Oct. 31, 1930.

CURTIS
ST. LOUIS

In the drawing the body of the oval is lined for red and the cross bars for blue. Applicant is the owner of registration No. 105,389, of July 20, 1915, for the words "Curtis St. Louis," per se.
For Tanks for Compressed Air.
Claims use since 1920.

Ser. No. 307,541. UNION BAG AND PAPER CORPORATION, New York, N. Y. Filed Nov. 4, 1930.

UNION
LONG HORN

For Paper Bags.
Claims use since Oct. 23, 1930.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 304,031. APEX PRODUCTS CORPORATION, Chicago, Ill. Filed July 31, 1930.

CLOTH O' GOLD

For Chemically-Treated Polishing Cloth for Metal and Varnished Surfaces.
Claims use since July 22, 1930.

Ser. No. 306,783. NAUHEIM PHARMACY, INC., New York, N. Y. Filed Oct. 15, 1930.

The exclusive right to the words "Savon pour le Bain, New York, Paris" is disclaimed except in association shown.

For Soaps.

Claims use since Sept. 1, 1930.

Ser. No. 306,829. NORTON COMPANY, Worcester, Mass. Filed Oct. 16, 1930.

Applicant is the owner of prior registrations No. 196,641 and No. 200,267 for the word "India" Exclusive use of the words "Oil Stones" and "Sharp and Quick" is not claimed apart from the mark shown on the drawing.

For Oilstones, Hones, Whetstones, Scythe Stones, Rubbing Bricks, Abrasive Files, Points and Slips, Oilstone Wheels, and Abrasive and Sharpening Stones.

Claims use since Feb. 15, 1809.

Ser. No. 306,863. HUNTINGTON LABORATORIES, INC., Huntington, Ind. Filed Oct. 17, 1930.

Trazo-San

For Cleaning Compound Especially Adapted for Terrazzo, Tile, and Marble Floors.

Claims use since May 1, 1930.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 297,207. FERNANDO A. RUBIÓ and RAÚL ROVIRALTA, doing business as Laboratories Andromaco, Barcelona, Spain. Filed Mar. 12, 1930.

For Cod-Liver Oil, General Tonics, Laxative Medicines; Medicines Indicated for Diseases of the Respiratory Organs, Rheumatism, and the Nervous System; Opotherapic Medicines and Serum.

Claims use since 1925.

Ser. No. 302,819. FRANCOIS FUES, doing business as Dr. Francois Fues Pharmaceutical Corp., Bloomfield and Newark, assignor to Dr. Francois Fues Pharmaceutical Corp., Newark, N. J., a Corporation of New Jersey. Filed June 25, 1930.

The representation of the female figure forming a feature of the mark is fanciful. The facsimile signature forming a feature of the mark is that of the applicant. The words "Marque Depose" are disclaimed apart from the mark as shown on the drawing. The translation of the words "Reusedum Mirakulosum" which form a feature of the mark is "without limit miraculous." The words "Reusedum Mirakulosum" are disclaimed apart from the mark.

For Cold Cream and Face Powder.

Claims use since Dec. 4, 1906.

Ser. No. 303,454. ALFRED TINALLY, San Antonio, Tex. Filed July 12, 1930.

For Paste, a Lubricant, and a Preservative for All Metals, Wood, and Concrete as Proof Against Acids, Alkali, Corrosion, Rust, Teredos, White Ants, Electrolysis, Oxidation, Chemicals, Heat, Cold, Steam, Gas, or Sulphur Fumes, Brine, or Other Destructive Agencies.

Claims use since Jan. 1, 1926.

Ser. No. 303,680. APEX PRODUCTS CORPORATION, Chicago, Ill. Filed July 21, 1930.

For Insecticide.

Claims use since June 1, 1930.

Ser. No. 304,499. E. I. DU PONT DE NEMOURS AND COMPANY, Wilmington, Del. Filed Aug. 12, 1930. Under section 5b of the act of 1905, as amended in 1920.

Applicant is the owner of registrations Nos. 57,419 and 57,420 effected on the ground of actual and exclusive use.

For Chromic Acid, Arsenic Acid, Formic Acid, Calcium Arsenate, Manganese Arsenate, Lead Arsenate, Cadmium Chemicals, Zinc Chemicals, Lead Chemicals, Insecticides and Fungicides Such as the Above-Mentioned Arsenicals, and in Addition Spray Products, Bordeaux Mixtures, Lime Sulfur, Wettable Sulfur, Oil Emulsions, Summer-Fruit Sprays, Casein Lime Preparations Used in Horticultural Sprays, Depilatories, Soldering Fluxes, Tinning Fluxes, Tin Chloride, and Titanium Oxide Filaments. Filed Feb. 26, 1930. Serial No. 431,622. Original No. 1,693,713, dated Dec. 4, 1928, Serial No. 247,260, filed Jan. 16, 1928. 20 Claims. (Cl. 260—168.)

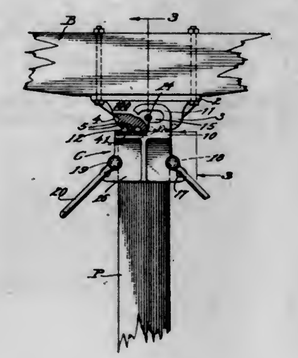
1. A method of purifying impure anthracene, which comprises subjecting it to the selective solvent action of a solvent containing at least one liquid compound containing the furane nucleus.

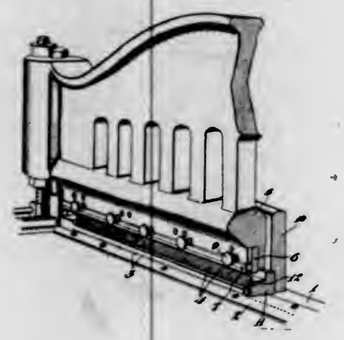
17. In methods of purifying anthracene substances whereby a cake is obtained containing a furfural, the step which comprises subjecting said cake to steam distillation.



17,903. PROCESS OF MAKING GARMENTS FOR WOMEN AND CHILDREN. MARY D. NEILSON, Minneapolis, Minn. Filed July 24, 1930. Serial No. 470,504. Original application filed June 22, 1920, Serial No. 390,731. Renewed Dec. 5, 1927. Original No. 1,680,267, dated Aug. 7, 1928. 4 Claims. (Cl. 2—28.)

1. The process of making undergarments which consists in providing a front part and forming therein a division starting at a point in the longitudinal center line of said front part adjacent the front of the crotch, providing a back part having excess length of material at its central portion which along its center line from the waistline to the bottom is substantially double in length the distance from said starting point along the center line of the front part to the waist line of the garment, forming said back part with a central bottom edge portion double the length of each edge of said division, uniting said back part along its side edges to the side edges of said front part, and attaching said central bottom edge to the edges of said

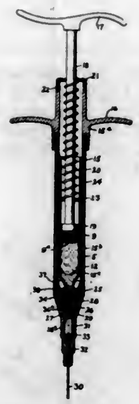
division with the center of said bottom edge at said division starting point, whereby legs are formed with crotch fullness extending directly back from the center of the front of the garment.



17,904. BEARING FOR PUMP-OPERATING MEMBERS. JAMES P. RATIGAN, Los Angeles, Calif. Filed Jan. 18, 1930. Serial No. 421,821. Original No. 1,657,178, dated Jan. 24, 1928, Serial No. 106,461, filed May 3, 1926. 10 Claims. (Cl. 308—21.)

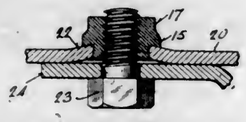
1. A Samson post for deep well pumps having on its top end a plane uninterrupted top load surface, and a

walking beam having a rocker portion presenting a longitudinally curved, smooth rolling tread face meeting the said surface in broad, transverse rolling-line contact; whereby to eliminate point contact of the face and the surface under load and to obtain long wear life of the meeting faces and side checks limiting sideplay of the rocker.



17,905. METHOD OF LUBRICATING PERFORATOR PRESSES. JOSEPH T. WRIGHT, Cincinnati, Ohio, assignor to The J. T. Wright Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 29, 1930. Serial No. 492,004. Original No. 1,734,024, dated Oct. 29, 1929, Serial No. 213,665, filed Aug. 17, 1927. 2 Claims. (Cl. 164—90.)

1. In a machine of the class described, a reciprocating cross head, one or more perforator pins dependingly sustained from said cross head, a stationary stripper bar beneath the cross head having apertures therethrough for guiding the perforator pins, and a lubricant distributing pad mounted on said stripper above the pin guiding apertures and wiping the shank portion of the pins for lubricating the pins in their reciprocating action at a point above the cutting ends of the pins.

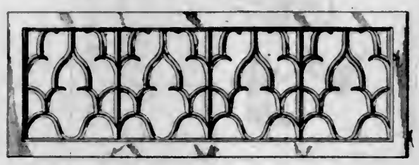


17,906. HYPODERMIC SYRINGE. ARTHUR E. SMITH, Los Angeles, Calif. Filed Feb. 12, 1927. Serial No. 167,853. Original application filed May 18, 1925, Serial No. 31,029. Renewed Sept. 23, 1926. Original No. 1,607,271, dated Nov. 16, 1926. 28 Claims. (Cl. 128—218.)

10. A syringe adapted to receive an ampule and having means at its discharge end to make fluid tight connection directly with the forward end of the body of an ampule, a plunger adapted to operate in said ampule, and means

on the interior of the syringe co-acting with said ampule and adapted to hold the ampule in place in the syringe independently of the thrust of the plunger.

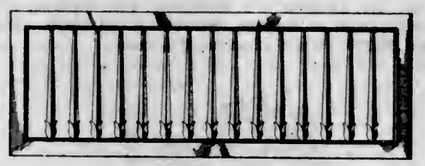
17,907. ATTACHING TAPPED NUTS TO METAL PLATES. BIRGER TORVALD ANDREN, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Apr. 2, 1930. Serial No. 441,156. Original No. 1,705,463, dated Mar. 12, 1929, Serial No. 205,963, filed July 15, 1927. 20 Claims. (Cl. 29—148.)



1. The method of securing tapped nuts to metal plates, which comprises the operations of providing a perforation in the plate and displacing the surrounding metal to form an embossment upon one side of the plate and a concavity upon the other, forming a nut with a shank at one side and a dished shoulder at the base of the shank to receive the said embossment, inserting the shank of the nut through the perforation in the plate with the dish of the shoulder engaging the said embossment, and expanding the metal of the shank into engagement with the wall of the perforation, to secure the nut in position, without filling the concavity.

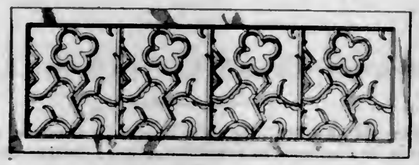
CARNEGIE LIBRARY OF ATLANTA

DESIGNS



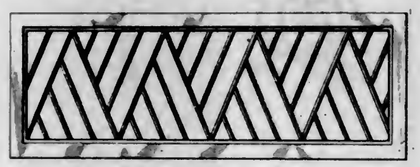
DECEMBER 16, 1930

82,778. GRILLE. JOHN ARCHIBALD ARMSTRONG, Chicago, Ill., assignor to The Herman Nelson Corporation, Moline, Ill., a Corporation of Illinois. Filed Apr. 21, 1930. Serial No. 35,328. Term of patent 14 years.



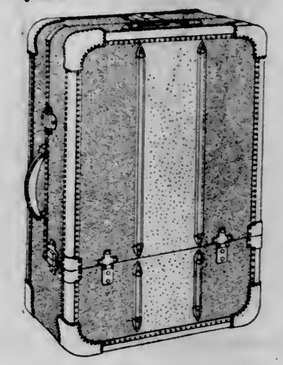
The ornamental design for a grille, as shown and described.

82,779. GRILLE. JOHN ARCHIBALD ARMSTRONG, Chicago, Ill., assignor to The Herman Nelson Corporation, Moline, Ill., a Corporation of Illinois. Filed Apr. 21, 1930. Serial No. 35,330. Term of patent 14 years.

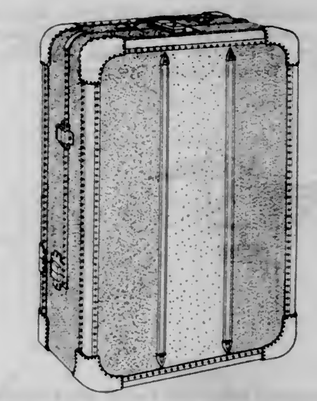


The ornamental design for a grille, as shown and described.

82,780. GRILLE. JOHN ARCHIBALD ARMSTRONG, Chicago, Ill., assignor to The Herman Nelson Corporation, Moline, Ill., a Corporation of Illinois. Filed Apr. 21, 1930. Serial No. 35,331. Term of patent 14 years.

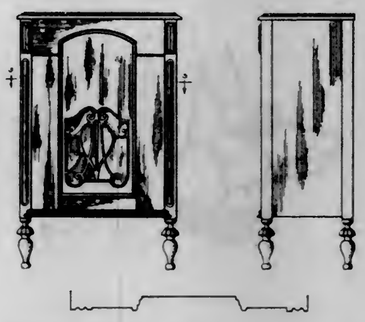


The ornamental design for a grille, as shown and described.

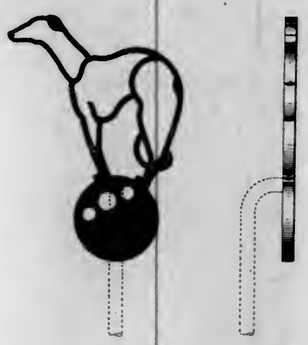


82,781. GRILLE. JOHN ARCHIBALD ARMSTRONG, Chicago, Ill., assignor to The Herman Nelson Corporation, Moline, Ill., a Corporation of Illinois. Filed Apr. 21, 1930. Serial No. 35,332. Term of patent 14 years.

The ornamental design for a grille, as shown and described.

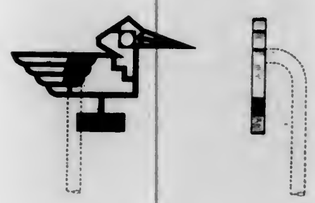


82,782. TRAVELING CASE. SAUL APTER, Cincinnati, Ohio. Filed July 10, 1930. Serial No. 36,321. Term of patent 7 years.



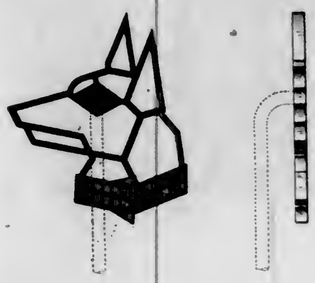
The ornamental design for a traveling case, as shown.

82,783. RADIOCABINET. HANS BERG, Grand Rapids, Mich. Filed Jan. 15, 1930. Serial No. 34,137. Term of patent 3½ years.



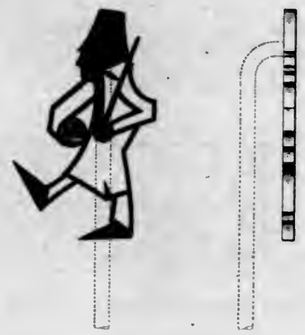
The ornamental design for a radio cabinet, substantially as shown.

82,784. SCARFPIN. CHARLES SEBASTIAN BICHELE, Chicago, Ill., assignor to J. Milhening, Inc., Chicago, Ill., a Corporation of Illinois. Filed Sept. 22, 1930. Serial No. 37,045. Term of patent 3½ years.



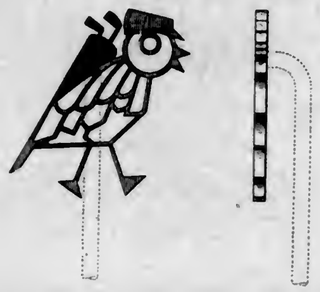
The ornamental design for a scarf pin as shown.

82,785. SCARFPIN. CHARLES SEBASTIAN BICHELE, Chicago, Ill., assignor to J. Milhening, Inc., Chicago, Ill., a Corporation of Illinois. Filed Sept. 22, 1930. Serial No. 37,046. Term of patent 3½ years.



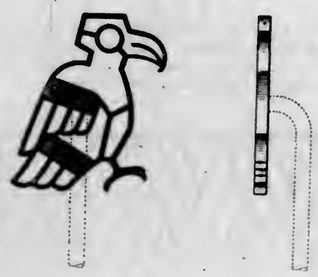
The ornamental design for a scarf pin as shown.

82,786. SCARFPIN. CHARLES SEBASTIAN BICHELE, Chicago, Ill., assignor to J. Milhening, Inc., Chicago, Ill., a Corporation of Illinois. Filed Sept. 22, 1930. Serial No. 37,047. Term of patent 3½ years.



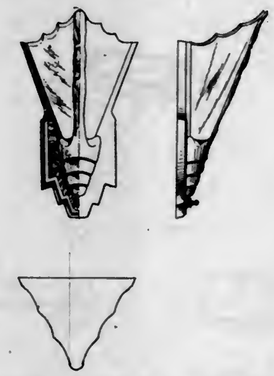
The ornamental design for a scarf pin as shown.

82,787. SCARFPIN. CHARLES SEBASTIAN BICHELE, Chicago, Ill., assignor to J. Milhening, Inc., Chicago, Ill., a Corporation of Illinois. Filed Sept. 22, 1930. Serial No. 37,048. Term of patent 3½ years.



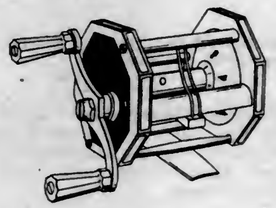
The ornamental design for a scarf pin as shown.

82,788. SCARFPIN. CHARLES SEBASTIAN BICHELE, Chicago, Ill., assignor to J. Milhening, Inc., Chicago, Ill., a Corporation of Illinois. Filed Sept. 22, 1930. Serial No. 37,049. Term of patent 3½ years.



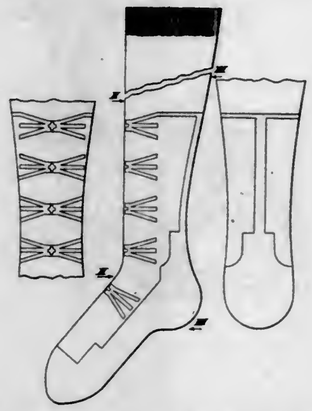
The ornamental design for a scarf pin as shown.

82,789. SCARFPIN. CHARLES SEBASTIAN BICHELE, Chicago, Ill., assignor to J. Milhening, Inc., Chicago, Ill., a Corporation of Illinois. Filed Sept. 22, 1930. Serial No. 37,050. Term of patent 3½ years.



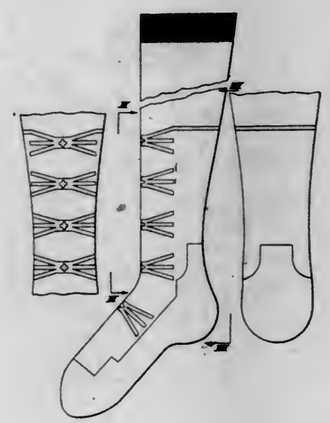
The ornamental design for a scarf pin as shown.

82,790. LIGHTING-FIXTURE BRACKET OR ARTICLE OF SIMILAR NATURE. JULIUS J. BLUMENTHAL, New York, N. Y., assignor to Lighting Appliance Company, Inc., New York, N. Y. Filed Aug. 8, 1930. Serial No. 36,605. Term of patent 3½ years.



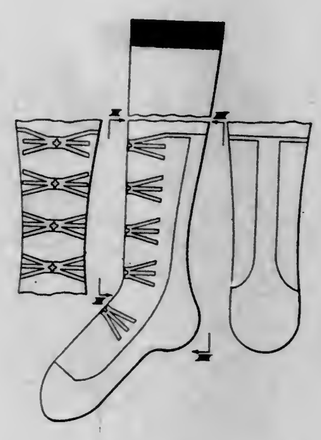
The ornamental design for a lighting fixture bracket, or article of similar nature, as shown and described.

82,791. FISHING REEL. HARRY A. BOKELUND, Kalamazoo, Mich., assignor to Shakespeare Company, Kalamazoo, Mich. Filed Oct. 20, 1930. Serial No. 37,328. Term of patent 14 years.



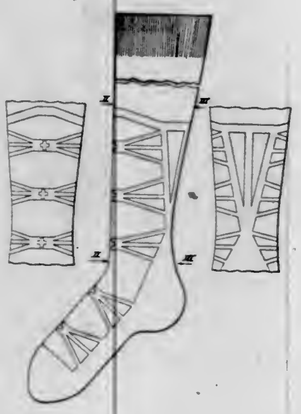
The ornamental design for a fishing reel, as shown and described.

82,792. STOCKING. WALTER D. BUTZ, Norristown, Pa. Filed Dec. 4, 1929. Serial No. 33,639. Term of patent 14 years.



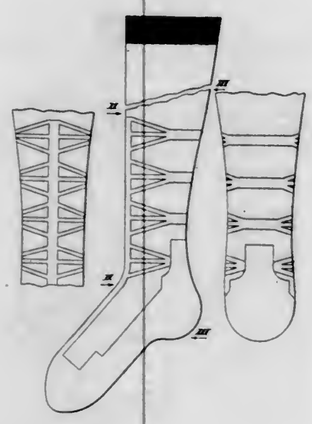
The ornamental design for a stocking, as shown.

82,793. STOCKING. WALTER D. BUTZ, Norristown, Pa. Filed Dec. 4, 1929. Serial No. 33,640. Term of patent 14 years.



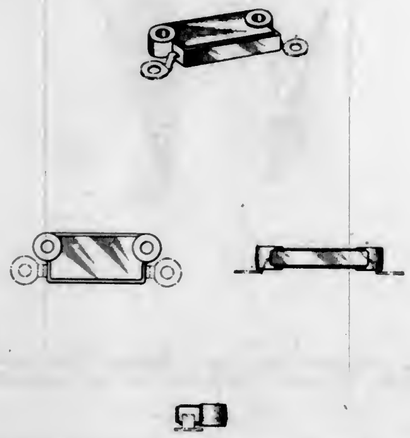
The ornamental design for a stocking, as shown.

82,794. STOCKING. WALTER D. BUTZ, Norristown, Pa. Filed Dec. 4, 1929. Serial No. 33,641. Term of patent 14 years.



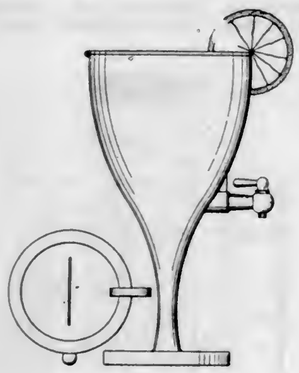
The ornamental design for a stocking, as shown.

82,795. STOCKING. WALTER D. BUTZ, Norristown, Pa. Filed Dec. 4, 1929. Serial No. 33,643. Term of patent 14 years.



The ornamental design for a stocking, as shown.

82,796. STOCKING. WALTER D. BUTZ, Norristown, Pa. Filed Dec. 4, 1929. Serial No. 33,642. Term of patent 14 years.

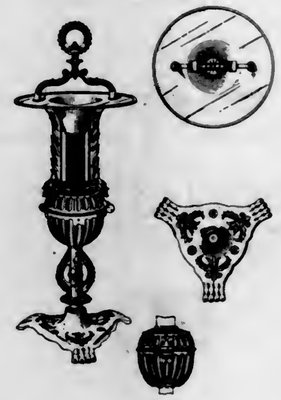


The ornamental design for a stocking, as shown.

82,797. CONDENSER CASING. SAMUEL I. COLE, Brooklyn, N. Y. Filed Dec. 19, 1929. Serial No. 33,850. Term of patent 7 years.

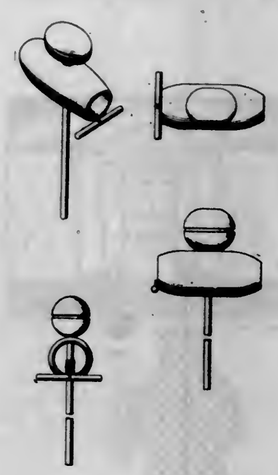
The ornamental design for a condenser casing substantially as shown and described.

82,798. BEVERAGE DISPENSER. HARRY E. CROSBY, Huntington Park, Calif., assignor to California Crushed Fruit Corporation, Los Angeles, Calif., a Corporation of Delaware. Filed June 20, 1930. Serial No. 36,113. Term of patent 7 years.



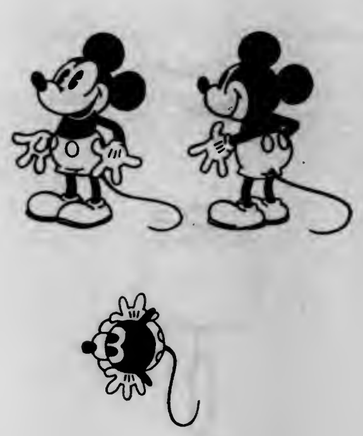
The ornamental design for a beverage dispenser, as shown.

82,799. ASH TRAY. ALICE CULIN, New York, N. N. Filed Sept. 8, 1930. Serial No. 36,894. Term of patent 7 years.



The ornamental design for an ash tray, as shown.

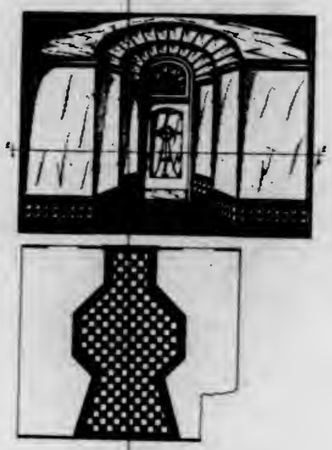
82,800. SMOKER'S STAND. HUBERT DALTON, Stamford, Conn. Filed Aug. 12, 1930. Serial No. 36,638. Term of patent 14 years.



The ornamental design for a smoker's stand, as shown.

82,801. TOY. NICHOLAS DEAKIDES, Athens, Ga. Filed Sept. 18, 1930. Serial No. 37,014. Term of patent 3½ years.

The ornamental design for a toy, as shown.

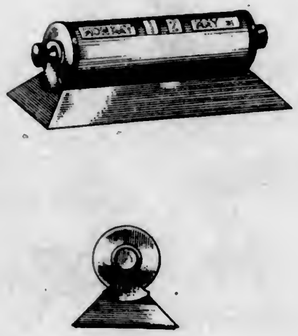


82,802. TOY OR SIMILAR ARTICLE. WALTER E. DISNEY, Los Angeles, Calif. Filed Oct. 30, 1929. Serial No. 33,219. Term of patent 14 years.

The ornamental design for a toy or similar article substantially as shown.

82,803. [WITHDRAWN.]

82,804. STORE FRONT. ALBERT I. ELIAS, Long Beach, N. Y., assignor to Wise Shoes, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 15, 1929. Serial No. 32,414. Term of patent 3½ years.

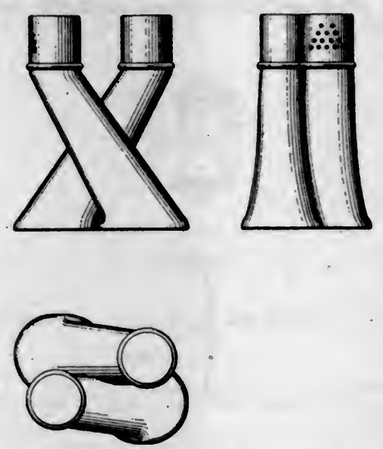


The ornamental design for a store front as shown and described.

82,805. LATCH. WILLIAM D. FERRIS, Sterling, Ill., assignor to Frantz Manufacturing Co., Sterling, Ill., a Corporation of Illinois. Filed July 25, 1930. Serial No. 36,478. Term of patent 14 years.

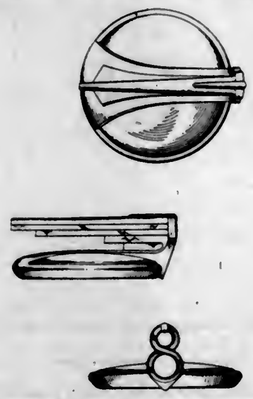
The ornamental design for a latch, as shown and described.

82,806. PERPETUAL CALENDAR. HOWARD L. FISCHER, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Mar. 22, 1930. Serial No. 34,998. Term of patent 14 years.



The ornamental design for a perpetual calendar as shown.

82,807. COMPASS OR SIMILAR ARTICLE. JOHN H. FISCHER, New York, N. Y., assignor to Eagle Pencil Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 12, 1929. Serial No. 30,446. Term of patent 7 years.



The ornamental design for a compass or similar article, substantially as shown and described.

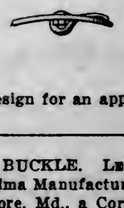
82,808. CONDIMENT HOLDER. WILBUR A. FISHER, Temple, Tex. Filed July 22, 1930. Serial No. 36,441. Term of patent 14 years.

The ornamental design for a condiment holder, as shown.

82,809. RADIATOR CAP. KINGSTON FORBES, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 28, 1930. Serial No. 35,824. Term of patent 14 years.

The ornamental design for a radiator cap, as shown.

82,810. APPAREL BUCKLE. LEON FRANK, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,922. Term of patent 3½ years.



The ornamental design for an apparel buckle, as shown.

82,811. APPAREL BUCKLE. LEON FRANK, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,923. Term of patent 3½ years.

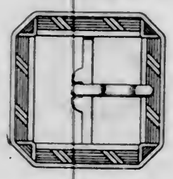
The ornamental design for an apparel buckle, as shown.

82,812. APPAREL BUCKLE. LEON FRANK, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,924. Term of patent 3½ years.

The ornamental design for an apparel buckle, as shown.

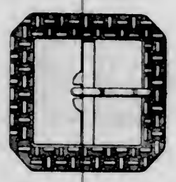
82,813. APPAREL BUCKLE. LEON FRANK, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,925. Term of patent 3½ years.

The ornamental design for an apparel buckle, as shown.



82,814. APPAREL BUCKLE. LEON FRANK, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,928. Term of patent 3½ years.

The ornamental design for an apparel buckle, as shown.



82,815. APPAREL BUCKLE. LEON FRANK, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,929. Term of patent 3½ years.

The ornamental design for an apparel buckle, as shown.

82,816. APPAREL BUCKLE. LEON FRANK, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,930. Term of patent 3½ years.

The ornamental design for an apparel buckle, as shown.

82,817. APPAREL BUCKLE. LEON FRANK, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,931. Term of patent 3½ years.

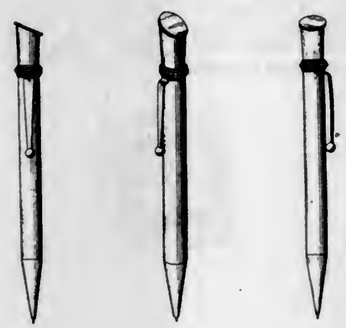
The ornamental design for an apparel buckle, as shown.

82,818. APPAREL BUCKLE. LEON FRANK, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,932. Term of patent 3½ years.

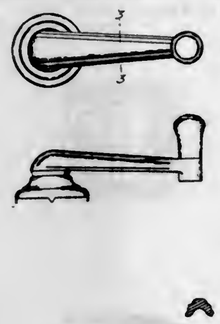
The ornamental design for an apparel buckle, as shown.

82,819. APPAREL BUCKLE. LEON FRANK, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,933. Term of patent 3½ years.

The ornamental design for an apparel buckle, as shown.

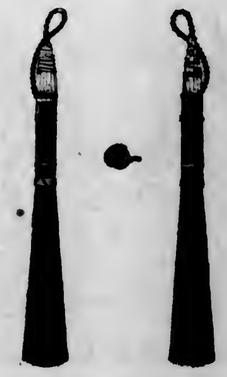


82,820. APPAREL BUCKLE. LEON FRANK, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,934. Term of patent 3½ years.



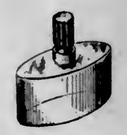
The ornamental design for an apparel buckle, as shown.

82,821. PENCIL. FRANK FUREDY, Penn-Wynne, Pa. Filed Sept. 17, 1930. Serial No. 36,991. Term of patent 14 years.



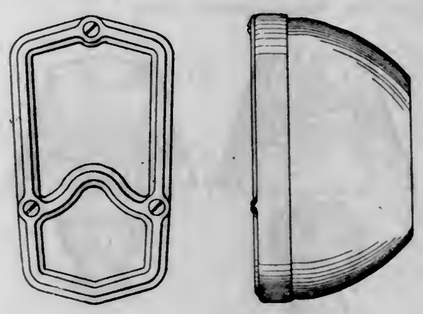
The ornamental design for a pencil, as shown and described.

82,822. MOTOR-VEHICLE WINDOW-REGULATOR HANDLE. GEORGE GRAFF, Toledo, Ohio, assignor to the Dura Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 28, 1930. Serial No. 35,422. Term of patent 14 years.



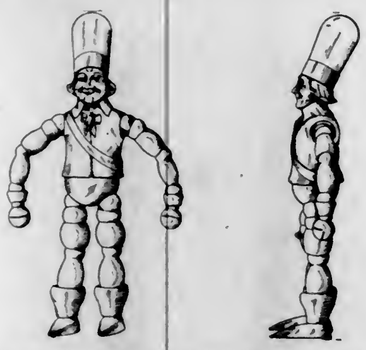
The ornamental design for a motor vehicle window regulator handle substantially as shown.

82,823. HEARTH BROOM. GUSTAVUS A. HANCOCK, Oak Lane, Pa. Filed Sept. 26, 1929. Serial No. 32,875. Term of patent 3½ years.



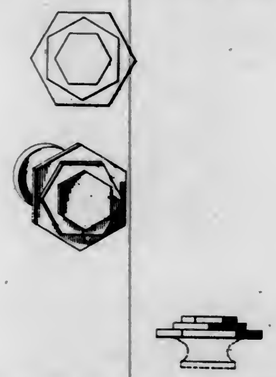
The ornamental design for a hearth broom as shown and described.

82,824. BOTTLE OR SIMILAR ARTICLE. WILLIAM W. HOBÉ, New York, N. Y. Filed Oct. 29, 1929. Serial No. 33,205. Term of patent 3½ years.



The ornamental design for a bottle or similar article substantially as showu.

82,825. COMBINED TAIL AND STOP LIGHT FOR MOTOR VEHICLES. ROY W. JOHNSON, Columbus, Ohio, assignor to The Checker Cab Manufacturing Company, Kalamazoo, Mich., a Corporation of New Jersey. Filed Sept. 12, 1930. Serial No. 36,952. Term of patent 3½ years.



The ornamental design for a combined tail and stop light for motor vehicles, as shown.

82,826. ADVERTISING DOLL. JOSEPH L. KALLUS, Brooklyn, N. Y. Filed Oct. 7, 1930. Serial No. 37,178. Term of patent 14 years.

The ornamental design for an advertising doll, as shown and described.

82,827. KNOB. HENRY J. KASCH, Dayton, Ohio. Filed Aug. 12, 1929. Serial No. 32,390. Term of patent 14 years.

The ornamental design for a knob substantially as shown and described.

82,828. TABLE LAMP. SAMUEL J. KAZ, Chicago, Ill., assignor to Mohawk Products Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 30, 1930. Serial No. 37,096. Term of patent 7 years.

The ornamental design for a table lamp substantially as shown and described.

82,829. APPAREL BUCKLE. ALLEN H. KERNGOOD, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,935. Term of patent 3½ years.

The ornamental design for an apparel buckle, as shown.

82,830. APPAREL BUCKLE. ALLEN H. KERNGOOD, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,936. Term of patent 3½ years.

The ornamental design for an apparal buckle, as shown.

82,831. APPAREL BUCKLE. ALLEN H. KERNGOOD, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,937. Term of patent 3½ year.

The ornamental design for an apparel buckle, as shown.

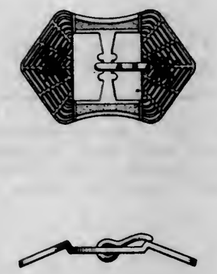
82,832. APPAREL BUCKLE. ALLEN H. KERNGOOD, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,938. Term of patent 3½ years.

The ornamental design for an apparel buckle, as shown.

82,833. APPAREL BUCKLE. ALLEN H. KERNGOOD, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,939. Term of patent 3½ years.

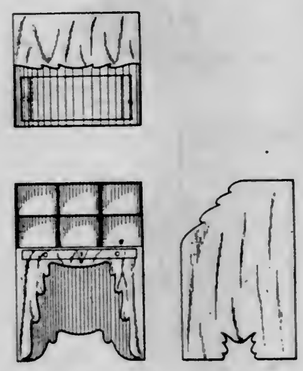
The ornamental design for an apparel buckle, as shown.

82,834. APPAREL BUCKLE. ALLEN H. KERNGOOD, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,940. Term of patent 3½ years.



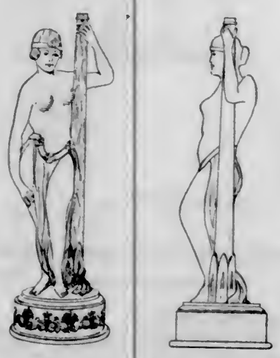
The ornamental design for an apparel buckle, as shown.

82,835. APPAREL BUCKLE. ALLEN H. KERNGOOD, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,941. Term of patent 3½ years.



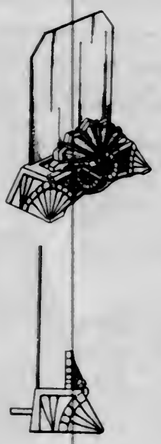
The ornamental design for an apparel buckle, as shown.

82,836. APPAREL BUCKLE. ALLEN H. KERNGOOD, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,942. Term of patent 3½ years.



The ornamental design for an apparel buckle, as shown.

82,837. TOY DESK OR SIMILAR ARTICLE. JULIUS KIVY, Brooklyn, N. Y. Filed July 31, 1930. Serial No. No. 36,522. Term of patent 3½ years.



The ornamental design for a toy desk or similar article, as shown.

82,838. LAMP BASE OR ARTICLE OF ANALOGOUS NATURE. MICHAEL KIWAD, New York, N. Y., assignor to La Belle Specialty Co., Inc., a Corporation of New York. Filed Oct. 16, 1930. Serial No. 37,271. Term of patent 3½ years.

The ornamental design for a lamp base or article of analogous nature substantially as shown.

82,839. TABLE LAMP. MORRIS KORNBLUM, Brooklyn, N. Y., assignor to Metal Lamp Corporation, Brooklyn, N. Y., a Corporation of New York. Filed May 12, 1930. Serial No. 35,609. Term of patent 3½ years.

The ornamental design for a table lamp, as shown.

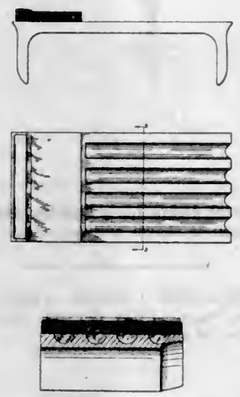
82,840. COAT. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 27, 1930. Serial No. 36,807. Term of patent 3½ years.

The ornamental design for a coat substantially as shown and described.

82,841. DRESS. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 27, 1930. Serial No. 36,808. Term of patent 3½ years.

The ornamental design for a dress substantially as shown and described.

82,842. PICTURE FRAME. SALVATOR MAGGIO, Pittsburgh, Pa. Filed July 31, 1930. Serial No. 36,527. Term of patent 14 years.



The ornamental design for a picture frame, as shown.

82,843. DOLL. LOTTIE LAURIE MCCALL, Biloxi, Miss. Filed Oct. 4, 1930. Serial No. 37,141. Term of patent 14 years.

The ornamental design for a doll, substantially as shown.

82,844. COMBINED TELEPHONE PAD AND PENCIL HOLDER. LEO A. MELTZER, Seattle, Wash. Filed Aug. 6, 1930. Serial No. 36,567. Term of patent 14 years.

The ornamental design for a combined telephone pad and pencil holder, as shown.

82,845. LADY'S NECKPIECE. FLOY C. MERRILIES, Chicago, Ill. Filed Sept. 24, 1930. Serial No. 37,066. Term of patent 14 years.

The ornamental design for a lady's neckpiece as shown and described.

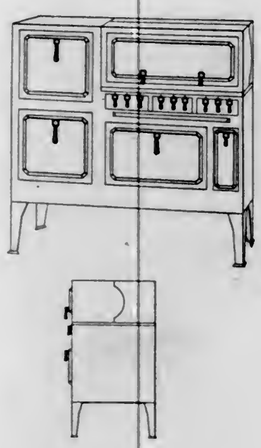
82,846. KEY CASE. JOSEPH A. PARRELLA, Washington, D. C. Filed Oct. 4, 1930. Serial No. 37,143. Term of patent 14 years.

The ornamental design for a key case, as shown.

82,847. SHOE ORNAMENT. SAMUEL M. RIKER, Chester, N. J. Filed Mar. 7, 1930. Serial No. 34,764. Term of patent 7 years.

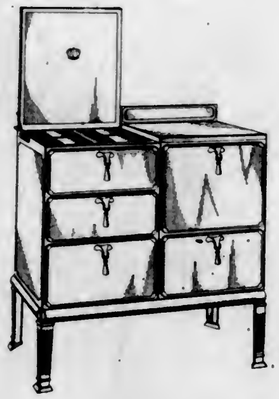
The ornamental design for a shoe ornament, as shown.

82,848. SHOE BUCKLE. SAMUEL M. RIKER, Chester, N. J. Filed Mar. 7, 1930. Serial No. 34,765. Term of patent 7 years.



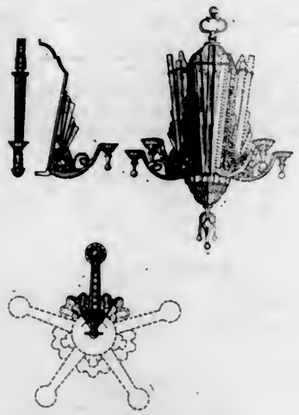
The ornamental design for a shoe buckle, as shown.

82,849. SHOE BUCKLE SAMUEL M. RIKER, Chester, N. J. Filed Mar. 7, 1930. Serial No. 34,772. Term of patent 7 years.



The ornamental design for a shoe buckle, as shown.

82,850. GAS STOVE. ALFRED J. REEDY, Battle Creek, Mich., assignor to A-B Stove Company, Battle Creek, Mich. Filed Oct. 7, 1929. Serial No. 32,964. Term of patent 7 years.



The ornamental design for a gas stove as shown.

82,851. GAS STOVE. WALTER F. ROGERS, Cicero, Ill., assignor to Crown Stove Works, Cicero, Ill., a Corporation of Illinois. Filed Sept. 22, 1930. Serial No. 37,035. Term of patent 14 years.

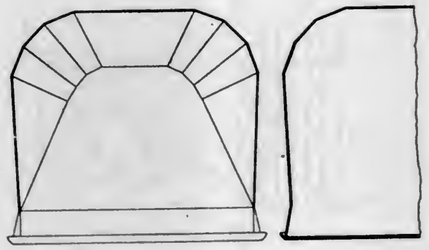
The ornamental design for a gas stove, as shown and described.

82,852. LIGHTING FIXTURE OR ARTICLE OF SIMILAR NATURE. ISIDOR ROSENBLATT, New York, N. Y. Filed Oct. 9, 1930. Serial No. 37,205. Term of patent 7 years.

The ornamental design for a lighting fixture, or article of similar nature, as shown and described.

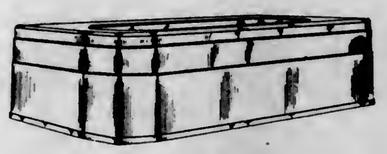
82,853. FLASH-LIGHT CASING. JAMES L. SHANNON, Longmeadow, Mass. Filed Oct. 17, 1930. Serial No. 37,280. Term of patent 14 years.

The ornamental design for a flashlight casing, as shown.



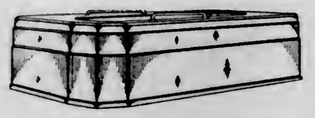
82,854. SUSPENDER-END TOP LINK. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Sept. 3, 1929. Serial No. 32,647. Term of patent 3½ years.

The ornamental design for a suspender-end top link, as shown.

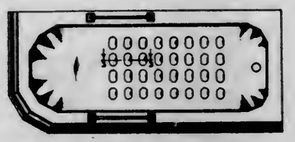


82,855. GRAVE VAULT. RALPH E. SMITH, Galion, Ohio, assignor to The Galion Metallic Vault Company, Galion, Ohio, a Corporation of Ohio. Filed Aug. 4, 1930. Serial No. 36,548. Term of patent 7 years.

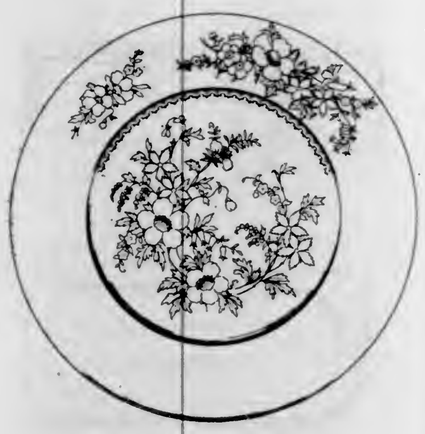
The ornamental design for a grave vault, substantially as shown.



82,856. BATHTUB. CARMI J. STEELE, Los Angeles, Calif., assignor of one-third to Roy C. Troeger and one-third to Wallace R. Coates, Los Angeles, Calif. Filed June 30, 1930. Serial No. 36,238. Term of patent 14 years.



The ornamental design for a bathtub, as shown.



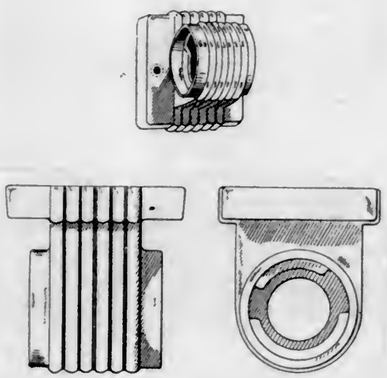
82,857. BATHTUB. CARMI J. STEELE, Los Angeles, Calif., assignor of one-third to Roy C. Troeger and one-third to Wallace R. Coates, Los Angeles, Calif. Filed June 30, 1930. Serial No. 36,239. Term of patent 14 years.

The ornamental design for a bathtub, as shown.

82,858. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, Astoria, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Jan. 14, 1929. Serial No. 29,605. Term of patent 7 years.

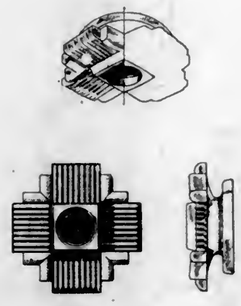
The ornamental design for a plate or similar article, as shown and described.

82,859. WOMAN'S SHOE. SEYMOUR TROY, New York, N. Y. Filed Oct. 17, 1930. Serial No. 37,291. Term of patent 14 years.



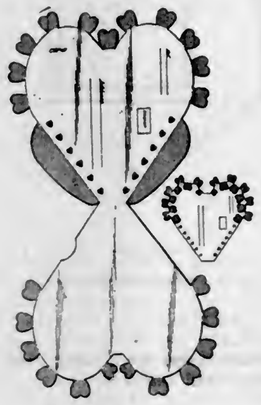
The ornamental design for a woman's shoe substantially as shown.

82,860. WOMAN'S SHOE. SEYMOUR TROY, New York, N. Y. Filed Oct. 17, 1930. Serial No. 37,292. Term of patent 14 years.



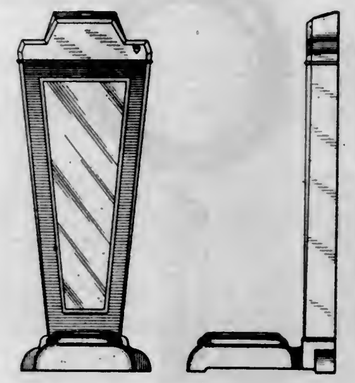
The ornamental design for a woman's shoe substantially as shown.

82,861. LIGHTING FIXTURE OR ARTICLE OF SIMILAR NATURE. WALTER VON NESSEN, New York, N. Y., assignor to Efcolite Corporation, Trenton, N. J. Filed May 24, 1930. Serial No. 35,745. Term of patent 7 years.



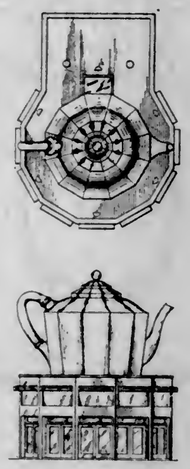
The ornamental design for a lighting fixture or article of similar nature, as shown.

82,862. LIGHTING FIXTURE OR ARTICLE OF SIMILAR NATURE. WALTER VON NESSEN, New York, N. Y., assignor to Efcolite Corporation, Trenton, N. J. Filed May 24, 1930. Serial No. 35,747. Term of patent 7 years.



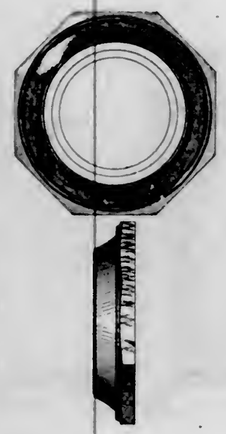
The ornamental design for a lighting fixture or article of similar nature, as shown and described.

82,863. VALENTINE ENVELOPE. MAHALA WARREN, Wetumka, Okla. Filed Apr. 22, 1930. Serial No. 35,341. Term of patent 7 years.



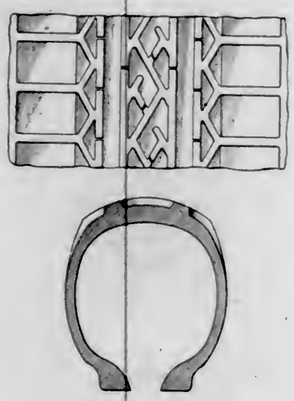
The ornamental design for a valentine envelope, as shown.

82,864. CASING FOR A WEIGHING SCALE. THOMAS W. B. WATLING, Chicago, Ill. Filed Oct. 7, 1930. Serial No. 37,170. Term of patent 7 years.



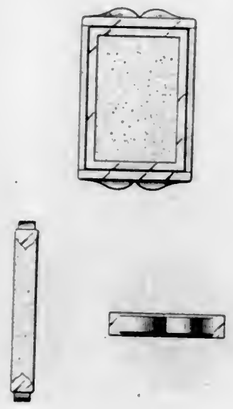
The ornamental design for a casing for a weighing scale, as shown.

82,865. SELLING BOOTH. EUGENE L. WEAVER, Los Angeles, Calif., assignor to Harry B. Carpenter, Los Angeles, Calif. Filed Oct. 2, 1930. Serial No. 37,106. Term of patent 3½ years.



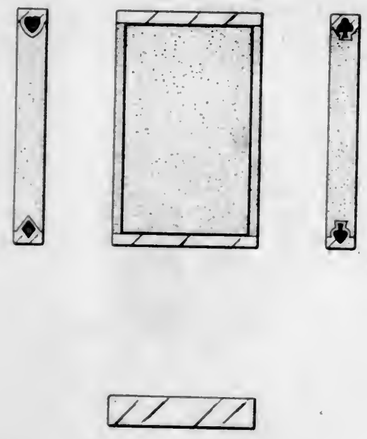
The ornamental design for a selling booth, as shown.

82,866. CLOCK CASE. RICHARD H. WHITEHEAD, New Haven, Conn., assignor to The New Haven Clock Company, New Haven, Conn., a Corporation. Filed July 25, 1929. Serial No. 32,201. Term of patent 14 years.



The ornamental design for a clock-case as shown.

82,867. TIRE OR SIMILAR ARTICLE. FLOYD S. YOUNG, Shenandoah, Iowa, assignor to May Seed & Nursery Co., Shenandoah, Iowa., a Corporation of Iowa. Filed July 2, 1928. Serial No. 27,359. Term of patent 3½ years.

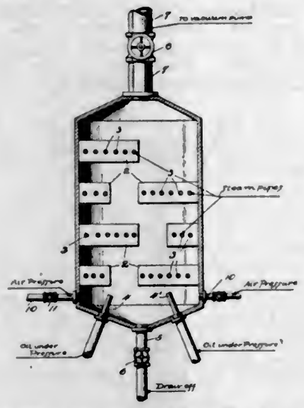


The ornamental design for a tire or similar article, as shown.

82,868. VANITY CASE OR ANALOGOUS ARTICLE. DAVID H. ZELL, Brooklyn, N. Y. Filed July 23, 1930. Serial No. 36,447. Term of patent 3½ years.

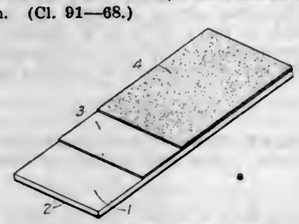
The ornamental design for a vanity case or analogous article, as shown.

82,869. VANITY CASE OR ANALOGOUS ARTICLE. DAVID H. ZELL, Brooklyn, N. Y. Filed July 23, 1930. Serial No. 36,448. Term of patent 3½ years.



The ornamental design for a vanity case or analogous article, as shown and described.

PATENTS

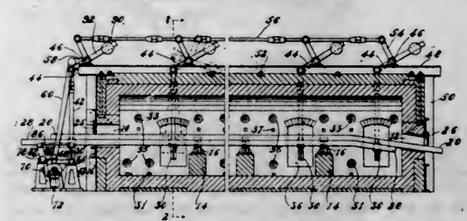


GRANTED DECEMBER 16, 1930

1,784,809. LUBRICANT AND PROCESS OF PRODUCING THE SAME. NELS C. BEIM, Minneapolis, Minn. Filed Mar. 19, 1928. Serial No. 262,959. 1 Claim. (Cl. 87—9.)

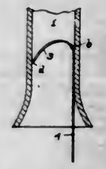
The process of producing a lubricant for internal combustion motors and the like, which consists in injecting substantially equal quantities of two grades of commercial lubricating oil into a closed chamber under heavy pressure, whereby a substantially complete physical and structural intermixture of the two results; subjecting the mixture to the action of a partial vacuum of approximately 10 lbs.; heating the mixture to approximately 425° F. to drive off a portion of the lighter fractions; adding approximately .3 of 1% of magnesium stearate to the residuum while agitating the mixture; and filtering the resulting product.

1,784,810. FLOOR COVERING. ROBERT D. BONNEY, Glen Ridge, N. J., and WILLIAM Y. IRWIN, Jr., Moores, Pa., assignors to Congoleum-Nairn, Inc., a Corporation of New York. Filed Oct. 8, 1928. Serial No. 310,977. 1 Claim. (Cl. 91—68.)



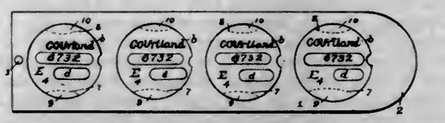
As a new article of manufacture, a floor covering comprising a body of felt saturated with waterproofing material; a facing coat of paint applied to one side thereof and forming a wearing surface; and a backing coat on the opposite side; said backing coat comprising a thin film of discrete particles of a metallic powder and a flaky mineral substance, and a pigmented bonding medium adhesively securing said film to said body and partially visible through said film.

1,784,811. SILICON STEEL. VERE B. BROWNE, Brackenridge, Pa. Filed Feb. 13, 1930. Serial No. 428,244. 9 Claims. (Cl. 175—21.)



1. Silicon steel containing at least about 3.% silicon and characterized by having a watt loss value exclusive of cutting strains of less than .500 watts per pound as indicated by the standard Epstein test and by having relatively high permeability.

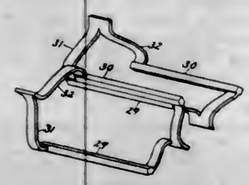
1,784,812. FURNACE AND CONVEYER THEREFOR. RALF S. COCHRAN, Toledo, Ohio, assignor to The Surface Combustion Co., Incorporated, Toledo, Ohio, a Corporation of New York. Filed Apr. 23, 1928. Serial No. 272,020. 20 Claims. (Cl. 263—6.)



7. In combination, a furnace chamber having work entering and discharging openings at opposite ends, a conveyer of the work lifting and translating type in line with said openings, said conveyer being positioned above the floor of the chamber, and means extending upwardly through the furnace side walls for supporting the movable part of the conveyer.

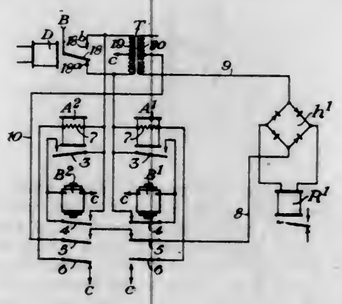
1,784,813. MEMORANDUM TICKET FOR TELEPHONE SERVICE. GEORGE D. COX, Philadelphia, Pa. Filed Mar. 19, 1930. Serial No. 437,179. 2 Claims. (Cl. 302—2.)

1. In a telephone memorandum distribution system wherein tickets containing memoranda are transmitted through pneumatic tubes rectangular in cross section, a ticket made of uncalendered fibred paper having the fibre running lengthwise of the tickets, of a width corresponding to the longest width of the inside section of the tube, and consisting of a main body portion, and a flap, the width of which exceeds slightly the breadth of the rectangular cross section of the said tube, and having the hinge between the main body of the ticket and the flap running at right angles with the side edges of the flap and across the fibre of the paper.



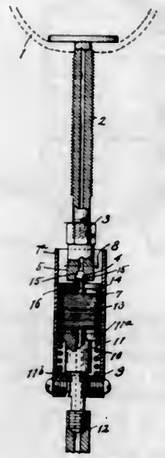
1,784,814. TELEPHONE-INSTALLER'S OMNIBUS NUMBER SIGN CARD. GEORGE D. COX, Philadelphia, Pa. Filed Apr. 25, 1930. Serial No. 447,250. 3 Claims. (Cl. 40—2.)

1. A telephone installer's omnibus number sign card, which consists of a card containing a series of discs, hav-



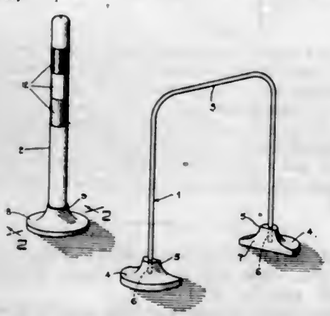
ing around the circumferences of each of said discs a cut passing nearly through the body of the card and almost severing the disc therefrom, said disc having wings partially severed from the main portion of the disc but much more grmly attached thereto than the discs are to the card.

1,784,815. DYNAMO-ELECTRIC-MACHINE ELEMENT. VINCENT G. APPLE, Dayton, Ohio. Filed June 14, 1928. Serial No. 285,361. 8 Claims. (Cl. 172—120.)



1. In a winding for a dynamo electric machine element having a core with partially closed slots, a closed loop integrally comprising two spaced apart inductor bars and connecting ends, a bar being of a cross section which will fit and which may be endwise entered thru the wider portion of one of the core slots, the connecting ends at one end of said bar being of such cross section and extending from the bar in such direction as may be endwise passed thru the narrow or open part of the same slot.

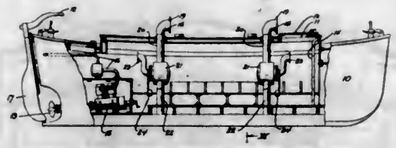
1,784,816. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HERMAN G. BLOSSER, Pittsburgh, and RONALD A. MCCANN, Swissvale, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 20, 1929. Serial No. 394,054. 2 Claims. (Cl. 246—63.)



1. Railway train carried governing apparatus comprising a master relay controlled from the trackway and having an armature adapted to oscillate in response to impulses received from the trackway, two thermal relays each having a heating winding and a normally open contact which closes after the winding has been energized for a given interval of time, two auxiliary slow-releasing relays associated with said two thermal relays respectively, a circuit for the winding of one thermal relay including a contact closed when said master relay armature is in one extreme position and a back contact of the associated auxiliary relay, a circuit for the winding of the other thermal relay including a contact closed when the armature of said master relay is in the other extreme position and a back contact of the associated auxiliary relay, a pick-up circuit for the first auxiliary relay including said first master relay armature contact and the contact of the associated thermal relay, a stick circuit for said first auxiliary relay including its own front contact and said first master relay armature contact, a pick-up circuit for the second auxiliary relay including said second master relay armature contact and the contact of the associated thermal relay, a stick circuit for said second auxiliary relay including its own front contact and said second master relay armature contact, a train control relay, and means for energizing said train control relay while said master relay armature is oscillating if and only if the front contacts of both of said auxiliary relays are closed.

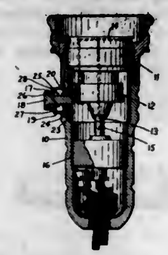
1,784,817. HAND GRIP AND AIR CONNECTER. ADELBERT E. BRONSON, Cleveland Heights, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 12, 1927. Serial No. 212,445. 2 Claims. (Cl. 285—176.)

1. In a device of the character described, the combination with a sleeve member, a pair of heads within the sleeve and movable with respect thereto, a flexible means connecting said heads and forming a chamber between the same, means carried by the sleeve and cooperating with an extension from one of said heads for guiding said head in its movement and providing a stop limiting the movement of said head, a spring normally urging said last-mentioned head toward the other of said heads, said other head being provided with a formation for cooperation with a member to which air is to be supplied, the first mentioned head being provided with an air passage through which air may be introduced into the chamber between the heads.



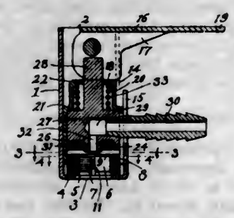
1,784,818. GAME. LEWIS C. BUMP, Brandon, Vt. Filed Dec. 27, 1928. Serial No. 328,742. 5 Claims. (Cl. 273—56.)

3. Apparatus for playing croquet comprising a wicket adapted to be forced into the ground, and detachable



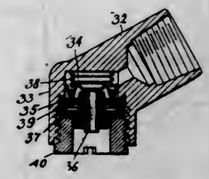
holders for supporting the wicket without penetration of the supporting surface, said holders each being a sector of a circle and having bores closely adjacent the straight sides thereof for receiving the lower ends of the wicket, the straight sides being arranged toward each other when the wicket is set up.

1,784,819. LIFEBOAT. LOUIS COCHARD, Napa, Calif. Filed Sept. 3, 1929. Serial No. 389,038. 3 Claims. (Cl. 9—4.)



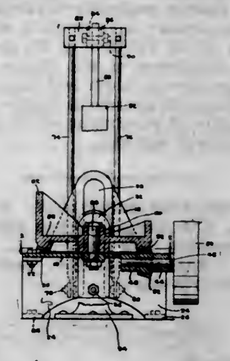
1. A lifeboat comprising a hull, said hull being completely decked over, a drum arranged within the hull, a vertical pipe extending from the drum through the deck, a cowl fitted to the upper end of said pipe exterior of the hull, conduit extending from the bottom of the drum through the bottom of the hull, an air inlet pipe connected to the drum and having an open end disposed within the hull above the water-line, said air inlet pipe being revolvably connected to the drum, and means for constantly maintaining said pipe in its uppermost position.

1,784,820. ELECTRICAL SWITCH. JOSEPH H. COHEN, Bridgeport, Conn. Filed Dec. 18, 1924. Serial No. 756,740. 2 Claims. (Cl. 200—172.)



1. A push-button switch device comprising a shell having a confined chamber at one end and an integral reduced nipple at the other end adapted to be inserted in an opening adapted to receive it and to be beaded over the periphery of said opening to secure the shell therein; and a button slidably mounted in said shell and having means formed integral therewith in the confined chamber for retaining the button to the shell.

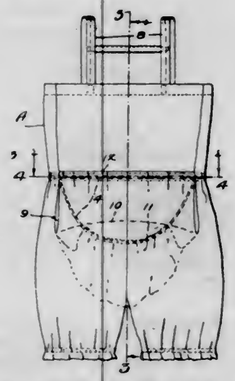
1,784,821. CONNECTING DEVICE FOR FLUID-PRESSURE HOSE. JOHN C. CROWLEY, Cleveland Heights, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 15, 1928. Serial No. 254,341. 4 Claims. (Cl. 285—150.)



1. A device of the character described comprising a casing, a contractible chuck arranged at one end of said casing adapted to engage the inlet stem of the receptacle to which the device is to be attached and having a portion of its circumference provided with a taper, an operating member connected with said casing, and a slidable member in said casing intermediate said operating member and said chuck adapted to be moved by the former into engagement with the tapered portion of the latter for contracting the same and clamping the device to the stem.

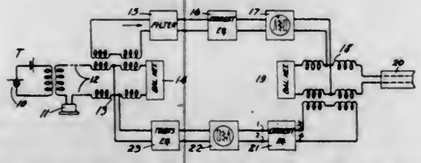
1,784,822. AIR CHUCK. JOHN C. CROWLEY, Cleveland Heights, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 15, 1928. Serial No. 254,342. 6 Claims. (Cl. 284—17.)

4. An air chuck comprising a valve housing member having a chambered head and an air inlet passage thereto, said head having an opening, closure means for said opening which is also provided with an opening, a member held in operative association with said closure means having a part extending through and above the opening therein provided with a passageway, a valve arranged in said head having a relatively narrow offset depression, the wall of said valve at the base of said depression being adapted to be engaged by the extended part of said last named member and to extend across the passageway therein when the chuck is applied to a valve stem, and a spring adapted to normally maintain said valve in engagement with its seat.



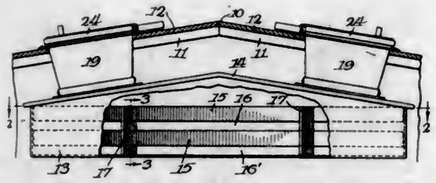
1,784,823. PUMP JACK. ROSS T. CRUIKSHANK, Minneapolis, Minn. Filed June 7, 1929. Serial No. 369,230. 3 Claims. (Cl. 74—14.)

1. A pump jack comprising a horizontal supporting plate, a vertically disposed guide member having horizontal flanges secured to said plate, said guide member being downwardly extended to form legs and containing a vertical slot, a slide working in said slot, front and rear plates for holding said slide in said slot, bolts passing through said plates and slide, one of said bolts being extended and carrying a roller, a disk member rotatably mounted on said supporting plate by a vertical pivot, an annular cam extending up from said disk member and engaged by said roller, an annular gear extending down



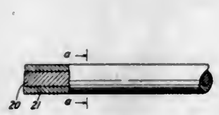
from said disk member, a shaft rotatably mounted below said annular gear, a pinion secured to said shaft and meshing with said annular gear, a driving pulley secured to the outer end of said shaft, and pump links attached to said slide.

1,784,824. GARMENT. BERTHA SUZANNE DE LONG, Minneapolis, Minn. Filed Apr. 12, 1928. Serial No. 269,401. 5 Claims. (Cl. 2—78.)



5. A garment adapted to embrace the body of a wearer, having a seat opening extending downwardly from the back of the waistline thereof, a flap having top and side edges secured to the lower rear portion of the garment and adapted to cover said opening when upwardly extended, a flexible strip secured to the inner side of the waistline forwardly of the edges of the seat opening and elastics mounted at the top of said flap and extending laterally of the edges of said flap, the forward portions of said elastics projecting inwardly through the waistline of the garment adjacent the edges of the seat opening and being permanently mounted in said strip, whereby said elastics will normally hold said flap in upwardly raised position against the rear portion of the waistline of the garment to close said opening, but will permit said flap to be bodily dropped to expose the said opening without detachment of said elastics from said strip, forward portions of said elastics projecting inwardly through the waistline of the garment being partially withdrawable to gather portions of the waistline of the garment between the points of attachment of the elastics to said strip and the portions through which said elastics extend and thereby afford long and stretchable lengths of the elastics between the points of attachment of the elastics to the strip and the edges of said flap.

1,784,825. SPEECH TRANSMISSION. HOMER W. DUDLEY, Teaneck, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 5, 1929. Serial No. 390,491. 5 Claims. (Cl. 178—44.)



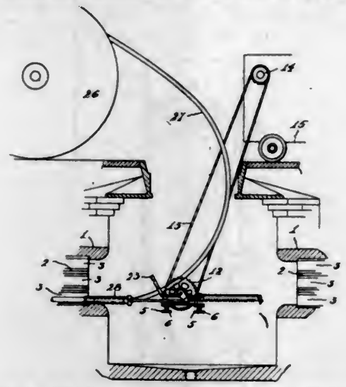
3. The method of receiving highly attenuated speech currents which comprises equalizing the intensities of the received currents of different frequencies at low energy level, amplifying the equalized currents uniformly and thereafter restoring the frequency distribution of the energy to normal.

1,784,826. WATER TANK FOR STOCK CARS. ISRAEL V. EDGERTON, Chicago, Ill., assignor to Palace Poultry Car Company, Chicago, Ill., a Corporation of Illinois. Original application filed May 19, 1927, Serial No. 192,609, now Patent No. 1,711,112, dated Apr. 30, 1929. Divided and this application filed Jan. 9, 1929. Serial No. 331,250. 3 Claims. (Cl. 220—22.)

1. In combination with a rectangular water tank, a baffle removably mounted in said tank comprising a plurality of flat strips spaced edgewise with their ends interfittingly engaged with diagonally opposite corners of the tank, and cleats secured to and crosswise of both sides of said strips, said cleats extending beyond the lowermost strip and resting on the bottom of the tank.

1,784,827. MAGNETIC MATERIAL. GUSTAF W. ELMEN, Leonia, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 15, 1928. Serial No. 285,643. 5 Claims. (Cl. 175—21.)

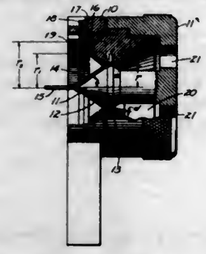
1. A composite magnetic body having an air-gap at which free poles may exist and a magnetic material having higher permeability and lower coercivity than ordinarily prepared iron in combination with a magnetic material having higher coercivity than such iron, said materials forming parallel branches of a magnetic circuit.



1,784,828. METHOD OF TANNING CHAMOIS, BUCKSKINS, OR OTHER LEATHER. AUGUST ERNST, Johnstown, N. Y. Filed Mar. 27, 1930. Serial No. 439,530. 11 Claims. (Cl. 149—5.)

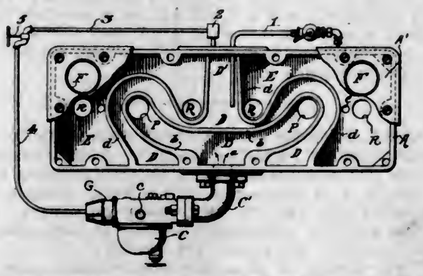
11. A method of tanning leather such as chamois, buckskin or the like, including the steps of agitating cleaned limed skins in a bath containing formaldehyde, then adding a mixture containing soap, moellon degras, sod oil, Glauber's salt and bicarbonate of soda and further agitating said skins in said bath until tanned.

1,784,829. UNDERGROUND-CABLE-PULLING DEVICE. PETER EUFINGER, Frankfort-on-the-Main, Germany, assignor to Peter Lancier, Munster, Germany. Filed Oct. 2, 1928, Serial No. 309,806, and in Germany Mar. 23, 1928. 10 Claims. (Cl. 254—31.)



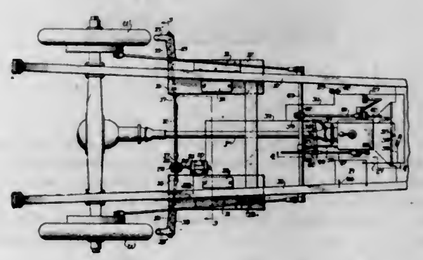
1. In a cable puller of the class described an adjustable wall engaging frame, to bridge a manhole, a transversely

shiftable bearing frame, lockably mounted thereon a shaft, revolvably supported by said bearing frame, a crank,



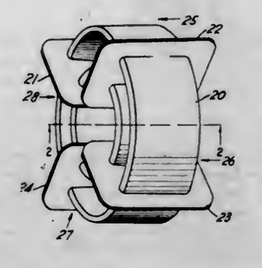
secured to said shaft, and substantially horizontally disposed means, connected to said crank, for intermittently engaging and pulling a cable at said manhole.

1,784,830. MECHANICAL IMPEDANCE DEVICE. PAUL B. FLANDERS, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 25, 1928. Serial No. 302,123. 6 Claims. (Cl. 181—0.5.)



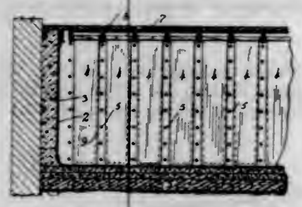
1. A mechanical resistance unit comprising a diaphragm for receiving energy from a vibratory system, an air chamber, and means defining slot through which occurs a flow of air between said chamber and the atmosphere due to vibrations of said diaphragm, said slot being narrow in a direction transverse to that of the air flow and having an appreciable length in the direction of flow, whereby it offers an impedance to the air flow which is substantially a resistance free from reactance.

1,784,831. HUMIDIFYING DEVICE FOR INTERNAL-COMBUSTION ENGINES. JOHN S. FUNALMAN, Ashland, Ohio. Filed Dec. 7, 1929. Serial No. 412,559. 1 Claim. (Cl. 123—25.)



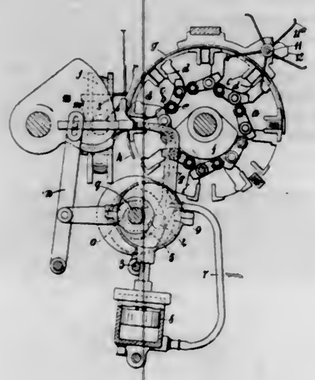
In an internal combustion engine, humidifying device comprising an outer casing divided into a plurality of chambers, and attached to an engine, one of said chambers constituting an intake manifold located at the interior of said outer casing and enclosed by thin walls, a pair of ports, one at each end of said chamber leading inwardly, a pair of chambers of similar structure constituting an exhaust manifold—and a boiler chamber intermediate said pair, and means for conveying hot water from the water jacket of the engine to said boiler chamber.

1,784,832. TRACK SANDER FOR MOTOR VEHICLES. FRANK FLORIAN, Chicago, Ill. Filed Aug. 30, 1929. Serial No. 389,365. 2 Claims. (Cl. 291—23.)



1. An improved track sander for motor vehicles of the character described and illustrated, in combination with a motor vehicle chassis, sand boxes mounted on said chassis, having discharge chutes extending outward and sloping downward to a point in front of the rear traction wheels of the motor vehicle thence downwardly and rearwardly, screw conveyors in said chutes, electric motor geared to said conveyors by means of flexible shaft and universal joints, a source of electrical current, a current line connecting said source to said motor, a normally open manually operated switch preferably mounted on the instrument board, a normally open switch adapted to be closed by either the emergency brake lever or brake pedal lever of the vehicle through which said second switch is closed when said emergency brake lever or pedal brake lever is actuated to apply the brakes, thus providing means of operating the said track sander to reduce skidding and slipping of said traction wheels when stopping said vehicle.

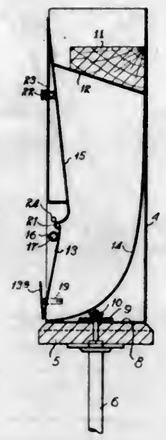
1,784,833. TOROIDAL INDUCTANCE DEVICE. EDWIN C. HAGEMANN, Short Hills, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 1, 1930. Serial No. 432,359. 6 Claims. (Cl. 175—359.)



1. A new article of manufacture comprising an annular member adapted for winding a plurality of inductance devices thereon and having a plurality of spacers of nonmagnetic material formed integral with said annular member dividing the winding space on said annular member into a plurality of sections of predetermined size.

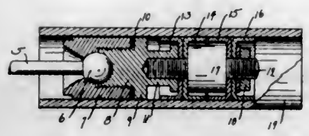
1,784,834. APPARATUS FOR MANUFACTURING ICE. FRANK HANUS, Cleveland, Ohio. Filed Jan. 17, 1929. Serial No. 333,198. 13 Claims. (Cl. 62—157.)

1. In an ice making apparatus of the type having a freezing tank within which a plurality of downwardly tapered ice molds in spaced rows are submerged in a cooling or heat absorbing medium adapted to flow between the rows of molds, means for obstructing the flow of such medium in the spaces between the rows of molds in proportion to the downward taper of the molds.



1,784,835. WRAPPING MACHINE FOR SWEETMEATS AND THE LIKE. RICHARD ANSON HARRIS, Peterborough, England, assignor to Baker Perkins, Limited, Peterborough, England. Filed Jan. 11, 1930, Serial No. 420,052, and in Great Britain Nov. 21, 1928. 9 Claims. (Cl. 93—7.)

1. A machine for wrapping caramels and like articles comprising a pocketed rotary wheel, a plunger for feeding a caramel and piece of wrapping paper into each of the pockets of the wheel in turn, and a displaceable element for positioning the pieces of wrapping paper, against which pieces of wrapping paper are retained by air pressure.

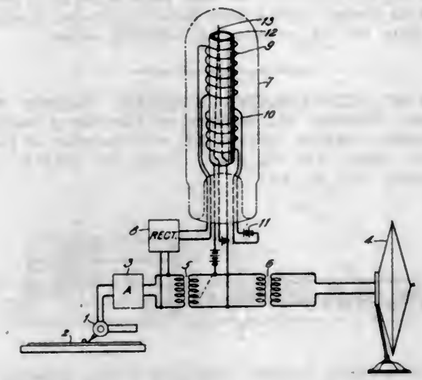


1,784,836. ENVELOPE FEEDER. EDWARD C. HESS, Pittsburgh, Pa. Filed Apr. 12, 1929. Serial No. 354,555. 5 Claims. (Cl. 312—61.)

1. In a dispensing device, the combination with a chute having a delivery opening at the lower end and in one side wall thereof, one wall of said chute curving toward the lower end of said opening, and an instrumentality in

said chute for causing horizontally placed articles in said chute to be delivered to said opening in a vertical position.

1,784,837. CONNECTING ROD AND CROSSHEAD. WILLIAM F. HIATT, Indianapolis, Ind., assignor of one-half to Henry D. Skiles, Indianapolis, Ind. Filed Jan. 6, 1930. Serial No. 418,808. 4 Claims. (Cl. 74—108.)

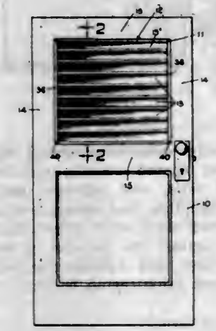


1. In a connecting rod structure, a cylinder, a cylindrical crosshead making a sliding fit in the cylinder and having a central bore therethrough, said bore being reduced at a point within the crosshead to form an annular shoulder therearound, a connecting rod having a ball end on a shank and having its shank passed through the bore of the crosshead to have the ball rest against said shoulder, a plug screw-threadedly entering said bore from the end opposite to the rod shank and having a cupped end adapted to contact with said ball, and a piston, screw-threadedly engaged to said plug comprising a threaded stud, a block, a nut screwing on the stud and cup leathers retained on the stud by the nut.

1,784,838. RUBBER COMPOSITION AND METHOD OF PRESERVING RUBBER. PAUL C. JONES, Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Original application filed Jan. 21, 1929, Serial No. 334,121. Divided and this application filed Dec. 14, 1929. Serial No. 414,231. 15 Claims. (Cl. 18—50.)

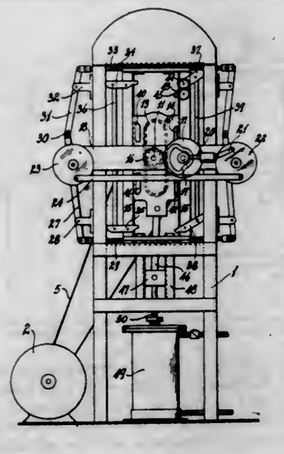
1. The method of preserving rubber which comprises treating rubber witha tetra-aryl hydrazine in which at least one of the aryl groups is substituted.

1,784,839. SOUND-REPRODUCING SYSTEM. ARTHUR C. KELLER, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 30, 1928. Serial No. 289,516. 3 Claims. (Cl. 179—100.4.)



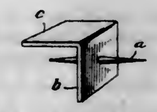
1. In a sound reproducing system, a sound record, a current reproducing device cooperating with said record, a loud speaker responsive to the currents generated by said device, a magnetron connected between said device and said loud speaker, and means for rectifying a portion of the output of said device for exciting said magnetron.

1,784,840. PROCESS FOR MANUFACTURING PORTLAND CEMENT. GUY S. LA FORGE, Union Bridge, Md. Filed July 23, 1929. Serial No. 380,462. 2 Claims. (Cl. 106—25.)



1. Those steps in the process of producing Portland cement which consists in mixing together raw calcareous material, raw argillaceous material and unground Portland cement clinker, and subjecting the mixed materials to a pulverizing operation.

1,784,841. VENTILATOR CONSTRUCTION. BERNHARD LANDAU, College Point, N. Y. Filed Dec. 5, 1928. Serial No. 323,826. 13 Claims. (Cl. 98—121.)

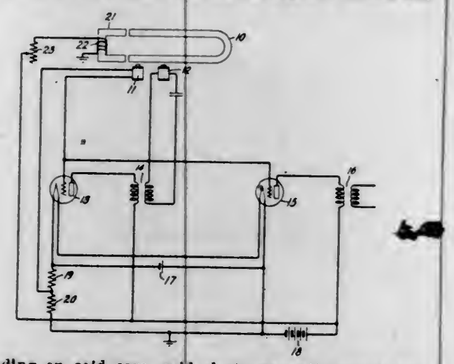


1. In a framed construction, such as a door or the like, a ventilator comprising individually formed louver members, means for maintaining the same in spaced relation to provide ventilating spaces and side members frictionally engaging said louvers for holding a plurality of such louver members in the said spaced relationship.

1,784,842. MECHANICAL MOVEMENT. GEORGE G. LEMONS, Long Beach, Calif. Filed June 25, 1929. Serial No. 373,615. 6 Claims. (Cl. 74—14.)

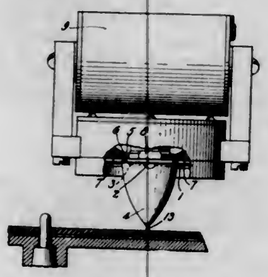
1. In a mechanical movement comprising a frame, a drive shaft journaled in the frame, drive means connected to said drive shaft, a pinion on the drive shaft, a head, an internal elongated gear in the head, said pinion being meshed with said internal gear, a pair of wheels mounted on the frame, a pitman connecting said wheels, means on the frame connected in timed relation to said drive shaft and to said wheels whereby said wheels are rocked, guide-ways in which said head is slidably mounted, said guide-ways being slidably mounted in said frame, plungers extending from said guide-ways at the top and bottom thereof, and links connecting said plungers and said wheels whereby the guide-ways are moved from side to side in the frame.

1,784,843. DOUBLE-PIN HOLDFAST. ALBERT LÖSCH, Hamburg, Germany. Filed Apr. 23, 1930, Serial No. 446,565, and in Germany Apr. 26, 1929. 2 Claims. (Cl. 85—14.)



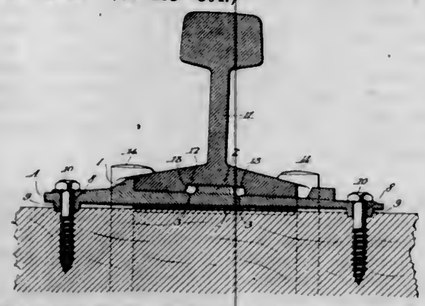
2. A double pin holdfast for connecting together wood parts, particularly for toys and models of all kinds, comprising an angular member of metal and a double ended pin secured at the middle in the centre of one of the limbs of the angular member, the arrangement being such that the other limb of the angular member forms a guide for the double pin by bearing firmly against one of the sides of one of the members to be connected together by the double pin.

1,784,844. CONSTANT FREQUENCY WAVE SOURCE. WARREN A. MARRISON, Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 18, 1927. Serial No. 226,831. 7 Claims. (Cl. 84—409.)



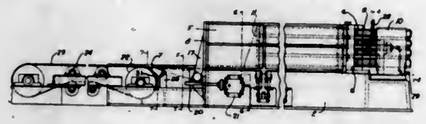
4. A source of constant frequency waves comprising a tuning fork, an amplifier, a source of potential for energizing said amplifier, a control element for producing

an electromotive force of frequency proportional to the rate of vibration of said fork connected to the input of said amplifier, means for driving said fork connected to the output of said amplifier, electromagnetic means comprising a core forming with said fork a magnetic circuit and



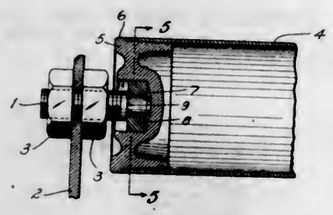
a winding on said core, said electromagnetic means acting to control the effective stiffness of said fork, and connections from said source to said winding to maintain the frequency of vibration of said fork substantially constant irrespective of variations of the potential of said source.

1,784,845. PHONOGRAPH NEEDLE. LOUIS A. MORRISON, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 4, 1928. Serial No. 310,259. 5 Claims. (Cl. 274—38.)



3. In an electrical pick-up device a moving system including a wooden needle of large base diameter coated with metal and attached to a diaphragm.

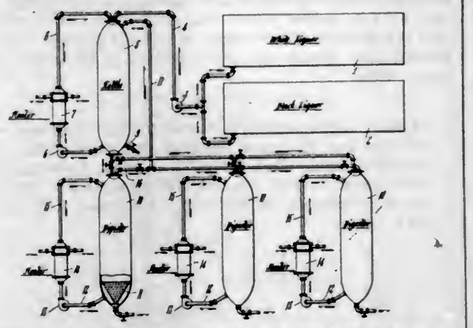
1,784,846. ANTICREEPING RAIL AND COOPERATING TIE PLATE FOR RAILWAYS. AXEL M. PETERSON, Denver, Colo. Filed Jan. 20, 1930. Serial No. 422,025. 2 Claims. (Cl. 238—304.)



2. A railway tie plate having an abutment rib near one end from which point the plate diminishes in thickness toward the opposite end, a central row of projecting teeth at right angles to said rib; spike receiving holes, one pair of said holes being cut through said rib, a boss being formed between the other two holes which is of greater height than said teeth; a pair of ribs on the under side of the plate which extend at right angles to the said abutment rib, and bosses on the under sides of the plate near the ends thereof, having holes therethrough and through the plate for the reception of retaining screws.

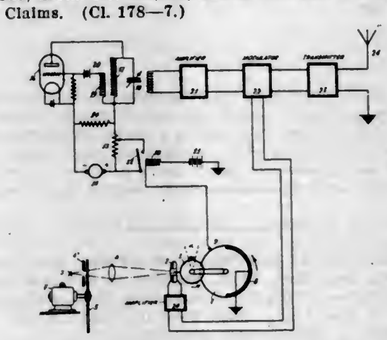
1,784,847. TILE-FORMING MACHINE. HERBERT W. REEL, Hinsdale, Ill., assignor to The United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 25, 1929. Serial No. 349,914. 7 Claims. (Cl. 25—42.)

7. A moulding machine comprising a base supporting two spaced apart parallel fixed mould bottoms, a central division plate mounted to travel longitudinally therebetween, fixed core poles carried upon the base arranged parallel to each bottom extending into each mould, exterior sides for each mould hinged to the outer sides of the base, a common closure for the same ends of both moulds carried on the division plate having apertures for receiving the core poles, hinged closures for the other ends of each mould, a cylinder within the division plate, a piston rod entering therein having a piston head mounted upon its inner extremity and its outer extremity fixed to the base at the end with the core poles.



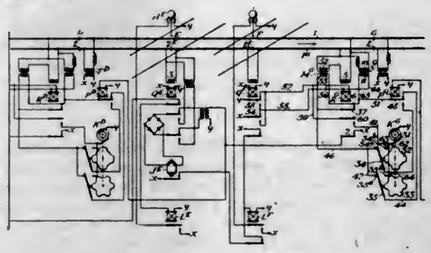
1,784,848. BEARING FOR CONVEYER ROLLERS. CARL J. REICHLE, Detroit, Mich., assignor to Alvey Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 9, 1927. Serial No. 232,019. 4 Claims. (Cl. 308—20.)

4. A roller conveyer comprising spaced supporting rails, oppositely disposed spaced bearing spindles adjustably mounted on said rails, and conveyer rollers rotatably mounted on said spindles, said rollers comprising a tubular body having end plugs with non-circular recesses in their outer faces against the bottoms of which the ends of said spindles bear, and non-circular bushings fitting in said recesses and constituting bearings for said spindles.



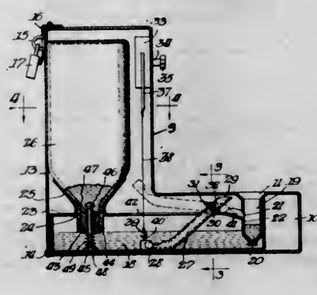
1,784,849. PULPMAKING AND APPARATUS THEREFOR. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Sept. 18, 1928. Serial No. 306,739. 3 Claims. (Cl. 92—7.)

1. A process of pulping raw cellulosic material, which comprises heating a confined pool of cooking liquor to high temperature and pressure conditions, adding such liquor to confined raw cellulosic material while displacing the air in said latter and causing it to escape into and displace



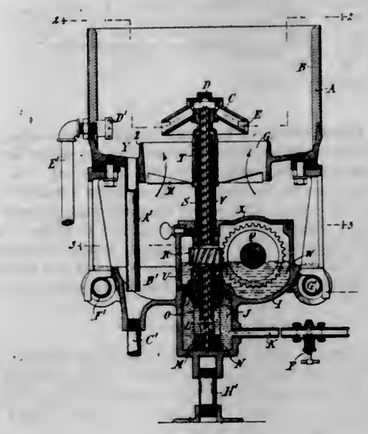
liquor in said pool, and cooking the confined charge of liquor and cellulosic material until pulping has been effected.

1,784,850. PICTURE TRANSMISSION. FRITZ SCHRÖTER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Filed Feb. 23, 1929, Serial No. 342,059, and in Germany Mar. 3, 1928. 6 Claims. (Cl. 178—7.)



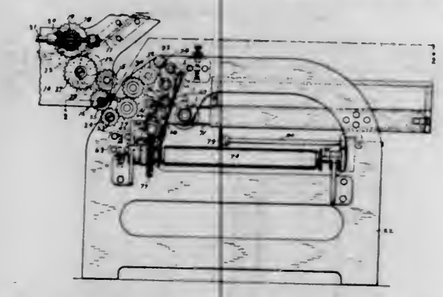
1. In a picture transmission system, means for scanning and analyzing a picture for transmission, means for modulating a transmitted wave in accordance with the point for point intensities of light and shade on the transmitted picture, and means for continually changing the frequency of the transmitted carrier at the period between any two successive line for line scannings of said picture.

1,784,851. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HOWARD A. THOMPSON, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 5, 1927. Serial No. 231,277. 12 Claims. (Cl. 246—34.)



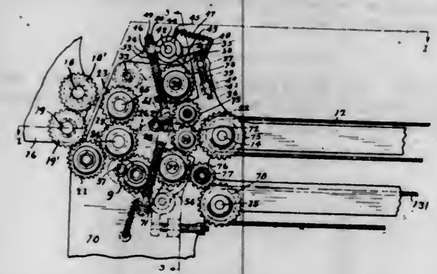
1. In combination, a section of railway track, a highway crossing said section, a source of energy connected across the rails adjacent the entrance end of the section, an insulated joint in one rail adjacent said highway crossing, a winding connected across said joint, and a highway crossing signal located adjacent said crossing and controlled by said winding.

1,784,852. LIQUID-DISPENSING APPARATUS. LORENZO D. THOMPSON, Chicago, Ill., assignor to The F-N Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 1, 1922. Serial No. 604,184. 10 Claims. (Cl. 120—57.)



1. An apparatus for use in filling fountain pens comprising a cabinet, a well associated with the cabinet, said well being of a shape and size to receive and fit the pen end of a fountain pen whereby to cause the fountain pen to withdraw substantially all of the ink from the well when filled from the well, a reservoir within the cabinet and means for transferring a measured quantity of ink from said reservoir to said well.

1,784,853. OIL-BURNING APPARATUS. HOMER ANDREW TIFFANY, Clifton, N. J. Filed Nov. 5, 1923. Serial No. 672,890. 5 Claims. (Cl. 158—77.)

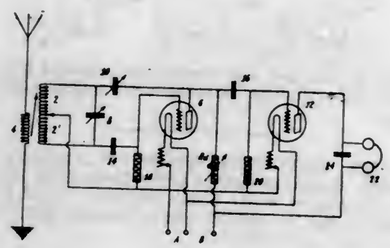


5. In combination, a receiving and discharging member, an open-ended tube fixedly secured to said member, means for rotatably supporting said member and tube in a substantially vertical position, a screw conveyor, fixed against rotation, extending along the interior of said tube toward said member, and means to rotate said tube and member.

1,784,854. PAPER DEFLECTOR. LESLEY R. TUFTS, East Cleveland, and ANDREW OLSON, Cleveland, Ohio, assignors to The Cleveland Folding Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 16, 1928. Serial No. 293,278. 17 Claims. Cl. 271—64.)

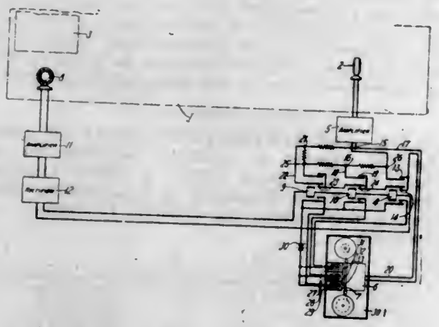
1. In a paper handling machine, two pairs of feed rolls, each pair adapted to direct sheets into a separate course, a deflector arranged in front of said pairs, and means associated with each of said pairs and adapted to be set in motion by the travel of a sheet therethrough for moving said deflector to direct a succeeding sheet into the other pair.

1,784,855. SHEET DEFLECTOR. LESLEY R. TUFTS, and ANDREW OLSON, Cleveland, Ohio, assignors to The Cleveland Folding Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 23 1928. Serial No. 321,321. 8 Claims. Cl. 271—64.)



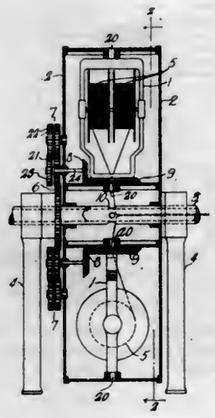
1. In a paper handling machine, means for causing the sheets to travel single file in a given path, a deflector for directing sheets from said path into either of two different courses, a shoe in each of said courses adapted to be shifted by the travel of a sheet therethrough, means associated with each shoe for shifting the deflector when the shoe is shifted, and independent means associated with each of said shoes for returning it to normal position when not in engagement with a sheet traveling through that course.

1,784,856. AXLE FOR SELF-PROPELLED VEHICLES. BERTIS H. URSCHEL, Bowling Green, Ohio, assignor to Urschel Engineering Company, Bowling Green, Ohio, a Corporation of Ohio. Filed Mar. 7, 1928. Serial No. 259,796. 4 Claims. (Cl. 301—124.)



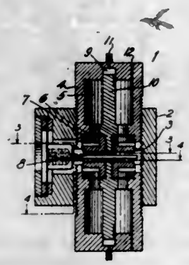
1. An axle for a vehicle comprising a tube, the end portions of the tube formed rectangular in shape, the upper and lower side walls of each end portion having openings for receiving a bearing member, the axle having cuts along the corners of the rectangular formed portions, the portions of the remaining side walls located between the cuts bent to extend across the ends of the axle and so that the upper and lower edges of the said portions will lie substantially within end edge portions of the upper and lower sides.

1,784,857. ELECTRON-TUBE CIRCUITS. MANFRED VON ARDENNE and HEINRICH HEINERT, Berlin, Germany, assignors to Radio Corporation of America, a Corporation of Delaware. Filed Nov. 13, 1926, Serial No. 148,166, and in Germany Aug. 25, 1925. 3 Claims. (Cl. 179—171.)



3. A regenerative receiver comprising an electron emission tube, anode and control electrode circuits including regeneratively coupled inductances, a tuning condenser, and a series combination of a substantially pure ohmic resistance and a source of direct anode potential connected in parallel with the regeneratively coupled anode inductance.

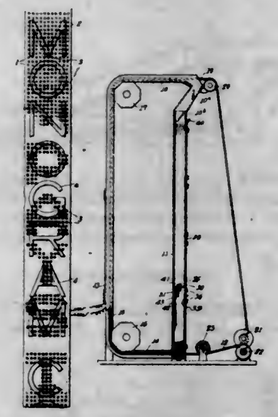
1,784,858. SOUND-RECORDING SYSTEM. EDWARD C. WENTE, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 10, 1928. Serial No. 253,253. 2 Claims. (Cl. 179—100.3.)



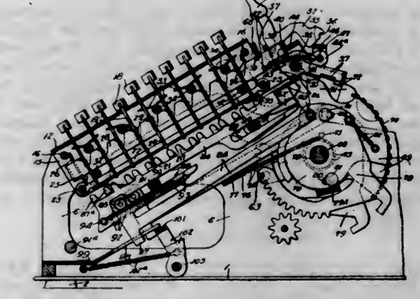
1. In a sound recording system, a recording surface, a source of sounds to be recorded, a pick-up device at a distance from the source for translating the sounds into corresponding electric currents, a recording circuit, and monitoring means responsive to the sounds for varying the gain in the recording circuit automatically in anticipation of changes in the amplitude of the currents from the pick-up device and for marking the recording surface at intervals only in accordance with the gain variations.

1,784,859. TWISTING MACHINE. WILLIAM K. WESTON, Sanderstead, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 8, 1928, Serial No. 298,250, and in Great Britain Aug. 22, 1927. 5 Claims. (Cl. 117—20.)

1. In a wire twisting machine individually rotatable yokes, bobbins for the wires mounted in said yokes and means for revolving said yokes about a central common axis, the axes of rotation of said yokes being at an angle with said common axis so that the deleterious effect of centrifugal forces due to the latter revolutional movement is substantially removed said angle being about 85°.



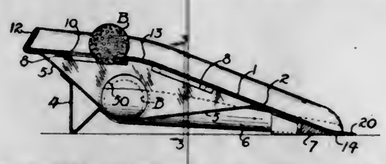
1,784,860. SOUND RECORDER. CHARLES F. WIEBUSCH, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 25, 1928. Serial No. 302,083. 4 Claims. (Cl. 181—0.5.)



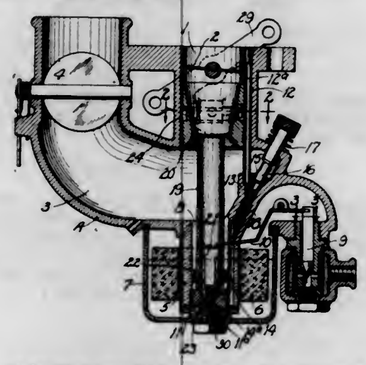
3. In a mechanical vibration damping device, a casing, a pair of spaced plates, a member adapted to oscillate between the plates, viscous matter in said casing to impede the oscillations of said member and means responsive to temperature changes for varying the spacing of said plates.

1,784,861. ELECTRIC SIGN. FRANCIS E. J. WILDE, Meadowmere Park, N. Y. Filed Sept. 4, 1926. Serial No. 133,676. 1 Claim. (Cl. 177—350.)

In a "talking" sign, a panel of traveling-letter-forming lamps, means carried by said panel for forming stationary letters visible independently of the traveling letters and means for flashing the lamps to effect traveling of design characters over the panel, the stationary letter-forming means comprising appropriately shaped neon tubes supported on the panel in the same field but clear of the traveling letter-forming lamps.

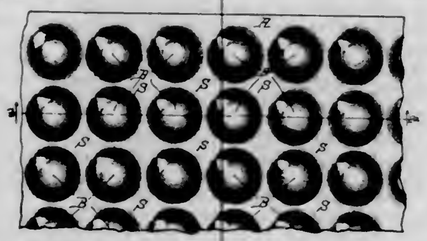


1,784,862. ADDING MACHINE. GLENN J. BARRETT, Evanston, Ill., assignor to Portable Adding Machine Company, Chicago, Ill., a Corporation of Illinois. Original application filed Aug. 14, 1925, Serial No. 50,219. Divided and this application filed July 26, 1927. Serial No. 208,578. 7 Claims. (Cl. 235—60.)



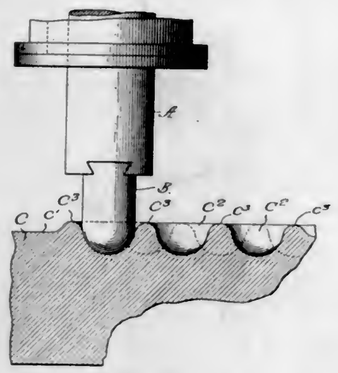
1. In a key-set adding machine, a keyboard comprising a row of keys; a zero key in said row; key stems formed with stop fingers; a depressed-key latch strip associated with said row of keys; a detent dog pivoted at the rear end of the latch strip and normally preventing movement of the associated adding sector and type segment; a spring yieldingly holding said detent dog in engagement with the latch strip, and said strip normally holding the said detent dog in operative position to prevent movement of the adding sector and type segment and permitting said dog to rise above the adding sector and type segment stop when the latch strip is moved forwardly; a stop slide connected to the adding sector; means whereby when the zero key is depressed the latch strip is moved forward to release the detent dog, and the stop slide and its connected adding sector is held against movement, the associated type segment being released from the detent dog; and means to permit the released type segment to move a single type space to place the zero type in printing position without movement of the adding sector.

1,784,863. INDOOR PORTABLE PRACTICE PUTTING GREEN. HERBERT R. BUSSE, Seattle, Wash. Filed Dec. 19, 1927. Serial No. 241,005. 4 Claims. (Cl. 273—36.)



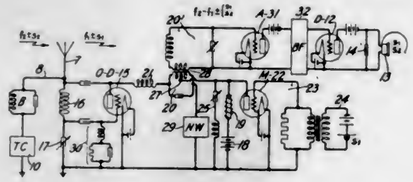
1. A portable practice green comprising a sheet defining an apertured surface inclined upwardly and rearwardly from a forward floor-engaging edge, said forward edge being weighted to prevent displacement when struck by a ball.

1,784,864. CARBURETOR. WILLIAM C. CARTER, Flint, Mich. Filed July 15, 1927. Serial No. 206,028. 6 Claims. (Cl. 261—41.)



1. A carburetor provided with a main mixture passageway, a throttle valve, an accelerating well for holding fuel, a fuel duct leading from the lower end of said well for introducing fuel into said main mixture passageway when the throttle valve is closed or only partly open, the inlet of said fuel duct being formed in the side wall of said well, and a horizontally-disposed partition member arranged parallel to and in closely spaced relation with the bottom of said well, above the inlet end of said duct, for preventing the liquid fuel in said well from surging laterally away from the inlet end of said duct under certain conditions.

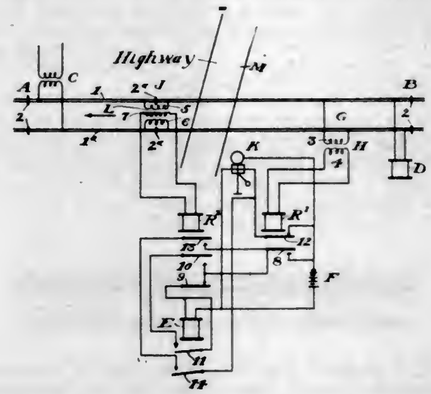
1,784,865. METHOD OF STRAIN HARDENING MANGANESE STEEL. FRANK A. FAHRENWALD, Chicago, Ill., assignor to American Manganese Steel Company, Chicago Heights, Ill., a Corporation of Maine. Filed Dec. 13, 1926. Serial No. 154,645. 3 Claims. (Cl. 148—12.)



1. The process of strain hardening manganese steel, characterized by forming upon a surface of the steel, spaced, conchoidal elevations, and after heat treatment of the steel, and while the steel is cool, depressing these elevations into the body of the casting.

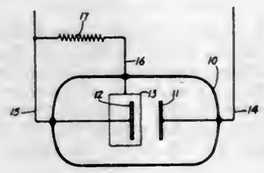
1,784,866. METHOD OF STRAIN-HARDENING STEEL. FRANK A. FAHRENWALD, Chicago, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Mar. 24, 1927. Serial No. 177,878. 2 Claims. (Cl. 148—12.)

1. The process of producing work hardened manganese steel castings, characterized by the step of pressing into the heat treated casting, while the casting is cool, and at spaced intervals, a tool with a rounded end.



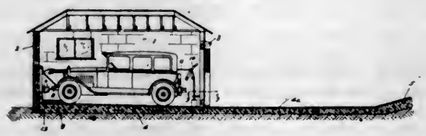
1,784,867. SIGNALING SYSTEM. JOHN F. FARRINGTON, Flushing, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed July 31, 1923, Serial No. 654,823, Patent No. 1,724,917, dated Aug. 20, 1929. Divided and this application filed June 13, 1927. Serial No. 198,443. 10 Claims. (Cl. 250—9.)

10. A combination for two-way signaling comprising a transmission means, an oscillator-modulator circuit, a source of signal currents and a receiver circuit both of which are associated with said transmission means through said oscillator-modulator circuit; and balancing currents from affecting said receiver circuit.



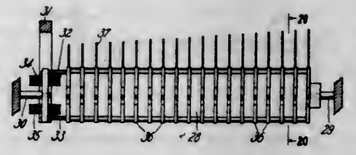
1,784,868. APPARATUS FOR THE CONTROL OF HIGHWAY-CROSSING SIGNALS. ROBERT M. GILSON, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 29, 1926, Serial No. 125,761. Renewed Mar. 20, 1930. 14 Claims. (Cl. 246—130.)

9. In combination, a section of railway track provided with an insulated joint in at least one track rail, a source of alternating track circuit current connected across the rails of said section, a transformer the primary of which is connected in series with said one rail to conduct current around said insulated joint, a relay connected with the



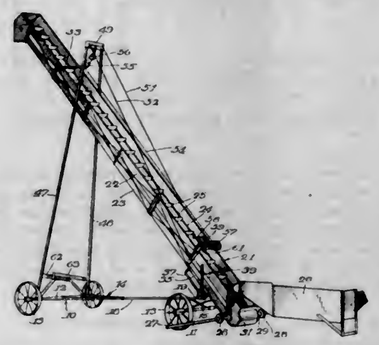
secondary of said transformer, a highway intersecting said track, and a highway crossing signal for said intersection controlled in part by said relay.

1,784,869. RECTIFIER. FRANK GRAY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 31, 1926. Serial No. 98,658. 4 Claims. (Cl. 250—27.5.)



1. A discharge device comprising a containing vessel, a filling of inert gas therein, a pair of opposed disc shaped cold main electrodes comprising an anode and a cathode, a perforated cup-shaped cold electrode interposed between said main electrodes and having a surface parallel with and surrounding the periphery of one of said electrodes, and a high resistance connection between said perforated electrode and one of said main electrodes.

1,784,870. ART OF GARAGE CONSTRUCTION. WESLEY R. HALL, Cincinnati, Ohio. Filed Jan. 23, 1930. Serial No. 422,887. 4 Claims. (Cl. 20—1.13.)

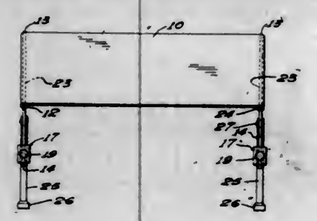


1. In the art of garage construction, the provision of a supporting surface so inclined that the car, without brakes, will gently roll back over same, the provision of a locking device for holding the car to prevent its backward movement, a releasing device for said locking device located adjacent the car door, and an inclined surface located exteriorally of the car for blocking the movement of the car after its movement from the garage.

1,784,871. MECHANICAL TRANSMISSION SYSTEM. HENRY C. HARRISON, Port Washington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 22, 1926. Serial No. 110,879. 6 Claims. (Cl. 181—0.5.)

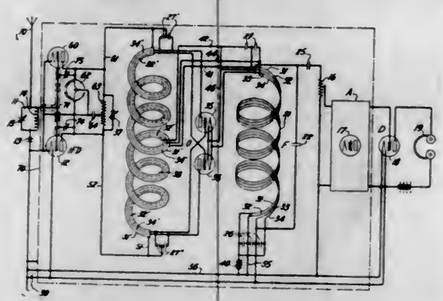
4. A device for measuring frequencies within a given range comprising a plurality of elements, each selectively responsive to a definite frequency within said range, means responsive to wave motion for actuating said elements, and means for coupling said elements to said responsive means comprising a plurality of uniform mass elements and uniform elastic elements coupling said mass elements serially, the ratio of the elasticity of said elastic coupling leements to the values of said masses being large enough to permit the transmission through the coupling means of all frequencies in the given range.

1,784,872. PORTABLE GRAIN ELEVATOR. EDWARD HARTMAN, Sandwich, Ill., assignor to Sandwich Manufacturing Co., a Corporation of Illinois. Filed Aug. 21, 1926. Serial No. 130,759. 2 Claims. (Cl. 198—233.)



1. In combination, a truck comprising front and rear axle assemblies, a bolster member, a coupling member secured to said rear axle assembly, means for pivotally connecting the forward end of said coupling member to said front axle assembly, means for pivotally mounting said bolster member on said front axle assembly, a shaft journaled in said bolster, a pair of pinions on said shaft, an elevator, a rack bar secured to each side of said elevator adjacent to the front end thereof for engaging said pinions for slidably adjusting said elevator longitudinally, keepers for holding said pinions in engagement with the rack, a lever pivoted to said shaft, a toothed wheel for rotating the same, a pawl and ratchet for holding said shaft in adjusted position, and means for raising and lowering the rear end of said elevator.

1,784,873. COPYHOLDER. JAMES BUNDY HAYWOOD, Hopewell, Va. Filed Apr. 20, 1927. Serial No. 185,185. 4 Claims. (Cl. 197—143.)



1. In a device of the character described, a manuscript support presenting a continuously flat surface

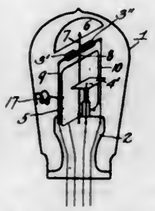
throughout its entire length and breadth, legs hingedly secured to said support and foldable flat thereagainst, certain of said legs being provided with means slidable

thereon for adjustably attaching them to a typewriter for bringing the adjacent edge of the support into position to receive a manuscript from the platen.

1,784,874. CONTROL OF WAVE TRANSMISSION. FRANK A. HUBBARD, Islip, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 26, 1926. Serial No. 111,730. 11 Claims. (Cl. 250—20.)

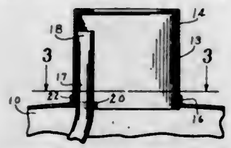
1. A vacuum tube translating device having input and output circuits, and means for coupling said circuits to each other, said means comprising an oscillator including two electric space discharge devices connected in push-pull relation, said means also including a variable condenser effectively connected across the plate and filament of said vacum tube translating device.

1,784,875. ROCKING-HORSE. ADOLPH J. JESSWEIN, Kenosha, Wis. Filed Aug. 3, 1928. Serial No. 297,137. 5 Claims. (Cl. 298—42.)



1. The combination with a wheeled frame, of a seat member pivotally associated with said frame intermediate the extremities thereof, a crank shaft constituting a whel support for said frame, a connecting rod secured to said seat member rearwardly of its pivotal support, an operative connection between said connecting rod and crank shaft to impart movement to said frame responsive to the oscillation of said seat member, steering means for said wheeled frame, pivotal levers connected to said steering means, a bar between said levers to insure corresponding steering movement therein, and resilient means anchored to said bar for operative connection with said steering means to normally guide said wheeled frame in a rectilinear path.

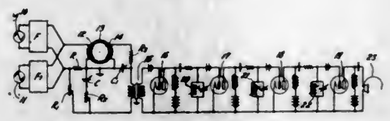
1,784,876. COMBINED FLOOR AND CEILING CONSTRUCTION. HERBERT E. MARKS, Sewickley, Pa., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 10, 1925. Serial No. 61,736. 5 Claims. (Cl. 72—71.)



1. A combined floor and ceiling structure comprising spaced floor beams, combined floor-form and ceiling-supporting members resting independently of each other upon ten tops of and extending transversely of the floor beams and spaced at uniform intervals, floor-form plates supported by said members, a monolithic floor formed on said plates, hangers separately engaging and independently extending downwardly from said uniformly spaced members and arranged at a plurality of intervals between said floor beams, and pre-formed cementitious fire-proofing ceiling slabs of uniform width attached at their ends directly to said hangers and lying in a plane below the lower edges of said floor beams.

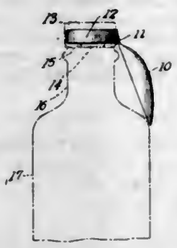
1,784,877. GAS-FILLED DISCHARGE DEVICE. FRIEDRICH MEYER and HANS JOACHIM SPANNER, Berlin Halensee, Germany, assignors, by mesne assignments, to Electrons, Inc., a Corporation of Delaware. Filed Aug. 19, 1927, Serial No. 214,192, and in Germany for a part Aug. 20, 1926, and for a part Oct. 15, 1926, and for another part Nov. 15, 1926. 13 Claims. (Cl. 250—27.5.)

1. An electric discharge tube containing a gas, a plurality of anodes, a barrier interposed between said anodes, said barrier being spaced a distance from said anodes comparable to the mean free distance of said gas and a solid thermionic cathode interposed between said anodes.



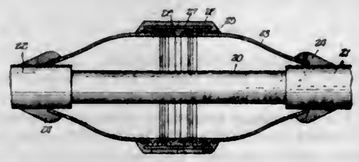
1,784,878. ENGINE-COOLING RADIATOR. CHARLES OPPE, New Haven, Conn., assignor to The G & O Manufacturing Company, New Haven, Conn. Filed July 21, 1926. Serial No. 124,052. 10 Claims. (Cl. 220—24.)

5. A radiator for internal combustion engines, having a tank provided with an opening in the upper side there-



of, and a filler neck secured to the tank within said opening, a vent tube having its upper end extended within the filler neck and adjacent the wall thereof, and means formed integrally with the filler neck and embracing the vent tube to hold it snugly against the wall of the filler neck.

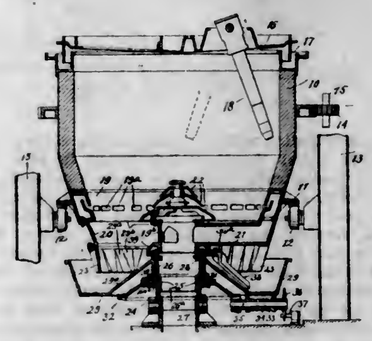
1,784,879. MAGNETIC MODULATOR CIRCUIT. EUGENE PETERSON, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 22, 1926. Serial No. 110,876. 10 Claims. (Cl. 179—171.)



1. A transmission system comprising a source of currents having one or more frequencies in a definite range, a source of currents having a frequency outside of said range, a magnetic device, and means for applying currents from said sources to said device, the impedances of said first source and of said device being matched so as to cause approximately the maximum transfer of energy therebetween when currents from said second source are supplied to said device.

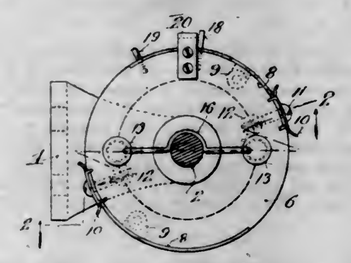
1,784,880. COMBINED SPOON AND CLIP. FERDINAND PHILLIPSON, New York, N. Y. Filed May 24, 1929. Serial No. 365,652. 1 Claim. (Cl. 215—100.)

A medicine spoon or the like, having a bowl portion to which is fixed an expansible, spring clip member, the clip being open-ended whereby it may be snapped into and out of engagement with bottle necks of various sizes, the bowl portion extending at nearly a right angle to the plane of the clip, whereby the bowl portion will lie close to the neck of the bottle when in engagement therewith, and so be out of the way, the clip serving as a handle for the spoon when out of engagement with the bottle, the entire article being stamped out of sheet metal.



1,784,881. INSULATING JOINT. JOSEPH RAH, Chicago, Ill., assignor to G and W Electric Specialty Company, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1927. Serial No. 195,359. 3 Claims. (Cl. 173—268.)

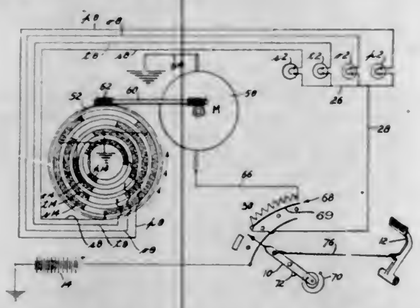
1. In a device of the character described, the combination of a sheathed cable having an interruption in the sheathing, and an insulation containing means for bridging said interruption, said means comprising a plurality of metallic members positioned in and spaced by a plurality of condensers.



2. In a device of the character described, the combination with a sheathed cable having a gap in said sheathing, a sleeve for bridging said gap, said sleeve comprising spaced metallic members associated with said sheathing, insulation disposed between and joining the edges of said members, and a plurality of metallic members disposed between and insulated from the edges of said first mentioned members.

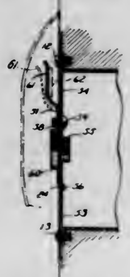
1,784,882. GAS PRODUCER. JOHN F. ROGERS, Cleveland Heights, Ohio, assignor to The Wellman Engineering Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 2, 1930. Serial No. 421,221. 12 Claims. (Cl. 48—85.1.)

2. In a gas producer, a rotatable producer body, means for rotatably supporting the latter, means for rotating said body, a member coaxial with the lower portion of the producer body, independent means for rotatably supporting said member, means connecting said member to the producer body to be rotated thereby, an ash-pan mounted on said member, said ash-pan being normally rotatable with said member but so mounted on said member as to be capable of rotative movement relative thereto, and means acting automatically and at intervals on said ash-pan to impart turning movements thereto relative to said member and producer body.



1,784,883. COMPENSATING SWITCH. HAROLD ROWNTREE, Scarsdale, N. Y., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed May 15, 1926. Serial No. 109,225. 7 Claims. (Cl. 200—164.)

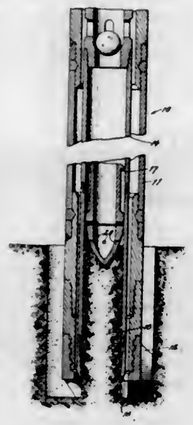
1. In a switch the combination with an operating shaft of a switch comprising a fixed member having a plurality of contacts thereon, a movable member adapted to rotate on said shaft having shoes to cooperate with said contacts and means operated by the shaft for moving the



movable member with respect to the fixed member the contacts and shoes being arranged so that contact is made between them and immediately upon rotation of the shaft in one direction.

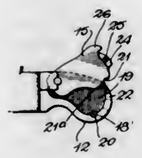
1,784,884. VEHICLE STOP SIGNAL. HARRY M. SMITH, Alameda, Calif. Filed Dec. 9, 1926. Serial No. 153,514. 4 Claims. (Cl. 177—339.)

1. In combination with a vehicle having a brake lever, an electric signal circuit, switch means in said signal circuit for periodically closing the same, a normally open motor circuit, a motor in said motor circuit operative to actuate said switch means, a rheostat in said motor circuit for varying the resistance thereof, and a second switch in said signal circuit operable upon an actuation of said brake lever to close said signal circuit thereat and to simultaneously cooperate with said rheostat for closing the motor circuit therethrough in such manner that an increased degree of brake lever displacement is arranged to effect an increased frequency of closing of said first switch means.



1,784,885. LIGHTING-FIXTURE SUPPORT. ISIDORE WOLARSKY, Mount Vernon, N. Y. Filed Oct. 25, 1926. Serial No. 143,810. 13 Claims. (Cl. 240—85.)

1. A device for supporting lighting fixtures from electrical outlet fittings, said device comprising a strap having screw receiving openings to support the strap on outlet boxes of various sizes and styles, a laterally drawn tubular extension internally threaded and adapted to receive a threaded stud, a second strap removably carried by the first strap, and a tubular member extending laterally outwardly and connected to said second strap, said member having a larger diameter than the said extension.

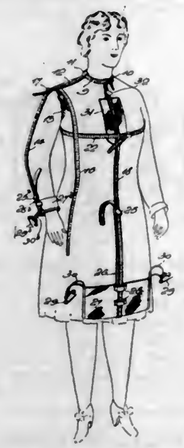


1,784,886. SCREEN PLUG FOR CORE BARRELS. REUBEN C. BAKER, Coalinga, Calif., assignor to Baker Oil Tools, Inc., a Corporation of California. Filed Dec. 24, 1927. Serial No. 242,363. 3 Claims. (Cl. 255—72.)

1. In combination with a core barrel, of a hollow plug adapted to fit within the lower end thereof to close the same, said plug being of a diameter whereby it may travel upwardly into the core barrel when released therefrom, said plug having a plurality of restricted openings formed therein to permit the passage of fluid therethrough, means on the plug engaging the core retainer in the core barrel to support the plug, means carried by the plug

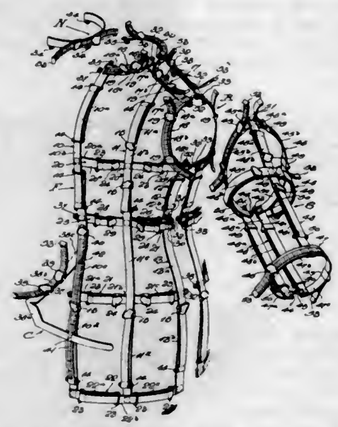
engaging the lower end of the core barrel to prevent the passage of the plug upwardly into the core barrel, said last-named means being fragile whereby it may be disrupted when the core barrel has reached the point of operation in a well so that the plug may be released from the core barrel and travel upwardly therein to permit the entry of a core.

1,784,887. WRIST-WATCH ATTACHMENT. ROBERT F. CAMPBELL, Brooklyn, N. Y. Filed Oct. 17, 1929. Serial No. 400,220. 9 Claims. (Cl. 24—265.)



1. A bar supporting lug of the class described comprising a main lug part, a comparatively large recess formed on one side face of said part, a latch part movably supported in said recess, means for supporting one end of a bar within and between the parts of said lug, and means for retaining the latch part against accidental displacement when in closed position.

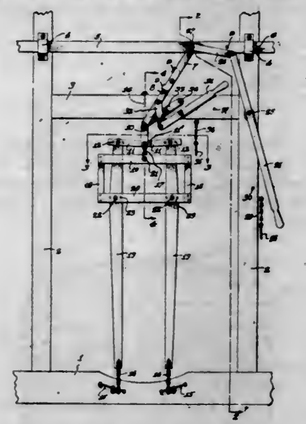
1,784,888. MEASURING HARNESS. MARIE G. COUTURE, Concord, N. H. Filed Mar. 8, 1929. Serial No. 345,573. 9 Claims. (Cl. 32—2.)



1. In a measuring harness, a pendent measuring strap for a garment portion, and a horizontally elongated flexible sheet connected with the lower portion of said strap to give the effect of any suggested length of said garment portion, said sheet projecting extensively from said strap and having free ends, pins at said ends for temporarily

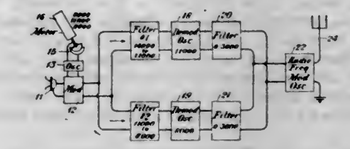
pinning them at different positions until the desired effect is attained, and flexible ties carrying said pins and connected permanently to said sheet.

7. In a measuring harness, a front dress length strap and a sheet disposed against the upper portion of said strap and connected therewith for vertical adjustment to give the effect of various suggested depths of neck, said sheet being of a width much greater than the strap and projecting oppositely from the latter.



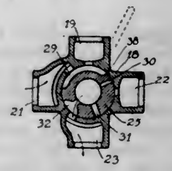
1,784,889. PATTERN-CUTTING HARNESS. MARIE G. COUTURE, Concord, N. H. Filed Mar. 8, 1929. Serial No. 345,575. 10 Claims. (Cl. 33—15.)

6. In an adjustable pattern cutting harness, a horizontal strap having a bifurcated end at least one furcation of which is extensible, and upper and lower vertical straps connected with the furcations of said bifurcated end, respectively.



1,784,890. CATTLE STANCHION. WILLIAM E. CURRIE, Lake Jovita, Fla., and PETER DE VRIES, Detroit, Mich.; said Peter de Vries assignor to William E. Currie. Filed Sept. 28, 1928. Serial No. 308,982. 4 Claims. (Cl. 119—148.)

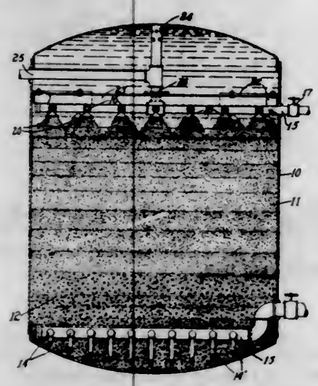
1. A stanchion comprising a frame, a bar slidably supported by said frame, a link suspended from said frame, a pair of neck bars suspended from said link and adapted to be operated thereby, a loose frame suspended from said first named frame having the neck bars pivoted thereto, a



connection between said slidable bar and link for operating the latter and the neck bars, means for sliding said slidable bar, and means independent of said slidable bar for operating said link.

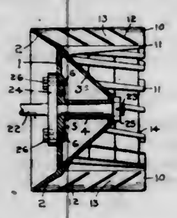
1,784,891. PRIVACY SIGNALING SYSTEM. SAMUEL W. DEAN, Brooklyn, and CLIFFORD N. ANDERSON, New York, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 1, 1929. Serial No. 404,138. 9 Claims. (Cl. 179—1.)

4. In a secrecy communicating system, a source of speech signal, means for modulating the signal against a varying carrier frequency, a path for transmitting the upper portion of one of the side bands, a second parallel path for transmitting the lower portion of the same side band, and means in each path for demodulating to the original frequency range with the two portions adjacent but transposed and continually varying.



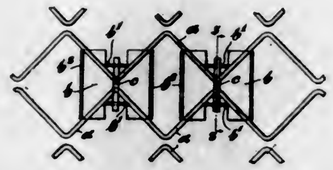
1,784,892. FLUID-TREATING APPARATUS. EMIL G. DUDEN, Oakmont, Pa., assignor to Wm. B. Scaife & Sons Co., a Corporation of Pennsylvania. Filed Apr. 30, 1927. Serial No. 187,768. 2 Claims. (Cl. 251—104.)

1. A five way valve comprising a valve casing having four circumferentially spaced ports and an intermediate port, all for the passage of liquid, a valve plug operable within said casing having an intermediate passage formed therein and so located as to register with said intermediate port in all positions of the plug, and having three pas-



sages communicating with said intermediate passage and adapted to establish communication between said intermediate passage and one or two of said circumferential ports for different positions of the plug, and having a peripheral groove formed therein for successively establishing communication between any two adjacent circumferentially spaced ports as said plug is turned to one of four different positions.

1,784,893. WATER-TREATING APPARATUS. EMIL G. DUDEN, Oakmont, Pa., assignor to Wm. B. Scaife & Sons Company, a Corporation of Pennsylvania. Filed Aug. 29, 1928. Serial No. 302,661. 2 Claims. (Cl. 210—24.)

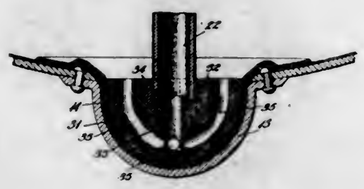


1. A water softening apparatus including a casing provided with a bed of water softening material, means for causing water to be softened to flow upwardly through said bed, vertically disposed offtakes for softened water located beneath the surface of said bed so as to cause said water flow to form areas of compression in said bed to prevent the free expansion thereof, offtakes located above said bed in spaced relation thereto, and means for removing water through either or both of said offtakes.

1,784,894. AIRPLANE PROPELLER. FRANK A. DUMONT, Shelton, Wash. Filed Mar. 5, 1928. Serial No. 259,177. 6 Claims. (Cl. 170—169.)

1. An airplane propeller, comprising a base, a conical member extending from the base and integral therewith, an elongated bearing for a shaft extending through the base and the apex of the member, a plurality of blades extending circumferentially of and enclosing the member, said blades being disposed in spaced parallel relation and defining a diagonal course in the direction of normal rotation of the propeller, the outer edge portions of the blades being located in angular relation to the base and their inner edge portions inclined in the direction of normal rotation of the propeller, and a plurality of inclined sections extending between said portions, disposed in spaced parallel relation and providing a plurality of air passages between the blades.

1,784,895. CONSTRUCTION OF ROADS AND THE LIKE. LOUIS HERMAN ALFRED DUNKER, Birmingham, England, assignor to The Steel-Mesh Road Service Company, Limited, Birmingham, England. Filed Aug. 10, 1928, Serial No. 298,756, and in Great Britain Aug. 27, 1927. 4 Claims. (Cl. 94—30.)

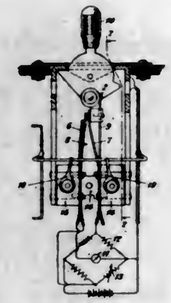


1. In combination with a supporting foundation, a metallic mesh comprising a plurality of bent metal strips loosely disposed in parallel relation, the crests and depressions of said strips being opposed, and metal plates intermediate said strips and said foundation, said metal plates having upturned portions engaging said strips at various points for holding them in fixed relative position.

1,784,896. BRAKE-BEAM STRUCTURE. HERBERT W. EKHOLM, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 5, 1928. Serial No. 267,778. 12 Claims. (Cl. 188—213.)

3. In a brake beam third or fourth point support chair, a device for clamping the chair against a brake beam member, and a separate element seated in said chair and adapted to be forced into the surface of said member when said device is tightened.

1,784,897. CUSHIONING ANCHORAGE DEVICE. HOWARD E. FRITZ, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 26, 1928. Serial No. 295,452. 7 Claims. (Cl. 220—86.)



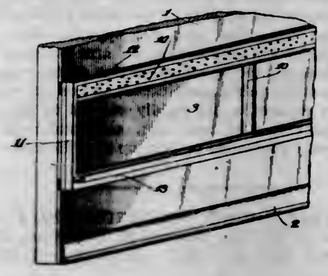
1. In combination, a mobile tank formed with a sump, a resilient member comprising a rubber mounted in said sump, and a well-pipe mounted in said tank, having its lower end engaged with said resilient member and holding the same firmly within the sump.

1,784,898. CIRCUIT SWITCH. LAURENCE A. GARY, San Francisco, and HOMER G. TASKER, Los Angeles, Calif., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed July 17, 1928. Serial No. 293,445. 2 Claims. (Cl. 200—1.)

1. A switch for electric circuits comprising a plurality of contact members, means associated with said contact

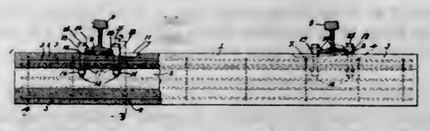
members for making and breaking contact therebetween, a plurality of insulating members each in juxtaposition

with one of said contact members, and a current conducting shield having surface contact with each of said insulating members.



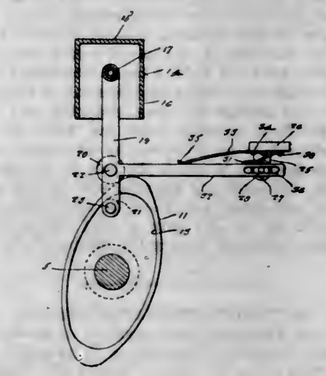
1,784,899. COMPRESSIBLE PACKING. STANLEY IMERMAN, Detroit, Mich. Filed Aug. 11, 1928. Serial No. 298,895. 1 Claim. (Cl. 74—109.)

In a travelling valve, a tubular body, a compressible packing thereon consisting of a series of segmental members arranged in a ring, each such member having a thin portion and a thicker portion at opposite sides of an arcuate line thereon, additional segmental members placed adjacent said thin portions and overlapping the joints therebetween, a spring disposed within the series of first named segmental members and bearing outwardly thereon, and locking means between said thicker portions and the last named segmental members.



1,784,900. VENTILATED BLACKBOARD INSTALLATION. JOHN F. JOHNSON, Chicago Heights, Ill., assignor to Weber Costello Company, Chicago Heights, Ill., a Corporation of Illinois. Filed Sept. 17, 1928. Serial No. 306,530. 2 Claims. (Cl. 35—15.)

1. In combination in an apparatus for supporting a blackboard of the wall type solely by a wall in such a manner as to preclude the deposit of sweat on the board as a result of its proximity to the wall and to thus preclude the formation of chalk scum of the character described thereon, strips for spacing the board from the wall and additional supporting means for the board in

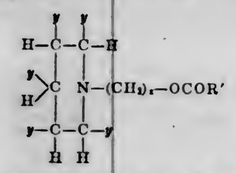


said spacing arranged to define substantially vertical passageways to allow a natural draft of atmospheric air to circulate through each of the passageways.

1,784,901. RAILWAY TIE. FRANK L. KLINGENSMITH, Detroit, Mich. Filed July 11, 1929. Serial No. 377,578. 3 Claims. (Cl. 238—92.)

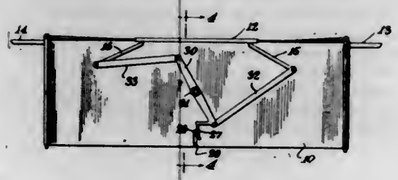
1. A railway tie including a body formed of cementitious material with a longitudinal opening formed by rapidly rotating the body while the material is in a plastic state, said opening being open through the ends of the body, a metal reinforcement in said body firmly embedded therein during said centrifugal formation of said body and means for securing rails and blocks in place upon the body, said means including members extending through the wall of the body and reinforcement with their inner ends within the longitudinal opening in the body.

1,784,902. POWER-SHAFT CONNECTION FOR INTERNAL-COMBUSTION ENGINES. JOSEPH V. MAURAIS, Muscatine, Iowa. Filed Oct. 22, 1929. Serial No. 401,587. 4 Claims. (Cl. 74—14.)



1. A power shaft connection comprising in combination, a piston adapted to be operably associated with a cylinder

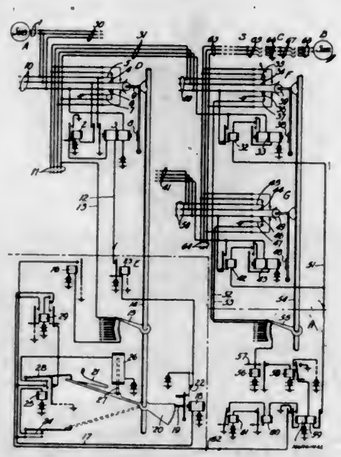
of an internal combustion engine, a straight shaft adapted to be horizontally journaled through the internal combustion engine, a cam having an outset track rigidly coupled to the shaft, a connecting arm having one end connected to the piston, a pair of vertically spaced rollers rotatably coupled to the arm at the lower end thereof, the rollers being engageable with the opposite sides of the track, an angularly disposed guide arm merging at its inner end with an intermediate portion of the connecting arm and provided with a longitudinal slot on its outer end, a stationary bracket, a pin rigidly secured to the bracket and movably seated in said slot, and automatic means bearing on said guide arm to take up play in said connecting arm.



1,784,903. PIPERIDINE DERIVATIVE AND PROCESS OF PRODUCING IT. SAMUEL M. MCELVAIN, Madison, Wis. Filed Mar. 30, 1927. Serial No. 179,725. 44 Claims. (Cl. 260—43.)

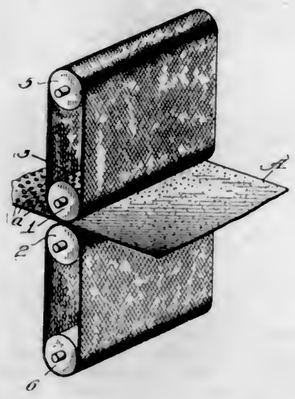
1. A piperidine derivative including a substance of the general formula

in which R' is an aromatic radicle, x is an integer, and y in one place is an aliphatic group and in each of the four other places is a hydrogen atom.



1,784,904. RODENT TRAP. RUPPERT MERKL, Ossining, N. Y. Filed Mar. 25, 1930. Serial No. 438,715. 2 Claims. (Cl. 43—61.)

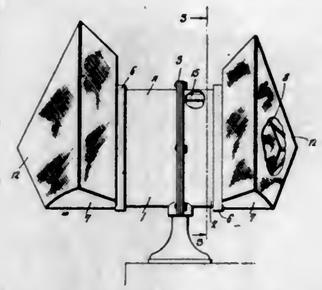
1. A rodent trap comprising a housing, doors for closing the ends of said housing, cross-rods to which the inner ends of said doors are hinged, angularly bent ends on said rods, frames turnably attached to said cross-rods, a movable platform in said housing, a stake on said platform for impaling the bait, a system of levers connected to said angularly bent rod ends, a lever extending from said platform through the wall of said housing, a trigger combined with said system of levers, engaging said lever to keep the platform elevated with the doors open, said platform adapted to be depressed by an animal stepping on the same desiring to reach the bait to disengage said trigger from said lever and allowing said system of levers to close the end doors and stops on said doors adapted to be engaged by the end bars of said frames for keeping the doors closed for barring the escape of the trapped animal.



1,784,905. TELEPHONE-EXCHANGE SYSTEM. GEORGE H. MORENCY, Portland, Oreg., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 10, 1929. Serial No. 369,671. 9 Claims. (Cl. 179—18.)

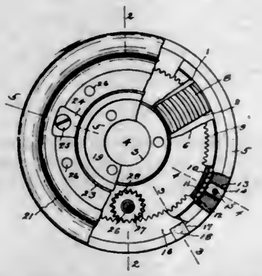
1. In a telephone system, calling lines terminating in primary line-switches, secondary line-switches accessible to said primary line-switches, and means operative in the event a plurality of said secondary line-switches are simultaneously seized to prevent the operation of said plurality

of secondary line-switches and to cause the release of those of said primary line-switches by which said plurality of secondary line-switches were seized.



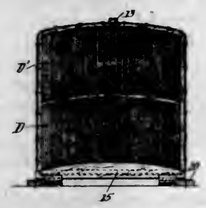
1,784,906. METHOD OF EMBOSSING FIBER SHEETS. LEOPOLD OXHANDLER, Chicago, Ill. Filed Aug. 8, 1927. Serial No. 211,429. 3 Claims. (Cl. 18—56.)

2. The method of embossing a fibrous sheet, which consists in passing the same, saturated with moisture, through embossing rollers with a thin flexible sheet interposed between at least one face thereof and the corresponding roller and forcing separated areas of the sheet bodily out of the plane of the sheet.



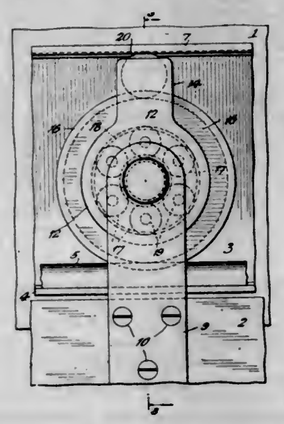
1,784,907. COOLING-FAN ATTACHMENT. ELLA PATRICK, Olathe, Colo. Filed Nov. 15, 1929. Serial No. 407,527. 2 Claims. (Cl. 261—30.)

1. In combination with a motor driven fan, a cylinder surrounding the same and supported from the pedestal of the fan, a cloth screen covering each end of the cylinder, a set of frames in rear of the cylinder, a set of frames in front thereof, each frame being of substantially conical shape and formed of wire, with the frames of each set being of gradually increasing area, cloth screens covering



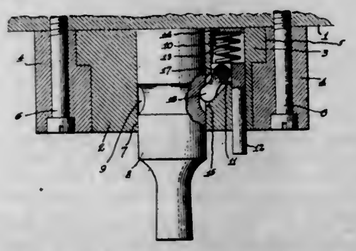
the frames and so arranged that the air entering the cylinder and leaving the same must pass through such screens and means for moistening the screens carried by the frames.

1,784,908. DIFFERENTIAL CHUCK. JOSEPH C. REGAN, West Hartford, Conn., assignor to The E. Horton & Son Company, Windsor Locks, Conn., a Corporation of Connecticut. Filed May 28, 1928. Serial No. 281,065. 3 Claims. (Cl. 279—114.)



1. A chuck having a body carrying radially movable jaws and a rotatable scroll disk for opening and closing the jaws, balls interposed in a race between the chuck body and the rim of the scroll disk and rotatably supporting and locking said disk in place in the body, said body having an opening through the rim from the exterior to said race for the introduction of said balls, and means removably fitted in and closing said opening.

1,784,909. METHOD AND APPARATUS FOR SHIPPING METAL. ROBERT T. ROMINE, Mount Clemens, Mich. Continuation of application Serial No. 313,846, filed Oct. 20, 1928, now Patent No. 1,745,057, dated Jan. 28, 1930. This application filed Jan. 23, 1930. Serial No. 422,846. 20 Claims. (Cl. 105—369.)

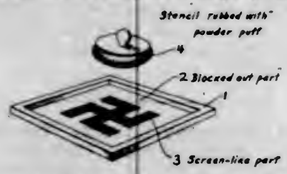


1. The hereindescribed method of shipping sheet, bar or strip metal, in relatively heavy unit packs on a freight car floor which consists in applying friction to the pack by binding the same as a unit with the upper or lower horizontal surface in engagement with relatively softer material, such as wood, and distorting the pack transversely of the binder against said material to increase the frictional engagement.

1,784,910. SLIDING-DOOR HANGER. BERNARD ROWNTREE, Carmel Highlands, Calif. Filed Sept. 14, 1927. Serial No. 219,448. 5 Claims. (Cl. 16—98.)

1. A sliding door support of the type described comprising a horizontally extending trackway, a sheave adapted to roll upon said trackway, a door support carried by said sheave, a second trackway having a concave curved surface spaced parallel with and adjacent said first trackway, and an anti-friction means adapted to contact with said sheave and said second trackway and prevent excessive tilting and friction should the sheave be raised from its trackway by reason of a tilting of the door in sliding same.

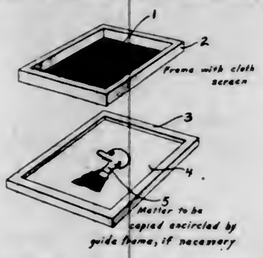
1,784,911. TOOL-RETAINING DEVICE. MICHAEL J. SCHLITTERS, Jr., and STANLEY IMERMAN, Detroit, Mich. Filed May 6, 1927. Serial No. 189,444. 2 Claims. (Cl. 279—79.)



1. A retainer for tools and the like comprising a socket member having a receiving aperture, a head slidably mounted in said member, a detent carried by said head and extending into said aperture, and a stem fixed to said head and passing through said member at the side having the receiving end of said aperture.

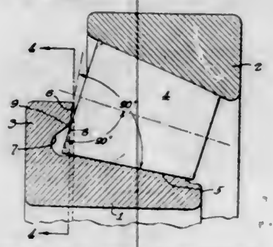
1,784,912. STENCILING. BEATRICE P. SCOTT, Marblehead, Mass. Filed Mar. 31, 1927. Serial No. 180,073. 5 Claims. (Cl. 101—129.)

1. The process of stenciling a design upon the surface of an object which consists in imparting an electric



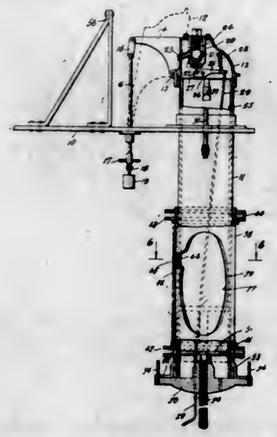
CARNEGIE LIBRARY OF ATLANTA

charge to the surface of the object by rubbing it, applying a dry powder to the surface through a design-bearing



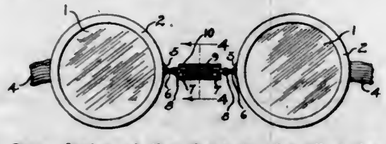
stencil screen applied to the surface by repeatedly rubbing the powder through the screen and onto the electrified surface, and removing the screen from the surface.

1,784,913. REPRODUCING PROCESS. BEATRICE F. SCOTT, Marblehead, Mass. Filed Aug. 28, 1928. Serial No. 302,573. 5 Claims. (Cl. 101—129.)



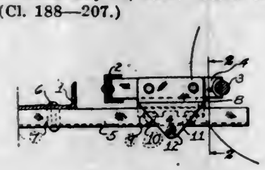
1. A process for reproducing characters formed of printer's ink consisting in placing a screen over the characters to be reproduced, rubbing a dry powder into said screen to form in the interstices thereof a copy of the original in powder-image form and thereafter placing said image-carrying screen upon a receiving surface and rubbing the powder contained in said screen from the screen and upon the surface.

1,784,914. ROLLER BEARING. SILAS A. STRICKLAND and THOMAS ZIMMERMAN, Detroit, Mich., assignors to Bower Roller Bearing Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 26, 1928. Serial No. 328,329. 4 Claims. (Cl. 308—214.)



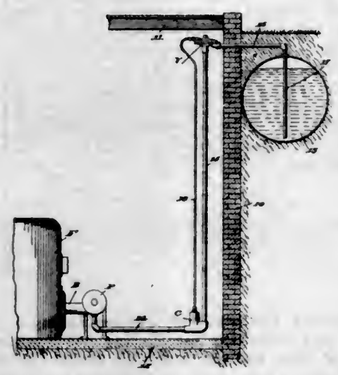
1. In tapered roller bearing structures, wherein the rolling cones and coacting conical surfaces produce a resultant endwise thrust of said cones, a bearing having an annular shoulder to take such end thrust, a cross-section of the bearing presenting said shoulder as having its active face projecting relative to a plane corresponding to the adjacent one of said conical surfaces with the projection at such angle as to permit of concurrent grinding of the active faces of both the shoulder and conical surface, said shoulder being recessed inwardly at the apex of the planes which produce the angle to locate the thrust-receiving line of the shoulder as spaced from the plane of the adjacent conical surface, and as the lower boundary of the ground face of the shoulder, whereby the cone thrust will be presented as a spaced two point or zone contact.

1,784,915. ESCAPE TUBE FOR SUBMARINES. HENRY A. STUDWELL, Stamford, Conn. Filed May 21, 1928. Serial No. 279,287. 6 Claims. (Cl. 114—16.6.)



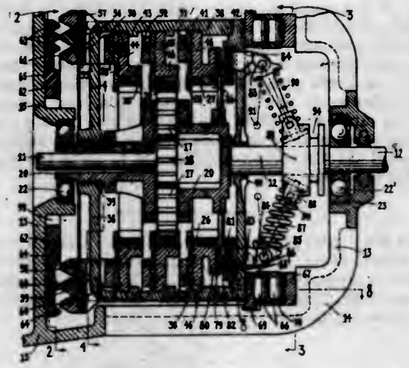
1. An escape device for submarines comprising a tubular casing adapted to project through the deck of the submarine, a hinged closure for the upper end of said casing and opening outwardly, said closure being provided with an opening closed by a valve, operating means carried by the closure for manually opening the valve and for automatically reclosing it, said casing being provided with an entrance opening within the submarine, and means for closing said opening operable from within the casing.

1,784,916. LINK BRIDGE FOR OPHTHALMIC MOUNTINGS. HARRY H. STILL, Southbridge, Mass. Filed Dec. 15, 1927. Serial No. 240,149. 3 Claims. (Cl. 88—44.)



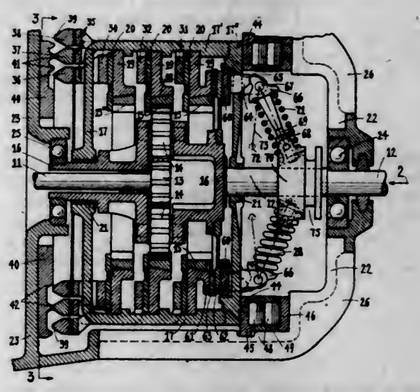
1. In a device of the character described for use in combination with a pair of lens holding members, a pair of link rods having their terminal ends facing and separated from each other each having a terminal eye, an attaching member on each lens holding member having an eye linked in an eye of one of said link rods for universal movement and threaded means adapted to change the distance between the facing ends of the two rod links.

1,784,917. HANGERLESS BRAKE BEAM. CHARLES I. WALKER, Los Angeles, Calif., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed May 14, 1927. Serial No. 191,422. 9 Claims. (Cl. 188—207.)



1. In a brake beam and mounting of the hangerless type, a beam, a support arm, and anti-friction elements carrying said beam on said arm and engaging opposite sides of said arm.

1,784,918. ANTISIPHONING SYSTEM. ALBERT U. WALTER, Baltimore, Md. Filed Nov. 22, 1927. Serial No. 234,975. 14 Claims. (Cl. 103—1.)



1. In a liquid feeding system having an elevated supply and a low level discharge, with a siphon conduit connecting the supply and discharge, a suction pump to draw the liquid through the conduit, a valve for closing said conduit located therein at a point above the liquid level in the elevated supply, means for normally holding said valve closed when there is no suction on the line, and means operating independently of the head of liquid between the valve and the pump for opening the valve and holding said valve open during the operation of the pump and for permitting said valve to close when the pump suction ceases.

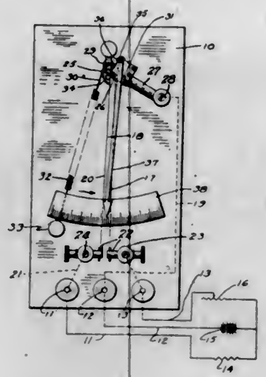
1,784,919. TRANSMISSION. ERNEST WILDHABER, Brooklyn, N. Y. Filed July 16, 1928. Serial No. 292,947. 21 Claims. (Cl. 74—34.)

1. In an automotive transmission, a driving element and a driven element, means for operatively connecting said elements, a joint rotatable member, a plurality of individual coaxial members suited to be locked to said joint rotatable member, means for maintaining said joint member stationary, frictional surfaces disposed on said individual members and on said joint member, a selector, means for transmitting pressure from said selector to an individual member, and means for effecting pressure between said selector and said joint member, for frictionally locking a previously selected individual member to said joint member.

1,784,920. TRANSMISSION. ERNEST WILDHABER, Brooklyn, N. Y. Filed July 16, 1928. Serial No. 292,948. 12 Claims. (Cl. 24—34.)

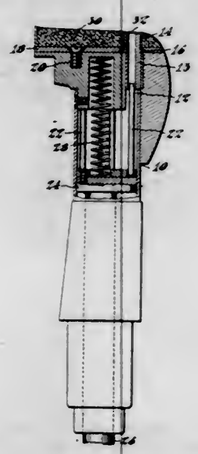
1. In a planetary transmission, frictional clutching means for effecting direct drive, spring means in constant operative connection with said clutching means for maintaining said clutching means in engagement under pressure, a brake for maintaining a member of the transmission stationary, other spring means in constant operative connection with said brake for maintaining said brake in engagement, a pedal, and means for operatively connecting said pedal selectively with said clutching means and with said brake.

1,784,921. CHANGEABLE EYES FOR DOLLS. IRA C. WINTERS, Norwich, N. Y. Filed Nov. 22, 1929. Serial No. 409,142. 2 Claims. (Cl. 46—40.)



1. In combination with a doll having eye openings in its head part, a shaft rotatably supported in the head of the doll, spherical members on the shaft having portions projecting through the eye openings, eye designs on each member of different colors and located in different positions with respect to the eye opening, means for rotating the shaft to bring any desired pair of designs into view through the openings, such means comprising a second shaft rotatably supported in the head of the doll, a weight thereon and chain and sprocket means for connecting the shafts together.

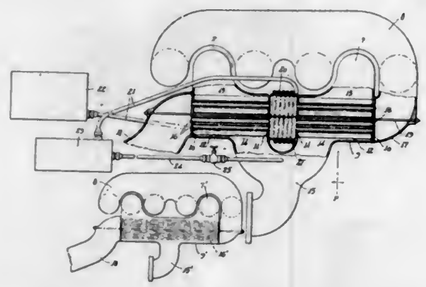
1,784,922. ELECTRICAL THERMOMETER. JOSEPH W. ALLEN, Dayton, Ohio. Original application filed Aug. 28, 1924, Serial No. 734,817. Divided and this application filed Mar. 16, 1929. Serial No. 347,633. 2 Claims. (Cl. 171—308.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



1. In an electrical measuring instrument of the character described, a wire loop, a pivoted arm for a pulley

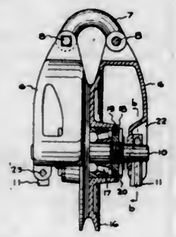
over which said loop passes, tensioning means normally urging said arm outwardly to keep the loop taut, and

means carried by said arm and movable relative to a scale upon turning of said pulley due to the expansion and contraction of said loop.



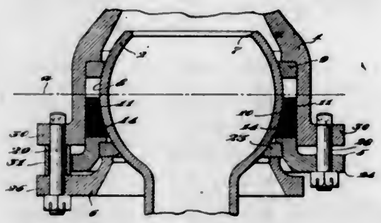
1,784,923. SHOE-SUPPORT. WILLIAM RODERICK BARCLAY, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 9, 1925, Serial No. 55,321, and in Great Britain Oct. 6, 1924. 7 Claims. (Cl. 1—32.)

1. A shoe-support comprising fastening-receiving tubes, and a body surrounding the tubes and arranged for contact with the heel-seat portion of a shoe, said body and tubes being organized for relative movement under pressure of the work and offering to the shoe under the influence of such pressure substantial uniformity of contact and reaction over the entire area.



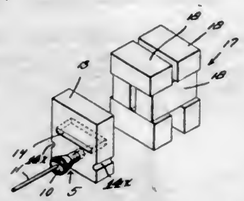
1,784,924. GAS-HEATING MANIFOLD. LEVI H. BERRY, Joplin, Mo. Filed Mar. 17, 1928. Serial No. 262,469. 2 Claims. (Cl. 123—180.)

1. The combination of intake and exhaust manifolds of an engine, the intake manifold having a tubular body portion with partitions between its ends forming chambers between said partitions and ends, said chambers having outlets, and the intake manifold having a bifurcated trunk communicating with said chambers, and flues in said chambers between said partitions and ends of said body portion, the exhaust manifold extending to one end of said body portion in communication with the corre-



sponding flues, and said body portion having a chamber between said partitions establishing communication between said flues, and gas supplying means having a coil surrounding the last-named chamber and connected to the intake manifold.

1,784,925. PULLEY BLOCK. ALVIN R. CAMPBELL, Seattle, Wash. Filed May 9, 1925. Serial No. 29,058. 3 Claims. (Cl. 254—192.)

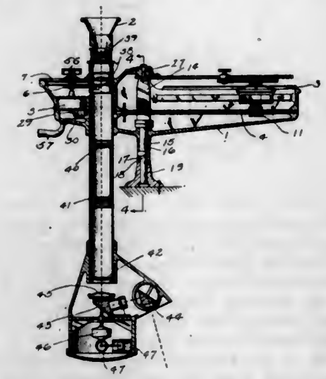


1. A demountable pulley block embodying a sheave; a pin for said sheave, said pin being tapered on each end portion, said end portion having a key way slot therethrough; two side mounting members constituting the pulley block shell, each of said members having a tapered hole adapted to receive said sheave pin, and a tapered slot; a tapered key to fit the key way slot in said sheave pin and said slot in said side members; and a releasably mounted shackle operatively disposed to unite the tops of said side members.

1,784,926. SWIVEL-JOINT PACKING. GEORGE CHRISTENSON, North Plainfield, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a Corporation of New York. Filed July 25, 1927. Serial No. 208,072. 2 Claims. (Cl. 285—94.)

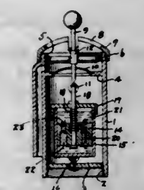
1. A universal joint pipe coupling construction comprising relatively movable ball and socket members, bearing rings between the ball and socket members, and packing between the rings, said packing comprising yieldable rings, said packing rings having an interfitting V-shaped groove and recess with the sides thereof inclined in relation to the general plane of each of the rings, a gland member holding one of the packing rings in place, said packing rings being disposed entirely at one side of a plane passing through the center of the ball, said packing and bearing rings being arranged to afford a fluid space between the ball and socket upon the side of the packing remote from the gland, whereby fluid pressure due to leakage into said space tends to cause the packing rings to be pressed into more intimate engagement with each other and the walls of the ball and socket members.

1,784,927. FUEL BURNER. OSCAR M. COON, Lubbock, Tex. Filed Mar. 16, 1928. Serial No. 262,092. 1 Claim. (Cl. 158—7.)



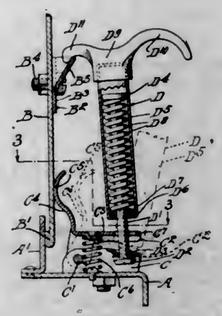
The combination of a burner open at its opposite ends and containing a comparatively small nozzle whereby a passage for air is afforded between burner and nozzle, and a burner block having an aperture receiving said burner and also having a slot above said aperture and burner and means in its end portions at opposite sides of the burner aperture for the passage of air.

1,784,928. VACCINE FOR HOG CHOLERA, AND PROCESS FOR MANUFACTURING THE SAME. MARION DORSET, Washington, D. C. Filed Sept. 1, 1928. Serial No. 303,619. 4 Claims. (Cl. 167—80.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



1. A vaccine for hog cholera comprising hog cholera virus from any source and formaldehyde in amount sufficient to eliminate the disease producing power of the virus without destroying its immunizing power.

1,784,929. AERIAL NAVIGATION INSTRUMENT. GEORGES ESTOPPEY, Dayton, Ohio. Filed Apr. 10, 1926. Serial No. 101,121. 10 Claims. (Cl. 33—46.5.)

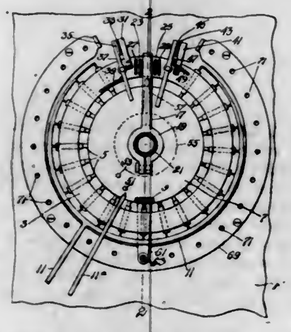


10. An instrument for determining automatically the relation between the various speed vectors for a moving craft comprising means for resolving the vectors of the various speeds into a mechanical triangle, said means comprising vector arms graduated and pivotally associated and including a ground-speed arm, means for determining the ground speed, and means comprising an index for indicating the ground-speed on said ground-speed arm and for interconnecting said arm and the wind speed arm whereby the length of the side of the triangle representing the ground-speed is automatically set up as the ground-speed is determined.

1,784,930. SWITCH. HARMON A. GEORGE, Petaluma, Calif. Original application filed July 24, 1926, Serial No. 124,762. Divided and this application filed May 16, 1927. Serial No. 191,858. 4 Claims. (Cl. 200—34.)

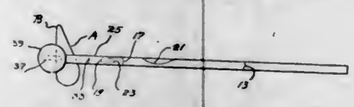
1. A switch adapted to close various circuits and to be manually moved in a plurality of directions, a cylinder adapted to hold a fluid, a piston in said cylinder, a rod pivotally connected to said switch and passing into said cylinder and slidably connected to said piston, said piston being resiliently mounted to disconnect the switch from a circuit, said piston having an aperture therethrough and means for adjusting the cross sectional area of said aperture, and a valve in said piston adapted to be opened by the fluid in the cylinder when the piston is moved.

1,784,931. HOOD LATCH. CHARLES B. GILMORE, Chicago, Ill., assignor to Chicago Forging & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 14, 1928. Serial No. 292,641. 4 Claims. (Cl. 292—114.)



1. In a hood latch for automobile hood closures, the combination of a down clamp element adapted to exert a thrust downwardly against the hood, and a lateral thrust element adapted to exert a thrust laterally against the hood, the two being independent in their operation during their simultaneous operative connection with the closure, and means associated with the down clamp element for withdrawing the lateral thrust element from operative engagement with the hood in response to movement of the down clamp element after its release.

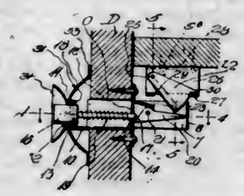
1,784,932. PROCESS OF WELDING DRILLS. FRANK O. HOAGLAND, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 1, 1928. Serial No. 251,109. 3 Claims. (Cl. 76—108.)



1. The process of welding a drill bit to a tubular shank, comprising butt welding to a drill bit of alloy steel having a longitudinal hole therethrough a piece of carbon steel having a similar cross-section to the drill bit and having a longitudinal hole therein, butt welding a tubular shank to the end of the carbon steel, and longitudinally drilling through said drill bit and said carbon steel and into said tubular shank.

1,784,933. ELEVATOR-CONTROL DEVICE. JOSEPH R. JACKSON, Jr., Boston, Mass. Filed Apr. 14, 1928. Serial No. 270,133. 9 Claims. (Cl. 187—29.)

5. In an electric elevator control, a shaft, a rotor thereon having conducting and insulation portions, a support, a series of spring-pressed contact pins carried by the support and engaging the rotor, manually operable means for turning the rotor to set the same in different positions of rotative adjustment, and means for holding the rotor in its different positions of adjustment.

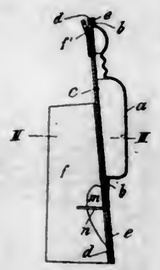


1,784,934. PLECTRUM HOLDER. PER WILHELM JOHANSSON, New York, N. Y. Filed Aug. 9, 1927. Serial No. 211,694. 11 Claims. (Cl. 84—322.)

1. A plectrum holder for stringed musical instruments including an extended handle portion, and a pair of rigidly connected flexible spaced jaws extending therefrom and having flat faces for frictionally seizing the plectrum therebetween, and means for releasably drawing the jaws positively together to clamp the plectrum firmly in its assigned position.

1,784,935. DOOR LATCH. VICTOR E. JOHNSON, Royal Oak, Mich., assignor of one-half to Jone E. Wolcott, Royal Oak, Mich. Filed Sept. 27, 1928. Serial No. 308,758. 6 Claims. (Cl. 292—227.)

1. In a door latch, a casing for passage through a door and having a portion to project rearwardly beyond the door, said projecting portion of said casing having an open side, a self-projecting latch having means for mounting it independently of the door and having a portion receivable in said open side of the casing, and means in

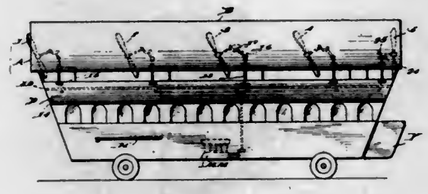


said casing for forcing said latch from the casing when desired, said means having an operating button at the front of the door.

1,784,936. SPRING CATCH AND LIKE DEVICE. ARTHUR W. KIMBELL, Chicago, Ill., assignor to Cinch Manufacturing Corporation, Chicago, Ill., a Corporation of Illinois. Filed Nov. 30, 1928. Serial No. 322,844. 4 Claims. (Cl. 292—74.)

1. A device of the class described comprising a casing part having a front face portion provided with an aperture and an attaching portion provided with an expansible peripheral wall, an axially movable spring pressed member projecting through said aperture and beyond the front face portion, and means providing a hump whereby the casing may be attached to a supporting structure by flattening the boss to expand a portion of the said peripheral wall of the attaching portion.

1,784,937. SHOW ARTICLE. PAUL KRESLAWSKY, Berlin, Germany. Filed Mar. 21, 1928, Serial No. 263,448, and in Germany Apr. 4, 1927. 5 Claims. (Cl. 40—126.)



1. In a show and exhibiting article, a hollow, forwardly closed, rearwardly open, cross-sectionally substantially channel shaped relievo-facsimile of a natural object, a marginal flanged portion around the edges of said facsimile, an inwardly bright covering sheet, closing the cavity of the facsimile and secured to the rear side of the flanged portion, and a surrounding frame upon the other side of the flanged portion and conforming to the outlines of the facsimile, and attached to the covering sheet and rockingly disposed supporting means at the back-side of the covering sheet and at an angle thereto.

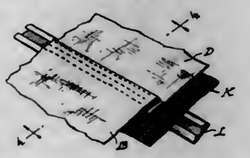
1,784,938. WINDOW-FRAME CONSTRUCTION. GEORGE W. LANCASTER, Richmond, Va. Filed Aug. 18, 1929. Serial No. 385,520. 11 Claims. (Cl. 189—75.)

1. A window frame having the opposite stiles thereof provided with slots, a channel member secured to the back of each stile across the slot therein, a pair of sashes having tongues on the opposite stiles thereof slidable in said slots, and parting beads detachably secured to the bottom of each channel member for slidably engaging the adjacent tongues of said sashes and to lock the sashes slidably in said frame.

1,784,939. AEROPLANE. FITZ RANDOLPH LONGSTREET, Gainesville, Ga. Filed Aug. 24, 1929. Serial No. 388,236. 2 Claims. (Cl. 244—14.)

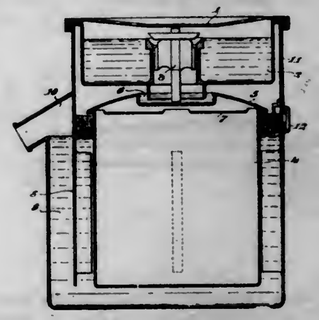
1. An airship, using a series of propellers placed directly under the top of rounded or angular roof planes, and extending at intervals parallel with said ridge almost the length of roof planes, said propellers being turned slightly upwards towards the rear, except rear propeller which is made vertical, as set forth.

1,784,940. ART OF MAKING SHOES. ALGERNON W. MATTHEWS, Haverhill, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 9, 1929. Serial No. 345,822. 18 Claims. (Cl. 12—142.)



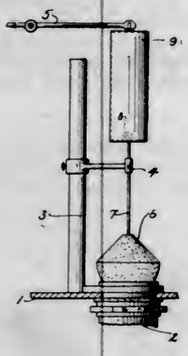
1. The method of making shoes which comprises assembling a shank stiffener and an insole, each having a fastener-receiving hole preliminarily formed therein, and securing the shank stiffener to the insole with said holes in registration, securing an upper to the insole, assembling an outsole with the insole and upper, utilizing said holes to locate a fastener at the outer side of the outsole in alinement with said holes, and passing the fastener inwardly through the outsole and through the registered holes in the insole and shank stiffener to secure together the outsole, shank stiffener and insole.

1,784,941. WATER-SOLUBLE PRODUCT FROM FATTY ACIDS OCCURRING IN WOOL FAT. GUSTAV MAUTHE, Cologne-Holweide, and ALFRED THAUSS, Cologne-Deutz, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 31, 1929, Serial No. 336,636, and in Germany Feb. 7, 1928. 10 Claims. (Cl. 87—12.)



1. Process which comprises reacting upon the fatty acids occurring in wool fat with air at a temperature between about 100–300° C. and sulfonating the products thus obtainable in the presence of a phenol.

1,784,942. GARMENT AND SEAMING THEREFOR. HENRY MILLER, Lincoln, Nebr. Filed Sept. 18, 1929. Serial No. 393,527. 1 Claim. (Cl. 2—276.)

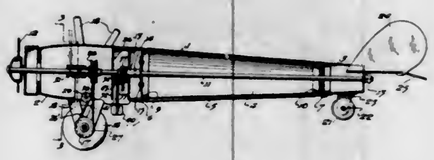


A fabric seam consisting of the infolded edge portions of associated fabric sections, said infolded edge portions being disposed in overlying relation and with the infolded parts having their outer faces engaging each other, a taping strip having infolded edge portions disposed in overlying relation to the first named infolded edge portions, a row of stitching extending through each of the infolded edge portions of the taping strip and through each of the infolded edge portions of the fabric sections, and a row of stitching extending through the parts thus united and disposed between the other rows of stitching.

1,784,943. SEPARATOR FOR LIGHT LIQUIDS. IGNAZ MÜLLER, Vienna, Austria. Filed July 13, 1929, Serial No. 378,131, and in Austria July 18, 1928. 6 Claims. (Cl. 210—56.)

1. In a separator for light liquids a casing, a dross collector closing such casing, an accumulating vessel for the light liquid, a cover for the accumulating vessel and an annular space constituting the separating chamber, both being arranged in such manner that water is compelled to flow over the cover, ere it enters the said separating chamber, and a liquid seal for the separating chamber, said seal being created and maintained between the dross collector and the separating chamber by means of the water flowing into the separating chamber.

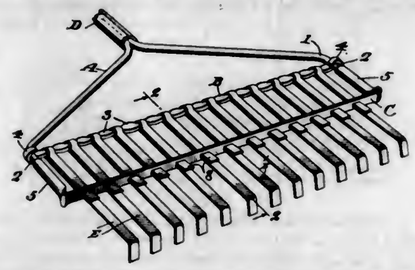
1,784,944. TOILET FLUSHER. LUDVIG B. NORDLUND, San Francisco, Calif. Filed Oct. 29, 1928. Serial No. 315,887. 1 Claim. (Cl. 4—57.)



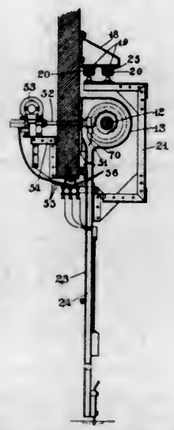
In a toilet flusher, a valve having a stem extending therefrom, an operating member for the stem and a connecting link between the stem and the member engaging the former with freedom of sliding motion and having a cylindrical wall encircling the stem as the valve is lifted for limiting tilting motion of the valve stem.

1,784,945. METHOD OF NITRATING CELLULOSE. LOUIS A. PINCK, Washington, D. C. Filed June 27, 1928. Serial No. 288,795. 5 Claims. (Cl. 260—145.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

4. A process of nitrating cellulose, which comprises in passing oxides of nitrogen into sulphuric acid, then adding cellulose and carrying the reaction substantially to completion.



1,784,946. TOY AEROPLANE. FOISTER S. RIMER, Washington, D. C. Filed Jan. 3, 1930. Serial No. 418,319. 2 Claims. (Cl. 46—48.)



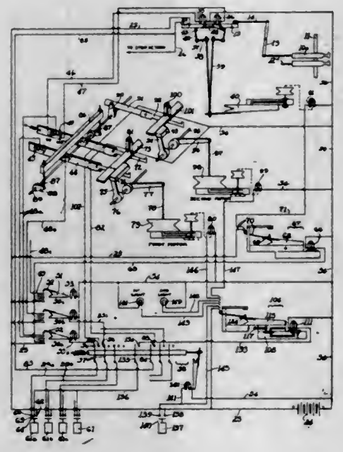
1. A toy aeroplane having a symmetrically shaped body comprising front and rear sections and an intermediate section, a propeller shaft fixed to and mounted for rotation with said intermediate section, means for maintaining the ends of said intermediate section in spaced relation to the opposing ends of the said front and rear sections, and means for rotating the propeller shaft.

1,784,947. RAKE. CAMILLE J. ROCQUIN, New Orleans, La. Filed Dec. 20, 1927. Serial No. 241,384. 4 Claims. (Cl. 55—10.)

1. In a rake, the combination with a support, of spaced front and rear cross bars connected thereto, said rear cross bar being provided with a plurality of spaced reduced portions; and a plurality of spaced, forwardly extending tines having their rear ends connected to the reduced portions of the rear cross bar and having their intermediate portions connected with said front cross bar.

1,784,948. DOOR FOR HANGARS AND OTHER STRUCTURES. ALBERT RUSH, Columbus, Ohio, assignor to The Kinnear Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Original application filed Nov. 12, 1927, Serial No. 232,775. Divided and this application filed Oct. 25, 1929. Serial No. 402,518. 6 Claims. (Cl. 189—54.)

2. In combination with a structure provided with a plurality of doors or curtains, a post having a guide for a margin of one of said curtains, means for supporting said post permitting it to be slid laterally into and out of margin-guiding position, electrically operated means for raising and lowering said curtain, and means on the post for controlling said electrically operated means.

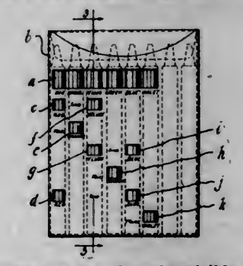


1,784,949. PROCESS OF CONVERTING TURPENTINE AND PINE-TAR OILS INTO HEAVIER OILS. EUGENE BURTON SMITH, Jacksonville, Fla., assignor to Edward Wilson Colledge, trustee for National Turpentine Products Company, Jacksonville, Fla., a Corporation of Florida, and American Turpentine & Tar Company, Ltd., New Orleans, La., a Corporation of Louisiana. Filed June 6, 1927. Serial No. 197,001. 1 Claim. (Cl. 134—56.)

The process of converting turpentine and pine tar oils into heavier oils adapted to serve as paint vehicles which consists in vaporizing the oils, passing the vapors in contact with fuller's earth as a catalyst, then condensing the vapors, passing the condensate into contact with the fuller's earth catalyst to dissolve and remove polymerized oil therefrom, and repeating the vaporizing catalyzing and condensing steps until the polymerized processed product reaches the viscosity and specific gravity adapting it for use as a paint vehicle.

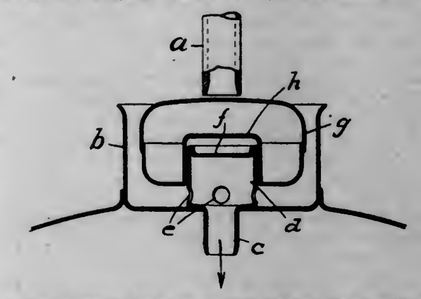
1,784,950. PROCESS OF PRODUCING CHROMIC ACID. MARVIN J. UDY, Niagara Falls, N. Y., assignor to Electro Metallurgical Co., a Company of West Virginia. Filed Dec. 16, 1927. Serial No. 240,637. 4 Claims. (Cl. 23—145.)

1. The process of recovering chromic acid from solutions containing soluble salts of chromic acid which comprises causing the solution to react with lead sulphate to form lead chromate, separating the latter from the solution, decomposing the lead chromate with sulphuric acid of such a concentration as to directly precipitate lead sulphate and simultaneously form a solution of chromic acid substantially free from dissolved salts, separating the lead sulphate from the solution, and recovering chromic acid from the solution.



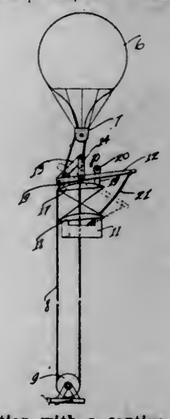
1,784,951. ORGAN STOP ACTION. EDMOND VERLINDEN, Milwaukee, Wis. Filed Oct. 27, 1928. Serial No. 315,552. 23 Claims. (Cl. 84—345.)

10. The combination, with a plurality of stop keys movable to "off" and "on" positions, a plurality of devices for selectively moving said stop keys to their alternative positions, a plurality of shiftable stop-controlling circuit-closers disposed in combination-controlling groups and having circuit connections with said stop-operating devices for operating the same, a combination push-button for each combination-controlling group of circuit-closers and having circuit connections therewith for directing current to said stop-operating devices, setting means for each group of combination-controlling circuit-closers to simultaneously actuate a group of circuit-closers into selective stop-controlling positions, stop-key-controlled means for determining the position to which said circuit-closers will be actuated, a relay having circuit connections with said combination push-buttons for alternatively controlling the setting of combinations or the bringing on of combinations, a combination-control push-button having circuit connections with said relay for moving it to its combination-setting position, and means controlled by any one of said combination push-buttons for retaining said relay in its combination-setting position to permit the release of said combination-control push-button.



1,784,952. EDUCATIONAL APPLIANCE. HAROLD M. WOLFSON, New York, N. Y., assignor to Milton Bradley Company, Springfield, Mass., a Corporation of Massachusetts. Filed Feb. 20, 1929. Serial No. 341,504. 2 Claims. (Cl. 35—12.)

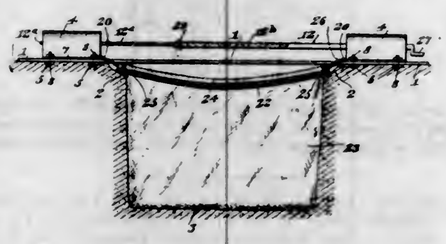
1. A commercial package of color tools comprising, color-making articles each appropriately colored on its exterior and arranged in a row, a box container enclosing the row, said container having a plurality of groups of small windows or peek-holes through each of which only



one of said articles is prominently visible by its color, the windows of each group having indicia associated therewith to suggest a factual color association for such group.

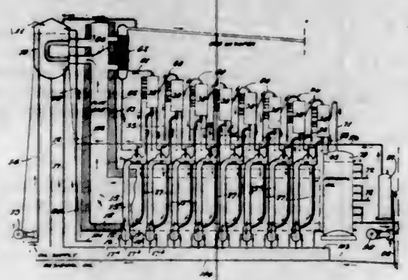
1,784,953. LIQUID-FLOW REGULATOR FOR CENTRIFUGES. BERT R. WRIGHT, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 30, 1928. Serial No. 273,912. 9 Claims. (Cl. 137—104.)

1. In a liquid flow regulating device, the combination with a cup having an outlet nozzle and, extending upward from the bottom of the cup, a cylindrical member with a closed top, of a float having, projecting inward from the bottom thereof, a cylindrical member adapted to be guided by and slide over said cylindrical member and by coaction therewith to form a dash pot substantially sealed against entrance and exit of gases.



1,784,954. APPARATUS FOR RELEASING GLIDER PLANES. OSCAR ALVISTUR, Oakland, Calif. Filed Dec. 13, 1929. Serial No. 413,852. 4 Claims. (Cl. 244—2.)

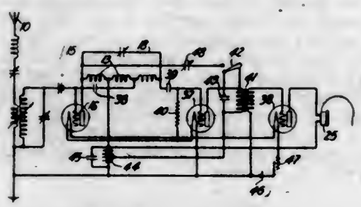
3. The combination with a captive balloon, of an apparatus for raising a glider plane to propel the same into



flight, said apparatus including means for elevating the balloon, a glider carrying frame mounted on said last mentioned means and adapted upon actuation of said frame by the occupant of the glider to propel the plane into flight.

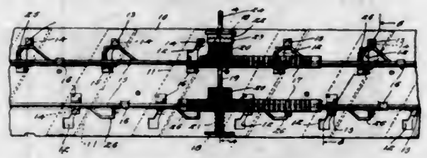
1,784,955. PORTABLE IRRIGATION HEAD GATE. HOWARD A. BALLARD, Clarksburg, Calif. Filed Aug. 29, 1928. Serial No. 302,857. 4 Claims. (Cl. 61—29.)

1. In a combination of the character described, a shaft, means for rotatably supporting said shaft, a flexible supporting member extending longitudinally of said shaft and sagging therebelow intermediate the ends of the shaft and supporting member, means connecting said supporting member to said shaft, whereby as said shaft is rotated the sag in said supporting member will be decreased or increased, and a flexible dam mounted upon said supporting member, as and for the purposes set forth.



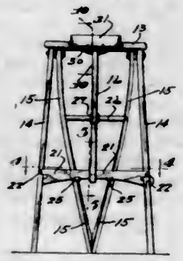
1,784,956. DISTILLING APPARATUS AND METHOD. EDWARD O. BENJAMIN, Newark, N. J. Filed July 28, 1924. Serial No. 728,543. 26 Claims. (Cl. 196—49.)

1. A process of refining oil, which includes passing the oil successively through a series of retorts in each of which the oil is maintained at temperatures higher and pressures lower than in the preceding retort, conducting off vapors from each retort, separately condensing constituents of such vapors, segregating the lighter condensate and feeding heavier condensate into a retort of higher temperature and lower pressure than that of the retort from which it was derived by injector action of higher pressure gases, the differences both in the pressures and in the temperatures being substantial and continuously maintained during normal operation, for the purpose described.



12. A retort having inlet and outlet ports therein adjacent its lower end providing a sediment collecting pocket below and between them, a substantially vertical heated up-flow pipe connected with the lower end of the retort and an unheated down-flow pipe of much smaller cross-section than the up-flow pipe delivering to the lower end of the retort.

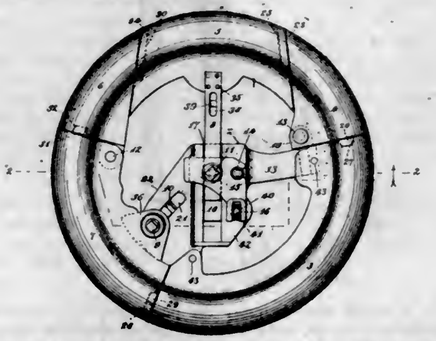
1,784,957. ELECTRIC WAVE TRANSMISSION SYSTEM. PHILANDER H. BETTS, Belmar, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 13, 1924. Serial No. 755,612. 11 Claims. (Cl. 179—171.)



1. In a radio receiving system, a plurality of space discharge tubes, means for supplying high frequency waves to one tube and means for coupling said tube to another tube comprising inductance and capacity elements in a closed loop, said inductance elements being arranged to match the impedances of said tubes to the impedances presented to said tubes by said loop at resonance.

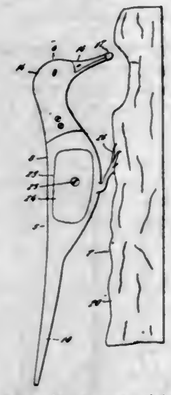
1,784,958. MEANS FOR QUICKLY ATTACHING AND DETACHING TRACTOR-WHEEL CLEATS OR LUGS. TILMON J. CALHOON, Franklin, Ill. Filed Apr. 27, 1929. Serial No. 358,726. 6 Claims. (Cl. 301—44.)

1. The combination with a tractor wheel and traction elements secured to the wheel by transverse movement upon the rim of the wheel, an annulus upon the inner surface of the rim of the wheel and rotatable with relation thereto, coacting elements upon the traction elements and annulus whereby upon rotation of the annulus the traction element is shifted transversely of the wheel rim, and means for locking the annulus against rotation.



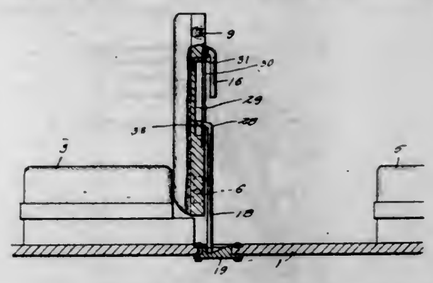
1,784,959. FOLDING IRONING TABLE. CHARLES DANIELSON, Minneapolis, Minn., assignor to Ericson-Nelson Manufacturing Company, Minneapolis, Minn., a Corporation of South Dakota. Filed Aug. 12, 1929. Serial No. 385,181. 5 Claims. (Cl. 68—10.)

1. A folding ironing table including a board, a pair of legs pivoted to the board for swinging movement longitudinally thereof and with a limited swinging movement toward and from each other, a brace for said legs in the form of a toggle-lever the members of which are directly pivoted the one to the other and pivoted at their outer ends to said legs, the inner end portions of



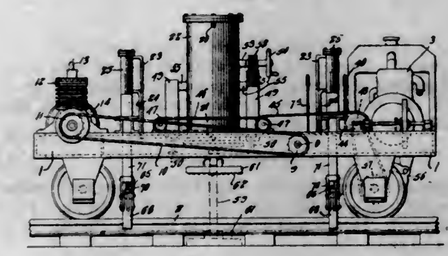
one of said members being extended materially outward of the pivotal connection therebetween, and a retaining device on the other one of said members with which the extended end portion of the first mentioned member interlocks when the brace is straightened to hold said members against lateral separation.

1,784,960. COLLAPSIBLE CORE. BARTHOLD DE MATTIA, Clifton, N. J., assignor, by mesne assignments, to National Rubber Machinery Company, Akron, Ohio, a Corporation of Ohio. Filed June 12, 1925. Serial No. 36,698. 7 Claims. (Cl. 154—9.)



1. In a collapsible core construction, the combination of a core body composed of a plurality of segmental sections, a relatively fixed support therefor, and a pivot connecting one of the segmental sections directly to the relatively fixed support, said pivot being shiftable bodily toward and from the center of the core.

1,784,961. ELECTRIC ANNUNCIATOR. JOSEPH J. ENNEKING, Fort Thomas, Ky. Filed June 12, 1929. Serial No. 370,356. 1 Claim. (Cl. 40—40.)

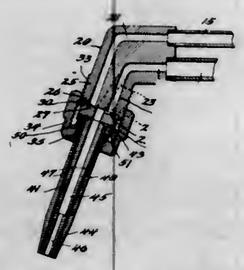


An electric annunciator comprising a hollow resonant supporting member and a figure attached thereto in simulation of a wood pecker and consisting of a hollow body having a shoulder portion provided with an elongated slot in communication with the hollow interior of the body, a movable head mounted on the said shoulder and having a beak in contacting relation with the supporting member, said head and shoulder having relatively broad arcuate contacting bearing faces, a spring strip extending longitudinally of the hollow interior of the body with its inner end secured to the said body and its outer end disposed through the said slot in the shoulder and anchored loosely within the said head and electrically operating means in the said body for rapidly vibrating the said strip to impart oscillatory movement to the said head.

1,784,962. CONVERTIBLE AUTOMOBILE BODY. THOMAS P. FESKO, Ecorse, via Detroit, Mich. Filed Nov. 30, 1929. Serial No. 410,790. 1 Claim. (Cl. 155—7.)

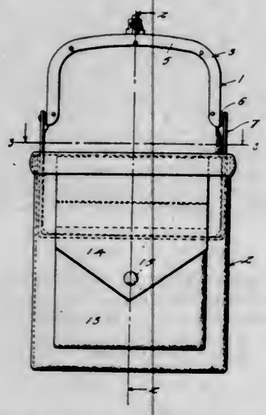
In a convertible automobile body having the back of its front seat supported for movement from its normal position into a horizontal or bed forming position, bearings passing through the floor of the body and provided with flanges contacting with the under side of the floor, the bearings being provided in their upper sides with recesses having upwardly and rearwardly inclined bottom walls, the side walls of the recesses being provided in their front ends with sockets open at their upper sides, plates contacting with the upper side of the floor and closing said sockets and provided with slots registered with said recesses, bolts passing through the flanges and plates and through the floor, braces having their lower ends arranged in the bearing recesses and passing through the slots in the plates, lateral lugs carried by said ends of the braces, and arranged in the bearing socket, and means pivotally and slidably connecting the upper ends of the braces to the back, the braces being adapted to occupy an upwardly and forwardly inclined position with the lower end portions in contact with the bottom walls of the bearing recesses when the seat is in horizontal position.

1,784,963. TRACK-SHIFTING APPARATUS. GROVER J. HOLT and WILFRED LONGEVIN, Crosby, Minn., assignors, by mesne assignments, to The Reclamation Company, St. Paul, Minn., a Corporation of Delaware. Filed May 23, 1929. Serial No. 365,319. 47 Claims. (Cl. 104—8.)



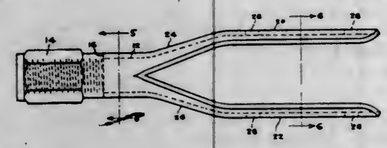
1. In a track shifting machine, a power source and a fluid pressure actuated track raising and shifting mechanism.

1,784,964. CUTTING AND WELDING TORCH. ALEXANDER F. JENKINS, Baltimore, Md. Filed Sept. 7, 1928. Serial No. 304,531. 21 Claims. (Cl. 158—27.4.)



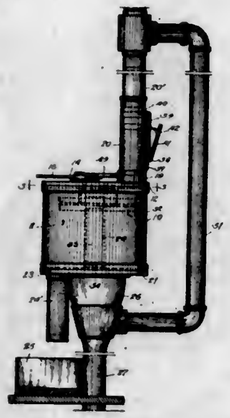
19. In a combined cutting and welding torch, in combination, a torch head having passages therethrough for preheating gas or gases and cutting oxygen, said head having a face with eccentrically arranged apertures in which said passages terminate, a tip having an axial bore, and a plurality of eccentric bores surrounding said axial bore, the

combination of means interposed between said face and the inner end of said tip for adapting said torch for either cutting or welding as desired, said means comprising a cylindrical plug having a central bore always in register



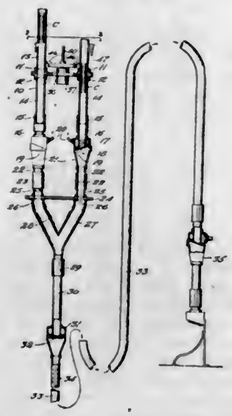
with said axial bore of said tip, and an eccentric bore adapted in one position of said plug to communicate with one of said head apertures, and in another position to lie therebetween.

1,784,965. LEADER CARRIER. SHERMAN O. HUFFMAN, Duquesne, Pa. Filed Mar. 19, 1929. Serial No. 348,267. 7 Claims. (Cl. 43—22.)



1. A fisherman's leader carrier comprising a purse consisting of a frame and a bag of moisture retaining material secured therein, a water proof pouch designed to receive the purse, and an air bag forming a part of said pouch to make the same non-sinkable.

1,784,966. METHOD OF MAKING COUPLING MEMBERS. EDWARD E. JOHNSON, St. Paul, Minn. Filed Mar. 25, 1929. Serial No. 349,683. 5 Claims. (Cl. 29—148.)



1. The method of making coupling members which consists in providing a pipe section, splitting said section for the greater portion of its length, and separating the split parts to form clasping wings extending from one end of said section to a position comparatively close to the other end of said section.

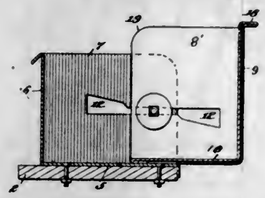
1,784,967. SINGLE SELECTOR RELAY FOR PNEUMATIC-TUBE SYSTEMS. WILLIAM V. MCGUINNESS, Flushing, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Sept. 17, 1929. Serial No. 393,244. 9 Claims. (Cl. 243—16.)

1. A single selector relay for pneumatic tube systems including a casing, a drum in said casing mounted for oscillatory movement therein, said drum being provided with a carrier receiving pocket, an inlet tube leading to said casing and positioned for alinement with the pocket in one position of the latter, said casing having a pair of outlets arcuately spaced from said inlet tube and with which said pocket is alined successively, a carrier having a selector collar at one end, means fixed to the casing for engaging said collar upon the pocket being alined with the first of said outlets, said means terminating short of the second outlet, and means to effect oscillation of the drum in the casing.

1,784,968. PNEUMATIC-TUBE SYSTEM. WILLIAM V. MCGUINNESS, Flushing, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Jan. 20, 1930. Serial No. 422,195. 7 Claims. (Cl. 243—6.)

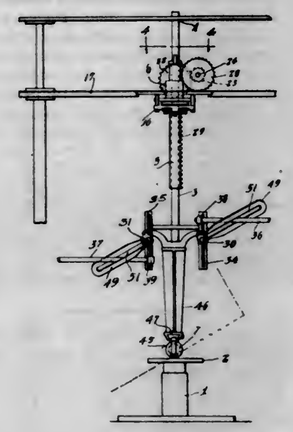
1. In a pneumatic tube system, a plurality of transmission tubes, a collector chute to which said tubes lead, a single tube leading from said chute, and means governing the passage of carriers through the plurality of tubes and arranged to permit carriers from only one tube to enter the chute at a time.

1,784,969. TOP FOR DESKS AND THE LIKE. RAYMOND H. MCLEOD, Laurel, Miss., assignor to McLeod Furniture Company, Laurel, Miss., a Corporation of Mississippi. Filed Jan. 5, 1928. Serial No. 244,588. 1 Claim. (Cl. 20—91.)



A fabricated three ply panel comprising a sheet of the long fiber, grainless composition produced by the high compression of steam-exploded wood, reinforcing members below said sheet and in the form of wooden strips of uniform thickness spaced apart within limits which will require a minimum of material while leaving no part of said sheet unsupported through an area great enough to permit a flexure sufficient to overcome the elastic limits of said sheet, a second sheet similar in size and composition to said first sheet below said reinforcing members, the whole united by glue and pressure into a unitary structure.

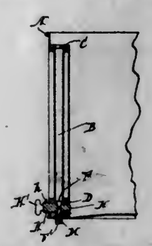
1,784,970. ATTACHMENT FOR HOLDING PICTURES AGAINST POCKET MIRRORS. BERT CLARKE MELTON, London, England. Filed Mar. 4, 1927. Serial No. 172,895. 1 Claim. (Cl. 40—156.)



In combination with a pocket mirror having a back, and a yieldable flange disposed at right angles to said back, a sheet of transparent material, said material and said back adapted to embrace a picture therebetween, the face of the picture being against the transparent material, a ring having a rigid flange releasably engaging said yieldable flange, and another flange integral with said rigid flange and disposed at right angles to the latter for gripping the outer marginal portion of the transparent material together with a picture.

1,784,971. LUGGAGE CARRIER FOR AUTOMOBILES. MERRILL MOORE, Creston, Iowa. Filed Mar. 16, 1928. Serial No. 262,096. 7 Claims. (Cl. 280—164.)

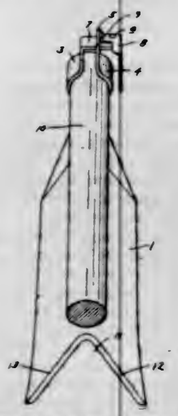
1. A box-like luggage carrier fixedly secured to the running board of an automobile, comprising two members of right-angle shape in cross-section adjustably, extensibly and pivotally secured together at each end thereof, one member forming the top of said carrier being adapted to form a step upon the said running board when rotatably adjusted upon the other member.



1,784,972. MACHINE FOR FORMING SCREW PROPELLERS. WALTER F. NEWBROUGH, Wilmington, Calif., assignor of one-half to William Lamble, Wilmington, Calif. Filed May 28, 1928. Serial No. 281,304. 11 Claims. (Cl. 90—11.)

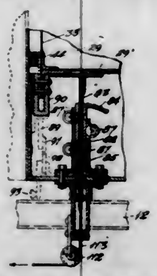
1. In a device of the class described, the combination of a work support, a thread turning machine, a working tool, a track, means operably connecting the thread turning machine with said track, means for supporting said tool from said track, a radius arm adjustably mounted at an angle to said track, and means operably connecting said tool with said radius arm to maintain said tool in position substantially perpendicular to each pitch angle of the thread segment being formed.

5. In a device of the character described, the combination of a vertical rod, a sleeve and rack gear on said rod, means for moving said sleeve on said rod when said sleeve is angularly displaced thereon, said means including a rack gear carried by the sleeve, a fixed horizontally disposed gear segment, a horizontally movable gear train adapted to maintain said rack and segment in operative contact, a cutting tool support attached to said sleeve, comprising a threaded shaft and a guide rod extending radially from said sleeve and parallel to each other, a radius rod extending from said sleeve, means for positioning said radius rod at a predetermined angle with said shaft and guide rod, a lever slidably mounted on said guide rod and adapted to cooperate with said radius rod, a cutting tool suspended from said lever, and means operated by rotation of said shaft for moving said lever and cutting tool suspended therefrom longitudinally upon said rod and shaft.



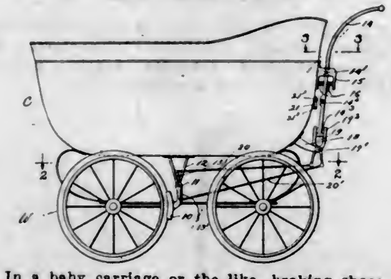
1,784,973. MILK MEASURING AND SAMPLING MEANS. ROBERT PRESTON, Gisborne, New Zealand. Filed June 6, 1922, Serial No. 566,320, and in New Zealand July 25, 1921. 3 Claims. (Cl. 73—21.)

2. In liquid measuring appliances, in combination, a measuring vessel having a vertical indentation in the



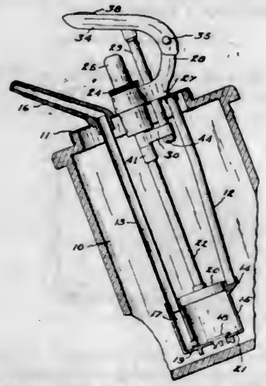
side of the vessel, a vertically extending backing-plate joined to the side edges of said indentation and to the bottom of said vessel, a block secured between the wall of the vessel and between the upper end of said backing-plate, a gauge glass lying in said indentation and having its upper end fitted into said block, said block having a port therein providing communication between said gauge glass and the interior of said vessel, another block secured between said wall and the lower end of said backing-plate, said block being adapted to receive the lower end of said gauge glass said lower block having a bore formed to extend through it, and port passages opening from the bore respectively upwards into the bottom of gauge glass, downwards outside the vessel and sidewards into the inside of the vessel, and a valve plug fitted into said bore and formed with passages through it designed and so positioned as to connect the side port with the upwardly extending port when the plug is in one position, and to close the side port and to connect the upwardly and downwardly extending ports, when in a second position, substantially as and for the purposes set forth.

1,784,974. CULTIVATING DEVICE. BENJAMIN M. ROLPH, Dixon, Ill. Filed Jan. 12, 1928. Serial No. 246,111. 1 Claim. (Cl. 306—26.)



In a fastening device for a cultivating tool, the combination with a pair of connected tool supporting plates in parallel relation with each other, of a pair of of semi-circular socket members projected from said plates, one of said members having a transverse slot, and the other member being provided with an angular tongue passing through said slot, and a cam lever attached to the end of said tongue and bearing against the slotted member.

1,784,975. VEHICLE BODY. ARON ROSMAN, Brooklyn, N. Y. Filed Apr. 19, 1929. Serial No. 356,526. 2 Claims. (Cl. 296—1.)



1. In a device of the kind described, a main frame having a bottom plate, a pair of angle bars extending up from the main frame and having juxtaposed vertical legs, one of said angle bars being spread forwardly from the other, the forward angle bar having its vertical leg projecting above the vertical leg of the rearward angle bar, a latch member slidable vertically between said vertical legs and having a notch extending transversely of the main frame along its upper edge, said latch member having a curved striker flange projecting rearwardly from its edge and overhanging the rearward angle member, spring means normally holding the latch member raised, a body movable horizontally onto and off of said main frame, and an angle member fixed to the under side of the body transversely thereof and provided with a vertical leg engaging the striker flange to depress the latch, said last vertical leg having its lower edge engaged in said notch upon movement into alinement therewith by elevation of the latch member under influence of the spring means.

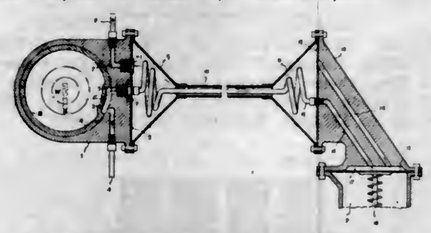
1,784,976. BABY CARRIAGE OR THE LIKE. ALFRED SCHNABEL, New York, N. Y. Filed July 20, 1928. Serial No. 294,102. 5 Claims. (Cl. 188—20.)

3. In a baby carriage or the like, braking shoes tending to normally occupy the operative position, a handle bar pivoted to the carriage, springs tending to hold said handle bar in neutral position, a pair of forceps like elements pivoted to the carriage and engaging between the lower end of said handle bar, a pair of oppositely directed arms operatively connected to each brake shoe, and connecting means between said arms and said forceps like elements, whereby when said handle bar is moved out of its neutral position the brake shoes will be released.

1,784,977. SYRUP PUMP. DEAN C. SEITZ, Cleveland, Ohio, assignor to The Russ Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 5, 1929. Serial No. 337,694. 12 Claims. (Cl. 225—35.)

1. In a syrup dispensing pump, a plunger, a plunger rod connected thereto, a push rod offset from and rigidly connected to said rod, and a hinged operating lever having unconnected sliding engagement with said push rod for actuating said plunger.

1,784,978. TESTING APPARATUS. HUGH S. TAYLOR, Jackson Heights, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 23, 1929. Serial No. 357,369. 12 Claims. (Cl. 179—175.)



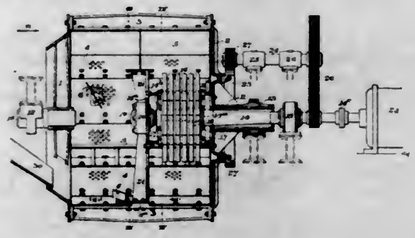
1. An electrical connecting device adapted to connect testing apparatus to terminals on a cord shelf and having supported on a handle member a plurality of aligned terminal connecting members and other terminal connecting means not in alignment with and movable with respect to the said aligned members.

1,784,979. HOLDER FOR SIFTER-TOP CANS OR PACKAGES. LILLIAN S. WITHERSPOON, San Francisco, Calif. Filed Nov. 10, 1928. Serial No. 318,530. 1 Claim. (Cl. 221—61.)

A holder for sifter top cans comprising an elongated container adapted to receive and snugly fit a sifter top can, an integral, shallow, hook-shaped, inwardly and downwardly turned flange on the upper end of the container engageable with the upper end of the sifter top can and leaving the top of the sifter top can exposed, the exterior surface of the can fitting against the holder contiguous to the side walls thereof, whereby the can is firmly held by the side walls against lateral movement, and a bottom on the container engageable with the lower end of the sifter top can to retain the same in firm engagement with the said flange on the upper end of the container.

1,784,980. FLUID-CONDUIT DEVICE. EDWARD C. ADAMS, Washington, D. C. Filed July 2, 1928. Serial No. 289,853. 5 Claims. (Cl. 103—202.)

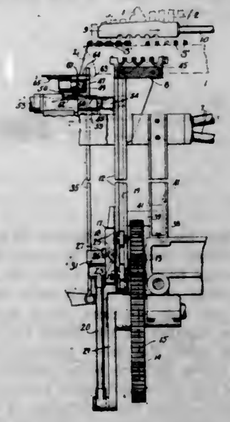
1. In a fluid conduit device, the combination of a conduit connected with a fluid supply source; a conduit connected with a fluid supply discharge; a pump interposed between said conduits; locking means in a casing interposed between said pump and one of said conduits; and a valve of said pump disposed in said casing.



1,784,981. SEPARATOR PLATE. ABRAHAM SIDNEY BEHRMAN, Chicago, Ill. Filed Feb. 11, 1929. Serial No. 339,269. 12 Claims. (Cl. 136—146.)

12. A new composition of matter, consisting of silica gel mixed with a binder.

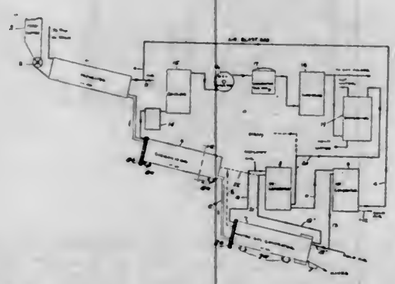
1,784,982. CURING MASSECUITE. JULIEN BERGÉ, Tirlemont, Belgium, assignor to Raffineric Tirlemontoise Societe Anonyme, Tirlemont, Belgium, a Corporation. Filed Feb. 11, 1927, Serial No. 167,595, and in Germany July 24, 1926. 4 Claims. (Cl. 127—58.)



1. A process for increasing the yield of sugar crystals from any kind of massecuite which comprises boiling the massecuite, cooling to a pasty condition, and then separating the mass into sugar crystals and syrup by means of a centrifuge, in which the centrifugal force is considerably more than 800 times the weight of the mass to be separated.

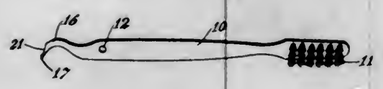
1,784,983. COAL BREAKER. GEORGE W. BORTON, New Lisbon, N. J., assignor to Pennsylvania Crusher Company, New York, N. Y., a Corporation of New York. Filed Aug. 31, 1929. Serial No. 389,771. 10 Claims. (Cl. 83—52.)

1. In a crushing structure, the combination of a rotating cylinder having a foraminous wall, means for rotating said cylinder, lifting means extending longitudinally of said cylinder internally of the same whereby material introduced therein may be lifted for gravitational discharge to the lower portion of the cylinder for fracture and subsequent discharge through the foraminous wall, means for carrying such material forward in the cylinder, and independently operated hammer mechanism disposed at one end of the chamber.



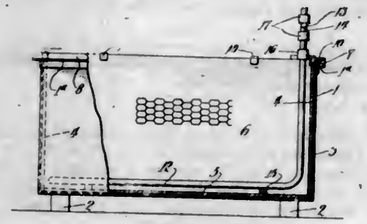
1,784,984. LACING MACHINE. HOWARD D. COLMAN, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Apr. 23, 1928, Serial No. 272,029. Renewed Mar. 10, 1930. 15 Claims. (Cl. 28—21.)

1. In a skein-lacing and lace-tying mechanism, the combination of a vertically reciprocatory structure having channels therein, lacing members reciprocable in said channels, a tube fixed to said structure and communicating with said channels, a stationary knotter compris-



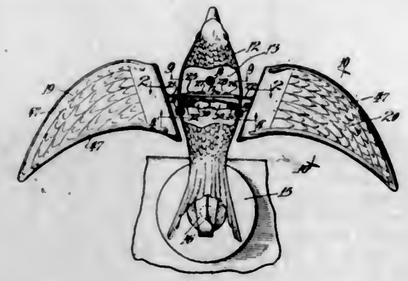
ing a rotary tying bill, two guide plates above the tying bill and a rotary stripper disk between said plates, a suction conduit below said tying bill and arranged to register with said tube in one position of the latter, the upper walls of said tube and conduit being longitudinally slotted to permit the suction current to draw the ends of the lacing from said channels and through said slots into operative relation to said tying bill and plates, and a reciprocatory member arranged to control the slot in the suction conduit to time the movement of the ends of the lacing into operative relation to the tying bill.

1,784,985. APPARATUS FOR GASIFYING COAL AND THE LIKE. CALEB DAVIES, Jr., Poland, Ohio. Filed May 31, 1922. Serial No. 564,689. 5 Claims. (Cl. 48—73.)



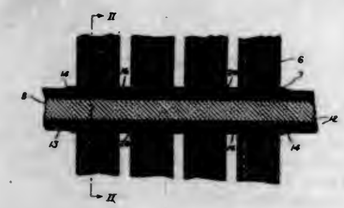
1. Apparatus for complete gasification of solid fuel, comprising a rotary water-gas generator; a carbonizer thereabove connected to receive hot water-gas therefrom and supply carbonized residue thereto, said carbonizer being inclined and having a rotary mounting whereby to continuously lift and drop the fuel through the hot gas stream; a fuel preheater; and a connection between said preheater and said carbonizer.

1,784,986. TOOTHBRUSH. SIMON EISENBERG, Savannah, Ga. Filed Feb. 1, 1929. Serial No. 336,680. 7 Claims. (Cl. 132—89.)



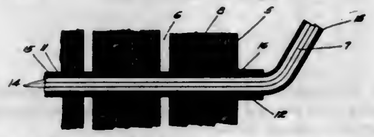
7. A relatively flat tooth brush handle having a comparatively rigid pointed curved end, said end having four surfaces that converge to form the point, the inner surface being substantially normal to the plane of the curve and concave, the two side surfaces being comparatively flat and converging together at the point and converging towards each other from the inner surface towards the outer surface, the outer surface being substantially normal to the plane of the curve and being provided near the point with a concave portion that conforms to the general convexity of the forward (mesial) surfaces of the back teeth, and which permits the pointed end to be easily inserted between the teeth and provides concave scraping edges fitting the convexity of the mesial surface of teeth where the side surfaces of the end join this concave portion.

1,784,987. TANK FOR CHROMIUM PLATING. C. ROY GLEASON, Chicago, Ill. Filed June 3, 1927, Serial No. 196,169. Renewed Mar. 14, 1930. 2 Claims. (Cl. 204—5.)



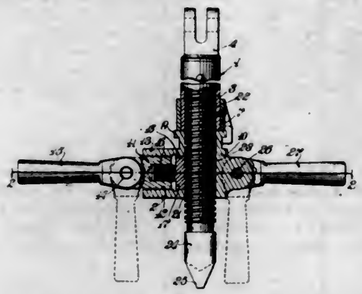
1. A tank for containing the electrolyte for use in the electro-deposition of chromium, comprising a container composed of any suitable material and a lining of lead and then lined with glass.

1,784,988. MECHANICAL RADIATOR ORNAMENT. CHARLES L. HAWES, Chicago, Ill., assignor of one-half to Christopher Strassheim, Chicago, Ill. Filed May 7, 1930. Serial No. 450,398. 5 Claims. (Cl. 46—40.)



1. A device of the character described comprising a casing, a pair of coacting gear members pivotally mounted within said casing, a pair of links journalled in said gear members, a pair of wings secured to said links, a finger portion on each link, and a second pair of coacting gear members adapted to engage said finger portions to cause oscillation of said links, said second pair of gear members mounted substantially coaxially with said first mentioned gear members.

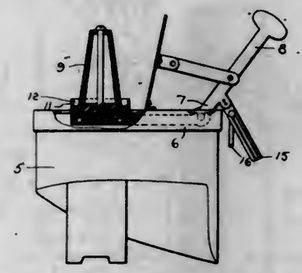
1,784,989. ELIMINATION OF CORONA IN ALTERNATORS. CHARLES F. HILL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 11, 1927. Serial No. 182,612. 7 Claims. (Cl. 171—206.)



1. The combination with the core of a dynamo-electric machine, of an armature conductor embedded therein and having solid insulation therearound and a coating of a conductive high-resistance material integrally united to the surface thereof entirely covering the portion which is intended to lie within the armature core with which the conductor is to be used, said coating having sufficient conductivity to permit the flow of currents such as to introduce appreciable losses, but the resistance of said coating being sufficiently high that said losses are very small as compared to the ordinary copper losses in the armature.

1,784,990. CORONA ELIMINATION IN DYNAMO-ELECTRIC MACHINES. CHARLES F. HILL, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 3, 1928. Serial No. 258,750. 15 Claims. (Cl. 171—206.)

10. In a high-voltage dynamo-electric machine of the type having insulated armature conductors having coil sides lying in slots and end connections extending out of the slots at the end of the core, means for preventing corona on the end connections near said core, comprising a damping layer of a leaky insulating substance intimately surrounding the insulation on each of said end turns for a predetermined distance, one end of said damping layer being grounded on the core, said damping layer having a very small capacity current induced therein by condenser action from the armature conductor, the length and resistance of the damper layer being such that the potential gradient along the layer is below the value at which corona will appear along the layer itself, and the voltage between the free end of the layer and the conductor is below the corona voltage for the particular conditions existing at this point.

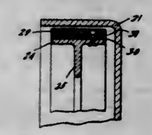


1,784,991. ADJUSTABLE JACK. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed July 20, 1928. Serial No. 294,092. 8 Claims. (Cl. 254—98.)

1. An adjustable jack comprising a tubular body, an adjusting screw telescopically arranged therein, and means for effecting adjustment of said screw relative to said body comprising a housing member rotatably mounted on said body and having a lateral recess, a nut slidably mounted in said recess and engageable with said screw, means for adjusting said nut into and out of engagement with said screw, and means for rotating said body, said body and screw being capable of free telescopic movement when said nut is out of engagement with said screw.

1,784,992. ICE-CREAM-CONE COATER. OTTO LANGE, Chicago, Ill. Filed Aug. 13, 1925. Serial No. 49,955. 4 Claims. (Cl. 91—4.)

1. A coating device comprising a casing adapted to hold the coating material, a cover for said casing, a lever pivotally associated with the cover and with one end projecting into said casing and the other end projecting outwardly, and a coating member fixed to the inwardly projecting lever end and adapted to be revolved upwardly

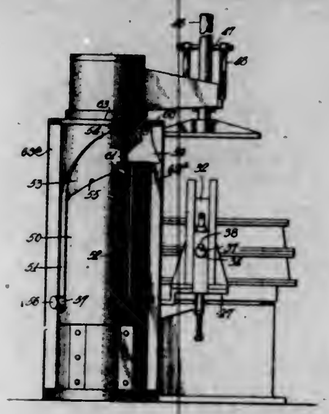


by said lever, said coating member having an annular flange projecting horizontally outwardly from its inner end and a second annular flange projecting from the periphery of said first mentioned flange towards the outer end of the member.

1,784,993. WATER-RESISTANT FIBER PRODUCT AND PROCESS OF MANUFACTURE. WILLIAM H. MASON, Laurel, Miss., assignor to Masonite Corporation, Laurel, Miss., a Corporation of Delaware. Filed May 12, 1928. Serial No. 277,382. 5 Claims. (Cl. 92—21.)

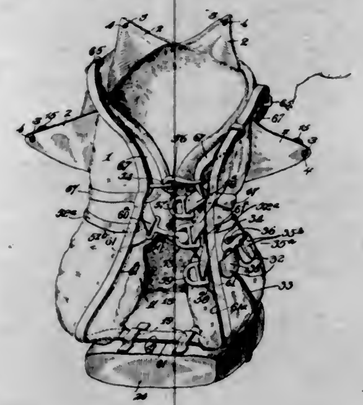
1. A process for producing a water resistant fiber product which comprises the agitating of unsized vegetable fiber pulp in a water bath containing water greatly in excess of the fiber content and free, undissolved paraffin or equivalent hydrocarbon having a melting point of about 125° F. in the proportion of ½ to 10% of paraffin to the weight of dry fiber, maintaining said water bath at a temperature sufficient to prevent congealing of the hydrocarbon material during such agitating and separating the free water from said pulp.

1,784,994. BRAKE LINING. FRED C. MORRIS, San Francisco, Calif. Filed Oct. 5, 1928. Serial No. 310,471. 11 Claims. (Cl. 188—259.)



1. In combination, a brake element provided with a supporting surface, a brake lining for said surface, and a strip of material separating said lining from said surface, said strip comprising a relatively non-stretchable element and a resilient element integrally secured together.

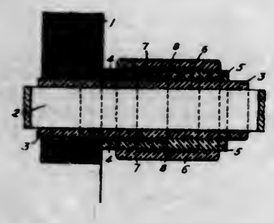
1,784,995. MOLDING MACHINE. THOMAS O. MORRIS, Easton, Pa., and JOHN J. LAWLOR, Plainfield, N. J., assignors to Automatic Molding Machine Corporation, Dover, Del., a Corporation of Delaware. Filed Mar. 12, 1929. Serial No. 346,352. 13 Claims. (Cl. 22—26.)



8. In a molding machine, a carrier adapted to reciprocate vertically and swing angularly about a vertical axis, a cam formed with two angularly spaced vertical grooves and an inclined transverse groove connecting the vertical grooves at their upper ends, a pin on the carrier adapted to ride in said grooves and control the angular position

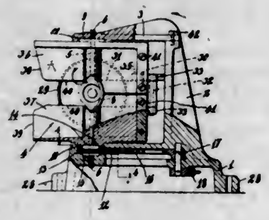
of the carrier, said transverse groove guiding a pin from one vertical groove to the other, upon one vertical rise

of the carrier, and a trigger operating to guide the pin out of the latter groove and into the transverse groove upon the next vertical rise of the carrier.



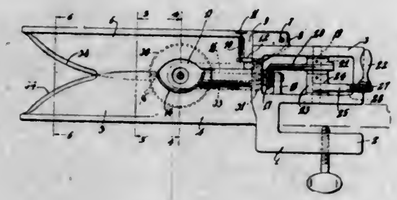
1,784,996. PADDED UPHOLSTERY, HARNESS, AND PACK FOR AIRCRAFT CHAIRS. JAMES FLOYD SMITH, Trenton, N. J., assignor to Switlik Manufacturing Company, Inc., Trenton, N. J., a Corporation of New Jersey. Filed Apr. 3, 1929. Serial No. 352,225. 20 Claims. (Cl. 224—21.)

12. In a device for the purpose indicated, an upholstery and harness for aircraft passengers, the upholstery being tufted, well padded and adapted as a padding between the wearer's body and the harness, as well as conforming to and detachably secured to the back of a chair and constituting an upholstery for the chair.



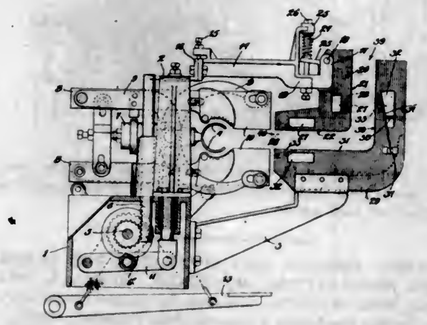
1,784,997. CORONA ELIMINATION IN DYNAMO-ELECTRIC MACHINES. MORITZ SCHENKEL, Berlin-Charlottenburg, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 13, 1929, Serial No. 370,602, and in Germany July 2, 1928. 3 Claims. (Cl. 173—318.)

3. In electrical apparatus, a high-voltage conductor having an insulating covering, a conductive coating surrounding said covering and grounded to said apparatus, means for preventing the formation of corona at the edge of the said grounded coating comprising a semi-conductive



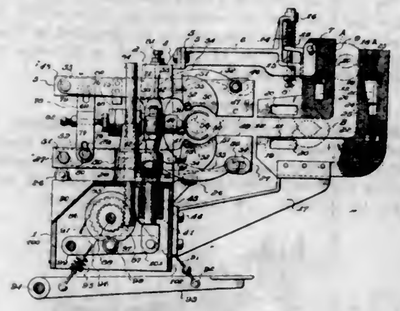
shield embedded in insulating material, said shield surrounding said coating near its edge but concentrically and insulatingly spaced therefrom.

1,784,998. FRUIT PITTER. EARL R. ANDERSON, Los Angeles, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Feb. 6, 1926, Serial No. 86,423. Renewed Mar. 14, 1930. 18 Claims. (Cl. 146—28.)



1. In a fruit pitter, the combination of an impaling blade upon which the fruit is adapted to be impaled, pitting means operably connected with the impaling blade and adapted to pass into the incision formed in the fruit during the impaling operation, and means for rotating the impaling blade relative to the said pitting means to sever the fruit from the pit.

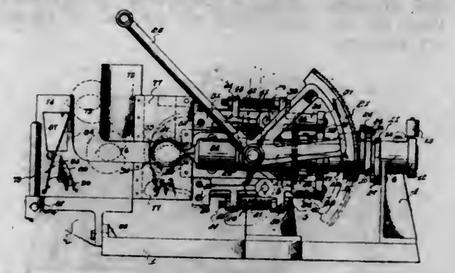
1,784,999. FRUIT-PITTING APPARATUS. EARL R. ANDERSON, Los Angeles, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Feb. 6, 1926. Serial No. 86,424. 9 Claims. (Cl. 146—28.)



1. In a fruit pitter, the combination of a fixed impaling blade, a movable impaling blade, means for moving the movable impaling blade toward the fixed impaling blade, a curved pitting knife, and means for effecting relative movement between the said knife and impaler blades.

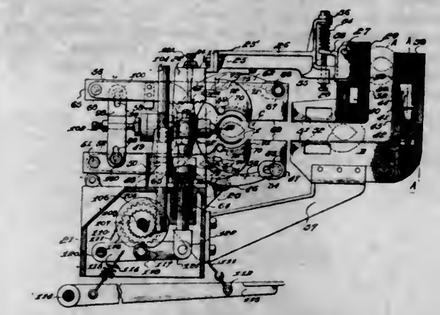
1,785,000. APPARATUS FOR FEEDING, TRIMMING, AND CUTTING FRUIT PREPARATORY TO REMOVING THE PIT THEREFROM. ARTHUR L. DUNCAN, Oakland, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Oct. 7, 1925. Serial No. 60,973. 15 Claims. (Cl. 146—28.)

1. A device of the class described comprising a support, stationary slicing means mounted on said support forming a guideway for the pit of a fruit, portions of said guideway directing the fruit in angular relation to other portions thereof, for forming a slice in a fruit moved through said guideway.



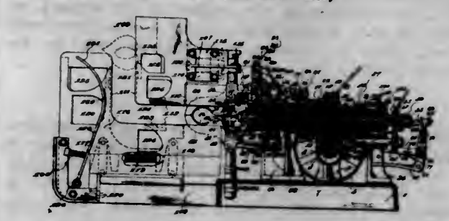
1,785,001. FRUIT-TREATING METHOD AND APPARATUS. ARTHUR L. DUNCAN, Oakland, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Jan. 5, 1926. Serial No. 79,428. 24 Claims. (Cl. 146—28.)

1. That step in the method of seeding or coring a fruit which consists in forming a channel around the fruit to the depth of a central core to be removed by wedging sections of the pulp apart to form a channel and holding the sections apart for the entry of a coring knife.



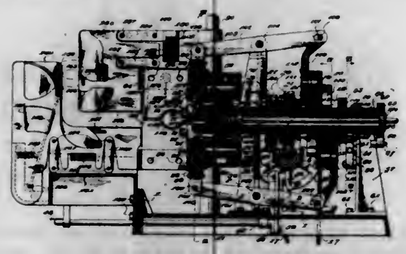
1,785,002. FRUIT PITTING AND CORING APPARATUS. ARTHUR L. DUNCAN, Piedmont, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Mar. 11, 1926. Serial No. 94,025. 32 Claims. (Cl. 146—28.)

1. A peach halving and pitting device including bodily immovable knives spaced apart to permit passage of a pit between them, a portion of one knife being spaced from the other a distance approximating the width of the pit measured in the plane of its suture and another portion of



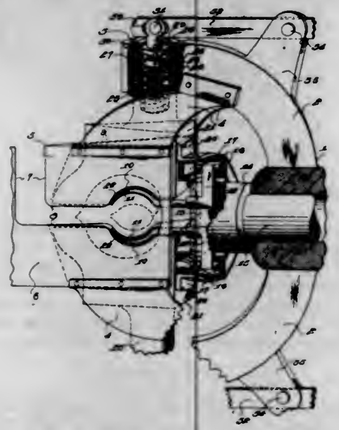
one knife being spaced from a portion of said other knife a distance approximating the length of the pit, measured in the same plane.

1,785,003. FRUIT PITTING AND CORING METHOD AND APPARATUS. ARTHUR L. DUNCAN, Piedmont, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Sept. 28, 1926. Serial No. 138,211. 15 Claims. (Cl. 146—28.)



1. The method of pitting peaches which consists in cutting a narrow kerf in the flesh of the peach to expose the suture of the pit, adjusting a severing means to the size of the whole pit in the plane of its suture and then simultaneously cutting both halves of the peach from the whole pit by a revolution of the severing means that ends without crossing the edge of the pit in said plane.

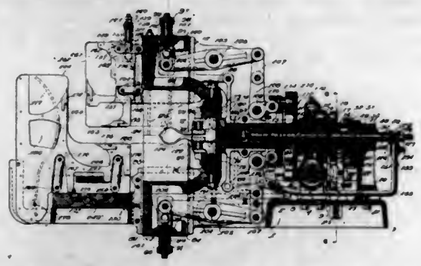
1,785,004. FRUIT PITTING AND CORING APPARATUS. ARTHUR L. DUNCAN, Piedmont, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Nov. 1, 1926, Serial No. 145,530. Renewed May 20, 1930. 18 Claims. (Cl. 146—28.)



1. In a fruit pitting and coring device, a plurality of curved blades, and frictionally operated means to open and close said blades.

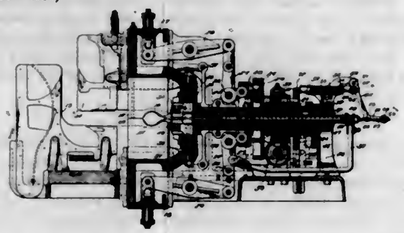
1,785,005. FRUIT PITTING AND CORING APPARATUS. ARTHUR L. DUNCAN, Piedmont, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Nov. 6, 1926. Serial No. 146,754. 51 Claims. (Cl. 146—28.)

1. A fruit coring machine comprising means to form a circumferential recess in the fruit to a depth of a core to be removed, oppositely disposed knives curved to approximate the outline of the pit, means to adjust and center said knives on said core and means to cause said knives to follow a determined non-circular path.



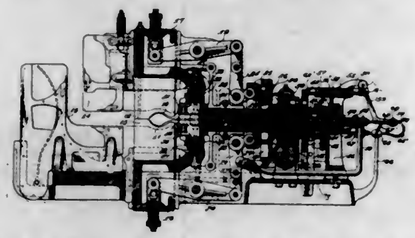
1,785,006. FRUIT PITTING AND CORING METHOD. ARTHUR L. DUNCAN, Piedmont, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Nov. 22, 1926. Serial No. 150,082. 1 Claim. (Cl. 146—28.)

The method of cutting a substantially whole pit from a peach having the edges of the pit in the plane of its suture exposed, which comprises adjusting the severing means substantially to the outline of the exposed pit edges and then moving said severing means transversely of such edges on a non-circular path unguided by the body of the pit.



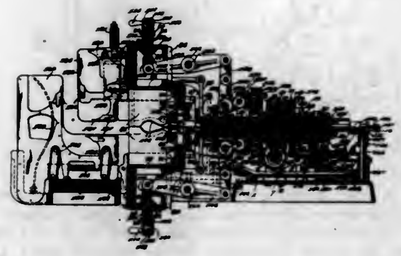
1,785,007. FRUIT PITTING AND CORING MECHANISM. ARTHUR L. DUNCAN, Piedmont, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed May 14, 1927. Serial No. 191,334. 21 Claims. (Cl. 146—28.)

1. A fruit coring machine comprising means to form a recess in the flesh of the fruit and to guide the fruit in a substantially predetermined path toward a coring station, a gauge to position the fruit at said coring station, rotatable coring means, mechanism operating in timed relation to withdraw said gauge and to then po-



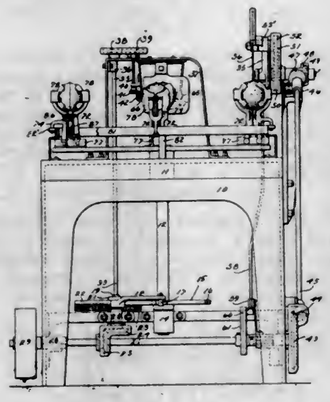
sition and rotate said coring means to remove the core, said mechanism including elements to vary the operative position of said gauge.

1,785,008. METHOD AND APPARATUS FOR CLEARING FRUIT-PITTING MACHINES. ARTHUR L. DUNCAN, Piedmont, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed July 30, 1927, Serial No. 209,488. Renewed May 20, 1930. 15 Claims. (Cl. 146—28.)



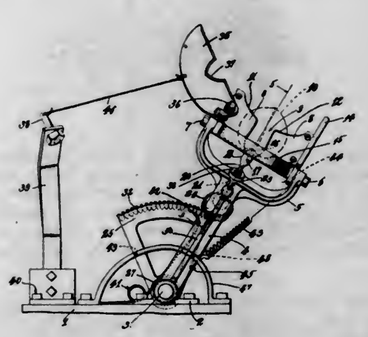
15. In a fruit pitting mechanism, the combination with a pair of rotatable pitting knives arranged to be rotated within a piece of fruit to sever the pit from within the fruit, of a pit remover arranged to be operated in timed relation to the operation of the knives to dislodge the severed pit from the knives.

1,785,009. FRUIT-PITTING MACHINE. ARTHUR L. DUNCAN, Piedmont, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Oct. 24, 1927. Serial No. 228,352. 16 Claims. (Cl. 146—28.)



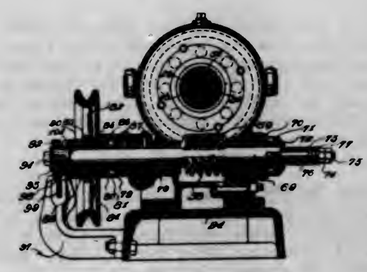
3. A fruit pitting machine of the type that includes rotatable pitting knives arranged to be centered with respect to the substantially intact pit and to rotate about said pit, comprising means to rotate said knives from their initial or centering position to cut the pit from the fruit and to then stop them in said position, means to drive said first named means including an adjustable spring arranged to cushion the movement of said knives through the fruit.

1,785,010. PITTING AND CORING MACHINE. ARTHUR L. DUNCAN, Piedmont, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed May 8, 1928. Serial No. 276,154. 21 Claims. (Cl. 146—28.)



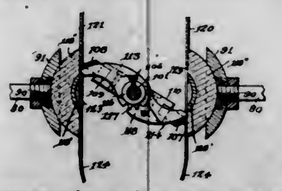
1. In a fruit pitting machine; means for separating the flesh of a fruit to be pitted substantially to the depth of a core to be removed; pitting means adapted to enter between the separated flesh; means for rotating said pitting means; and yieldable means for guiding said pitting means in a predetermined path through the flesh of the fruit to be pitted.

1,785,011. FRUIT-PITTING MACHINE. NARSETE FELIZIANETTI, Los Angeles, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed May 13, 1922, Serial No. 560,750. Renewed Mar. 31, 1926. 63 Claims. (Cl. 146—28.)



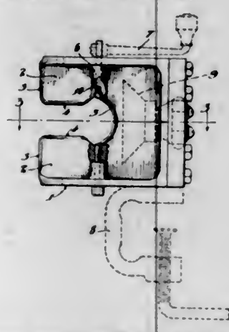
12. In a fruit pitting device, a pair of complementary curved pitting knives mounted upon a single shaft and having their cutting portions arranged on substantially diametrically opposite sides of the shaft, and means providing surfaces with which the flesh of the fruit engages and having an opening through which the knives operate to simultaneously completely sever the pit from the fruit.

1,785,012. FRUIT PITTER. HJALMAR GORANSON and DAVID GORANSON, San Jose, Calif., assignors, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed June 25, 1928. Serial No. 287,992. 19 Claims. (Cl. 146—28.)



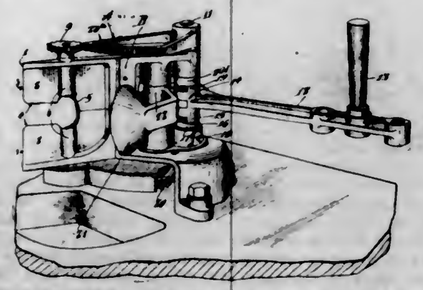
1. In a fruit pitter, the combination of an impaling blade having a pit receiving recess therein, a pitting member, means for actuating the impaling blade to thrust the pitting member around the pit of the fruit, and means for rotating the pitting member to cut the pit from the flesh of the fruit.

1,785,013. FRUIT-PITTING AND CORING MACHINE. WILSON W. HAVENS, Oakland, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Nov. 25, 1927, Serial No. 235,623. Renewed Aug. 19, 1930. 7 Claims. (Cl. 146—28.)



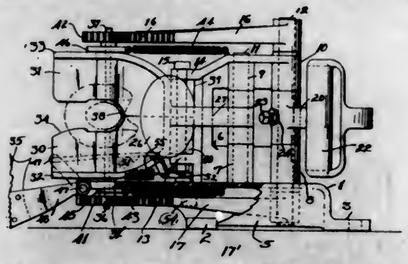
1. A fruit pitting machine of the type that includes a rotatable pitting knife arranged to turn about the pit, comprising a drive shaft adapted to impart rotation to said knife, a worm wheel carried by said shaft, a second shaft, a worm secured to said second shaft and adapted to mesh with said worm wheel, a driving pulley loosely mounted on said second shaft, co-operating clutch members carried by said second shaft and said driving pulley respectively, and yieldable means carried by said second shaft to urge it yieldingly toward said pulley whereby upon said pitting knife encountering an obstruction said second shaft is permitted to move relative to said pulley to disengage said clutch members, said yieldable means being arranged adjacent an end of said second shaft and including accessible means to adjust the yielding effect thereof.

1,785,014. FRUIT PITTER. HAL W. NORGAARD, Burbank, Calif., assignor to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Mar. 30, 1925. Serial No. 19,392. 13 Claims. (Cl. 146—28.)



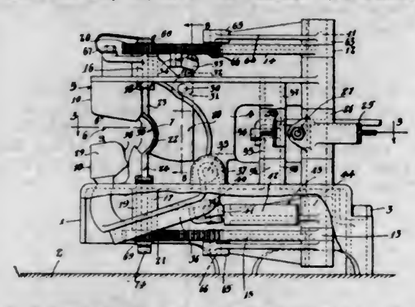
2. A pit remover for a fruit pitting machine, said pit remover including a shaft having a feeler mounted thereon, a curved knife adapted to engage said feeler, said knife being flexible, said knife being mounted to move independently of said feeler, the curvature of said knife being altered when it is engaged by said feeler.

1,785,015. FRUIT PITTER. ALBERT R. THOMPSON, San Jose, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Oct. 14, 1925. Serial No. 62,377. 3 Claims. (Cl. 146—28.)



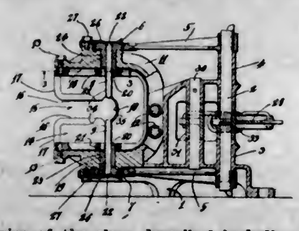
1. In a fruit pitter, impaling means for cleaving the flesh of the fruit and leaving the pit intact, pitting means on said impaling means and adapted to pass around the intact pit and sever the same from the flesh of the fruit, and means for maintaining the second half of the fruit on the blade after the first half of the fruit has been severed from the pit.

1,785,016. FRUIT PITTER. ALBERT R. THOMPSON, San Jose, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Feb. 2, 1926. Serial No. 85,513. 19 Claims. (Cl. 146—28.)



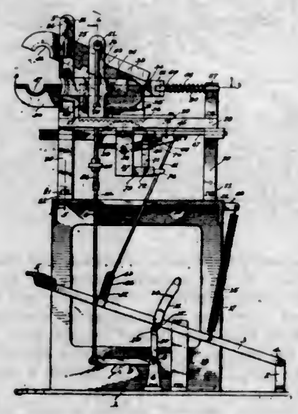
1. In a fruit pitter, a curved knife for cutting the flesh of the fruit from the pit and means for rotating the knife from both of its ends simultaneously.

1,785,017. FRUIT-PITTING MACHINE. ALBERT R. THOMPSON, San Jose, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Mar. 29, 1926. Serial No. 98,077. 32 Claims. (Cl. 146—28.)



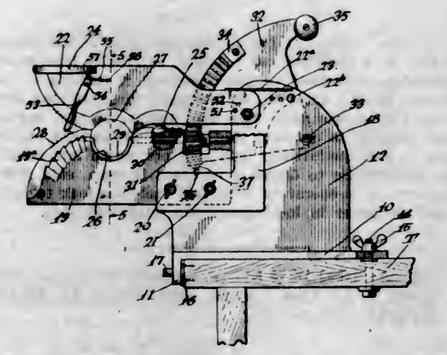
2. A fruit pitting machine comprising a splitting knife having a slot to receive the seed of the fruit, a rotary pitting knife, means to advance said knife when it rotates, means to return said knife to the starting point as it completes its rotation, and means to split the bud end of the fruit near the end of the operation.

1,785,018. FRUIT-PITTING APPARATUS. ALBERT R. THOMPSON, San Jose, Calif., assignor to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Oct. 30, 1926, Serial No. 145,160. Renewed May 20, 1930. 35 Claims. (Cl. 146—28.)



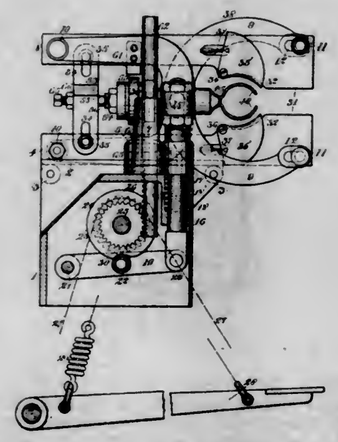
1. A fruit pitter comprising means for halving the flesh of the fruit, a rotary pitting knife having a cutting radius adapted to produce a predetermined depth of cut in the fruit flesh irrespective of the width of the pit, means for rotating the said knife, and means to shift the pit during the rotation of the said knife to permit the knife to pass around the pit.

1,785,019. FRUIT PITTER. ALBERT R. THOMPSON, San Jose, and EARL R. ANDERSON, Los Angeles, Calif., assignors to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Oct. 1, 1927. Serial No. 223,336. 18 Claims. (Cl. 146—28.)



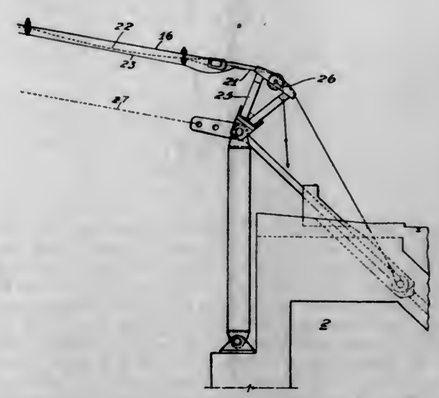
1. A device of the class described including means for halving the fruit, means with said halving means for pitting the fruit, and means for shifting the plane of the halving means during the operation of the pitting means.

1,785,020. CLINGSTONE-FRUIT PITTER. JAMES B. WHIPPLE, Huntington Park, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed July 31, 1924, Serial No. 729,316. Renewed Jan. 19, 1927. 5 Claims. (Cl. 146—28.)



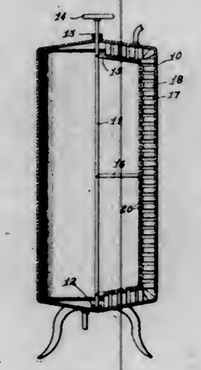
1. A fruit pitter comprising a lower blade rigidly mounted to slide forwardly and backwardly, a second blade pivoted to the first blade and adapted to swing to and from the first blade, said blades being adapted to cut the meat of a peach or the like into two parts and hold the pit, and means having meat spreader edges mounted at the outer sides of the blades and adapted to separate the meat from the pit as the blades are reciprocated.

1,785,021. FRUIT PITTER. JAMES B. WHIPPLE, Huntington Park, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Mar. 4, 1926. Serial No. 92,203. 9 Claims. (Cl. 146—28.)



1. A fruit pitter comprising two opposed blades having complementary recesses adapted to cooperate to receive the pit of the fruit, an arcuate knife disposed in one of said recesses, said knife being rotatable upon an axis parallel to the meeting edges of said blades so as to swing into the other recess, and means for rotating said knife.

1,785,022. FRUIT-PITTING MACHINE. ARTHUR L. DUNCAN, Oakland, Calif., assignor, by mesne assignments, to Pacific Machinery Company, San Francisco, Calif., a Corporation of California. Filed Dec. 16, 1924. Serial No. 756,175. 24 Claims. (Cl. 146—28.)

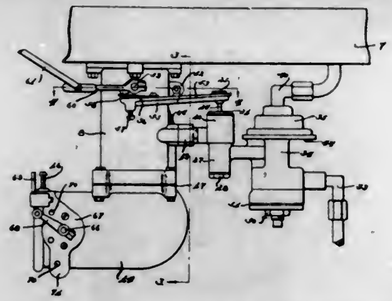


1. A fruit pitting apparatus comprising a base, a spindle rotatably carried thereabove, a pair of curved pitting knives extended outwardly from the end thereof, means for moving the knives longitudinally relatively to the spindle to move their ends to and from each other, and means for revolving the spindle.

1,785,023. BRIDGE-BUILDING APPARATUS. VERE B. EDWARDS, Moon Township, Allegheny County, and GEORGE F. WOLFE, Coraopolis, Pa., assignors to The Dravo Contracting Company, a Corporation of Pennsylvania. Filed Jan. 31, 1930. Serial No. 424,883. 6 Claims. (Cl. 14—23.)

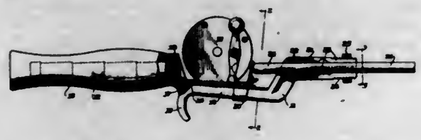
1. Bridge-building apparatus adapted for use in cooperation with bridge towers and two anchorages, such apparatus including adjustable double way-cables, a plurality of carriages movable upon said way-cables, each carriage adapted to receive a cable-strand and provided with a clamp, a messenger line capable of being drawn to and fro over the bridge towers and adapted to engage at one end a cable strand and to draw the cable strand to position between the anchorages and upon the towers, and a back-hauling line adapted to be engaged by the carriage clamps.

1,785,024. BOILER CLEANER. THOMAS D. EVANS, Phoenixville, Pa. Filed Mar. 3, 1930. Serial No. 432,582. 6 Claims. (Cl. 210—206.)



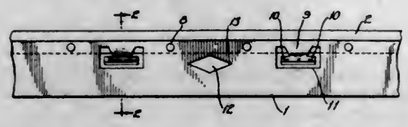
1. A boiler cleaner comprising in combination with a cylindrical boiler, a shaft journaled along the axis within the boiler, arms extending radially from the shaft, a bar carried by the arms extending parallel with the sides of the boiler, continuously similar means carried by the bar and said arms for frictional engagement with the entire inner surface of the boiler, and means to rotate the shaft.

1,785,025. SQUARE TUBING FOR NEWEL POSTS. HAROLD FELSENTHAL, Chicago, Ill., assignor to Guarsteel Safety Stair Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 2, 1927. Serial No. 237,314. 7 Claims. (Cl. 189—41.)



1. A tube of the class described made from a substantially flat steel strip, one surface thereof being provided with longitudinally extending V-shaped grooves, a longitudinally extending thickened portion on the other side of said strip positioned substantially opposite each groove for strengthening the grooved portions of said strip, said strip being bent along said grooves to form a plurality of substantially flat sides angularly disposed to one another, and the lateral edges of said strip being joined to form a hollow unitary structure.

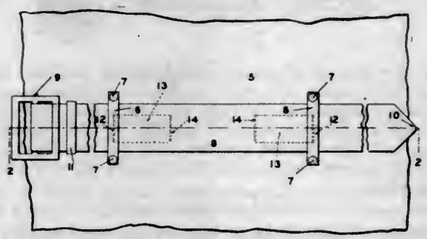
1,785,026. CABURETOR. ARTHUR W. FULWILER, Highland Park, Mich., assignor to The Gwisdalla Floatless Carburetor Corporation. Filed Apr. 30, 1927. Serial No. 187,781. 1 Claim. (Cl. 261—41.)



A carburetor of the class described, comprising: a mixing chamber; an arm projecting outwardly to said mixing chamber; a sleeve carried on the outer end of said arm of Venturi bore and communicating through a lateral opening with a passage formed in said arm; a nipple secured to the periphery of said mixing chamber and communicating through its bore and through a passage formed in said mixing chamber with the passage in said arm; a chamber forming member carried on said nipple; a fuel conduit communicating with the chamber in said chamber forming member; a valve for closing communication between said fuel conduit and said passages, said valve being normally slightly open; an additional valve for controlling communication between said conduit and said passages; and a flexible diaphragm, flexible in response to the suction of the engine for raising, upon flexing, said additional valve to open position.

1,785,027. FISHING ROD. HARRY F. GEPHART, Chicago, Ill. Filed June 10, 1929. Serial No. 369,674. 3 Claims. (Cl. 43—22.)

1. In a fishing-rod, the combination of a handle having a seat for a reel-base and a slotted, externally tapered and threaded, apertured portion designed to receive a rod-section in said aperture, an internally-threaded ring fitted over and co-operating with the threads of said portion and adapted to contract said portion on to said rod-section to lock the latter in said aperture, and a lock slidable on said handle to fasten a reel-base thereon, said locked rod-section co-operating with said reel-base lock to maintain the latter in locking relation with said base.

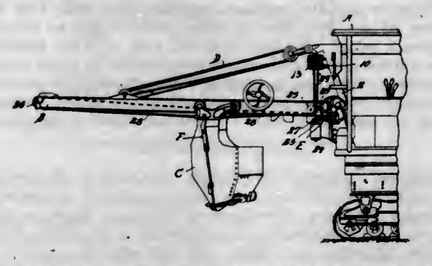


1,785,028. DIVIDING STRIP. ROBERT W. HARDIE, Fanwood, N. J. Filed Apr. 17, 1930. Serial No. 445,025. 2 Claims. (Cl. 94—17.)

1. A dividing strip for use in terrazzo and similar floorings, having a longitudinal series of anchor segments

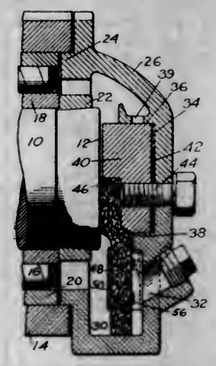
inclined transversely of the body of the strip from bases located between an outer edge and the central longitudinal line of the strip forming an inner retaining edge opposite the free ends of the anchor segments and provided with ends offset laterally from the body of the segments.

1,785,029. APPAREL COAT. ARTHUR HESSLER, St. Louis, Mo., assignor to The Alligator Company, St. Louis, Mo., a Corporation of Delaware. Filed Aug. 19, 1929. Serial No. 386,874. 2 Claims. (Cl. 2—93.)



1. An article of the class described comprising a coat body provided with guide straps, a belt sliding in said straps, and a flexible tape interposed between the coat and belt and attached at one end to the coat and at the other to the belt, a portion of said tape between its ends being unattached to either coat or belt to allow relative movement between said parts.

1,785,030. MANUFACTURE OF NITROCELLULOSE. ARTHUR HOUGH, Summit, JOHN ROY DUFFORD, Paterson, and WILLIAM CLELLAND LEONHARD, Passaic, N. J. Filed Aug. 31, 1926. Serial No. 132,906. 8 Claims. (Cl. 260—146.)



8. Nitrated paper parchment, in a substantially stable condition.

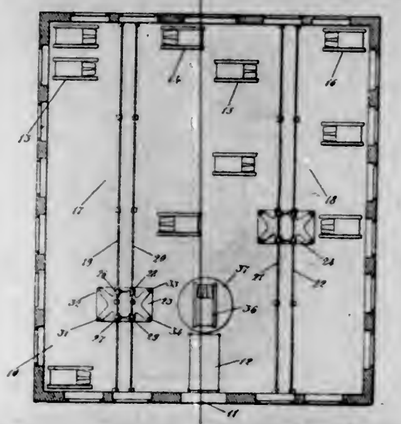
1,785,031. DIRECT BUCKET DRIVE. ERICH H. LICHTENBERG, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Feb. 12, 1930. Serial No. 427,908. 4 Claims. (Cl. 104—92.)

1. In a paving machine of the class described for distributing concrete aggregates upon a subgrade, in combination, a supporting frame, a boom associated with said frame, pivotal connections intermediate one end of the boom and the frame enabling horizontal and vertical swinging movements of the boom, a bucket to traverse the boom, cable means connected with the bucket to move it in and out on the boom, and an operating unit for said cable means carried by the upper portion of the framework and comprising drive shafting, devices to put said shafting in motion and a cable drum carried by the shafting in a position projecting from the framework so that the drum is arranged above the vertical axis of this boom with the cable means passing therearound in a plane substantially including the said axis, with attaching devices for said unit enabling its bodily removal from the frame.

1,785,032. JOURNAL BOX. PAUL B. LIEBERMANN, Santa Barbara, Calif., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 28, 1926. Serial No. 118,964. 9 Claims. (Cl. 308—41.)

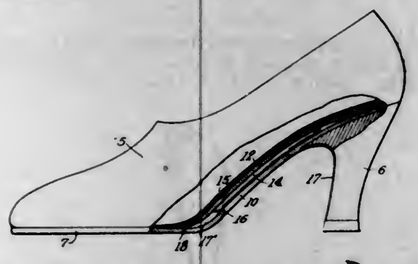
1. In a device of the character described, a journal box, a shaft journalled therein and having a smooth end face, a cap closing the end of the box and having its lower portion enlarged to form a lubricant reservoir, said cap also having a circular recess in line with the end of the shaft, a circular plate fitting in said recess and projecting therefrom to engage the end face of the shaft, said plate having a portion of its projecting face cut away, a wick set in said cut away portion and extending into the lubricant reservoir, and means for holding said circular plate from rotation; substantially as described.

1,785,033. STOCKING PROTECTOR. CURT LORENZ and ELIZABETH BOECHER Pittsfield, Mass., Filed Jan. 24, 1928. Serial No. 249,146. 1 Claim. (Cl. 36—2.)



A stocking protector comprising a leg portion of waterproof elastic material reinforced at the top with heavier elastic material, said stocking protector being open at the bottom and provided with a flare of elastic material of heavier material than the body of the stocking protector, said flare being adapted to be turned-up and down, and when turned down adapted to fit snugly the contour of the upper portion of a shoe, and a strap of thin elastic material connected to the leg portion and free of the flare and adapted to fit under the instep of the foot to hold the stocking protector in position.

1,785,034. MEANS FOR HANDLING VEHICLES IN GARAGES. GOTHARD LOWENSTEIN, Brooklyn, N. Y. Filed Nov. 10, 1927. Serial No. 232,298. 5 Claims. (Cl. 214—16.1.)

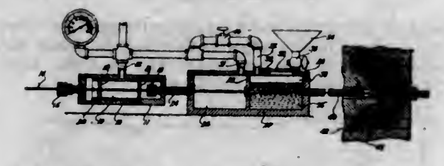


1. In a building for the purpose described the combination, with a storage room, of a trackway running close to the ceiling thereof, a carrier comprising a wheeled

structure running along said trackway, and an elongated vehicle supporting platform depending from said structure, said platform being parallel to and in close proximity to the surface of the floor of said room and being permanent-

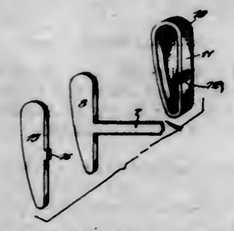
ly disposed transversely of the direction of travel of said wheeled structure, and a turn table independent of said carrier, adapted to change the direction of a vehicle to be driven on or off said platform.

1,785,035. TURNED SHOE. FRED MACCARONE, Brooklyn, N. Y., assignor of one-half to Frank Cardone, Brooklyn, N. Y. Filed Mar. 5, 1930. Serial No. 433,242. 6 Claims. (Cl. 36—18.)



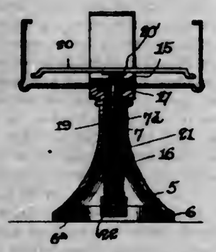
5. A turned shoe having a sole provided with a short tab formed integral therewith near the forward end of the shank of the shoe, a reinforcing flap member having one end joined to said tab and extending therefrom over the shank of the shoe, and a shank piece one end of which rests under said tab and is held against forward movement thereby, and is covered by said flap member.

1,785,036. OSCILLATION GENERATOR. WARREN A. MARRISON, Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 30, 1927. Serial No. 243,604. 4 Claims. (Cl. 171—327.)



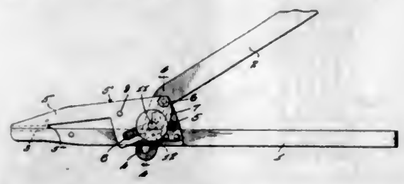
2. A holder for piezo electric resonator comprising a mounting member, two bolts secured thereto, an electrode secured to each said bolt, said electrodes each consisting of bi-metallic elements.

1,785,037. METHOD OF AND APPARATUS FOR COATING CORES. CHARLES MARTELL, Cicero, and BERGER AMANDUS HAGEN, Chicago, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 20, 1927. Serial No. 214,224. 6 Claims. (Cl. 91—68.)



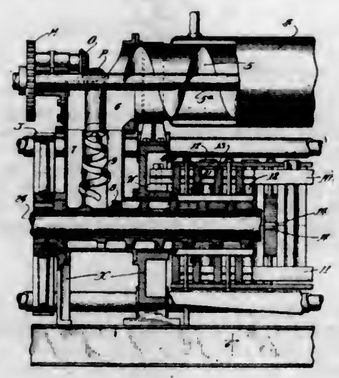
2. The method of continuously applying semi-fluid material to a conductor, which consists in passing the conductor continuously through an evacuated area and through a semi-fluid material adjacent to the evacuated area, and reducing the pressure upon the semi-fluid material to prevent the material from flowing into the evacuated area.

1,785,038. NOSE-GUARD MOUNTING FOR SPECTACLES AND EYEGLASSES. LAURENCE C. MARTIN, Providence, R. I., assignor to Martin-Copeland Company, a Trusteeship consisting of Edgar W. Martin, Barrington, R. I., Laurence C. Martin, Providence, R. I., and George W. Bleecker, Chicago, Ill. Filed July 18, 1929. Serial No. 379,215. 2 Claims. (Cl. 88—48.)



1. A nose-guard for ophthalmic mountings comprising a metallic member formed with a substantially flat head and an arm projecting therefrom for attachment to an eyeglass or spectacle frame, a non-metallic shell comprising a box-like portion enclosing one side and the edges of the head and provided with a slot in its side through which the arm projects, and a cover abutting the opposite side of the head and secured in place within the sides of the box to provide a smooth-surfaced resilient enclosure for that portion of the guard which contacts with the nose of the wearer of the eyeglasses or spectacles.

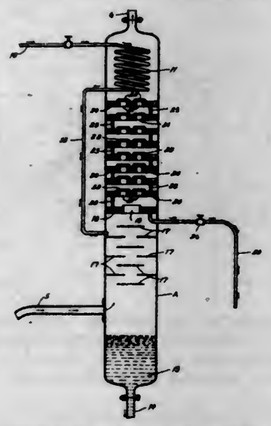
1,785,039. NAPKIN FIXTURE. WILLIAM P. MCCORKINDALE, South Hadley Falls, Mass., assignor to Specialty Sales Company, Incorporated, Holyoke, Mass., a Corporation of Massachusetts. Filed May 10, 1926. Serial No. 108,109. 4 Claims. (Cl. 311—51.)



1. A napkin dispensing device consisting of a napkin holding means having four upwardly extending arms provided with inwardly extending spaced terminal stops, and means comprising a tubular member, a plunger therein and a spring in the tubular member engaging the plunger for propelling a stack of napkins against the stops.

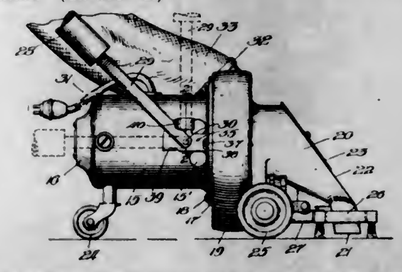
1,785,040. VALVE LIFTER. JAMES P. MCCREADY, Berlin, N. H. Filed Jan. 15, 1930. Serial No. 421,026. 4 Claims. (Cl. 29—86.3.)

1. A device of the class described comprising upper and lower handles, an upright fastened to the lower handle intermediate its ends and to which the upper handle is pivoted an appreciable distance from one end, this end of the upper handle having slots therein, a roller having its ends passing through the slots, a jaw member pivoted to the uprights and having a slot therein through which the roller passes.



1,785,041. CONTINUOUS SCREW PRESS. WILLIAM MCDONALD, Chicago, Ill., assignor to Swift & Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 1, 1926. Serial No. 138,885. 9 Claims. (Cl. 100—48.)

7. A continuous screw press of the character described and having a cylindrical compression chamber and a screw member arranged to force the material operated upon therethrough and having also a feed chamber in axial alignment with the compression chamber and a feed chute opening transversely into said feed chamber and a spiral feeding member in said feed chute, said screw member extending into said feed chamber and being formed opposite said feeding member with spaced peripheral notches having a crushing action arranged to break up large fragments of material delivered by said feed member to the notched portion of said screw member.

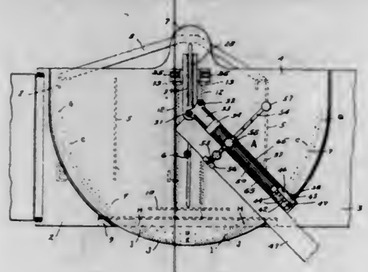


1,785,042. APPARATUS FOR CRACKING HYDROCARBONS. WALTER MILLER, Ponca City, Okla., assignor, by mesne assignments, to Continental Oil Company, Ponca City, Okla., a Corporation of Delaware. Filed June 8, 1927. Serial No. 197,289. 2 Claims. (Cl. 196—99.)

1. In an apparatus for cracking hydrocarbons, a cracking element maintained at a cracking temperature, a dephlegmator receiving the vapors from said cracking element, said dephlegmator comprising a refluxing zone wherein the highest boiling point fraction in said vapors is condensed, and a relatively cool bubbling zone provided with pools of hydrocarbon liquid through which vapors are discharged from said refluxing zone, the vapors from said refluxing zone being passed through said pools of liquid, an inlet device whereby charging stock is delivered

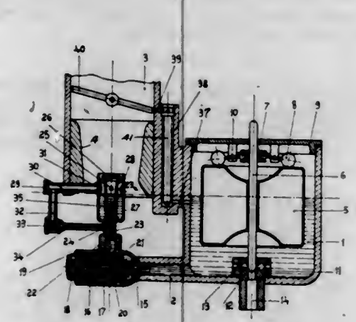
to the reflux condensate formed in said refluxing zone, said inlet device being adapted to prevent the delivery of said charging stock to said bubbling zone, means whereby the mixture of reflux condensate and charging stock is delivered to said cracking element, a storage receptacle, and a discharge device leading from said bubbling zone to said storage receptacle so as to remove the intermediate condensate from the cracking system.

1,785,043. VACUUM-CLEANER-HANDLE MOUNTING. EDWARD MROSS, Racine, Wis., assignor to Hamilton Beach Mfg. Co., Racine, Wis., a Corporation of Wisconsin. Filed Oct. 31, 1928. Serial No. 316,333. 2 Claims. (Cl. 306—4.)



1. A vacuum cleaner having a horizontally disposed pin extending outwardly from each side of the cleaner body, a bracket secured to said body adjacent one of said pins, said bracket consisting of a substantially flat apertured plate member having an outwardly extending, horizontally disposed ear on its lower margin, rearwardly of the aperture in the plate, said pin extending through the aperture of the plate, and a handle having bifurcated arms apertured at their lower ends and pivotally mounted on said pins on the cleaner body in engagement with the outer surface of the bracket.

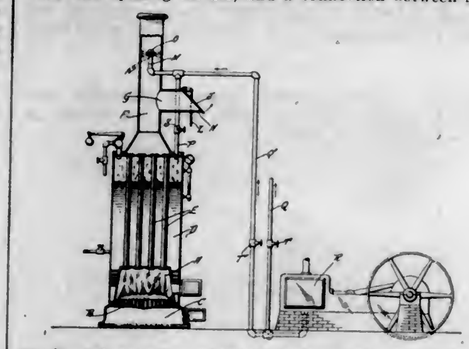
1,785,044. UNIVERSAL RAFTER-FRAMING MACHINE. JAMES NICKELS, Silvis, Ill. Filed Jan. 21, 1927. Serial No. 162,483. 5 Claims. (Cl. 143—6.)



2. In a device of the class described, a saw-table dial provided with a central saw slot, and provided with one

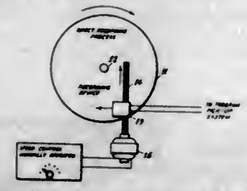
or more series of openings forming arcuate scales, a gage adapted for a pivotal mounting at either side of said slot, and having parallel side faces for the alternative support of a piece of rafter timber in position for being cut, spring-actuated pins for selective engagement with

said perforations, to establish the position of said gage with reference to said saw slot, and a clamping mechanism carried by said gage, capable of adjustment in position to hold a piece of rafter timber to one side or the other of said gage.



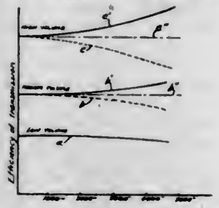
1,785,045. CARBURETOR FOR INTERNAL-COMBUSTION ENGINES. EUGENIO PEDRINI, Turin, Italy. Filed Mar. 14, 1929, Serial No. 347,050, and in Czechoslovakia and Germany Feb. 19, 1929. 6 Claims. (Cl. 261—121.)

1. A carburetor for internal combustion engines comprising, in combination with a constant level chamber, a spray nozzle and a Venturi tube, a cone-shaped distributing tube provided with holes at different heights and being an extension of said spray nozzle, a chamber surrounding said distributor and communicating above with the Venturi tube and means for effecting a compensating action on the fuel delivery in order to ensure a practically constant composition of the mixture in the Venturi tube under varying working condition.



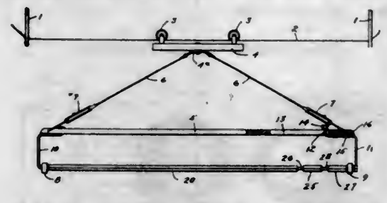
1,785,046. COMBUSTION DEVICE. EDWIN W. PELSTER, St. Louis, Mo. Filed Dec. 3, 1927. Serial No. 237,477. 1 Claim. (Cl. 110—661.)

In combination with a furnace, a flue for the passage of the gases of combustion from said furnace, said flue having an opening in a wall thereof arranged to allow air to flow through said opening into said flue and combine with said gases of combustion, means for controlling the flow of air through said opening, a nozzle positioned in said flue at a point more remote from said furnace than said opening for air, and a connection between said



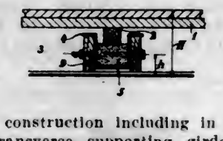
nozzle and a source of steam supply, said nozzle being arranged axially in the flue and formed to deliver steam jets radially and substantially transversely of said flue.

1,785,047. METHOD AND MEANS FOR CUTTING PHONOGRAPH RECORDS. EDWIN JAY QUINBY, Yonkers, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Sept. 14, 1927. Serial No. 219,522. 31 Claims. (Cl. 179—100.4.)



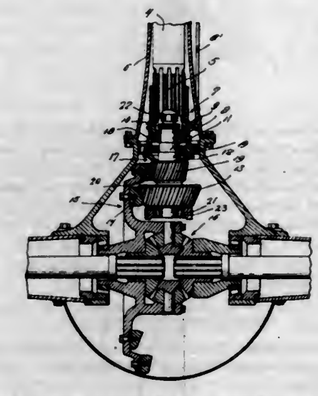
1. The method of cutting sound reproducing grooves in a phonograph record which comprises the steps of rotating the disc about a fixed pivot, subjecting said rotating record to a cutting tool, said cutting tool being responsive to the sound vibrations desired to be recorded, and feeding said cutting tool radially of said disc, the speed of said cutting tool being varied in accordance with the character of the material to be recorded.

1,785,048. SYSTEM FOR ELECTRICALLY TRANSMITTING AND REPRODUCING SOUND. JOHN LOUIS REYNOLDS, Long Island City, N. Y., assignor, by mesne assignments, to Electrical Research Products Inc., a Corporation of Delaware. Filed May 19, 1927. Serial No. 192,616. 7 Claims. (Cl. 178—44.)



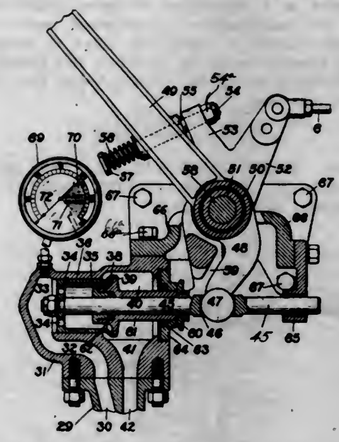
4. In a system for electrically reproducing sounds with the same aural effects as the original sounds, means for translating the sounds into corresponding modulated currents, means for amplifying said currents comprising an electron discharge amplifier having a plurality of stages, means comprising an adjustably tuned circuit for coupling certain of said stages, and means for varying the tuning range of said coupling simultaneously with the gain of another stage of said amplifier to compensate for volume-frequency distortion.

1,785,049. QUILTING MACHINE. JOHN R. RUSSELL, Sterling, Ill. Filed Oct. 3, 1927. Serial No. 223,807. 1 Claim. (Cl. 112—119.)



A machine of the class described, comprising a support and carriage movable longitudinally thereof, a bar suspended from said carriage and provided at its ends with hangers, a frame supported at its ends by said hangers, and quilting rollers in said frame provided at one of their ends with one or more sections forming spaced bearings for the support thereof, the hanger adjacent to the section ends of said rollers being adjustable longitudinally of said bar to conform to the adjustments afforded by said sections.

1,785,050. CEILING CONSTRUCTION. ALFRED SCHMID, Vienna, Austria. Filed Aug. 2, 1927, Serial No. 210,139, and in Austria Feb. 15, 1927. 3 Claims. (Cl. 72—66.)

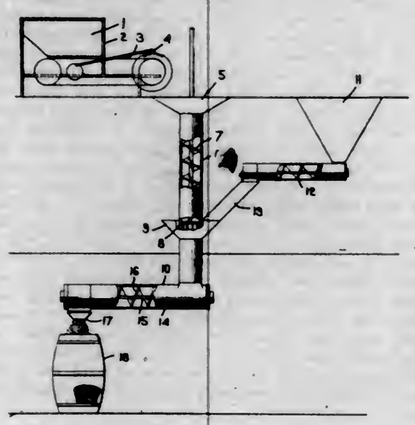


1. A ceiling construction including in combination, a plurality of transverse supporting girders, filling material arranged within and extending throughout the length of the girders, bolsters lying partly in the girders and disposed on and supported by the filling material, spaced horizontal ceiling members supported respectively on the upper surface of the bolsters and on the undersurface of the girders, and horizontally disposed insulating members secured to and continuing from the upper portions of the girders and dividing the space between the ceiling members into two air chambers, substantially as and for the purposes set forth.

1,785,051. POWER TRANSMISSION. JESSE C. SMOOT, Lincolnton, N. C., now by judicial change of name Jess Covington Radnor. Filed July 20, 1927. Serial No. 207,225. 2 Claims. (Cl. 74—58.)

1. In a power transmission construction of the class described, a housing, a pair of axle shafts supported therein, a standard differential mechanism including a driving disc having inner and outer concentric ring gears, a propeller shaft associated with the front end of the housing, a solid driven inner pinion shaft disposed in alignment with said propeller shaft, a pair of longitudinally spaced bearing assemblies in which the opposite end portions of said solid shafts are mounted for rotation, a relatively large pinion gear fastened on said solid shaft and in driving mesh with the inner ring gear, a roller bearing structure mounted in said housing, an outer tubular shaft surrounding and rotatable on said inner solid shaft, said tubular shaft having its front end mounted for rotation in said roller bearings, a relatively small pinion gear carried by the tubular shaft and in mesh with the outer ring gear, an additional roller bearing structure mounted within the front end portion of the tubular shaft, said solid shaft being mounted for rotation in said last-named bearing, said relatively large pinion gear having a recess defining a cavity, and an end thrust bearing arranged in said cavity and receiving the rear end of said tubular shaft, the forward ends of the inner and outer shafts having independent driving teeth, a sliding collar splined for longitudinal sliding motion on said propeller shaft, operating means for adjusting said collar, said collar being provided with internal and external driving teeth adapted to be selectively meshed with the driving teeth of either the inner solid shafts or the outer hollow shaft.

1,785,052. AUTOMATIC BRAKE CONTROL FOR POWER-PROPELLED VEHICLES. EDWIN G. STAUDE, Minneapolis, Minn. Filed Dec. 11, 1925. Serial No. 74,767. 30 Claims. (Cl. 188—152.)



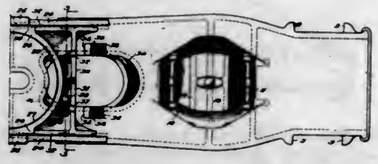
26. A brake control for power propelled vehicles, comprising brake applying means, a pedal, a driven pump having a fluid circulating system, a fixed passage in direct contact with the fluid and through which the circulating fluid flows, relatively movable valve and valve seat elements located within the fixed passage and connections between the pedal and one of the elements and the brake applying means and the other element.

1,785,053. FILLING AND BINDING COMPOSITION. CLEMENT K. STODDER, Brookline, Mass. Filed Apr. 15, 1929. Serial No. 355,426. 3 Claims. (Cl. 106—34.)

3. A powdered filling and binding composition comprising the following ingredients in substantially the following proportions:—

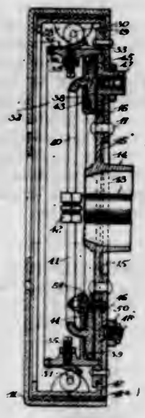
	Parts
Calcined gypsum (plaster of Paris)	32
Dextrine	4
Volcanic ash	4

1,785,054. PROCESS OF PRODUCING SOAP POWDER FROM SOAP STOCK HIGH IN FATTY ACID. CLEMENT K. STODDER, Brookline, Mass. Filed Aug. 28, 1928. Serial No. 302,632. 7 Claims. (Cl. 87—16.)



1. A cold process of producing soap powder from a semi-plastic, moisture-containing soap stock which comprises dividing the plastic soap stock into pieces of large surface areas relatively to the mass of said pieces, embedding said pieces in a dehydrated powdered alkali having an affinity for the moisture in said moist soap stock, and aging the mixture to permit the alkali to absorb a substantial proportion of the moisture and thereby render the soap stock brittle and then reducing the mixture to a desired fineness.

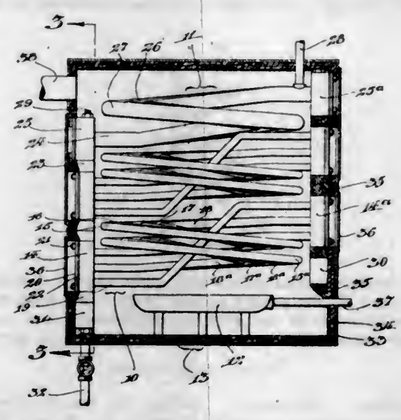
1,785,055. DRIVING MECHANISM. NELS A. STRAND, Evanston, Ill. Filed Oct. 15, 1928. Serial No. 312,523. 5 Claims. (Cl. 74—21.)



1. In driving mechanism of the character described, the combination of a bracket provided with means whereby it may be attached to the top part of the casing of an electric motor, a stud secured to one end of the bracket and extending upwardly therefrom, a frame adjustably mounted on the stud and provided with a pair of countershafts arranged one above the other, a belt and pulley connection between the rotor shaft of the electric motor and the lower countershaft, and a belt and pulley connection between the two countershafts.

1,785,056. RAILWAY-CAR-TRUCK BOLSTER. THOMAS H. SYMINGTON, Baltimore, Md., assignor to T. H. Symington & Son, Inc., Baltimore, Md., a Corporation of Maryland. Filed Apr. 5, 1927. Serial No. 181,161. 16 Claims. (Cl. 105—200.)

4. In combination, a body bolster having a center plate and depending side bearing elements, a truck bolster having side bearing means cooperating with said depending side bearing elements, means on the truck bolster slidably mounted longitudinally thereof and embracingly engaging said center plate and formed as a ring-like body surrounded by a plate portion having marginal ribs and having diagonal brace webs merging into the ring-like body and into certain of the ribs.



1,785,057. BRAKE MECHANISM. HENRY L. F. TREBERT, Canandaigua, N. Y. Filed Jan. 13, 1926. Serial No. 80,865. 18 Claims. (Cl. 188—152.)

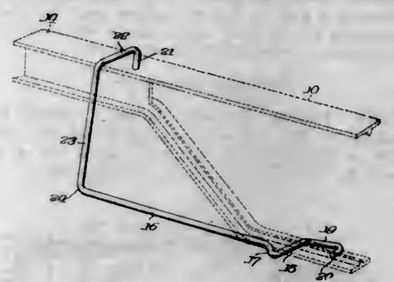
17. In a brake mechanism, the combination of a brake drum, a brake element within the drum, means connected with said brake element for holding it against axial movement within the drum, an annular element mounted within the drum for movement axially thereof, cam means interposed between said annular element and the brake element adapted upon axial movement of said annular element to actuate the brake element and means for actuating said annular element.

1,785,058. BOILER. EARL V. VARCOE, Philadelphia, Pa. Filed May 24, 1927. Serial No. 193,786. 10 Claims. (Cl. 122—50.)

1. A steam generator including a pair of headers; a plurality of tubes extending from one header; making more than a complete turn spirally to form coils, and entering the other header; a plurality of tubes extending

from one header, bending upwardly and forwardly to pass through the coils, and entering the other header; and means for heating the tubes.

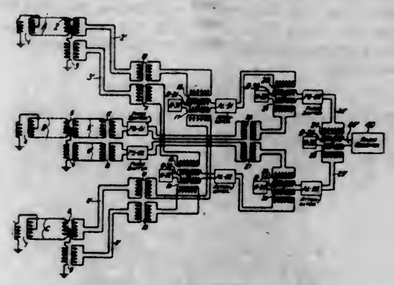
1,785,059. CLASP OR FASTENING DEVICE FOR BRACELETS. JULIUS WEISMAN, Providence, R. I., assignor to Plainville Stock Company, Plainville, Mass., a Corporation of Massachusetts. Filed Feb. 8, 1929. Serial No. 338,526. 5 Claims. (Cl. 24—71.)



1. In a fastening-device of the character described, a housing provided with an open end, a channel-shaped receptor in the form of a tray slidable within and held against separation from said housing, hinged connecting-members attached to said receptor and foldable therewithin between the sides thereof to maintain them in alinement, and means for normally retaining the receptor and connecting-members telescoped within the housing.

1,785,060. METALLURGICAL PROCESS. JOHN H. WHITE, Cranford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 15, 1926. Serial No. 155,114. 4 Claims. (Cl. 75—1.)

1. The process of treating an alloy of nickel and iron which comprises adding to the nickel-iron alloy while it is in a molten state an amount of another alloy of nickel and a substance having properties similar to those of tantalum, the nickel predominating, said amount being such that said substance will have a mass less than 1% of the total nickel-iron content of the resulting alloy.



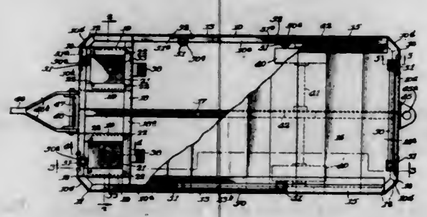
1,785,061. CEILING SUPPORT. WILLIAM E. WHITE, Chicago, Ill., assignor to Kalman Steel Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 21, 1928. Serial No. 263,292. 4 Claims. (Cl. 72—118.)

2. The combination with a truss having upper and lower chords, of a chord extension device consisting of a length of rod bent into substantially a right angle and having hooks formed at its respective ends, the hook at one end having portions adapted to lie below and above a flange of said chord to provide an interlocking

connection that cannot be disengaged without first disengaging the opposite end, the hook on the opposite end overlying the top chord.

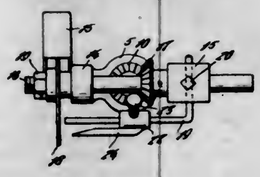
1,785,062. TRANSFORMER SYSTEM. HORACE WHITTLE, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 27, 1927, Serial No. 215,863. Renewed June 6, 1930. 20 Claims. (Cl. 250—11.)

1. In combination, a circuit, one or more transformers in said circuit, and one or more other transformers so connected to said circuit and producing in waves transmitted therethrough phase shifts of such magnitude relative to the phase shifts produced by the first mentioned transformers in waves in said circuit as to compensate for the latter phase shifts, one of said first mentioned transformers having electrical constants substantially different from those of any one of said other transformers.



1,785,063. ANTIFRICTION BEARING. JAMES F. WILLIAMS, Lyndhurst, N. J., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 7, 1928. Serial No. 297,965. 5 Claims. (Cl. 308—212.)

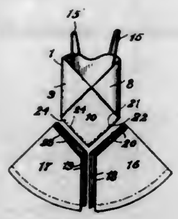
1. In an antifriction bearing, a race ring having a raceway and an arcuate groove at the end of the raceway, the



groove being peripherally discontinuous, and its ends breaking out into the raceway, and a guiding and retaining element held in the groove and comprising a flat sided ring having a pair of tongues spaced apart to straddle the material of the race ring between the ends of the arcuate groove; substantially as described.

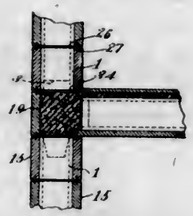
1,785,064. TRUCK. WERNER ZEINDLER, Albion, Mich., assignor to The Service Caster & Truck Co., Albion, Mich., a Corporation of Michigan. Filed Oct. 4, 1926. Serial No. 139,317. 5 Claims. (Cl. 280—49.)

1. A trailer truck comprising a substantial rectangular frame formed of a channel-shaped member having its flanges directed inwardly and its web extending vertically, side rails of angle cross section attached to the top flanges of the side members of said frame, floor boards resting on the lower flanges of said side rails, and wooden jambs mounted on the ends of said floor boards inside of said rails.



1,785,065. ROTARY SAW. BERTRAND L. ABORN, Belfast, Me. Filed Oct. 11, 1929. Serial No. 398,923. 1 Claim. (Cl. 143—43.1.)

A saw of the character described comprising a supporting sleeve, a bearing in one end thereof, arms projecting from opposite sides of the bearing, aligned bearings on the free ends of the arms, a shaft extending rotatably through the aligned bearings, means operatively connecting the shaft to a source of power for actuation thereby, a saw fixed on the shaft adjacent one of the aligned bearings, a substantially L-shaped depth gauge having one of its legs extending for sliding adjustment through the other aligned bearing, the other leg of the depth gauge disposed parallel to the shaft and terminating in spaced relation to the saw, means for securing the depth gauge in adjusted position, a sleeve mounted for longitudinal sliding adjustment on said other leg of the depth gauge, means for securing the sleeve in adjusted position, and a width gauge formed integrally on the sleeve and extending therefrom in parallelism with the other leg of the depth gauge.

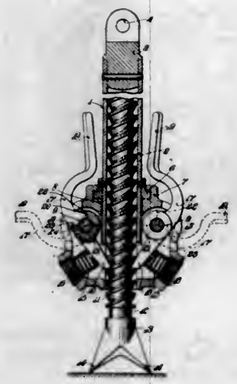


1,785,066. GARMENT. RUTH F. ALBERT, New York, N. Y. Filed Mar. 14, 1930. Serial No. 435,810. 6 Claims. (Cl. 2—73.)

1. A garment provided with a trunk portion composed of a main piece of fabric having its opposite ends folded inwardly and meeting at a point located substantially at the center of the piece, the lower edges of said inwardly folded portions diverging outwardly from the center of the piece towards its opposite sides, an inserted piece of fabric having upper edges extending co-extensively with

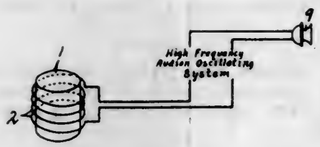
the divergent edges on the main piece and stitched thereto, and a skirted portion secured to the lower edges of the inserted piece at the back of the garment and to the lower edges of the main piece at the front of the garment.

1,785,067. BUILDING. ALBERT F. BEMIS, Newton, Mass., assignor to Bemis Industries, Inc., Boston, Mass., a Corporation of Delaware. Filed Dec. 2, 1925. Serial No. 72,678. 17 Claims. (Cl. 72—30.)



1. In a building construction a structural wall or the like, formed about a series of closely spaced columnar units and having a series of slabs disposed upon opposite sides of the units with connecting member secured to the marginal portions of slabs upon opposite sides of the units and extending into the spaces between the units.

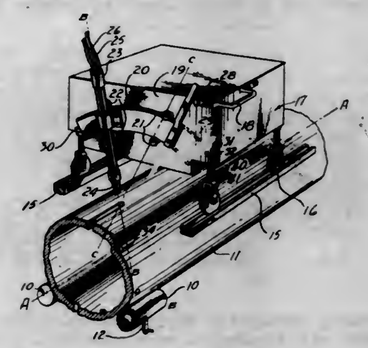
1,785,068. ELECTRIC SWITCH. TONJES A. BOTH, Stratford, Conn., assignor to The Connecticut Electric Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 8, 1926. Serial No. 153,287. 10 Claims. (Cl. 200—67.)



1. In an electric switch, a flat support comprising a plate composed of insulating material mounted to rock in a mounting about an edge of the plate as a pivot in a direction transverse the plane of the plate and having a transverse opening, a switch contact member mounted directly on said support to move therewith in a plane substantially normal to the plane of the plate, means extending into said opening to secure the contact directly to said support, and means for rocking the support.

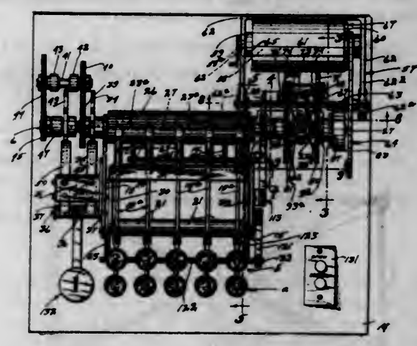
1,785,069. ADJUSTABLE JACK. CORNELIUS G. BOUDETTE, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Apr. 16, 1928. Serial No. 270,456. 9 Claims. (Cl. 254—98.)

1. An adjustable jack comprising a body member carrying an abutment engaging member, a plurality of pawls carried by said body member, a helical screw arranged to telescope within said body member, spring means normally tending to hold said pawls in engagement with the threads on said helical screw, said pawls having means adapted to cooperate with said threads for effecting relative longitudinal movement of said body member and screw upon rotation of said pawls around said screw, and handle means adjustable relative to said pawls and movable into one position to effect release of said pawls from said threads to permit free collapsing of said jack, said handle means also being adjustable to another position wherein they project laterally to serve as leverage attaining means for rotating said pawls around said screw.



1,785,070. INDUCTIVE LIGHT SOURCE. THEODORE WILLARD CASE, Auburn, N. Y., assignor to Case Research Laboratory Incorporated, Auburn, N. Y., a Corporation of New York. Filed July 23, 1928. Serial No. 294,867. 2 Claims. (Cl. 179—100.3.)

1. A source of light comprising a bulb having a wall permitting the passage of light rays, a gas within the bulb, a coil adjacent the bulb, means for producing high frequency oscillating currents in the coil, and means for modulating said current in accordance with sound wave variations.

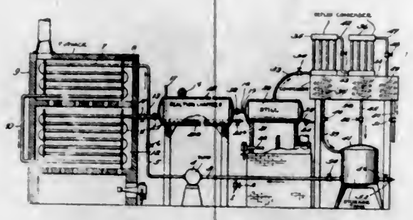


1,785,071. METHOD OF PRODUCING TAPER-SLOTTED PIPE. CLARENCE J. COBERLY, Los Angeles, Calif., assignor to Kobe, Incorporated, Los Angeles, Calif., a Corporation of California. Filed Feb. 4, 1929. Serial No. 337,493. 8 Claims. (Cl. 148—9.)

3. A method of taper-slotting pipe, which comprises: forming a hole in said pipe; directing the flame of a cutting torch through said hole in a non-radial direction; moving said torch relative to said pipe in a direction parallel to the axis of said pipe; shifting said torch into

a different non-radial position; and moving said torch relative to said pipe in a direction parallel to the axis of said pipe.

1,785,072. TELEGRAPHIC TRANSMITTING INSTRUMENT. WILLIAM D. COOPER, St. Paul, Minn. Filed Dec. 16, 1927. Serial No. 240,433. 7 Claims. (Cl. 178—83.)

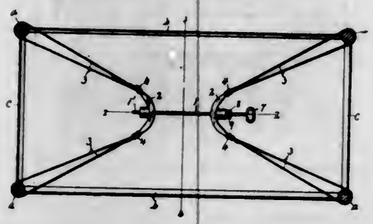


1. In a telegraphic transmitting instrument, a shaft, means for rotating said shaft, means for opening and closing a telegraphic circuit, means for operatively connecting said shaft with said means for opening and closing said telegraphic circuit, a series of keys for producing relatively short telegraphic impulses or dots, and a series of keys for producing relatively long telegraphic impulses or dashes, means for connecting each key in each of said series of keys with said shaft, whereby said shaft is allowed to rotate through different predetermined angular distances when the several keys are manipulated, and means under control of the several keys for positively stopping the rotation of said shaft when the instrument has transmitted a predetermined number of long or short impulses.

1,785,073. PROCESS FOR TREATING PETROLEUM OILS. WALTER M. CROSS, Kansas City, Mo., assignor, by mesne assignments, to Gasoline Products Company, Inc., Wilmington, Del., a Corporation of Delaware. Filed Aug. 28, 1925. Serial No. 53,122. 4 Claims. (Cl. 196—142.)

1. A process of converting hydrocarbon oils comprising heating the oil in a coil and passing it to an enlarged chamber, the oil in the coil and chamber being maintained

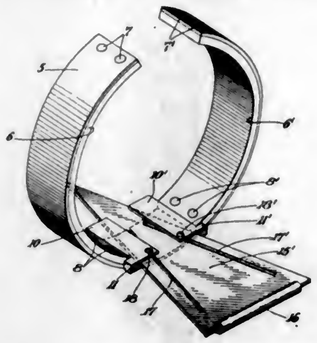
at sufficient pressure to retain it substantially in liquid phase, adding a gas containing available oxygen to the oil in the chamber to maintain the thermal conditions of conversion and to supply oxygen to increase the anti-



detonating properties of the product, and passing heated oil from the chamber to a stage maintained at pressure conditions reduced to the extent that the lighter fractions are distilled off.

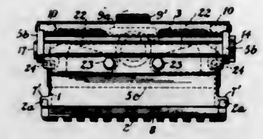
1,785,074. FUNGICIDAL AND INSECTICIDAL COMPOSITION AND METHOD OF PREPARING SAME. LEO P. CURTIN, Freehold, N. J., assignor to Curtin-Howe Corporation, a Corporation of New York. Filed Jan. 25, 1927. Serial No. 163,575. 5 Claims. (Cl. 167—14.)

5. Fibrous organic material which has been impregnated with the herein described solution of arsenous oxide and an aqueous solution of a base, the base not in excess of one-third of the molar equivalent of the oxid.



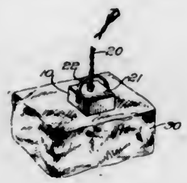
1,785,075. BED STAY. JOHN HENRY DE BOER, Syracuse, N. Y. Filed Feb. 20, 1929. Serial No. 341,409. 2 Claims. (Cl. 5—306.)

1. The combination with a piece of furniture having four legs, of a stay comprising a pair of saddles, means for adjusting the saddles toward each other and for holding them in their adjusted positions, and a pair of stay-wires one for each saddle, each stay wire being continuous from end to end and having its ends attached to opposite ends of its corresponding saddle and its central portion slidably engaged with its saddle and its remaining portion bent into loops divering from the opposite ends of the adjacent saddle and embracing two of the legs to exert inward stress upon said legs along the inwardly converging lines of the loops when tightened, said loops being free to open and close to conform to legs of different sizes.



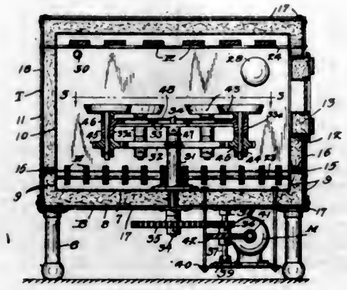
1,785,076. BRAKE-BAND-LINING DEVICE. VLADIMIR FRESHKOFF, New York, N. Y. Filed Aug. 1, 1929. Serial No. 382,752. 2 Claims. (Cl. 29—84.)

1. A device for compressing a sectional brake lining within a brake band, said lining sections being attached to the band at their outer ends and their inner spaced ends squared, comprising blocks having outer faces to contact the inner ends of said sections, said blocks having diagonal slots in their rear surfaces, lugs on said blocks to contact the edges of said lining and band, and a tri-



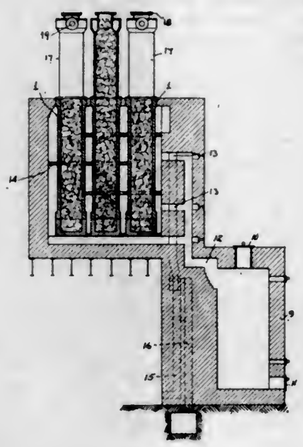
angular plate to enter the slots constituting a wedge whereby the blocks may be forced outwardly to compress the lining sections equally.

1,785,077. SAFETY RAZOR. HENRY J. GAISMAN, New York, N. Y., assignor to Autostrop Safety Razor Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 28, 1927. Serial No. 187,154. 5 Claims. (Cl. 30—12.)



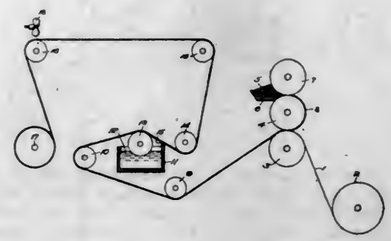
1. A safety razor comprising a frame provided with a guard, a second frame pivoted to the first named frame and having a blade holder and provided with a movable member adapted to engage the first named frame for retaining the blade in shaving relation to the guard, said member being cooperative with the second named frame for retaining the member in position to engage a strop for tensioning it, a roller carried by the second named frame to engage the strop, and gearing connecting said roller with the blade holder for rocking the latter.

1,785,078. DEVICE FOR MAKING SHAPED PIECES OF ICE. CHARLES J. GIBSON, Greenville, Mich. Filed Jan. 31, 1929. Serial No. 336,358. 1 Claim. (Cl. 62—112.)



In a device for making shaped pieces of ice from a block thereof, a grid comprising a first series of plates, a second series of plates transverse to said first series, each of said plates having a lower rolled edge, a wire in said rolled edge, and means to cause the flow of electric current thru said wire to heat the latter and, in turn, to heat the rolled edge.

1,785,079. OVEN STRUCTURE. ALBERT E. GRAPP, Minneapolis, Minn. Filed July 16, 1928. Serial No. 292,971. 5 Claims. (Cl. 126—338.)

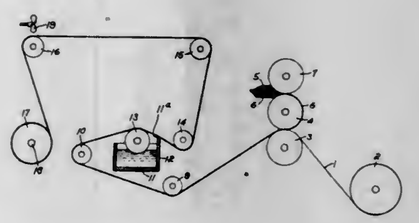


1. An oven comprising a baking chamber, a stationary gear disposed above the bottom of said chamber, a carrier frame above said gear mounted for rotation on an axis concentric with said gear and having a depending shaft projecting through the base of said chamber, a plurality of carrier elements circumferentially arranged about the axis of said carrier frame and rotatably mounted in said carrier frame, said carrier elements having planetary gears in mesh with said stationary gear, means disposed below said chamber for driving said shaft to cause rotation of said frame and in co-operation with said stationary gear to cause independent rotation of said carrier elements at a high rate of speed, and heating elements in said chamber.

1,785,080. APPARATUS FOR CHEMICAL REACTIONS. THOMAS GRISWOLD, Jr., Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Jan. 27, 1927. Serial No. 163,929. 13 Claims. (Cl. 23—262.)

1. In apparatus of the character described, the combination of an externally heated vertically disposed tubular reaction chamber, an externally heated vertically disposed tubular vaporizing vessel, and an externally heated horizontally disposed clean-out chamber below said reaction chamber and vaporizing vessel, separate therefrom and communicating therewith.

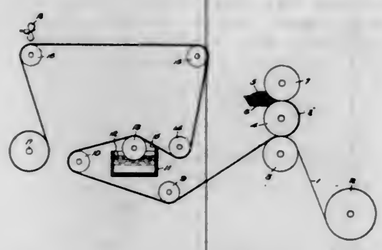
1,785,081. RUBBER ARTICLES AND METHOD OF PRODUCING THE SAME. HANS RICHARD HAERTEL, Wrentham, Mass., assignor to Thomas H. Dumper, trustee, Newton, Mass. Filed July 12, 1929. Serial No. 377,895. 10 Claims. (Cl. 91—70.)



2. The process of treating tacky rubber surfaces which comprises coating them with a liquid containing a volatile solution of shellac and an ammonia solution of a metal carbonate, the latter substantially inert with respect to rubber.

1,785,082. RUBBER ARTICLE AND METHOD OF PRODUCING THE SAME. HANS RICHARD HAERTEL, Wrentham, Mass., assignor to Thomas H. Dumper, trustee, Newton, Mass. Filed July 12, 1929. Serial No. 377,896. 11 Claims. (Cl. 91—68.)

1. That improvement in the method of producing rubberized textile sheets which comprises coating the tacky surface of the rubber with shellac, and afterward wetting the surface of the shellac with a liquid containing an ammonia solution of a metal carbonate.



1,785,083. METHOD OF PRODUCING RUBBER ARTICLES. HANS RICHARD HAERTEL, Wrentham, Mass., assignor to Thomas H. Dumper, trustee, Newton, Mass. Filed Oct. 17, 1928. Serial No. 313,032. 8 Claims. (Cl. 91—68.)

1. That improvement in the method of producing rubberized textile sheets which comprises applying a layer of rubber to a textile sheet and removing the tackiness of the rubber by wetting the exposed surface thereof with a film of ammonia solution of a metal carbonate.

7. An article of manufacture comprising a rubber coated textile sheet, the exposed surface of the rubber having thereon a substantially invisible and transparent coating of metal carbonate particles covered by a coating of shellac.

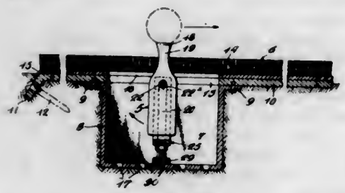
1,785,084. RUBBER ARTICLES AND METHOD OF PRODUCING THE SAME. HANS RICHARD HAERTEL, Wrentham, Mass., assignor to Thomas H. Dumper, trustee, Newton, Mass. Filed Jan. 13, 1928. Serial No. 246,616. 3 Claims. (Cl. 91—68.)

1. That improvement in the method of producing rubberized textile sheets which consists in coating the rubber surface while tacky with shellac and zinc carbonate dissolved in a mixture of alcohol and ammonia, and drying the coating.

1,785,085. RUBBER ARTICLES AND METHOD OF PRODUCING THE SAME. HANS RICHARD HAERTEL, Wrentham, Mass., assignor to Thomas H. Dumper, trustee, Newton, Mass. Filed Jan. 13, 1928, Serial No. 246,617. Renewed Sept. 13, 1930. 5 Claims. (Cl. 91—68.)

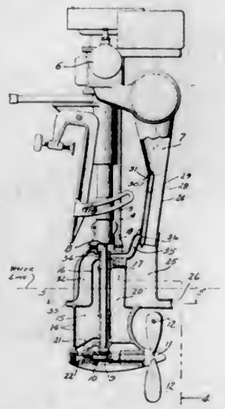
1. That improvement in the method of producing rubberized textile sheets which comprises coating the surface of the rubber while tacky with shellac and after drying of the shellac wetting the same with an ammonia solution of zinc carbonate containing alcohol, and drying said solution.

1,785,086. AUTOMATIC FEED DEVICE FOR ROTARY DRILL BITS. JOHN W. HAUK, Whittier, Calif., assignor of one-half to Leroy G. Gates, Bakersfield, Calif. Filed Mar. 1, 1928. Serial No. 258,170. 5 Claims. (Cl. 255—27.)



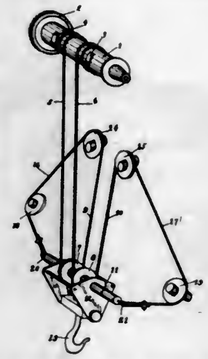
1. In a rotary well drilling apparatus, including a drill stem and a drill bit, a pair of relatively movable members, one carried by said stem and the other carrying said bit; gears carried by said members; and pinions meshing with said gears and connecting said members far relative movement in response to variations in the torque reaction of the bit.

1,785,087. MULTIPLE PUSH-BUTTON UNIT. ARTHUR E. HETZNER, East Orange, N. J., assignor to Graybar Electric Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 17, 1929. Serial No. 355,869. 7 Claims. (Cl. 179—99.)



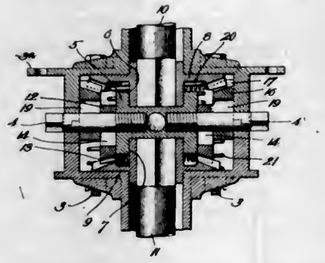
1. In combination with a telephone case having an opening therein adapted to receive an automatic telephone impulse transmitter, a multiple push button unit mounted in said opening comprising a support carrying a plurality of contacts, a contactor cooperating with said contacts, and a plurality of buttons mounted for selectively actuating said contactor to engage a desired contact.

1,785,088. GAME APPARATUS. JOHN RALPH HOGE and LEONARD D. SOUBIER, Toledo, Ohio, assignors to American Patents Corporation, a Corporation of Ohio. Filed Jan. 14, 1930. Serial No. 420,772. 6 Claims. (Cl. 273—33.)



1. In combination, a support, a golf ball tee mounted for vertical sliding and swinging movement on the support, a counterweight on the tee and means for sliding the tee and counterweight vertically and holding them at various elevations.

1,785,089. UNDERWATER EXHAUST MECHANISM. FINN T. IRGENS, Milwuakee, Wis., assignor to Outboard Motors Corporation, Milwaukee, Wis., a Corporation of Michigan. Filed Feb. 6, 1930. Serial No. 426,249. 10 Claims. (Cl. 115—17.)



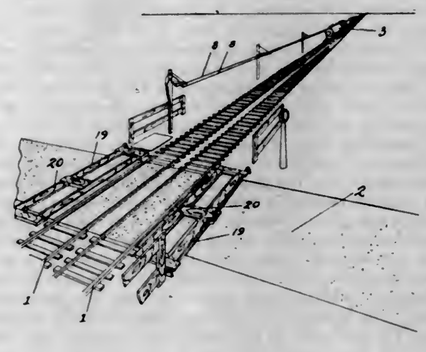
1. The combination with a marine engine having an exhaust manifold, with a submersible outlet and an atmospheric by-pass, of means for establishing a liquid seal for said by-pass.

1,785,090. CRANE. ARTHUR B. JACOBY, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Sept. 25, 1929. Serial No. 395,063. 9 Claims. (Cl. 254—190.)

1. In a crane, a hook block and means to prevent the turning thereof, comprising opposed cables brought down at an angle and attached to said hook block, and means for taking said cables up during the hoisting operation.

1,785,091. DIFFERENTIAL GEARING. WILLIAM KIRN, Solomon, Kans. Filed Sept. 23, 1929. Serial No. 394,593. 8 Claims. (Cl. 74—7.)

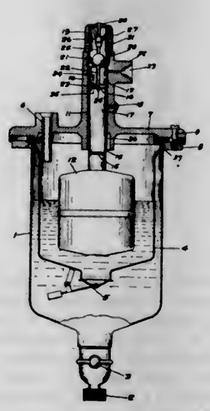
1. A differential gearing comprising a rotatable housing, one or more pins within and rotatable with the housing, a pair of gear wheels suitably journaled within the housing, a pair of axle members axially alined and rotatable with the gear wheels respectively, a pair of telescopically disposed sleeve gears suitably journaled within the housing and each adapted for intermeshing engagement in one of said gear wheels, and means whereby rotation of the housing shall cause the said pins to effect simultaneous rotation in the same direction and at the same speed, to said sleeve gears and hence to the respective shaft sections.



1,785,092. PROCESS OF UNHAIRING HIDES OR SKINS. GEORGE DUNLAP MCLAUGHLIN, GEORGE EDMUND ROCKWELL, FREDERICK O'FLAHERTY, and JOHN HENRY HIGHBERGER, Cincinnati, Ohio, assignors to Tanners' Council of the United States of America, New York, N. Y., a Corporation of the District of Columbia. Filed Mar. 15, 1927. Serial No. 175,627. 9 Claims. (Cl. 149—2.)

1. The process of dehairing a cured skin of a steer which comprises subjecting it to the action of a bath containing saturated lime solution to which has been added about one percent of an amine of the composition

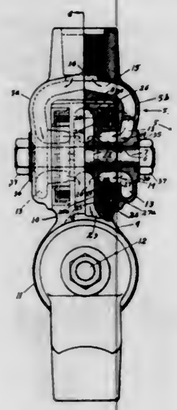
$$C_nH_{(2n+2)-x}(NH_2)_x$$



until the skin's hair may be readily removed.

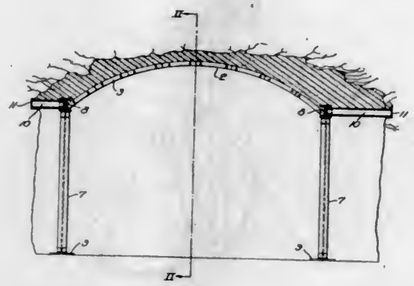
1,785,093. SYSTEM FOR AUTOMATICALLY PREVENTING RAILWAY-GRADE-CROSSING ACCIDENTS. MARTIN E. MCKEE, Cincinnati, Ohio. Filed July 30, 1929. Serial No. 382,191. 2 Claims. (Cl. 246—125.)

1. A system for automatically preventing grade-crossing accidents comprising an electric generator carried by a train road blocking means having an electric motor for actuating said means arranged at the grade-crossing, and electrically conductive trolley wires extending along the track a suitable distance from the crossing and establishing connections with said motor, and trolleys carried by the locomotive for causing current to flow from said generator to said motor, an alarm arranged at the crossing, and means electrically connected with said alarm for closing a circuit from said generator to said motor after a predetermined interval.



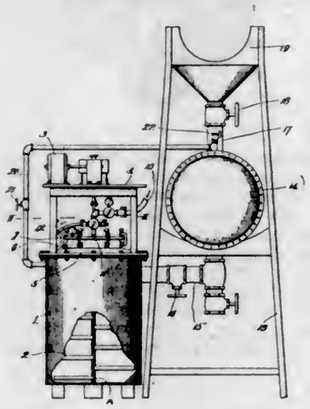
1,785,094. FUEL-SUPPLY APPARATUS. JOSEF V. PACHER, Brooklyn, N. Y., assignor to International Postal Supply Company, Brooklyn, N. Y. Filed Mar. 22, 1930. Serial No. 437,970. 7 Claims. (Cl. 103—236.)

1. A fuel supply apparatus including; a main receptacle having a discharge outlet therefrom and having a free



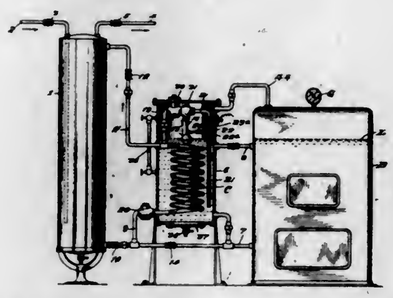
air opening near its upper edge, an auxiliary receptacle positioned within and spaced from the sides of said main receptacle with a fuel inlet thereto, said auxiliary receptacle being shorter than the main receptacle and having an opening in the bottom for quickly discharging its contents in said main receptacle, and a valve for controlling said discharge opening; a cover for both of said receptacles, said cover having a hollow extension, a float in said auxiliary receptacle and having a hollow stem projecting into and guided in said cover extensions, said stem terminating in a pair of spaced collars, said stem also having an imperforate disc positioned just above the float and further having an opening into the auxiliary receptacle, a valve seat positioned in the upper end of said extension, a ball valve to fit said seat, said ball having pins extending from diametrically opposite sides thereof, the lower pin having a guiding fit in the outer of said spaced collars on the float stem, and having a reduced part passing through a hole in the second collar, means for preventing said reduced portion of the pin from being pulled through said second collar, said collars having holes therethrough other than those for said pin, a cap fitting the upper part of said extension, a member having a plurality of spring arms carried by said cap, the upper of said pins carrying a double cone-shaped device against which the free ends of said spring arms engage, said cap having at least one air opening, a port opening into said hollow extension below said valve seat and above the upper limit of movement of said float stem, said port opening adapted to be continuously connected into operative relation to a suction pipe.

1,785,095. FLEXIBLE PIPE ASSEMBLY. EDGAR W. PATTERSON, Los Angeles, Calif., assignor, by direct and mesne assignments, to Walter P. Lacy, William G. Lacy, and C. A. Stiles. Filed June 6, 1929. Serial No. 368,937. 3 Claims. (Cl. 285—19.)



3. In a flexible pipe assembly, a swivel joint comprising a head; and a bifurcated pipe joint member having bifurcations between which said head is pivotally mounted with a working fit, there being a circular groove in a side of said head in radially spaced relation to the pivotal mounting thereof, there being, in spaced relation to the bottom of said groove, a circular passage within said head extending around and in spaced relation to the pivotal mounting thereof, there also being ports affording communication between said groove and said circular passage, a bifurcation of said bifurcated member having a passage which is in communication with said groove, through a plurality of ports.

1,785,096. TUNNEL. ROBERT V. PROCTOR, Youngstown, Ohio, assignor to The Commercial Shearing & Stamping Company, Youngstown, Ohio, a Corporation of Ohio. Filed July 14, 1928. Serial No. 292,874. 2 Claims. (Cl. 61—42.)

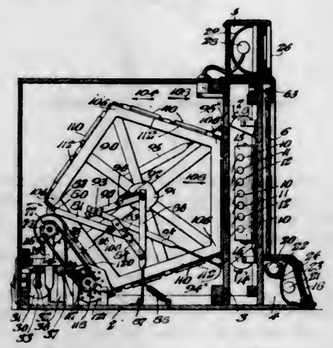


1. A tunnel lining, which comprises a plurality of wrought metal plates having flanges provided with openings and extending toward the inside of the tunnel, the openings being provided with bolts for securing the plates together, a plurality of metal members spaced longitudinally of the tunnel on opposite sides thereof, stringers extending longitudinally of the tunnel arranged on the metal members, means for connecting the stringers with the arch, and struts spaced longitudinally of the tunnel for bracing the stringers.

1,785,097. DISPENSING DEVICE. GWYNNE RAYMOND, Kansas City, Mo. Filed Sept. 4, 1928. Serial No. 303,715. 1 Claim. (Cl. 221—74.)

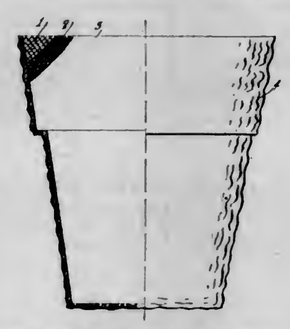
The combination in pressure spraying apparatus, of a pressure tank adapted to contain a liquid to be sprayed, a discharge connection leading from a point adjacent the bottom of said tank, a filling tank adapted to contain spraying liquid to be admitted to said pressure tank, a valve-controlled liquid supply line connected at one end to the bottom of the filling tank and at its other end to said pressure tank, a valve-controlled pressure line connecting each of said tanks at points above the normal liquid levels therein, and a connection to the upper part of said pressure tank from a source extraneous to both tanks for applying compressed air to said pressure tank.

1,785,098. AUTOMATIC BOILER CONTROL AND WATER-HEATING DEVICE. MORRIS SEIDEL, Brooklyn, N. Y., assignor of fifty per cent to Leon Sanders, Woodmere, Long Island, and George Green, Brooklyn, N. Y. Filed May 31, 1929. Serial No. 367,498. 9 Claims. (Cl. 122—32.)



1. In combination, a boiler, a hot water heater in communication with the water space of said boiler, a heat-absorbing coil located in said heater, a hot water reservoir connected to said heat-absorbing coil, said water reservoir having a water inlet pipe and a water outlet pipe connected thereto, a pipe connected to said reservoir and communicating with said heater, and a float controlled valve adapted to control the flow of water through said pipe into the heater.

1,785,099. PROCESS OF PREPARING COMPOSITE GLASS FOR SEALING. JAMES H. SHERTS, Glen Ridge, N. J., assignor to Duplate Corporation, a Corporation of Delaware. Filed May 26, 1928. Serial No. 280,958. 3 Claims. (Cl. 49—81.5.)

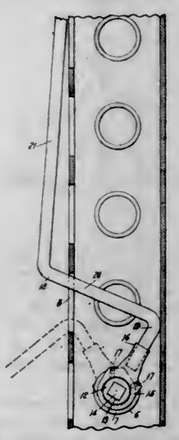


2. The process of removing the periphery of the reinforcing sheet lying between a pair of glass sheets in a composite plate which consists in submerging the edges of the plate in a corrosive liquid which will react with the material of the reinforcing sheet but which will not react with the glass, and leaving the edges of the plate in the liquid until the edges of the reinforcing sheet have been removed to a point inside the edges of the glass sheet.

1,785,100. ADVERTISING DEVICE. DAVID SOLODAR, Ephrata, Pa. Filed Oct. 26, 1929. Serial No. 402,575. 13 Claims. (Cl. 40—33.)

1. In an advertising device, a polygonal drum, tensioned levers in which said drum is rotatably mounted, means for intermittently rotating said drum, and means for retracting and advancing said levers and drum during the rotation of the latter.

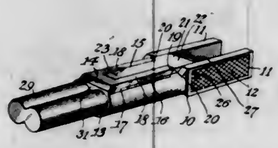
1,785,101. POROUS FIBROUS MATERIAL. DANIEL MANSON SUTHERLAND, Jr., Morrisville, Pa., assignor, by mesne assignments, to Better Packages, Inc., Shelton, Conn., a Corporation of New York. Filed Oct. 11, 1928. Serial No. 311,768. 4 Claims. (Cl. 92—55.)



1. A porous fiber body consisting of fibers having air-porous interstices between them and bound together by red gum deposited upon the fibers.

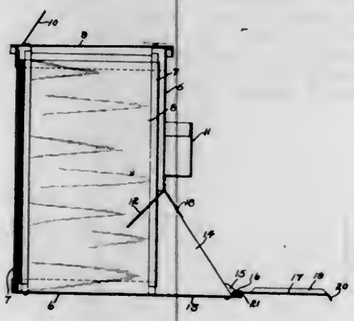
1,785,102. ABRASIVE OR REFRACTORY ARTICLES AND METHOD OF MAKING THE SAME. PRESCOTT H. WALKER and SHERMAN S. KENYON, Niagara Falls, N. Y., assignors to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed May 1, 1928. Serial No. 274,352. 19 Claims. (Cl. 18—47.5.)

5. A method of producing ceramic articles of low permeability which consists in forming a bonded article of granular material and a binder, and then filling the pores of the article throughout the mass with an inorganic heat resistant substance distinct from the binder.



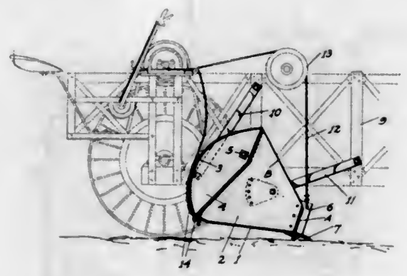
1,785,103. OPERATING DEVICE FOR TUBE EXPANDERS AND THE LIKE. GUSTAV WIEDEKE, Dayton, Ohio, assignor to Gustav Wiedeke Company, Dayton, Ohio, a Copartnership consisting of Gustav Wiedeke, Otto Wiedeke, and Robert Wiedeke. Filed Oct. 28, 1929. Serial No. 402,852. 2 Claims. (Cl. 81—60.)

1. A device for operating a tube expanding or cutting tool, or the like, in a header having in one side thereof a longitudinal series of tube receiving openings and having a second longitudinal series of openings in a side thereof which is at a substantially right angle to the first men-



tioned side, the openings of said second series being arranged adjacent to the respective tube receiving openings, said device comprising a pawl and ratchet wrench to be connected with a tool which has been inserted in a tube in one of said tube receiving openings, and a handle for said wrench having a part extending from said wrench lengthwise of said header, and a part extending transversely to the axis of said wrench and arranged to extend through an opening in said second series which is spaced longitudinally of said header from the tube in which said tool is mounted, and also having a part extending from the outer end of said transverse part lengthwise of said header.

1,785,104. ADJUSTABLE CONNECTION FOR BRACELETS AND THE LIKE. ALEXANDER WITTMAYER, Brooklyn, N. Y. Filed July 15, 1929. Serial No. 378,346. 11 Claims. (Cl. 24—206.)



5. In a connection, a head, a shank having a projection, and a rockable rack member on said head having shoulders and a tongue between them with teeth to engage said projection of the shank, said shank being slidable in said head, and means on the head engaging said shoulders for controlling the movement of said rack.

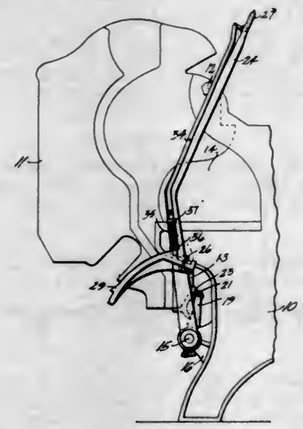
1,785,105. DISPLAY DEVICE. JOSEPH WOZNIAK and ERNEST G. BREMFORDER, Detroit, Mich. Filed Jan. 14, 1929. Serial No. 332,318. 1 Claim. (Cl. 312—114.)

A display receptacle, comprising upright walls, a top and a bottom, one of said upright walls terminating at a distance above the bottom to provide an outlet, the bottom being extended outwardly beyond the plane of said last mentioned wall, the two sides adjacent said outlet having triangular extensions joining the bottom extension to constitute a spout substantially co-extensive in width with the receptacle; the bottom extension being provided with marginal side flanges overlapping the lower edges of the side walls and of the triangular extensions and extending outwardly beyond the latter, a hinge rod connecting the extending portions of said flanges, and a door hinged on said rod and adapted to close against the upper edges of said triangular extensions, the bottom being extended outwardly far enough to provide an abutment to limit the opening of the door to a horizontal position.

1,785,106. SCRAPER-BOWL CONSTRUCTION. WILLIAM J. ADAMS, Santa Cruz, Calif., assignor to Ball Wagon Grader Company, Stockton, Calif., a Corporation. Filed Nov. 6, 1928. Serial No. 317,628. 1 Claim. (Cl. 37—128.)

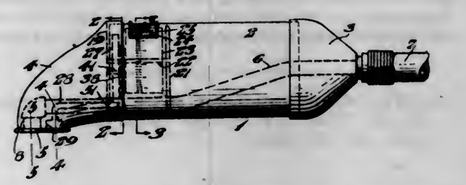
A scraper bowl having bottom and side plates, an endgate extending between the side plates and alining with the rear edges thereof when the gate is closed, ears on the edges of the gate having a running fit between the side plates of the bowl, pivots between the ears and bowl nearer the top than the bottom thereof, the forward edges of the ears having a slight inclination forwardly from the upper rear corners of the side plates to points adjacent the pivots, and a slight reverse inclination from those points rearwardly to the lower rear corners of the side plates.

1,785,107. TOOTHPICK HOLDER. CASSIUS M. BARTHOLOMEW, Columbus, Ohio. Filed Feb. 14, 1929. Serial No. 339,994. 5 Claims. (Cl. 312—73.)



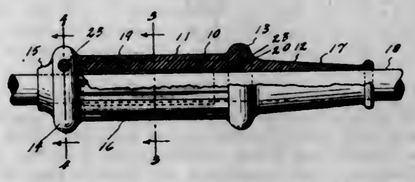
1. A toothpick server comprising an elongated rectangular receptacle arranged in substantially upright position, said receptacle having a forward wall and a bottom wall arranged to form an acute angle therewith, means to permit of the removal of said forward wall, a flange constituting a platform extending upwardly and outwardly from and forming an angle with the forward edge of said bottom wall, a guard flange extending upwardly and outwardly from the lower edge of said forward wall, means for supporting the forward wall to maintain the flange in spaced relation, the lower edge of said forward wall being directed at the point of the angle formed between the platform and the bottom wall, said forward wall and bottom wall having the lower edges thereof centrally recessed to facilitate grasping a pick, and means for securing the forward wall in position.

1,785,108. ENGINE. PAUL BASTIEN, Indianapolis, Ind. Filed Dec. 17, 1925. Serial No. 76,053. 2 Claims. (Cl. 123—52.)



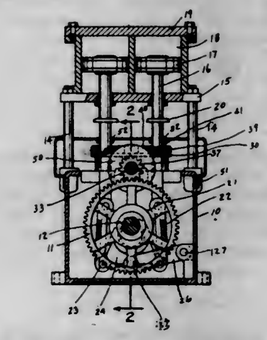
1. In an internal combustion engine having eight cylinders in line and all arranged on the same side of the crank shaft, the combination of a shaft having cranks of which the four middle cranks are in a common plane and in which the two end pairs of cranks are in a common plane at right angles to the first mentioned plane, thereby permitting a firing order of four middle cylinders in regular sequence at each half revolution of the crank shaft and a firing order of four end cylinders in regular sequence and alternating with that of said four middle cylinders, a detachable head for said cylinders including a pair of parallel positioned vertical conduits positioned midway of the engine, a laterally extending manifold passage connected at one end by a branched passage to the third and fourth cylinders and at its opposite end to the fifth and sixth cylinders and at its mid portion to the top of the vertical conduit closest to the cylinders, a second laterally extending manifold passage substantially parallel to the first mentioned passage and similarly arranged relative to the end pairs of cylinders and the more remote vertical conduit, the lower ends of said vertical conduits being arranged for independent carburetor connection, and an outer wall associated with the exhaust passages and intake passage and fully inclosing the same and providing water jacketing space therebetween, and valves arranged in line and carried by the head for controlling the supply of fuel to and the exhaust from said cylinders.

1,785,109. BREAST LIFTER FOR GINS. JOSEPH BEHLE, Dallas, Tex., assignor to The Murray Company, Dallas, Tex., a Corporation of Texas. Filed Dec. 7, 1929. Serial No. 412,390. 4 Claims. (Cl. 19—55.)



1. In a gin breast lifting device, the combination with a gin frame, a rock shaft, elements carried by said shaft for engaging the breast to elevate said breast when the shaft is rocked, means for rocking said shaft, and oppositely coiled springs surrounding the shaft, each spring having one end immovably held and its opposite end adjustably secured and arranged for rotation whereby the tension of the spring may be varied, said springs being under tension when the breast is lowered and uncoiling when the breast is elevated to assist in lifting the same.

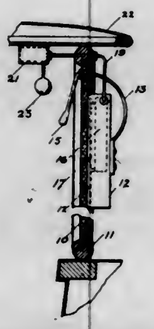
1,785,110. COMBINED COMPRESSED-AIR HOSE AND AIR-PRESSURE GAUGE. CHARLES A. BELZ, Arcola, Pa. Filed July 19, 1929. Serial No. 379,457. 3 Claims. (Cl. 152—11.5.)



1. In a device of the character stated, a cap formed with a nozzle, said cap being secured to a handle, a pair of pipes arranged in said cap, one of said pipes leading to and communicating with an air pressure gauge secured in said handle, there being a window in the handle, said window disclosing a portion of said air gauge.

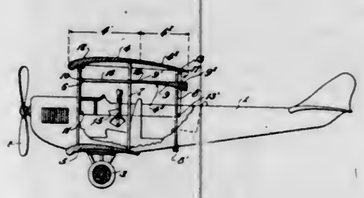
1,785,111. HANDLE. CHARLES S. CRICKMER, Dallas, Tex., assignor to Tridex Corporation, Dallas, Tex., a Corporation of Texas. Filed Apr. 19, 1928. Serial No. 271,156. 5 Claims. (Cl. 16—116.)

5. A flexible handle including an elongated body having a longitudinal bore and a longitudinal cavity contiguous to said bore terminating short of the ends of the bore, said body having a longitudinal surrounding hand grip extending substantially the length of the cavity, collars at each end of the hand grip of the body, and metallic adjustable clamps embedded in the body and surrounding the bore at the collars.



1,785,112. COMBINATION DRIVE AND OIL PUMP. STUART DEAN, Indianapolis, Ind. Continuation in part of application Serial No. 219,868, filed Sept. 16, 1927. This application filed July 18, 1928. Serial No. 293,742. 10 Claims. (Cl. 184—13.)

4. In combination a gear chamber constituting an oil reservoir, a gear therein adapted to run in oil in said chamber, a superposed gear meshing therewith, a cover for said chamber including an oil passageway for gravity lubrication, and including an opening above the superposed gear for supplying the oil to the passageway from the lat-

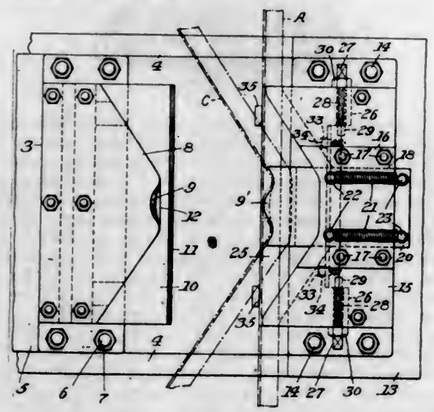


ter, a shaft supporting the superposed gear in position beneath said cover passageway and lubricated thereby, and plates carried by the shaft adjacent the superposed gear for rotation with and by the shaft in the rotation of the gear, said plates overlapping both gears and the meshing engagement for laterally confining the oil carried by the first-mentioned gear to the engageable portions of said gears.

1,785,113. WINDSHIELD WIPER. HUGH DOLAN, Pottsville, Pa. Filed Nov. 2, 1928. Serial No. 316,862. 1 Claim. (Cl. 15—255.)

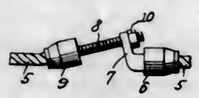
A wind-shield wiper comprising a block member provided with a solution holding chamber and a communicating open groove formed in and extending along one edge thereof, said groove adapted to lie in contact with the surface of the wind-shield, the block portions immediately adjacent said groove and for the full length thereof constructed with oppositely disposed knife-edges for the purpose set forth.

1,785,114. AIRPLANE. FRANCIS A. DOYLE and GEORGE A. LYONS, Springfield Mass. Filed Aug. 10, 1927. Serial No. 212,022. 6 Claims. (Cl. 244—29.)



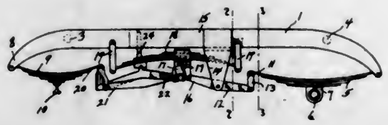
1. In an airplane comprising, in combination, a pair of supporting wings one of the wings being mounted for free and unrestricted movement, either upward or downward, for creating an air pressure on either the upper or lower surface of said wing, and means for retaining the movable wing in a fixed position for retarding the motion of the airplane.

1,785,115. SOLDERING FLUX. HARRY B. DYKSTRA, Wilmington, Del., assignor, by mesne assignments, to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Delaware. Filed May 7, 1930. Serial No. 450,599. 2 Claims. (Cl. 148—23.)



1. In a process of soft soldering, the step of applying a flux comprising a chlorinated rosin.

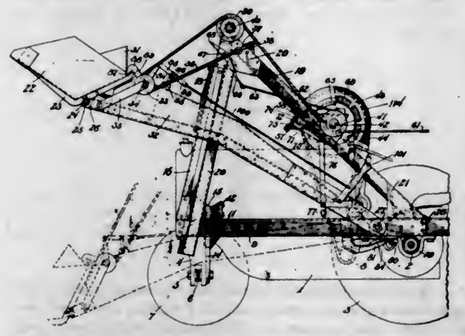
1,785,116. DIE MECHANISM. CHARLES FASSINGER, Pittsburgh, Pa., assignor to Oliver Iron & Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 17, 1928. Serial No. 320,077. 8 Claims. (Cl. 153—25.)



1. A die mechanism for bending structural shapes, which comprises a plurality of dies, means for causing relative movement of said dies toward and away from each other, and means including a hinge plate and a spring-controlled slide for preventing warping of the shapes during bending.

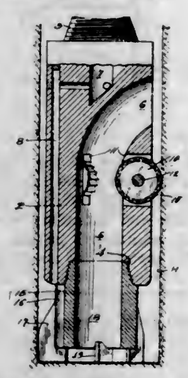
1,785,117. ANTISKID CHAIN. EDWARD FONFEREK, Gillett, Wis. Filed July 28, 1928. Serial No. 296,021. 1 Claim. (Cl. 24—124.)

A connector for the ends of cables of antiskid devices comprising a head secured to one end of a cable, an apertured member extending from said head, said apertured member being extended laterally, a bolt extending from the opposite end of the cable and passing through the apertured member, and a nut operating on the bolt for drawing the ends of the cable together.



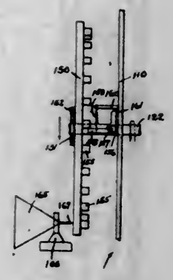
1,785,118. BALANCING SPRING. JOHN W. FRY, Struthers, Ohio. Filed Aug. 6, 1928. Serial No. 297,669. 3 Claims. (Cl. 280—104.)

1. In a device of the class described, a pair of rear springs, the rear end of each of said springs being attached to a vehicle frame, said spring being supported by a rear axle, a pair of front springs, the front end of each of said front springs being attached to a vehicle frame, each of said front spring being supported by a front axle, a cross bar secured to said frame and positioned between the front and rear axles, a pair of cross levers having their front ends shackled to rear ends of said front springs, said cross levers being pivotally mounted on said cross bar, a pair of oppositely disposed centrally located springs each of which is suspended by shackles to the frame of the vehicle, the rear ends of said cross levers being shackled to the central portion of the centrally located springs, a



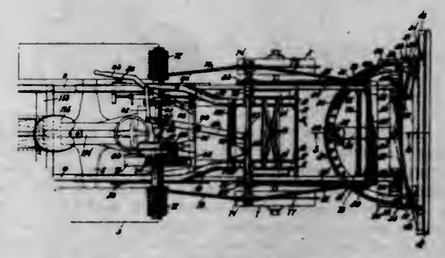
pair of support members oppositely disposed and secured to each side of said frame, a pair of oppositely disposed levers pivotally secured to said support members, the front end of each of said oppositely disposed levers being shackled to one of said centrally located springs, the rear end of each of said oppositely disposed levers, being shackled to the front end of one of said rear springs, substantially as described.

1,785,119. LOADER. HOWARD F. GORSUCH and ARTHUR SHERIDAN HUGHES, Mansfield, Ohio, assignors to Hughes-Keenan Company, Mansfield, Ohio, a Corporation of Ohio. Filed June 5, 1926, Serial No. 113,962. Renewed May 14, 1930. 17 Claims. (Cl. 214—140.)



1. An attachment for a tractor comprising a main frame with horizontal side bars adapted to be secured to the rear axle housing of the tractor at opposite sides of the tractor body, a transverse member rigidly connecting the front ends of the side bars and adapted to be supported from the front axle tree of the tractor, inclined bars at each side of the main frame, said inclined bars being disposed in a vertical plane and secured at their lower ends to the side bars and secured at their upper ends to each other, guide rails secured respectively to the front inclined bars, a swinging frame including a pair of arms rigidly connected together and pivoted at their rear ends to the main frame so as to swing upwardly and downwardly, said arms being guided in their swinging movement by said guide rails, means at the forward end of the swinging frame for carrying a load, means for raising the swinging frame about its pivot, and releasable means for retaining the swinging frame in raised position.

1,785,120. CORE BY-PASS DRILL. OSCAR F. HARDING, Long Beach, Calif. Filed Oct. 8, 1928. Serial No. 311,158. 5 Claims. (Cl. 255—72.)

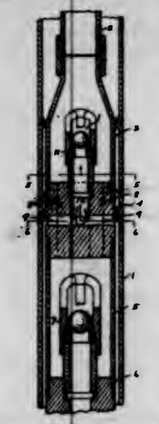


1. A well drilling tool body having a core receiving bore deflected out to one side, a set of rotary leading cutters cutting the hole and forming a core smaller than the bore, and an upper set of cutters reducing the core and reaming the hole.

1,785,121. GRAPHOPHONE CLOCK. JOHN H. HOLLOWAY, La Fayette, Ind. Filed Dec. 12, 1927. Serial No. 239,496. 2 Claims. (Cl. 58—14.)

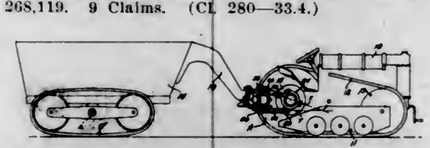
1. In a clock, a rotating shaft, a rotatable sound reproducing disc, a spring connected at one end to said shaft and at its other end to said disc, a stop, and a spring holding said stop in engagement with said disc, said stop spring overcome by tension of said first mentioned spring when the shaft has reached a predetermined position.

1,785,122. EARTHWORKING ATTACHMENT FOR TRACTORS. ARTHUR SHERIDAN HUGHES, Mansfield, Ohio. Filed Dec. 16, 1926. Serial No. 155,206. 6 Claims. (Cl. 37—159.)



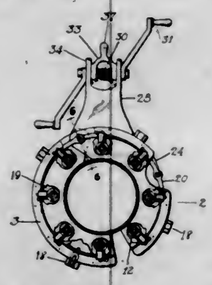
3. In an attachment for tractors, the combination of a main frame, arms pivotally connected to the main frame to swing upwardly and downwardly, said arms extending forwardly of the main frame, means operable by the tractor engine for raising or lowering said arms, a supporting frame secured to the forward portions of said arms, an implement frame, a vertical pivot pin connecting the implement frame to the supporting frame, said implement frame having an arcuate flanged portion concentric with the pivot pin, brackets secured to the respective swinging arms and to the supporting frame and having flanges between which the flanged arcuate portion of the implement frame is supported and guided, means for securing the implement frame in adjusted position with respect to the pivot pin, and an earth working implement carried by said implement frame.

1,785,123. WELL PACKER. GRANVILLE A. HUMASON, Houston, Tex. Filed Nov. 10, 1924. Serial No. 748,830. 3 Claims. (Cl. 166—10.)



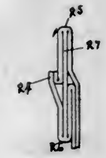
1. The combination with a tubular member adapted to rest on the bottom of the well bore and having an external abutment and formed of telescopically arranged parts having interengaging shoulders and also having a limited slidable movement relative to each other, of a mandrel

connected to the upper end of one of said telescoping parts and formed with an expander, an expansible sleeve around said mandrel, end abutments associated with the



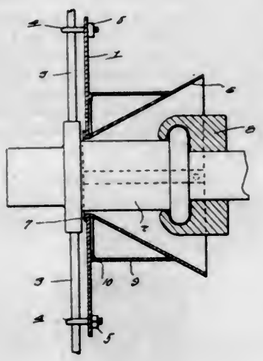
mandrel and confining said sleeve, anchoring means adapted to cooperate with said expander and to be engaged and actuated by the abutment on said tubular member into engagement with the walls of said bore.

1,785,124. HAULING UNIT. GEORGE C. JETT, Milwaukee, Wis., assignor of two-fifths to Walter H. Stiemke, Milwaukee, Wis. Filed Apr. 7, 1928. Serial No. 268,119. 9 Claims. (Cl. 280—33.4.)



1. A hauling unit comprising a tractor, a crawler tread therefor, a trailer having a body for receiving and transporting loose materials, and a load sustaining draft mechanism therebetween attached to one end of said tractor, said draft mechanism including a member for oscillation about a longitudinal horizontal axis, and means coacting with said tractor and trailer to transmit and apply a portion of the trailer load to said tractor at a point forwardly of the point of attachment of said mechanism to said tractor to thereby distribute said load over said crawler tread.

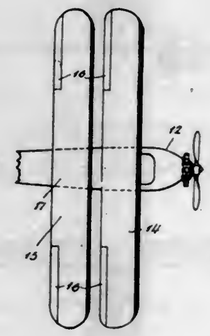
1,785,125. MULTIPLE WRENCH. ALBERT A. KALO, Columbus, Ohio, assignor of one-half to C. A. Hanner, Canton, Ohio. Filed July 31, 1929. Serial No. 382,403. 7 Claims. (Cl. 81—54.)



1. A multiple wrench comprising a pair of relatively movable supporting sections formed to be positioned around a pipe adjacent to a pipe coupling, a plurality of axially rotatable socket devices mounted for turning movement in said supporting sections, the ends of said devices being formed with open nut receiving sockets for the reception of the nuts of said coupling, primary means carried in connection with said supporting sections for effecting relatively rapid rotation of said socket devices during the initial tightening of the coupling nuts, and secondary operating means for relatively slow turning movement of said socket devices to produce a powerful tightening rotation of the coupling nuts.

1,785,126. BAG. MARVIN R. KENDALL, Chicago, Ill., assignor, by mesne assignments, to St. Regis Paper Company, New York, N. Y., a Corporation of New York. Filed Apr. 28, 1928. Serial No. 273,490. 5 Claims. (Cl. 150—9.)

1. A bag comprising a tubular body portion having gusset folded sides and an outstanding end closing seam, the walls of the bag being creased across the end substantially parallel with the seam and at a distance from the seam substantially equal to the depth of the gusset fold.



1,785,127. WHEEL-HUB PROTECTOR. HENRY E. KIEHLBAUCH, Tyndall, S. Dak. Filed Mar. 22, 1930. Serial No. 438,150. 2 Claims. (Cl. 301—123.)

1. A wheel hub protector of the character described comprising a plate adapted to be mounted on the wheel in a manner to encircle the hub, a frusto-conical sleeve mounted on the disk and extending laterally therefrom around the hub and an annulus having one end mounted on the sleeve and its opposite end mounted on the disk.

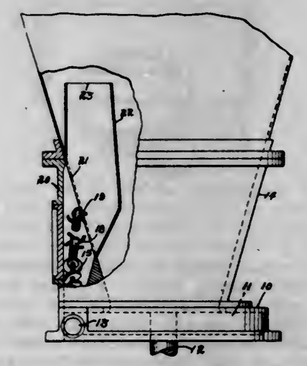
1,785,128. AEROPLANE. ANTHONY LANZETTA, Bronx, N. Y. Filed Mar. 22, 1928. Serial No. 263,655. 4 Claims. (Cl. 244—12.)

1. An aeroplane comprising a wing divided into sections arranged one behind another and in close proximity to each other, one of which sections has a central portion disposed in a plane above and parallel to that of the other section, and end portions which extend diagonally

downward from said central portion, the extremities of said end portions being in the same horizontal plane with said other section.

1,785,129. MEANS FOR CONNECTING TUBULAR MEMBERS. ERNST PAUL LEHMANN, Brandenburg-on-the-Havel, Germany. Filed Mar. 8, 1928, Serial No. 260,173, and in Germany Oct. 6, 1927. 1 Claim. (Cl. 285—182.)

In combination, a tube having a longitudinal slot therein, a wider slot at one end of the tube adjoining said longitudinal slot so as to form a continuation thereof, said wider slot having a width gradually increasing in size towards the said end of the tube, and a second tube adapted to receive the first-mentioned tube and having an inward projection adapted to engage in said wider slot and force the walls thereof apart on the first-mentioned tube being inserted in the second-mentioned tube, as and for the purposes set forth.



1,785,130. PROCESS FOR MAKING ROAD SURFACES. MARCEL LÉVY, Geneva, Switzerland, assignor of one-half to Prodorite S. A., Geneva, Switzerland, a Corporation of Switzerland. Filed June 23, 1927, Serial No. 201,023, and in Germany July 2, 1926. 1 Claim. (Cl. 94—23.)

A process for improving a freshly tarred road surface consisting in scattering over the tarred surface a dry bituminous stone powder obtained by impregnating 100 parts of powdered limestone with 10 to 15 parts of bitumen.

1,785,131. ZINC-CHLORIDE-BASE FLUX. GEORGE LUTZ, Rocky River, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Delaware. Filed Dec. 26, 1929. Serial No. 416,756. 3 Claims. (Cl. 148—23.)

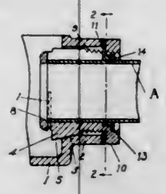
1. As a new composition of matter a soft soldering flux comprising a sulfonated vebetable oil compound and zinc chloride.

1,785,132. FEEDING DEVICE. ESLI A. MARSH, Chicago, Ill., assignor, by mesne assignments, to St. Regis Paper Company, New York, N. Y., a Corporation of New York. Filed Mar. 7, 1929. Serial No. 345,190. 8 Claims. (Cl. 221—129.)

1. In combination, a main feeding device, a hopper in position to furnish material to said device, an auxiliary feeding device, and a guide chute extending into said hopper, dividing material from that directed towards the main feeding device, and directing said divided material to said auxiliary feeding device.

1,785,133. BARREL-HEAD-FASTENING MEANS. DONALD B. MCDONALD, Quitman, Ga. Filed Mar. 19, 1929. Serial No. 348,298. 2 Claims. (Cl. 217—76.)

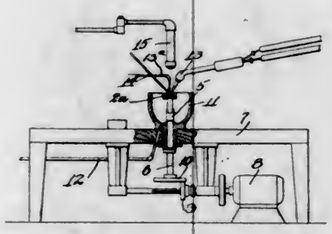
2. A container having a groove near its end, a ring adapted to fit in said groove and to be substantially enclosed therein said ring having diametrically oppositely disposed offsets extending inwardly from said ring and in substantially the same plane as the ring and a head for the container having on its inner surface a bar with wedge shaped ends extending circumferentially of the head and terminating at approximately the outer periphery of the head.



1,785,134. SOLDERING. HOWARD S. MCQUAID, East Chicago, Ind., assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Delaware. Filed Dec. 26, 1929. Serial No. 416,751. 6 Claims. (Cl. 148—23.)

6. A soldering flux comprising an ethanol-amine.

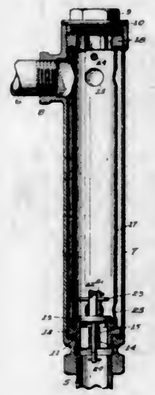
1,785,135. FLUX FOR SOFT SOLDERING. HOWARD S. MCQUAID, East Chicago, Ind., assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Delaware. Filed Dec. 26, 1929. Serial No. 416,753. 6 Claims. (Cl. 148—23.)



4. As a soldering flux an organic amine soap.

1,785,136. CONDUIT FITTING. GEORGE R. METCALF, Jr., Erie, Pa., assignor to Erie Malleable Iron Company, Erie, Pa., a Corporation of Pennsylvania. Filed Apr. 4, 1928. Serial No. 267,435. 2 Claims. (Cl. 247—25.)

2. In a conduit fitting, the combination of a body having a conduit opening therein; a slotted sleeve in the opening, said sleeve and walls of the opening having wedging surfaces operable to contract the sleeve with relative axial movement of the sleeve and body, said sleeve having a gland opening on its inner periphery; a nut on the outer end of the sleeve engaging the end of the body forcing the sleeve endwise; a gasket in the gland having a tongue extending into the slot and subjected to the closing action of the slot upon the contraction of the sleeve; and a gasket between the nut and the body having a tongue extending inwardly into the slot in position to be engaged by the tongue of the gasket on the gland.

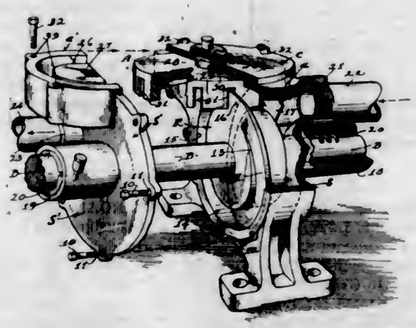


1,785,137. COMPOSITE-METAL ARTICLE AND METHOD OF MAKING THE SAME. CLARENCE W. MILLER and RICHARD E. BISSELL, Cleveland, Ohio, assignors to Thompson Products, Inc., Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 30, 1927. Serial No. 243,546. 9 Claims. (Cl. 148—1.)

1. The method of applying an homogeneous cast iron head substantially free from pits and blow holes to a steel member comprising recessing the member and preheating the same while rotating, applying a flux to the recess during preheating and prior to oxidation, depositing molten cast iron on the fluxed preheated recess while continuing such rotation, and then quenching the article while rotation is continued.

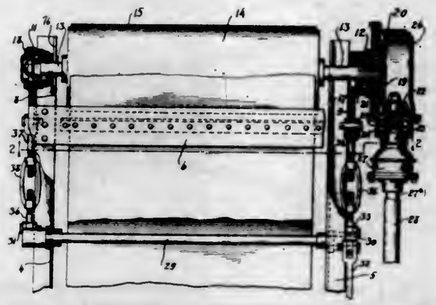
1,785,138. SUBTERRANEAN CHECK VALVE. JOHN J. MOHLER, Peoria, Ill., assignor, by direct and mesne assignments, to Wilmoh Manufacturing Corporation, Chicago, Ill., a Corporation of Illinois. Filed May 10, 1929. Serial No. 361,905. 4 Claims. (Cl. 137—69.)

1. In a subterranean check valve the combination of an elongated housing, an inlet passage to the housing, an outlet passage from the housing, a check valve between the two passages, and means extending from the check valve to a point adjacent one end of the housing and disengageably co-operating with the housing to exert



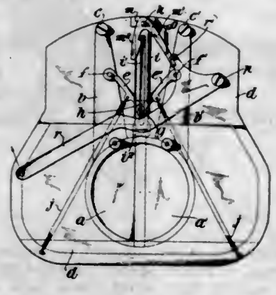
a downward pressure to hold the check valve in position and when disengaged serving to remove the check valve from the housing.

1,785,139. PROCESS OF PRODUCING METALLIC CADMIUM FROM CADMIUM-CONTAINING MATERIAL. HANSON H. MONROE, Painesville, Ohio, assignor, by mesne assignments, to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Delaware. Filed May 18, 1928. Serial No. 278,912. 9 Claims. (Cl. 75—17.)



1. The process of recovering metallic cadmium from zinc and cadmium bearing material, which comprises submitting said material to the action of a molten caustic alkali in the presence of a carbonaceous reducing agent.

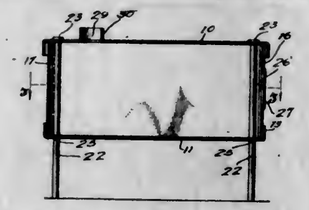
1,785,140. ROTARY FLUID PUMP. THOMAS L. MORRIS, Van Nuys, Calif. Refile for abandoned application Serial No. 195,801, filed June 1, 1927. This application filed Aug. 6, 1928. Serial No. 297,586. 2 Claims. (Cl. 103—123.)



1. A device of the class described comprising a casing having a chamber therein, a detachable side head for the chamber, a rotor in the chamber provided with a helical impeller vane, said casing having a top chamber above said rotor with a detachable top therefor having a seat therein, a rotatable disc having a trunnion at its central portion fitting in said seat and a downwardly projecting peripheral rim having notches therein through which the vane may pass, a base for supporting the rotor chamber, said detachable side head carrying an outer wall and a bored seat for said rim.

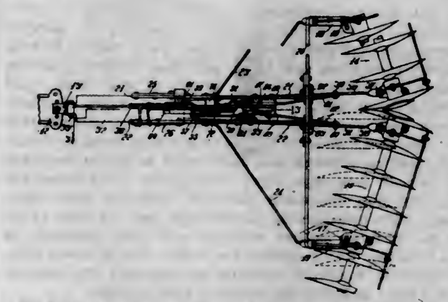
1,785,141. ELEVATOR. ROLLA A. MORTON, Long Beach, Calif., assignor to Western Wheeled Scraper Company, Aurora, Ill., a Corporation of Illinois. Filed Feb. 12, 1926. Serial No. 87,863. 8 Claims. (Cl. 198—203.)

1. The combination with an elevator frame comprising side members, a transverse support mounted on said side members for adjustment longitudinally thereof, said support comprising a plate extending across the frame below said side members, and a slide block between said plate and each of said side members, of a roller, bearings for said roller, carried by said support, driving means, and driving connections between said driving means and said roller adjustable longitudinally of the frame with said support.



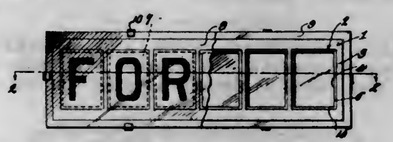
1,785,142. OBJECTIVE SHUTTER. RICHARD NERRLICH, Berlin, Germany. Filed Nov. 21, 1929, Serial No. 408,852, and in Germany Nov. 23, 1928. 5 Claims. (Cl. 95—62.)

1. An objective shutter of the character described, comprising, in combination, a pair of oscillable arms adapted to be moved towards, and away from, one another and forming at their free ends the shutting members proper for the objective; a toggle-joint lever located between said arms and being connected with them; springs engaging the toggle-joint lever arms and tending to maintain said shutter members proper in closed position; a slotted longitudinal member also located between the oscillable arms and behind said toggle-joint lever, the middle junction pivot of this lever engaging said slot; and damping means so arranged as to be adapted to intercept the said shutter members proper just before the very end of their closing path.



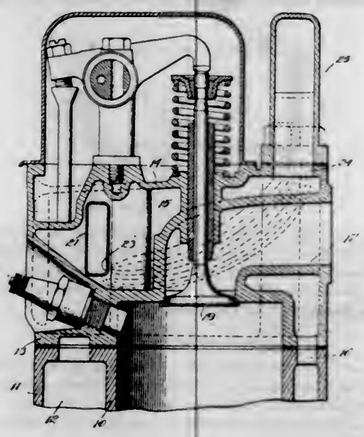
1,785,143. KNOCKDOWN STOVE. HARRY OONK, Phoenix, Ariz. Filed Mar. 18, 1929. Serial No. 347,945. 2 Claims. (Cl. 126—9.)

1. A knockdown stove comprising a top section, a bottom section, other sections interposed between the top and bottom sections to space the latter sections and form the side walls of the stove, hangers on the top and bottom sections for confining said other sections against outward displacement, tie members extending through the top and



bottom sections within and in proximity to said other sections to prevent inward displacement of the latter sections, heads on the tie members, and removable pins in the tie members co-acting with the heads to maintain the sections assembled by the tie members.

1,785,144. DISK HARROW. WILLIAM L. PAUL, Berkeley, Calif., assignor to Deere and Company, Moline, Ill., a Corporation of Illinois. Filed Nov. 13, 1925, Serial No. 68,835. Renewed Oct. 3, 1929. 45 Claims. (Cl. 55—81.)

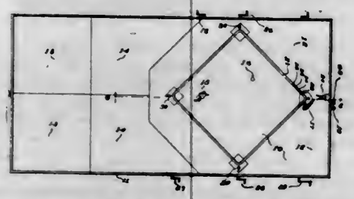


1. A gang shifting mechanism for disk harrows, comprising a draft member movable fore and aft relatively to the harrow frame, and means comprising rotary clutch controlled devices actuated by movement of said draft member to adjust the angular position of the gangs.

1,785,145. SIGN. EDWIN B. ROLL, Los Angeles, Calif. Filed Apr. 2, 1928. Serial No. 266,795. 1 Claim. (Cl. 40—140.)

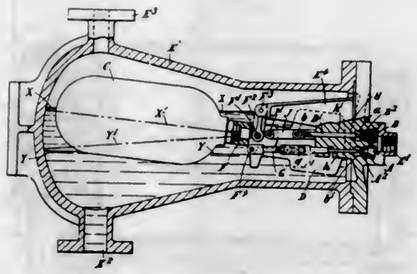
In a sign of the character described, a foundation comprising a flat body consisting of facially united plies, said plies being formed with registering openings of corresponding marginal contour, the openings in one of the plies being of smaller dimensions than the openings in the other ply to provide supporting portions projecting within the bounds of the openings of said other ply, sign character bearing members equal in thickness to said other ply and removably arranged within the openings of said other ply and resting marginally against said supporting portions, a transparent removable sheet disposed against said other ply and the transparent bearing members to hold the latter in place, a transparent removable sheet disposed against the ply having the smaller openings, and means for clamping the first and second mentioned transparent removable sheets in position.

1,785,146. INTERNAL-COMBUSTION ENGINE. OTTO R. SCHOENROCK, Chicago, Ill. Filed Apr. 20, 1929. Serial No. 356,815. 6 Claims. (Cl. 123—173.)



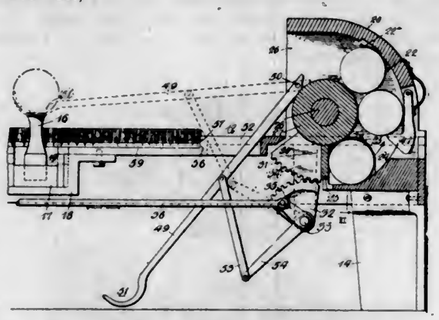
1. An internal combustion engine comprising, in combination, a cylinder block with a plurality of parallel aligned cylinders and a water jacket about said cylinders, a head structure on said block, said head structure having a water jacket extending the length of said block, said water jackets being in communication, valve conduits in said head structure, a sheet metal water distribution pipe removably inserted in one end of said head structure and extending through said head water jacket to the other end thereof, said pipe being rectangular in cross-section with the long dimension disposed vertically and being formed with large discharge openings, one for each cylinder, in its lower corner adjacent said valve conduits to direct cooling water toward the latter, and a water take-off manifold having a plurality of branches one opening to said head jacket in the region of each cylinder.

1,785,147. SULPHONATED MINERAL OILS AS ADDITION AGENTS TO ZINC-CHLORIDE-BASE FLUXES. WILLIAM KENMORE SCHWEITZER, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Delaware. Filed Dec. 26, 1929. Serial No. 416,759. 4 Claims. (Cl. 148—23.)



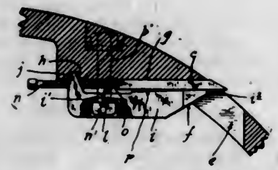
1. As a new composition of matter a soldering flux comprising zinc chloride and a sulphonated mineral oil.

1,785,148. BASEBALL GAME AND APPARATUS. PARKER T. SIMMONS, East Hampton, N. Y. Filed Aug. 17, 1928. Serial No. 300,236. 4 Claims. (Cl. 273—89.)



1. In a device of the character described, a field floor having an orbital slot therein, a plurality of series of endless members movable in a similar orbit beneath the slot, separate operating means for each endless member, a runner-carrying member extending from each endless member upwardly through the slot, runner figures thereon, said runner carrying members being successively spaced horizontally for independent movement past each other.

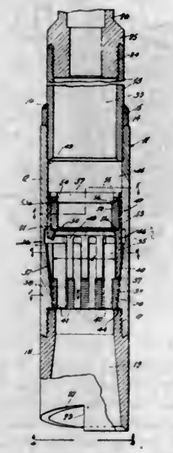
1,785,149. FEED-WATER REGULATOR. WALTER SMITH, Harrow-on-the-Hill, England. Filed Oct. 1, 1928, Serial No. 309,567, and in Great Britain Oct. 15, 1927. 6 Claims. (Cl. 137—103.)



1. In a feed-water control, the combination of a water chamber having an outlet for the feed-water; a pair of valves in said chamber to control the outlet; a float in the chamber; a lever pivoted in said chamber and carrying the float; and pivotal connections between the valves and the lever at opposite sides of the lever pivot for operating said valves in succession consequent upon the movement of the float in a single direction.

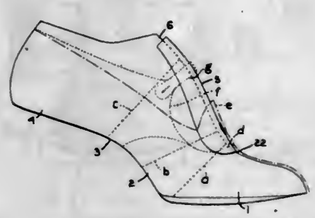
1,785,150. GAME APPARATUS. LEONARD D. SOUBIER and EDWIN J. CARL, Toledo, Ohio, assignors to American Patents Corporation, a Corporation of Ohio. Filed Jan. 4, 1930. Serial No. 418,512. 17 Claims. (Cl. 273—35.)

1. In combination, a tee adapted to support balls in driving position, a target spaced horizontally from the tee, a return conduit thru which driven balls are carried to a position adjacent the tee, and mechanical means for placing balls one at a time on the tee while the latter is disposed to support balls in driving position.



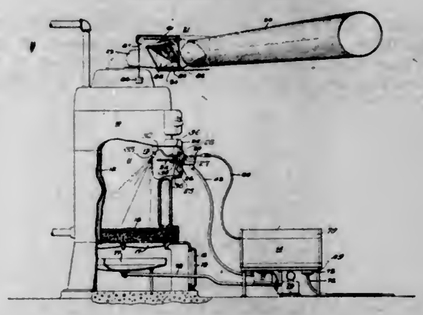
1,785,151. KNIFE-HOLDING MEANS FOR CHIPPING MACHINES. CHARLES B. SPRAGUE, Portland, Oreg. Filed May 20, 1929. Serial No. 364,594. 5 Claims. (Cl. 83—75.)

1. In a rotary cutter the combination of a hollow cylindrical head provided with longitudinal knife receiving



slots, the cylinder wall provided on the interior with a plane face constituting a knife seat, the interior end of said knife seat provided with a groove, a knife holding bar provided at its inner end with a retaining rib engaging in said groove, a knife clamped by said bar to said seat and the clamping face of said bar having a taper from its toe rearward for the purpose mentioned.

1,785,152. OVERSHOT. FREDERICK STONE, Los Angeles, and ALBERT L. STONE, Redondo Beach, Calif., assignors to Doheny-Stone Drill Co., Los Angeles, Calif., a Corporation of Delaware. Filed May 25, 1929. Serial No. 365,910. 17 Claims. (Cl. 294—102.)

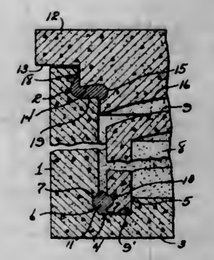


1. In a fishing tool, a barrel adapted to take work within its bore, there being a slip socket in the barrel bore and having downwardly and inwardly converging walls, a plurality of wedge slips mounted in the slip socket for bodily individual movement along said walls longitudinally of the barrel and hence radially with respect thereto, means for introducing fluid under pressure to said bore, said slips being movable downwardly and hence radially inwardly with respect to the barrel under the influence of hydraulic pressure applied through the barrel bore.

1,785,153. INCREASER FOR LASTS. JOHN E. SWANSON, Jamaica Plain, Mass. Filed Dec. 9, 1927. Serial No. 238,802. 2 Claims. (Cl. 12—137.)

1. An increaser for lasts comprising a pad of resilient fibrous material permanently curved to conform to the waist portion of the comb of the last with its lateral and lower edges tapered to merge into the curvature of the last, a stud having a split and slightly expanded lower end adapted frictionally and detachably to engage a socket in the last and having a reduced upper end portion extending through said pad and presenting a shoulder beneath said pad, a washer on said reduced portion engaging said shoulder and the under face of the pad, a washer on said stud engaging the upper face of the pad and curved to conform to the surface of the pad and countersunk therein with the end of the stud expanded upon said upper washer, said pad having an aperture therethrough adjacent to said washers to permit the introduction of the end of a detaching tool below the lower washer whereby the pad may be removed without distorting or otherwise damaging the same.

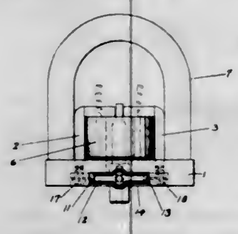
1,785,154. OIL-BURNING PROCESS. WHITMAN SYMMES, San Francisco, Calif., assignor to Anson Stiles Blake, Berkeley, Calif. Filed June 28, 1926. Serial No. 118,968. 1 Claim. (Cl. 158—117.5.)



A noiseless method of burning oil utilizing a nozzle for spraying the oil, a combustion chamber, and a porous bed of loose material forming the lower wall of the combustion chamber, said method comprising inducing a draft of air upwardly through said bed, spraying oil downwardly toward said bed to maintain combustion within the chamber, and maintaining the pressure within the chamber substantially constant.

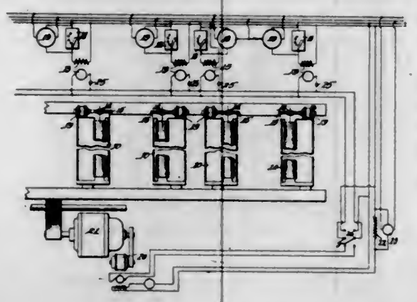
1,785,155. ZINC-CHLORIDE-BASE FLUX. EDWARD A. TAYLOR, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Delaware. Filed Dec. 26, 1929. Serial No. 416,757. 5 Claims. (Cl. 148—23.)

1. As a new composition of matter a soldering flux in which zinc chloride is the base, comprising zinc chloride and an alkyl naphthalene sulfonic acid compound.



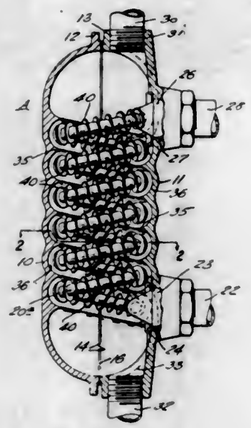
1,785,156. BURIAL VAULT. FLOYD L. TEMPLE, Terre Haute, Ind. Filed Feb. 8, 1930. Serial No. 426,934. 2 Claims. (Cl. 72—7.)

1. A reinforced concrete burial vault comprising a substantially rectangular outer body formed at its inner corner with a continuous inwardly directed pocket which reduces the outer end of the said body, said body having its inner wall at the juncture of the base thereof formed



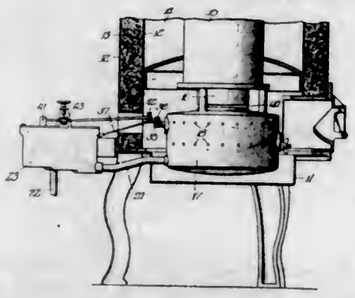
with a continuous channel whose outer wall is disposed at an angle, an inner substantially rectangular body having a continuous groove adjacent to the outer corner thereof, a plastic cement received in the channel designed to be compressed by the weight of the inner body when closed thereon to cause the said cement to enter the groove of the inner body, a sealing slab which is stepped and which has the side wall of its inner stepped portion grooved, the pocket of the outer body designed to receive therein a plastic cement which is contacted by the central shoulder of the stepped portion of the sealing slab and compressed by such contact to force the cement into the groove and into the joint between the outer stepped portion of the slab and the top of the outer body.

1,785,157. ELECTRIC PICKUP FOR PHONOGRAPH RECORDS. HERBERT JOSEPH TOEGEL, Elizabeth, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed May 19, 1928. Serial No. 278,989. 6 Claims. (Cl. 179—100.41.)



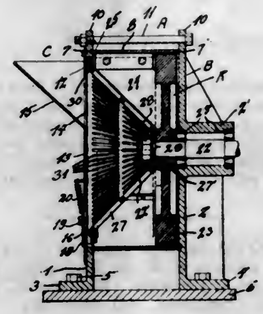
4. In a device of the class described, a base, a magnet positioned on the base, a generating coil disposed on the base between the limbs of the magnet, a pair of pole pieces for the magnet having free ends extending over the end of said coil which is farthest from the base and turned toward its axial center, a pair of pieces of flexible material, a plate positioned between said pair of pieces and substantially enclosed thereby and having a stem forming a core for said coil and having its extremity positioned between said pair of pole pieces, a clamp extending over said plate and resting against one of said pieces for adjustably mounting the said two pieces and plate to the base and a socket member attached to the plate and adapted to receive a record-playing needle.

1,785,158. INK-FOUNTAIN DRIVE. ISIDOR TORNBERG, Plainfield, N. J., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Sept. 23, 1927. Serial No. 221,453. Renewed May 9, 1930. 7 Claims. (Cl. 101—350.)



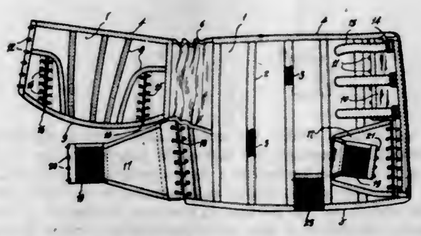
1. In a printing press, the combination with a main motor for driving the press, and a plurality of ink fountain cylinder motors, of a generator driven by the main motor, and means for conducting the current from the generator to the ink fountain cylinder motor armatures to drive them.

1,785,159. HEAT-INTERCHANGE DEVICE. HERBERT G. ULLMAN, Tuckahoe, N. Y. Filed Sept. 14, 1927. Serial No. 219,454. 5 Claims. (Cl. 257—229.)



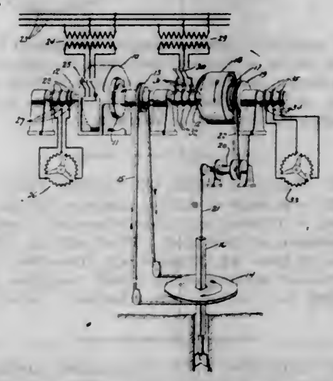
1. In a heat interchange device, a hollow coil composed of a plurality of spaced turns through which a fluid medium is passed, a casing extending about said coil and into which a second fluid medium enters and passes over said coil, said casing having an inner surface disposed in spaced relation to the outer side of said coil, said surface being formed with ribs extending inwardly between the turns of said coil at the outer side thereof so as to leave the inner side of said coil unobstructed and said ribs being spaced from said coil for directing fluid in said casing away from said surface between and over said turns of said coil towards the inner unobstructed side thereof, for the purpose set forth.

1,785,160. FUEL-FEED CONTROL. BEN VALJEAN, Lansing, Mich., assignor to Motor Wheel Corporation, Lansing, Mich., a Corporation of Michigan. Filed Sept. 19, 1929. Serial No. 393,627. 3 Claims. (Cl. 236—15.)



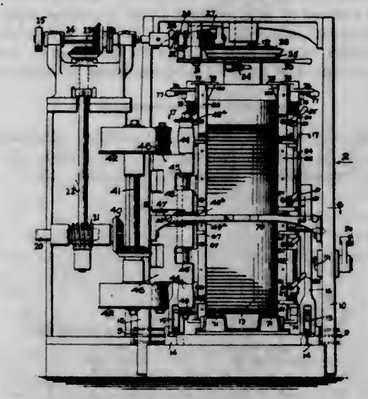
1. The combination with a fluid fuel burner of the carburetor type and a fuel supply passage, of means for automatically controlling the supply of fuel to the pilot and to the burner, said control means comprising a thermostatic device disposed within the carbureting chamber of the burner above the pilot and below the normal flame area, independently acting valves in the fuel supply passage, a connection between each of the valves and the thermostat whereby to open and close the pilot valve to a greater or less extent to maintain a uniform degree of heat at the pilot in the absence of flame within the burner proper, to increase the flow of fuel to the burner in the intermediate stage when there is flame in the burner proper and again to decrease the flow of fuel to the burner when the base of the flame rises above the burner proper as in normal operation.

1,785,161. SAND SCREEN. WALTER H. WANGELIN, St. Louis, Mo. Filed Oct. 15, 1928. Serial No. 312,449. 4 Claims. (Cl. 209—279.)



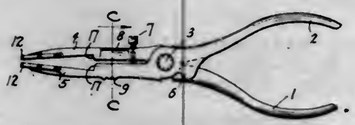
1. A sand screen comprising a housing having inlet and discharge openings, an impeller arranged for rotary movement within said housing by which sand is forcibly driven from said housing through the discharge opening thereof, a conical sieve located within said housing through which the sand passes before being acted on by said impeller, said sieve being rotatable with said impeller, and a fly wheel located within said housing immediately adjacent to and rotatable with said impeller.

1,785,162. ABDOMINAL SUPPORT OR CORSET. VIRGINIA A. WHITE, Dallas, Tex. Filed May 23, 1929. Serial No. 365,262. 1 Claim. (Cl. 2—41.)



A corset having a suitably braced body portion encircling the back of the figure and overlapping the hips, the upper edge of the corset being on the waistline of the figure and the lower edge of the corset extending to a point below the hips, pliable connecting strips at each side of the body portion, an abdominal supporter connecting said pliable side strips, said abdominal support having an unbroken front and a lower edge curved to follow the contour of the lower part of the abdomen, a quick detachable means at one side only of said abdominal support, comprising hook and eye members, buckle and strap means for relatively permanently adjusting said pliable connecting strips, means for adjusting the lower part only of said abdominal support, comprising a pair of laced slits, one adjacent each side thereof, and extending partway from the lower edge of the abdomen support upwardly, but terminating short of the waistline, and wing portions connected to the body portion of the corset located below and separate from the abdominal support, said wing portions having adjusting means for the control of the hips, the adjusting means comprising a pair of laced slits located immediately below said pliable connecting side strips.

1,785,163. WELL-DRILLING EQUIPMENT. ROY WILKINS, San Francisco, Calif. Filed Feb. 11, 1928. Serial No. 253,606. 12 Claims. (Cl. 255—19.)

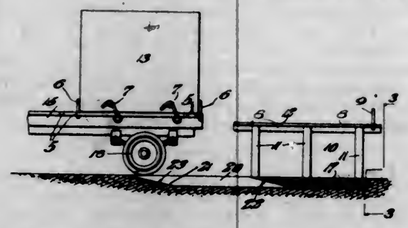


1. A motive power unit for driving a cutting tool comprising a main driving motor, a cutting tool adapted to be driven by said motor, a means for controlling the feed of the cutting tool, a second motor having its rotor directly connected to the rotor of said first motor for regulating the feed of said cutting tool with respect to the work, and means whereby the stator of said second motor can rotate with respect to its rotor to thereby control the feed controlling means of said cutting tool.

1,785,164. MULTIPLE-STEREOTYPE-PLATE-CASTING MACHINE. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Continuation of application Serial No. 568,137, filed June 14, 1922. Renewed Sept. 22, 1926. This application filed Apr. 9, 1927. Serial No. 182,525. 39 Claims. (Cl. 22—3.)

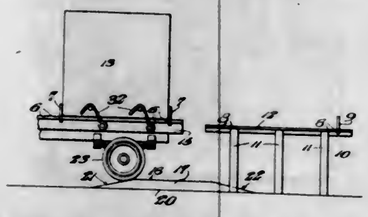
1. As an article of manufacture, a stereotype printing plate mold having means connected with the parts thereof for holding two stereotype matrices and leaving a metal receiving space between their ends to permit casting two complete stereotype printing plates integrally connected end to end.

1,785,165. PROCESS AND APPARATUS FOR REGULATION OF TONE-PRODUCING QUALITY OF HAMMERS IN STRINGED MUSICAL INSTRUMENTS. CHARLES CARLTON WOODS, Denver, Colo. Filed May 18, 1928. Serial No. 278,858. 8 Claims. (Cl. 84—460.)



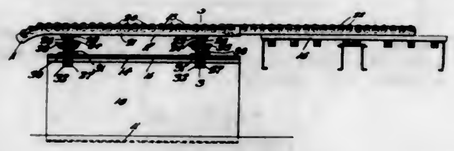
1. The process of voicing musical instrument hammers formed in layers comprising subjecting the opposite sides of the hammer simultaneously to a relatively opposed massaging action against the edges of the layers and then shaping the edge of the hammer.

1,785,166. MANUFACTURE OF ESTERS FROM ALDEHYDES. CHARLES O. YOUNG, Jackson Heights, N. Y., assignor to Carbide & Carbon Chemicals Corporation, a Corporation of New York. Filed July 14, 1925. Serial No. 43,616. 11 Claims. (Cl. 260—106.)



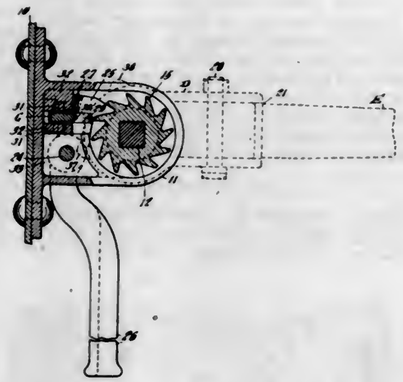
1. Process of making esters which comprises bringing an aldehyde into contact with aluminum butoxide as a catalyst.

1,785,167. LOADING AND UNLOADING APPARATUS. CHARLES D. YOUNG, Wayne, Pa. Filed Sept. 17, 1928. Serial No. 306,547. 12 Claims. (Cl. 254—45.)



1. A container handling apparatus comprising the combination of a vehicle for supporting a container, a fixed support for said container, a roadway having trackways for said vehicle leading to said support, and removable blocks respectively in said trackways to lower the supporting surface of said vehicle below the supporting level of said support whereby movement of said vehicle towards said support causes said surface to lower at a predetermined location and transfer said container to said support.

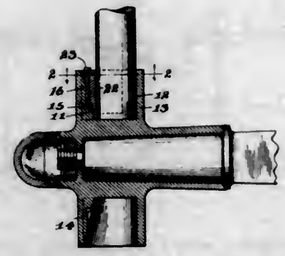
1,785,168. LOADING AND UNLOADING APPARATUS. CHARLES D. YOUNG, Wayne, Pa. Filed Sept. 17, 1928. Serial No. 306,548. 6 Claims. (Cl. 254—45.)



1. A container handling apparatus comprising in combination a movable platform for supporting a container, a fixed support for said container, and means including a plurality of blocks arranged to be placed on the surface of a roadway for varying the level of said roadway adjacent said fixed support whereby movement of said platform along said roadway a distance substantially equal to the length of said container causes said container to be automatically transferred from one supporting medium to the other.

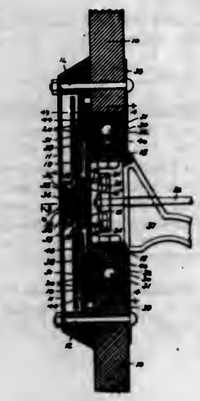
1,785,169. RAMP-RAIL CONSTRUCTION. CHARLES D. YOUNG, Wayne, Pa. Filed Jan. 18, 1929. Serial No. 333,332. 3 Claims. (Cl. 214—38.)

1. In a container transfer system, a fixed frame, a plurality of feed screws mounted on said frame for movement relative thereto, a ramp rail supported by said feed screws, leader nuts respectively on said feed screws and thrusting against said frame, and means for manually turning said nuts to raise or lower said rail with respect to said frame.



1,785,170. HAND BRAKE. CHARLES A. ZWEIBEL, Louisville, Ky., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Dec. 5, 1928. Serial No. 323,821. 3 Claims. (Cl. 74—116.)

1. In a hand brake, the combination with a rotatable chain-winding member; of means for intermittently rotating said member, including a lever-operated carrier rotatably mounted to turn about said member in reverse directions; means for preventing unwinding movement of said member, including a dog and cooperating ratchet means the ratchet means being fixed to the chain winding member; spring means for holding said dog in engagement with the ratchet means, said dog being movable to inoperative position to permit free rotation of said member; a latch element for locking the dog in inoperative position; and means on the carrier for unlocking said latch element from the dog upon movement of the carrier in either of said reverse directions.

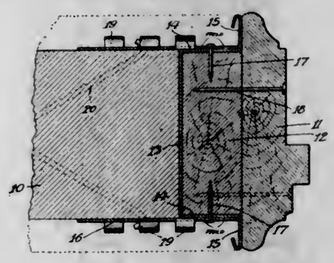


1,785,171. SPOKE. MATHIAS J. ADAMS and PETER PAUL ADAMS, Turkey River, Iowa, assignors of one-fourth to Adams Patent Wheel Co., Turkey River, Iowa. Filed Nov. 23, 1928. Serial No. 321,438. 3 Claims. (Cl. 301—81.)

3. A hub and spoke connection comprising a socket upon the hub having an inclined surface upon one side of the recess therein, a wedge member cooperating with said inclined surface to jam the inner end of the spoke against

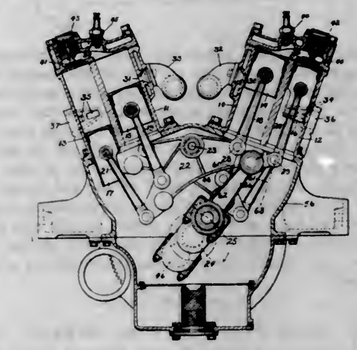
the opposite side of the recess and means passing through the wedge member and anchored in the inclined surface for holding the wedge member within the recess.

1,785,172. FRONT-WHEEL GUIDE AND BRAKE. PETER PAUL ADAMS, Turkey River, Iowa. Filed May 5, 1928. Serial No. 275,459. 3 Claims. (Cl. 188—194.)



1. In a vehicle wheel brake, a pivotally mounted axle carried non-rotatable brake disk, a second non-rotatable brake disk spaced therefrom, means to mount the second disk for movement toward and away from the first mentioned disk, means to move said second mentioned disk, and a dished, wheel carried, brake disk positioned between and normally spaced from the first and second mentioned disks and engageable with the latter when the second mentioned disk is moved in one direction.

1,785,173. SOLDERING FLUX. HAROLD J. BARRETT, Wilmington, Del., assignor, by mesne assignments, to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Delaware. Filed May 7, 1930. Serial No. 450,596. 6 Claims. (Cl. 148—23.)

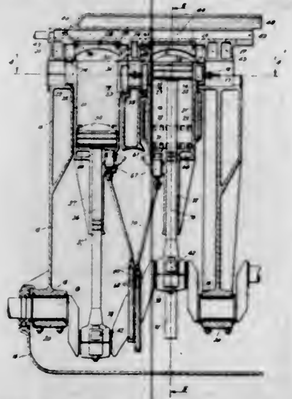


1. In a process of soft soldering, the step of applying a flux comprising a polymerized organic ester of vinyl alcohol.

1,785,174. DOORFRAME. ISAAC A. BAUM, Chicago, Ill. Filed Mar. 25, 1929. Serial No. 349,634. 6 Claims. (Cl. 72—98.)

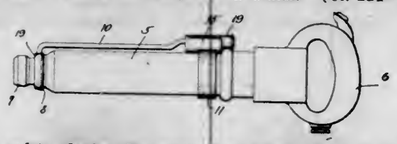
1. In frame construction, the combination of a channel shaped buck, and a continuous strip welded to a flange of the channel and extending rearwardly a substantial distance beyond the limits of the channel in line with the flange, and plaster anchors formed in said strip.

1,785,175. TWO-CYCLE V MOTOR. EDWARD H. BELDEN, Toledo, Ohio, assignor to Belden Patents Incorporated, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 21, 1923. Serial No. 682,001. 18 Claims. (Cl. 123—54.)



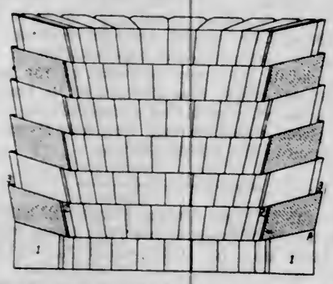
1. In an internal combustion motor, a working cylinder and piston, a charging cylinder and piston at one side of and substantially parallel with the working cylinder, there being a port connecting adjacent ends of the two cylinders, and an inlet port uncovered by the movement of the charging piston near the end of its travel away from the connecting port, and connections to move the charging piston simultaneously with and always in the same direction as the working piston.

1,785,176. INTERNAL-COMBUSTION ENGINE. LEO BERNER, South Milwaukee, and PAUL LOHR, Milwaukee, Wis. Filed May 14, 1928. Serial No. 277,582. 10 Claims. (Cl. 123—42.)



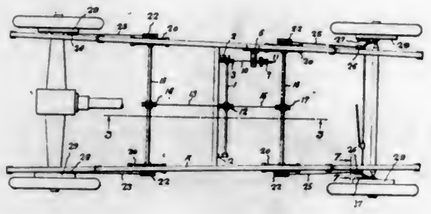
7. In an internal combustion engine, the combination of an oscillatory cylinder provided with a curved head whose center of curvature coincides with the center of oscillation of the cylinder, a semicylindrical valve of similar curvature, ports in said head and said valve, a fixed

head having a port adapted to register with said first-named ports, said cylinder having projections engageable



with said valve to intermittently oscillate the same, and means for otherwise restraining the movement of said valve.

1,785,177. SAFETY DEVICE FOR PNEUMATIC HAMMERS. JOHN G. BOLLOCK, Hastings, Nebr. Filed Sept. 4, 1928. Serial No. 303,915. 1 Claim. (Cl. 121—32.)



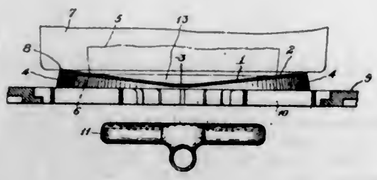
A safety device for pneumatic hammers, including a supporting barrel, the upper portion of the barrel being cut away throughout its length and having a notch in one end of the body portion, a removable tubular housing positioned in the barrel, a rod having a head on one of its ends and having a ring on the opposite end to embrace the hammer plunger with which the device is used, said rod resting in the notch, the head of the rod being positioned in the housing, a coiled spring surrounding one end of the rod and held between the head and one end of the barrel to normally hold the rod to the limit of one of its movements, and means for clamping the device to a pneumatic hammer.

1,785,178. WALL FOR REACTION TOWERS. FREDERICK J. BOWMAN, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Delaware. Filed Apr. 29, 1929. Serial No. 359,141. 7 Claims. (Cl. 23—283.)

1. Walls of reaction towers formed of blocks of building material in which the joints between the blocks drain towards the inside of the tower and in which the joints are widened at the outside of the walls to form grooves and ledges.

1,785,179. EQUALIZING SYSTEM FOR FOUR-WHEEL BRAKES. BERNARD CARLIN, Pensacola, Fla. Filed July 18, 1928. Serial No. 293,533. 2 Claims. (Cl. 188—204.)

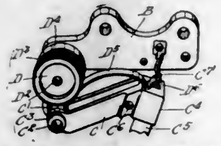
2. In combination with a vehicle having braking means associated with each wheel thereof, a pair of shafts, yieldable means for supporting the shafts whereby they can move toward and away from the front and rear axles of the vehicle, means for connecting the shafts with the brake means whereby rotary movement of the shafts will actuate the brake means, a third shaft, manually operated means for rotating the same and means for communicating the movement of the third shaft to the other two shafts.



1,785,180. FLUX FOR USE IN SOLDERING. HARRY P. CORSON, Lakewood, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Delaware. Filed Dec. 26, 1929. Serial No. 416,754. 3 Claims. (Cl. 148—23.)

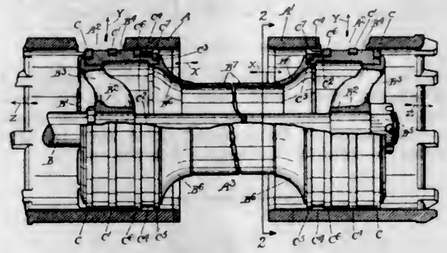
1. In a process of soft soldering metals the step of applying a soldering flux comprising a sulfonated vegetable oil compound.

1,785,181. SOFT SOLDERING FLUX. HARRY P. CORSON, Lakewood, and EARL S. RIDLER, Shaker Heights, Ohio, assignors to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Delaware. Filed Dec. 26, 1929. Serial No. 416,755. 4 Claims. (Cl. 148—23.)



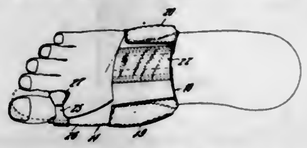
1. In a process of soft soldering metals the step of applying a flux comprising zinc chloride and an aldehdye.

1,785,182. BASE MEMBER FOR USE WITH COOKING VESSELS. EARL V. COULSTON, Shaker Heights, Ohio. Filed July 11, 1928. Serial No. 291,987. 1 Claim. (Cl. 126—215.)



A base member for use with cooking vessels, consisting of an imperforate plate having a concave upper surface and an upwardly-inclined bottom surface, said upper surface radiating in all directions from its center by the same inclination, and a peripheral supporting flange downwardly-extended from said plate to a point below said center, whereby a circular vessel having a plane bottom will rest upon the plate by a line contact, and whereby an air pocket will be formed within the line of contact and between the plate and vessel.

1,785,183. BRUSH HOLDER FOR ELECTRICAL MACHINES. CHARLES W. DAKE, Chicago, Ill., assignor to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 15, 1926. Serial No. 141,765. 7 Claims. (Cl. 171—324.)

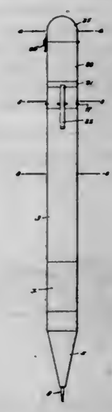


1. In a brush holder, a supporting plate, pins projecting therefrom, a brush holding arm pivoted on one pin, a brush carried by the arm, a tension member rotatable on the other pin, an arm projecting from the tension member engaging the free end of the brush holding arm and means for adjusting the tension therein, said means comprising a drum, a spring wound about the drum and interposed between it and the tension arm and means for locking the drum in adjusted position.

1,785,184. DISTRIBUTION VALVE. CHARLES W. DAKE, Chicago, Ill., assignor to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Filed Mar. 16, 1928. Serial No. 262,247. 6 Claims. (Cl. 121—142.)

1. A distribution valve mechanism for steam engines and the like, comprising a ported bushing, a piston adapted to reciprocate therein, a spring ring mounted on the piston, a peripheral channel in the outer face of the ring, and a longitudinal channel extending through one side of the ring and joining the peripheral channel.

1,785,185. BUNION CORRECTOR. JEREMIAH C. DAY, Lexington, Ky. Filed Jan. 15, 1927, Serial No. 161,420. Renewed May 3, 1930. 1 Claim. (Cl. 128—81.)



In a bunion corrector, a band adapted to encircle the foot around the metatarsal joints, and including a strip of elastic webbing to permit the band to yield when pressure is exerted upon the foot, a pad arranged centrally of the band and located beneath the foot, pads arranged at the opposite sides of the band to bear against the first and fifth metatarsal joints and to provide an anterior metatarsal support, an extension projecting forwardly from one side and the adjacent portion of the forward edge of the bottom edge of the band and arranged along the side of the foot adjacent the great toe and extending beneath the foot, a great toe encircling band carried by the extension, whereby an outward pull is exerted upon said toe when the band is extended under the pressure of the foot, and a pad carried by the toe encircling band and positioned between the great toe and next adjacent toe.

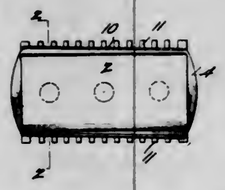
1,785,186. BUTTON RECEPTACLE. JAMES C. DAY, South Orange, N. J., assignor to The Whitehead and Hoag Company, Newark, N. J., a Corporation of New Jersey. Filed July 16, 1928. Serial No. 293,133. 11 Claims. (Cl. 40—10.)

1. In a device of the class described, a front plate, a back plate connected and having its central portion in spaced relation thereto to form a pocket, a fastening means positioned in the back plate, an aperture through the back plate communicating with the pocket to permit the introduction of an article therein, a portion of the back plate return bent on itself to hold the fastening means in position, and additional portions of the back plate return bent to hold in position the first mentioned return bent portion.

1,785,187. COMBINATION PENCIL. FRANCISCO DE LA TORRE, Chicago, Ill. Filed Oct. 1, 1929. Serial No. 396,498. 1 Claim. (Cl. 206—38.)

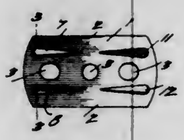
A device of the class described having a tubular body portion constituting a chamber having an opening therein, a closure for said opening hingedly secured to the tubular body portion, and a resilient retaining clip rotatably mounted on the tubular body portion in a manner to be shifted for engagement over the closure for retaining the same in its closed position said clip being further adapted to engage the side portions of the tubular body for detachably retaining the device in a pocket.

1,785,188. METHOD OF CONNECTING SPRINGS. ANTHONY GERLOWSKI, Chicago, Ill., assignor to The Rome Company, Inc., a Corporation of New York. Filed July 29, 1929. Serial No. 382,059. 1 Claim. (Cl. 140—3.)



The method of making a connection between the wire of a spring and a small helical spring, which consists in

screwing the free helical end of a helical spring upon the wire until said end passes a short distance beyond the wire on the side on which the helical spring is located, and then pressing together the free end of the helical



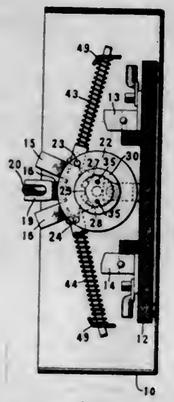
spring and the portion of the helical spring about 180 degrees distant therefrom to form a closed eye and twisting the eye to cause it to extend more or less in the direction of the spring.

1,785,189. RAZOR. PAUL D. GRISARD, Poughkeepsie, N. Y. Filed Apr. 24, 1929, Serial No. 357,789. Renewed Oct. 27, 1930. 6 Claims. (Cl. 30—12.)

1. A safety razor including clamping elements, a flexible blade with which the clamping elements cooperate, the blade in its initial cooperation with such elements having its cutting edge in parallel relation to the edges of such elements, and means formed on said elements to compel the cutting edge of the blade to assume a diagonal relation to the edges of said clamping means.

1,785,190. RAZOR. PAUL D. GRISARD, Poughkeepsie, N. Y. Filed Feb. 19, 1930. Serial No. 429,727. 8 Claims. (Cl. 30—12.)

1. A safety razor including a clamp and a guard plate, a blade to be confined between and clamped by the clamp and guard plate, the respective surfaces of the blade engaged by the clamp and guard plate being formed to compel the blade on the respective sides of the longitudinal median line to present different degrees of curvature under the clamping action whereby under such clamping action and incident to the different degrees of curvature the cutting edge of the blade will be positioned on a line diagonal to the line passing through the free ends of the guard plate when the blade is in clamped position.

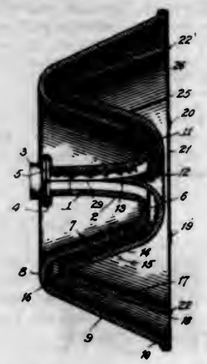


1,785,191. KITCHEN UTENSIL. CLYDE H. HALE, Riverside, and HENRY J. KLEEFISCH, Oak Park, Ill. Filed Feb. 27, 1928. Serial No. 257,162. 1 Claim. (Cl. 7—1.)

A kitchen utensil comprising in combination a fork having a shank of reduced size fixedly connected therewith, a pair of sharpening members having cutting edges in angularly spaced relation mounted on said shank adjacent to the fork, a guard plate on said shank adjacent to said sharpening members, an elongated sleeve on said shank next to said guard plate, a nut secured by screw threads

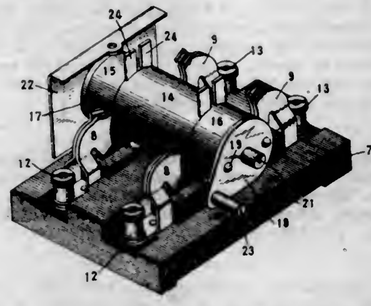
on the end of said shank serving by engagement with said sleeve to hold said sharpening members in tightened position against the fork, and a handle provided with a socket in which said shank and said sleeve are secured.

1,785,192. DOUBLE-THROW SWITCH. HERMAN J. HAMMERLY, Wallingford, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed July 18, 1928. Serial No. 293,675. 12 Claims. (Cl. 200—67.)



1. An electric switch including an operating crank, supporting means therefor, an operating handle, quick-make and break mechanism coacting between said handle and said crank and including two independent and detachably mounted throwing members each of which has a lost motion connection with the other movable parts of the said mechanism, and detachable means of connection between said throwing members and the means coacting therewith.

1,785,193. AMPLIFIER HORN. JESSE B. HAWLEY, Wilmette, Ill., assignor, by mesne assignments, to United Reproducers Corporation, St. Charles, Ill., a Corporation of New Jersey. Filed Sept. 27, 1924. Serial No. 740,159. 17 Claims. (Cl. 181—27.)

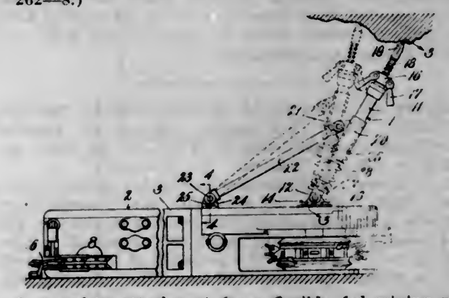


3. A sound amplifier comprising a hollow member forming sound guiding and amplifying surfaces, a diaphragm

disposed in said hollow member, a cooperative sound guiding member disposed relatively to said hollow member to direct the sound emitted by said diaphragm to am-

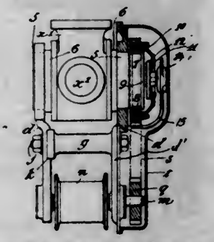
plify the same, said cooperative surface being vibratably mounted and spaced from said diaphragm, and means for connecting said diaphragm and said cooperative member to cause said cooperative member to vibrate.

1,785,194. MULTIPLE-BREAK SWITCH. HERMAN J. HAMMERLY, Wallingford, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation. Filed Jan. 15, 1930. Serial No. 420,927. 7 Claims. (Cl. 200—162.)



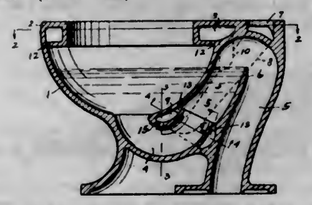
1. In a double break switch unit the combination of oppositely disposed stationary contacts, an insulating carrier mounted between the contacts and a switch blade carried by the carrier and consisting of two separately movable conducting bars having their ends projecting from opposite sides of the carrier.

1,785,195. CHAFFER FOR THRASHING MACHINES AND GRAIN HARVESTERS. JAMES W. HOES and HOWARD CRONK, Sidney, Nebr., assignors, by direct and mesne assignments, to The Wind-Blast Chaffer Company, Sidney, Nebr., a Corporation of Nebraska. Filed Feb. 7, 1928. Serial No. 252,458. 2 Claims. (Cl. 209—312.)



1. In a chaffer, a box, a series of perforated screen-sections therein, spaced from each other at adjacent ends to provide openings for the passage of air, valves controlling the passage of air through the openings, and means for simultaneous adjustment of the valves.

1,785,196. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Sept. 13, 1929. Serial No. 392,332. 18 Claims. (Cl. 262—8.)

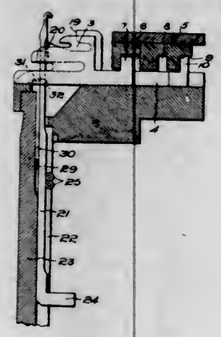


1. A safety attachment for a flexibly fed mining machine including a pivoted abutment engaging element adapted for connection to the frame of a mining machine, an element adjustably connected to said pivoted element, a link connection between said element and the frame of the mining machine, and resilient means acting on said adjustable element for urging said pivoted element into its operative position.

1,785,197. POWER-TRANSMISSION GEARING FOR USE ON RAILWAY AND OTHER VEHICLES. ALFRED EDWARD HONEY, Ilford, England, assignor to J. Stone & Company Limited, Deptford, England, a Corporation of Great Britain. Filed Feb. 3, 1928, Serial No. 251,631, and in Great Britain Feb. 9, 1927. 9 Claims. (Cl. 105—105.)

1. Power transmission gearing for use on railway and like vehicles for transmitting power from a running axle to a piece of apparatus on such vehicle, said gearing comprising an elongated two-sided frame pivotally suspended from the said piece of apparatus, a pulley revolubly mounted in bearings in the lower part of the side members of said frame, a gear revolubly mounted coaxially with the suspension pivot and operatively connected with the spindle of the driven piece of apparatus, transmission gearing between said pulley and said gear, and a cross frame member spacing the side frame members apart.

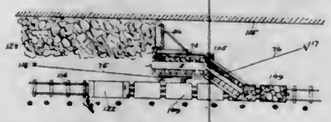
1,785,198. WATER-CLOSET BOWL. HOWARD F. KELSO, Houston, Tex. Filed Nov. 25, 1929. Serial No. 409,524. 4 Claims. (Cl. 4—73.)



1. A water closet bowl having a trap formed with an outlet passageway through which the contents of the bowl

may be discharged, there being inlet side channels terminating in series of correspondingly inclined outlet openings arranged about said outlet passageway and also a passageway leading from each channel and merging into common outlet openings arranged about the bowl, said outlet openings being disposed to direct the finishing fluid, in spiralled fashion, about the walls of said bowl, and outlet passageway, respectively.

1,785,199. MANUFACTURE OF LOW-CARBON CHROME STEEL. FRANK O. KICHLINE, Lebanon, Pa., assignor to Bethlehem Steel Company. Filed Apr. 20, 1926. Serial No. 103,377. 7 Claims. (Cl. 75—22.5.)

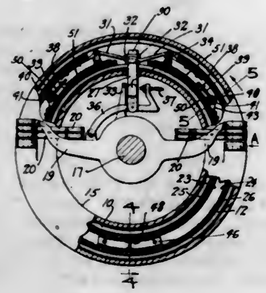


1. A process for the manufacture of low carbon chrome steel which consists in, intimately mixing comminuted pig iron containing carbon with crushed chrome ore and slag forming material, and fuzing the mixture in an electric furnace, so as to effect a reduction of chromium from the ore through the influence of the carbon in the pig iron.

1,785,200. MECHANISM FOR CONTROLLING KNITTING NEEDLES IN PLATING OPERATIONS. JOHN LAWSON and ROBERT H. LAWSON, Pawtucket, R. I., assignors to Hemphill Company, Pawtucket, R. I., a Corporation of Massachusetts. Original application filed Mar. 10, 1927, Serial No. 174,176. Divided and this application filed Mar. 23, 1929. Serial No. 349,360. 7 Claims. (Cl. 66—36.)

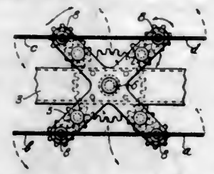
1. In a knitting machine having a series of independent needles and having means to feed two threads thereto in a plating relation, a series of instrumentalities one for each needle and movable in and out in knitting relation, each of said instrumentalities being recessed and a jack or element in the groove of the corresponding needle at the back of the latter and engaging said recess whereby outward movement of said instrumentality causes outward movement of the corresponding needle by reason of movement of said jack.

1,785,201. COAL-LOADING MACHINE. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Aug. 8, 1924, Serial No. 730,951. Renewed Mar. 27, 1930. 27 Claims. (Cl. 262—28.)



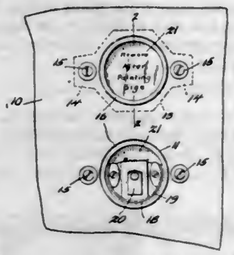
1. In a machine of the class described, the combination with a conveyor trough, of a series of continuously moving carrier elements adapted to slide over the mine floor in front of the forward end of said trough to pass beneath and lift loose material from the mine floor and carry it into and along said trough, laterally extending gathering means to move loose material into the path of said carrier elements, and means to bodily advance the machine to engage said gathering means with said material.

1,785,202. ELECTRIC ACCUMULATOR. CARL HILDING OSSIAN LUBECK, Stockholm, Sweden. Filed Oct. 21, 1925, Serial No. 63,982, and in Sweden Oct. 31, 1924. 5 Claims. (Cl. 136—81.)



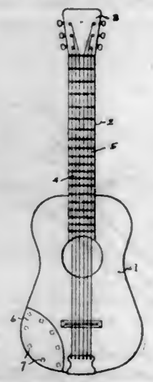
1. In a storage battery in combination a number of positive electrodes having the active mass enclosed between perforated cover plates and corresponding negative electrodes assembled into a group, intermediate spacing members of insulating material disposed between the electrodes at those points, where the electrodes tend to belly owing to the tendency of swelling of the active mass, a pair of press plates bearing each against one of the outermost electrodes and members connecting said press plates and adapted to take up, through the medium of the spacing members and the press plates, the inner pressure produced by the tendency of swelling.

1,785,203. BRAKE MECHANISM. ABRAM E. MINIUM, Denver, Colo., assignor of one-half to Gustave J. Ornauer, Theodore E. Syman, and Walter J. Heath, Denver, Colo. Filed Oct. 11, 1929. Serial No. 398,951. 1 Claim. (Cl. 188—75.)



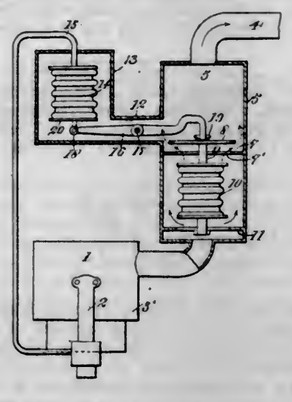
Brake mechanism comprising a rotary body having brake faces, brake bands cooperative with said faces, mechanism for the simultaneous expansion and contraction of the brake bands, including bell cranks fulcrumed at the ends of one of the bands, lugs at the end portions of the other band, members slidable upon the last mentioned band, in pivotal connection with the bell cranks, and adjusting screws for the members, mounted on the lugs, a housing for the brake faces and the brake bands, and means for rotation of the adjusting screws, exteriorly of the housing.

1,785,204. CHANGEABLE SIGN. OLIVER J. NELSON and FREDERICK G. BAENDER, Parsons, Kans., assignors, by mesne assignments, to Fred G. Baender, trustee, Parsons, Kans. Filed Mar. 31, 1927. Serial No. 179,741. 17 Claims. (Cl. 40—76.)



1. A changeable sign comprising, a rotatable carrier, panels rotatable on said carrier and arranged to be shifted into alignment with their adjacent edges in close relation, means for intermittently shifting said carrier, and planetary gearing connected to said panels to reverse same at each shift of said carrier.

1,785,205. LAMP RECEPTACLE. COLEMAN LINDZEY NICHOLSON, 2d, Syracuse, N. Y., assignor to Pass & Seymour, Inc., Solvay, N. Y., a Corporation of New York. Filed Aug. 13, 1928. Serial No. 299,418. 2 Claims. (Cl. 173—335.)

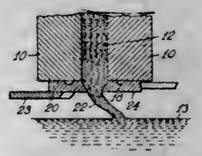


1. In a lamp receptacle having an insulation block provided with a recess, a screw shell contact in said recess below the mouth thereof and a removable disk frictionally engaging the wall of said recess near the mouth to retain the disk in position and sealing the recess to protect the contact.

1,785,206. MUSICAL INSTRUMENT. ANTOINETTE E. OVERTON, Houston, Tex. Filed Aug. 23, 1927. Serial No. 214,824. 3 Claims. (Cl. 84—328.)

1. In a stringed musical instrument having a body, a neck and a bridge on said body; an arm rest spaced from the body, and located remote from the neck and to one side of said bridge and legs formed of cushioning material arranged under the margins of said rest and resting on the top of said body and supporting the rest on said body.

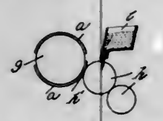
1,785,207. MOTOR - TEMPERATURE - CONTROLLING MEANS. STANLEY H. PAGE, Los Gatos, Calif. Filed July 11, 1927. Serial No. 204,980. 5 Claims. (Cl. 123—178.)



1. In combination with an internal combustion motor provided with an element for cooling the cylinder thereof and an inlet manifold, a means for controlling the cooling effect of the cooling element, a diaphragm operated by a variation of pressure in the inlet manifold, a diaphragm operated by a variation of the temperature of the cooling element, a member connecting the two diaphragms together and with said means, whereby the operation of said diaphragms actuates the means to vary the cooling effect of the cooling element to vary the temperature of the cylinder inversely with a variation in the power output thereof.

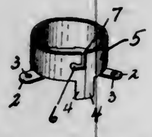
1,785,208. SMOKER'S PIPE. STEVE PAVLOFF, Camas, Wash. Filed May 1, 1929. Serial No. 359,697. 3 Claims. (Cl. 131—12.)

1. In a pipe, a bowl having a body consisting of two similar halves forming hollow semi-cylinders, a hinge securing said halves together at one side, caps each fitting over an end of the bowl to hold the halves in closed position, and a stem receiving nipple projecting from one of said caps and communicating with the interior of the bowl.



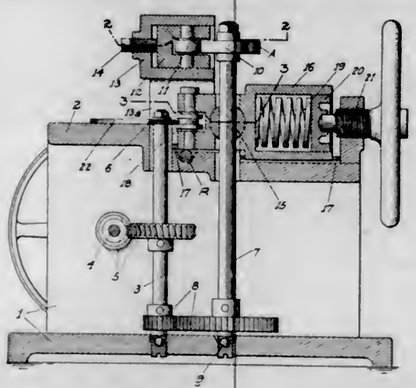
1,785,209. APPARATUS FOR GATHERING GLASS. KARL E. PEILER, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Apr. 21, 1925. Serial No. 24,789. 3 Claims. (Cl. 49—5.)

2. A split suction gathering receptacle for glass working, comprising cooperating longitudinal receptacle halves, a separate one piece annular severing member adapted to be moved into cooperative relation with the lower end of said receptacle and having an opening therein adapted to form a continuation of the receptacle cavity, said receptacle and said severing member being adapted to be



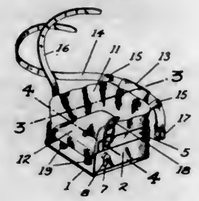
separated by a substantially vertical bodily movement of one of them with respect to the other, and a reciprocable shearing member adapted to move across the bottom surface of said annular member in synchronism with the movements of the receptacle while said annular member is in cooperative relation with the receptacle.

1,785,210. PROCESS FOR THE PRODUCTION OF PRINTING. HEINRICH RANCK, Hamburg, Germany. Filed Dec. 22, 1928, Serial No. 328,057, and in Germany Mar. 21, 1928. 2 Claims. (Cl. 101—149.)



1. A process for the purpose described wherein the mercury forming the ink-repelling material of the printing plate is continually renewed during the inking of the plate, consisting in applying the mercury in finely divided form to the printing ink while such ink is on the inking roll.

1,785,211. SOCKET SLEEVE. THEODORE JOHNSON SCOFIELD, Jackson, Mich., assignor to The Sparks-Withington Company, Jackson, Mich., a Corporation of Ohio. Filed Mar. 18, 1926. Serial No. 95,607. 3 Claims. (Cl. 173—328.)

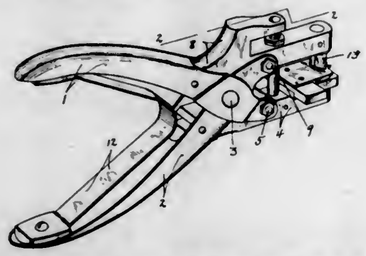


1. The method of forming socket sleeves comprising forming a blank having laterally projecting attaching lugs and spaced tube-supporting lugs extending from the same side of the blank as the attaching lugs, shaping the blank into cylindrical form, and bending the attaching lugs outwardly at substantially right angles to the axis of the cylinder.

1,785,212. PISTON-RING PEENER. JAMES SHAW, Lodi, Calif., assignor of one-third to C. H. Oehm and F. M. Oehm, Brooklyn, N. Y. Filed Mar. 23, 1928. Serial No. 264,213. 7 Claims. (Cl. 29—1.)

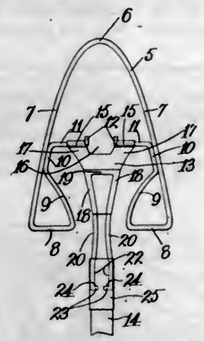
1. A piston-ring peener including a peening disc, means for rotating the disc, a member horizontally alined with the disc and spaced relative thereto to enable the width of a ring being received between the disc and said member, pressure means acting to force the member toward the disc to cause the ring to be frictionally engaged by the disc, and means for moving said member away from the ring at predetermined intervals against the resistance offered by the pressure means.

1,785,213. KNEE PAD. JOSEPH EMSLEY SHOTWELL, Chowchilla, Calif. Filed Aug. 12, 1930. Serial No. 474,740. 2 Claims. (Cl. 2—24.)



1. A knee pad comprising a primary shoe, and a secondary shoe movable within the primary shoe and normally held quiescent by a plurality of yieldable elements interposed between the bottoms of the two shoes, pivots on the secondary shoe connected with the primary shoe near the rear end thereof, the front plate of the primary shoe having a vertical slot and a stud on the front end of the secondary shoe projecting into and being movable vertically within the slot.

1,785,214. TENSION-HOLDING MEMBER FOR CONCRETE-REENFORCEMENT-TENSIONING DEVICES. HENRY SORENSEN, San Francisco, Calif. Filed Oct. 3, 1927. Serial No. 223,722. 3 Claims. (Cl. 72—128.)

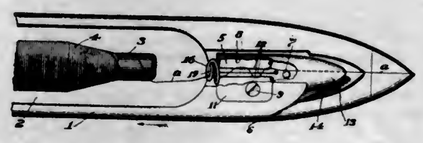


1. In a device to impart initial tension into the reenforcement of an infilled structure including means to hold said reenforcement to a support of the structure while under tension, the combination of a member adapted to strut said support against said tension, said member being isolated from the infilling, whereby said member may be removed after said infilling has set into cohesion with said reenforcement.

1,785,215. FILM PUNCH. EARL IRA SPONABLE, New York, N. Y., assignor to Fox Case Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 26, 1928. Serial No. 264,705. 3 Claims. (Cl. 164—120.)

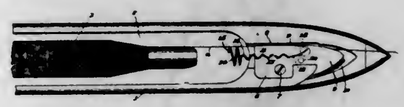
1. In a punch for removing spliced portions of a sound record element of a sound moving picture film, a punch, a die, a back plate for positioning the punch transversely of the film, a guide plate, and means for positioning the punch longitudinally of the film, said means comprising opposed fingers extending outwardly from the guide plate and spaced apart a distance corresponding to the width of the splice.

1,785,216. REVERSIBLE MOP HEAD. LESLIE M. THORNTON, Kansas City, Mo. Filed July 26, 1928. Serial No. 295,436. 9 Claims. (Cl. 15—229.)



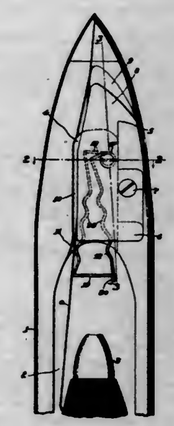
6. A mop head comprising a frame having a tapering body portion provided with a rounded forward end portion and having its greatest width at the rear end thereof, said rear end comprising a pair of spaced heel portions movable toward each other to transversely contract said frame at its portion of greatest width and a pair of aligned pivot members extending inwardly from opposite sides of said frame forwardly of said heel portions and a clip having bearings for pivotally receiving said pivot members.

1,785,217. FINGER RING. LEE M. WARGIN, St. Louis, Mo. Filed Feb. 6, 1930. Serial No. 426,323. 3 Claims. (Cl. 63—15.)



1. A finger ring including an outer composite black band and an inner supporting and reinforcing band, one edge of the outer band being flush with an adjacent edge of the inner band to present exposed edge portions of contrasting colors.

1,785,218. AUTOMATICALLY-THREADING LOOM SHUTTLE. CARL D. BROWN, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Jan. 27, 1930. Serial No. 423,658. 14 Claims. (Cl. 139—215.)

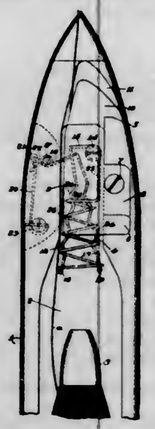


1. An automatically threading loom shuttle having a longitudinal thread passage and a side delivery eye communicating therewith, a plurality of thread tensioning members extending longitudinally of the thread passage and relatively yieldable in a direction towards and from each other, and thread guiding means to cause the thread during the first pick of the shuttle to be wrapped about the plurality of tensioning members as a unit as the thread is withdrawn from the shuttle, to thereby secure the same character of tension during the first and subsequent picks of the shuttle following replenishment.

1,785,219. AUTOMATICALLY-THREADING LOOM SHUTTLE. CARL D. BROWN, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 24, 1930. Serial No. 430,501. 10 Claims. (Cl. 139—215.)

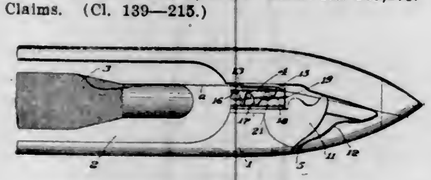
1. An automatically threading loom shuttle having a bobbin chamber, a longitudinal thread passage and a side delivery eye communicating therewith that the shuttle may be automatically threaded, a thread tensioning member having its forward end secured to the shuttle and resiliently responsive to deflection by the thread as it is withdrawn from the shuttle, and thread director positioned between said forward end and the supply of filling for directing a plurality of coils of the thread about the resilient tensioning member as the shuttle is picked.

1,785,220. AUTOMATICALLY-THREADING LOOM SHUTTLE. CARL D. BROWN, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 24, 1930. Serial No. 430,502. 10 Claims. (Cl. 139—215.)



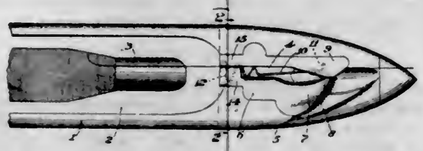
1. An automatically threading loom shuttle having a bobbin chamber, a longitudinal thread passage and a side delivery eye communicating therewith, a plurality of thread tensioning members constituted as arms extending longitudinally of the thread passage in spaced relation to each other and having their ends remote from the bobbin chamber secured to the shuttle and their ends adjacent the bobbin chamber free that the swirling thread may be wrapped about the plurality of spaced tensioning members as a unit by the swirling or revolving movement of the unwinding thread when the shuttle is picked and the tensioning members act within the thread wrappings under the pull of the thread and take up slack.

1,785,221. AUTOMATICALLY-THREADING LOOM SHUTTLE. CARL D. BROWN, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 25, 1930. Serial No. 431,236. 9 Claims. (Cl. 139—215.)



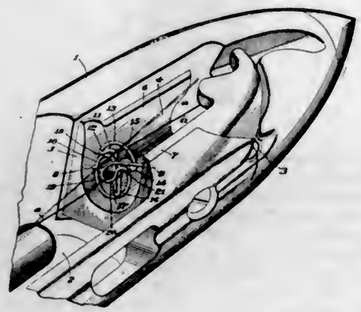
1. An automatically threading loom shuttle having a bobbin chamber, a longitudinal thread passage and a side

delivery eye communicating therewith, a plurality of thread tensioning members constituted as arms extending longitudinally of the thread passage, and a spiral unat-



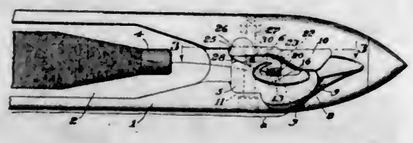
tached to and the coils of which enclose said plurality of tensioning members for directing the thread progressively about said tensioning members as a unit on the first pick of the shuttle following replenishment.

1,785,222. AUTOMATICALLY-THREADING LOOM SHUTTLE. CARL D. BROWN, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 2, 1930. Serial No. 449,178. 10 Claims. (Cl. 139—215.)



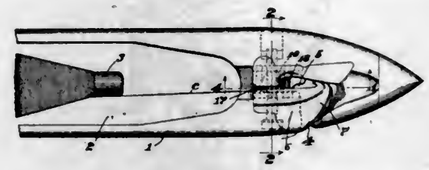
1. An automatically threading loom shuttle having a bobbin chamber, a longitudinal thread passage and a side delivery eye communicating therewith that the shuttle may be automtically threaded as the shuttle is picked, a thread tensioning member extending longitudinally of the thread passage and resiliently responsive to the pull of the thread to maintain tension thereon and take up slack during weaving, and a thread directing spiral the coils of which surround the tensioning member for progressively directing the thread about the resilient tensioning member as the shuttle is picked.

1,785,223. AUTOMATICALLY-THREADING LOOM SHUTTLE. CLARE H. DRAPER, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 25, 1930. Serial No. 431,155. 8 Claims. (Cl. 139—215.)



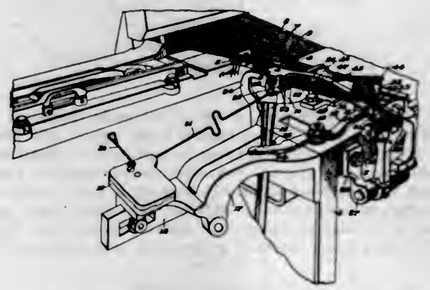
1. An automatically threading loom shuttle having a bobbin chamber, a longitudinal thread passage and a side delivery eye communicating therewith, a thread tensioning member extending longitudinally of the thread passage, an elongated spiral for directing the thread about the tensioning member, and a protecting guard extending about and over the top of the elongated spiral to prevent the thread from entanglement with the elongated spiral during weaving.

1,785,224. AUTOMATICALLY-THREADING LOOM SHUTTLE. VERNER LINDSJO, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 7, 1930. Serial No. 442,232. 8 Claims. (Cl. 139—215.)



1. An automatically threading loom shuttle having a bobbin chamber, a longitudinal thread passage and a side delivery eye, a tortuous thread tension device between the bobbin chamber and side delivery eye having the ends thereof secured to the shuttle at opposite sides of the thread passage in offset relation longitudinally of the thread passage, a thread deflecting loop formed in the tension device above one secured end thereof, a thread directing loop formed below the other secured end of the tension device, and a leg between the two loops about which the thread passes from the directing loop on its way to the thread deflecting loop.

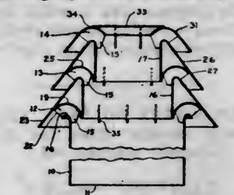
1,785,225. AUTOMATICALLY-THREADING LOOM SHUTTLE. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 27, 1929. Serial No. 416,776. 11 Claims. (Cl. 139—217.)



1. An automatically threading loom shuttle having a longitudinal thread passage and a side delivery eye communicating therewith that the shuttle may be automatically threaded, a thread tensioning post mounted at the point of communication between the side delivery eye and longitudinal passage, a tensioning plate supported independently of the post at the side of the thread passage opposite the tensioning post, a spring secured at the rear of the thread passage so that it is supported independently of said plate and having a forwardly extending portion bearing upon the tensioning plate that the thread may be tensioned between the post and plate as it passes about the post to the side delivery eye.

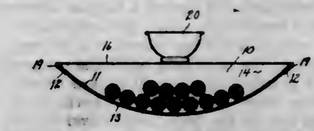
1,785,226. AUTOMATICALLY-THREADING LOOM SHUTTLE. HORACE E. WHITE and GEORGE M. F. DEPPER, Baltimore, Md., assignors to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 30, 1929. Serial No. 403,459. 8 Claims. (Cl. 139—212.)

1. An automatically threading loom shuttle having a longitudinal thread passage and side delivery eye, a thread tensioning ball loosely mounted in the longitudinal thread passage to engage and tension the thread on the first pick of the shuttle following replenishment, a ball cavity having side walls formed on curves one of which is higher than the other to cause the ball to gravitate to one side wall, a thread guide extending transversely of the thread passage above the bottom of the ball and over which the thread draws to direct the thread above the bottom of the ball and to one side thereof that the thread may be tensioned between the side of the ball and the adjacent side wall of the longitudinal thread passage during weaving.



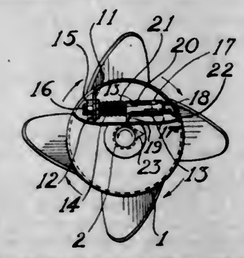
1,785,227. FILLING-REPLENISHING LOOM. FERDINAND A. F. SCHMID, Rosemary, N. C., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine, Filed Oct. 10, 1929. Serial No. 398,652. 11 Claims. (Cl. 139—230.)

1. In a filling replenishing loom, the combination of a filling feeler to detect the condition of the filling in the shuttle, a train of mechanism under control of the feeler to effect replenishment of filling when the feeler detects substantial exhaustion thereof, a filling fork mechanism to detect the presence or absence of filling in the shed, means actuated by the fork mechanism to stop the loom when the filling fork mechanism detects absence of filling, and a trip for rendering said train of mechanism inoperative to prevent the filling feeler from effecting replenishment of filling when it detects substantial exhaustion of filling and the fork mechanism detects absence of filling on the same detecting beat.



1,785,228. DISCHARGE LOUVER. HENRY F. SCHMIDT, Lansdowne, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 5, 1930. Serial No. 426,144. 16 Claims. (Cl. 98—66.)

1. In a ventilating louver for gaseous media, the combination of a main duct and a plurality of branch ducts for exhausting gaseous media therefrom, said branch ducts having their entrant portions facing in the direction of flow of the gaseous media through the main duct and their discharge portions extending outwardly and



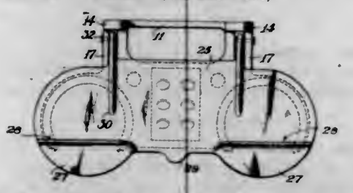
about the entire periphery of the main duct, the total flow-area of the entrant portions of said branch ducts being approximately equal to the flow-area of the main duct.

1,785,229. COMBINED DESK BLOTTER AND BOX. EMIL A. SCHUELKE, Meriden, Conn., assignor to The Napier Company, Meriden, Conn., a Corporation. Filed Sept. 30, 1929. Serial No. 396,053. 2 Claims. (Cl. 120—24.)

1. A box having a longitudinally bowed bottom provided at opposite sides with lips for the reception of ends of a strip of blotting-paper, and a cover hinged to one side of the box and provided on its top with a handle.

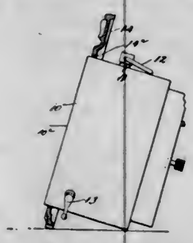
1,785,230. METHOD AND APPARATUS FOR CLEANING PIPE LINES. GEORGE A. SHANER and RALPH E. DAMP, Tulsa, and GEORGE G. DONOVAN, Seminole, Okla., assignors to Standard Oil Development Company, a Corporation of Delaware. Filed Sept. 18, 1929. Serial No. 392,471. 9 Claims. (Cl. 116—67.)

1. A method of cleaning pipe lines which comprises placing in the line a cleaning device, propelling the same thru the line and causing the device to energize a separate source of sound waves thereon to emit continuously sound audible at a distance.



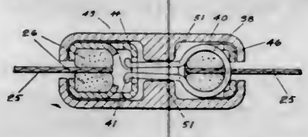
1,785,231. METAL BASE FOR NICKEL CLOCKS. JOHN O. SIMPSON, Bristol, Conn., assignor to the E. Ingraham Co., Bristol, Conn., a Corporation. Filed Nov. 2, 1928. Serial No. 316,640. 1 Claim. (Cl. 58—53.)

In combination with a clock case, a one-piece strap-like base having a mounting-reach to which the clock



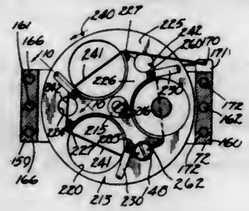
is secured, and two integral complementary feet extending downwardly from the ends of the said mounting-reach and substantially corresponding in width at their ends to the depth from front to rear of the said clock-case, whereby the clock is stabilized against tilting edgewise or flatwise.

1,785,232. MILK-BOTTLE HOLDER. RICHARD J. SIMS, Ottawa, Ontario, Canada. Filed Nov. 1, 1927. Serial No. 230,309. 1 Claim. (Cl. 248—65.)



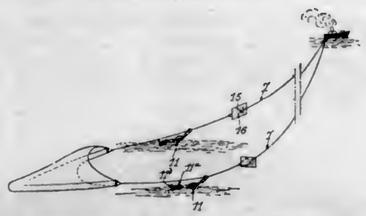
As a new article of manufacture, a holder including a one piece body constructed to provide a depending pocket open at its front side and having a bottom inturned flange inclined on its inner edges only; the material at the corners of the said pocket being turned out to form arcuate inturned flanges; the said body having a perforated arcuate depressed portion; and a cover hinged on said body to simultaneously close said pocket and the said arcuate depressed portion of the body; said cover having an upwardly offset portion at its outer edge over and projecting past the open front side of the said pocket.

1,785,233. ORNAMENTAL FRAME FOR ALARM CLOCKS. PAUL SIPTROTT, New York, N. Y. Filed May 4, 1928. Serial No. 275,034. 6 Claims. (Cl. 58—56.)



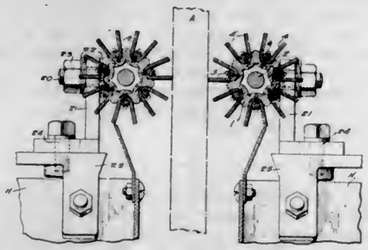
6. The combination with a clock having a casing, of a frame adapted to surround said casing, said frame having an opening therein, said opening having a bevelled wall tapering toward the front of said frame so that when said frame is mounted on said clock, the front portion of said bevelled wall forms the sole means of support of said frame on said clock.

1,785,234. SEPARABLE FASTENER. GIDEON SUNDBACK, Meadville, Pa., assignor to Hookless Fastener Company, Meadville, Pa., a Corporation of Pennsylvania. Filed Feb. 14, 1925. Serial No. 9,087. 21 Claims. (Cl. 24—205.)



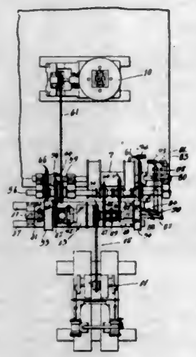
1. A slide type fastener comprising a pair of stringers having a plurality of pairs of opposed locking members, one member of each pair having a recess and the other member of each pair having resilient projections flexed to grip opposite edges of said recess.

1,785,235. VESSEL-CAPPING MACHINE. CHARLES L TURNER, Los Angeles, Calif., assignor of one-half to Ford W. Harris, Los Angeles, Calif. Filed Mar. 5, 1927. Serial No. 173,030. 27 Claims. (Cl. 226—92.)



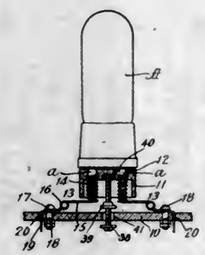
1. In a vessel capping machine, the combination of: a magazine for storing caps; a capping member movable toward a vessel for capping the same; a rotatable member for feeding a cap from said magazine into position between said capping member and said vessel; means upon said rotatable member for extending a string between said cap and said vessel; and means for cutting a piece from said string.

1,785,236. TRAWLING GEAR. JEAN-BAPTISTE JOSEPH ALPHONSE VIGNERON, La Rochelle, France, assignor to V. D. Limited, London, England. Filed Mar. 28, 1929, Serial No. 350,527, and in France May 16, 1928. 8 Claims. (Cl. 43—9.)



1. In a trawling gear, a net, a net cable connected to said net, a boat, a towing hawser connected to said boat, a buoyant shear board adapted to operate at a small distance above the ground, means for connecting said shear board with said net cable and hawser, a ballast member attached to said net cable adjacent said shear board and adapted to drag on the ground and a substantially cylindrical wire brush pivotally attached to said ballast member.

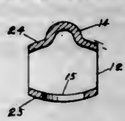
1,785,237. FILTER-CAKE DISCHARGER. JOSEPH V. ZENTHOEFER, Hazleton, Pa., assignor, by mesne assignments, to Oliver United Filters Inc., San Francisco, Calif., a Corporation of Nevada. Filed Feb. 15, 1927. Serial No. 168,274. 13 Claims. (Cl. 210—201.)



1. A device for stripping a filter cake from a filter screen comprising a rotating longitudinally grooved member, U shaped wiping members secured in said grooves with the legs of the U extending outward from the body member.

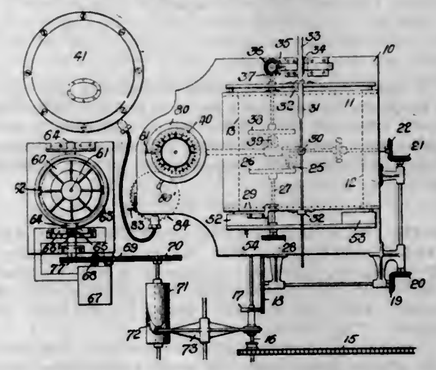
1,785,238. APPARATUS FOR DRILLING WELLS. LEWIS E. ZERBE, Moneta, Calif., and MERTON T. ARCHER, Pittsburgh, Pa., assignors to Union Tool Company, Torrance, Calif., a Corporation of California. Filed Apr. 30, 1925. Serial No. 26,880. 9 Claims. (Cl. 255—19.)

1. An apparatus for drilling wells, comprising a prime mover, a drill bit, means for rotating the drill bit, means for controlling the feed pressure on the drill bit, a differential connecting the prime mover with the rotating means and feed pressure control means, the connection between the differential and feed pressure control means consisting of a plurality of chain drives selectively utilizable for establishing various speed ratios between the differential and feed pressure control means, said chain drive operating through the medium of a countershaft.



1,785,239. SUPPORT FOR VACUUM TUBES. MILTON ALDEN, Springfield, Mass., assignor, by mesne assignments, to Robert S. Allyn, New York, N. Y. Filed Aug. 12, 1926. Serial No. 128,725. 6 Claims. (Cl. 173—328.)

1. A support for a vacuum tube or the like comprising, in combination, a base, an insulating member, a plurality of springs yieldingly supporting said insulating member upon said base, each of said springs embodying therein a torsion coil and a compression coil, the latter being fast to said insulating member and adapted to engage a terminal of a vacuum tube, said spring constituting an electric circuit connection thereto, and means to fasten each of said springs to said base.

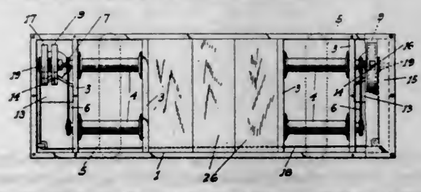


1,785,240. SEPARABLE FASTENER. PETER A. ARONSON, Rivercliffe, Devon, Conn., assignor to Hookless Fastener Company, Meadville, Pa., a Corporation of Pennsylvania. Original application filed June 14, 1923, Serial No. 645,223, and in Great Britain June 6, 1924. Divided and this application filed Jan. 23, 1928. Serial No. 248,675. 10 Claims. (Cl. 24—205.)

1. A locking member for a separable fastener having a projection and a recess on opposite sides of the member, the surfaces around the projection being transversely inclined away from the projection toward the recess side of the member and the surfaces around said recess being

transversely inclined away from the recess toward the projection side of the member to permit rocking of cooperating locking members on one another.

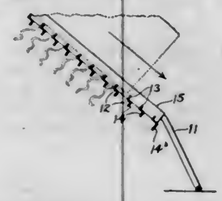
1,785,241. DEAD-RECKONING TRACER. MORTIMER F. BATES, Brooklyn, N. Y., assignor, by mesne assignments, to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 17, 1925. Serial No. 16,146. 14 Claims. (Cl. 234—8.)



1. In combination with a vehicle, a dead reckoning tracer comprising recording mechanism including a movable chart and a marker, means whereby said marker is moved in accordance with deviations from a predetermined course in azimuth of said vehicle, means for moving said chart, and means whereby said last named means is effective only as long as said vehicle has a component of travel along said course.

1,785,242. PROCESS OF RECLAIMING RESIDUES. ARMAN E. BECKER, Newark, and REGINALD G. SLOANE, Elizabeth, N. J., assignors to Standard Oil Development Company, a Corporation of Delaware. Filed Nov. 28, 1923. Serial No. 677,513. 3 Claims. (Cl. 196—34.)

1. The process of working up residues left from distillation of petroleum oils with caustic soda, which comprises thinning the residue with naphtha, washing with water and recovering naphthenates from the wash water, treating the residue while in the presence of naphtha with 66° Bé. sulphuric acid at the rate of about 50 lbs. to the barrel, settling and removing sludge, treating with caustic soda solution, washing, and distilling off naphtha.

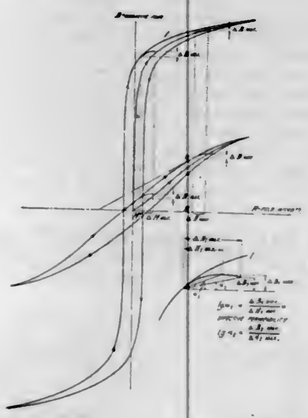


1,785,243. BRAKE-TESTING MACHINE. EDSON P. BEWLEY, Santa Cruz, Calif. Filed Jan. 9, 1928. Serial No. 245,412. 4 Claims. (Cl. 265—25.)

1. A vehicle brake testing machine including a roller to be engaged by a wheel of the vehicle, a pendulum

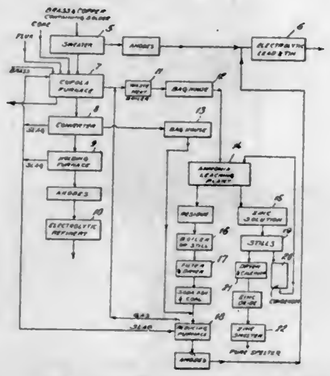
mounted independent of one roller, driving means for the roller mounted on the pendulum, and connections between the driving means and the roller for causing the force of the driving pressure to impart a rotation to the pendulum only when a resistance to the free rotation of the roller is had.

1,785,244. GRATER. THOMAS W. BIGONEY, Philadelphia, Pa. Filed Aug. 20, 1929. Serial No. 387,212. 2 Claims. (Cl. 146—180.)



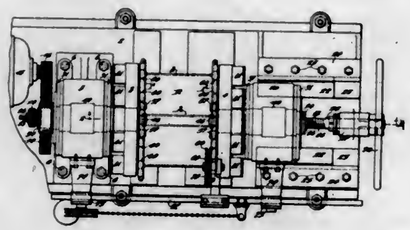
1. A grater comprising a frame supporting a body portion integrally formed with a series of parallel transverse members separated from each other by substantially rectangular open spaces, and having opposed perpendicular flanges reinforcing said members and forming cutting edges.

1,785,245. REMOVAL OF LEAD COATINGS FROM METALLIC ARTICLES. KIEL B. BOWMAN, Massillon, Ohio, assignor, by mesne assignments, to Republic Steel Corporation, Youngstown, Ohio, a Corporation of New Jersey. Filed Oct. 8, 1929. Serial No. 398,276. 10 Claims. (Cl. 75—18.)



1. The method of removing the lead coating from lead coated articles, which consists in treating the articles with an agent which oxidizes the lead coating and then removing the oxidized lead coating by means of an acid.

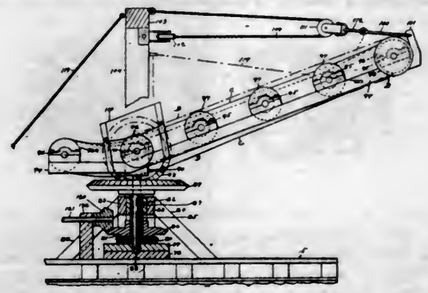
1,785,246. MAGNETIC MATERIAL. WIEBOLD FRANS BRANDSMA, POPKO REINDER DIJKSTERHUIS, GERARDUS JOHANNES SIZOO, and GOTTFRIED BRUNO JONAS, Eindhoven, Netherlands, assignors to Radio Corporation of America, a Corporation of Delaware. Filed Aug. 1, 1928, Serial No. 296,665, and in the Netherlands July 19, 1927. 1 Claim. (Cl. 175—21.)



A transformer core comprising magnetic material which is substantially decarbonized and partly oxidized to such an extent that the hysteresis curve is substantially straight.

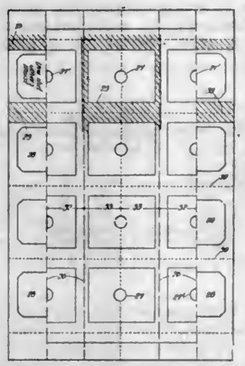
1,785,247. RECOVERY OF METALLIC ELEMENTS AND ALLOYS. HARVEY M. BURKEY, Plainfield, and DANIEL L. OGDEN, Woodbridge, N. J., assignors to American Metal Company, Ltd., New York, N. Y., a Corporation of New York. Filed Aug. 15, 1928. Serial No. 299,672. 15 Claims. (Cl. 75—17.)

1. The method of recovering copper and zinc from waste alloy material containing these elements, which comprises smelting the alloy material, separating a fume containing the zinc from the gases evolved by the smelting operation, leaching the fume with a solvent for the zinc and recovering the zinc from the solution.



1,785,248. CHUCK FOR SPOOLING OR REELING MACHINES. HERBERT S. BUSBY, Providence, R. I., assignor to American Electrical Works, Phillipsdale, R. I., a Corporation of Rhode Island. Filed June 28, 1929. Serial No. 374,496. 12 Claims. (Cl. 242—54.)

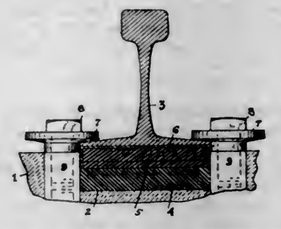
2. In a spooling or reeling machine, a chuck comprising a rotatable driving-head, a movable head adapted for adjustment towards and away from the driving-head, self-adjusting centers slidable axially of the heads to adapt them to engage the bore of a reel or spool, and means slidable on the heads to engage the sides of the reel to clamp the latter in position in the chuck to prevent it from running out of true or vibrating.



1,785,249. ROCK CONVEYER. ROY R. DAILEY, Colorado Springs, Colo. Original application filed Mar. 23, 1929, Serial No. 349,417. Divided and this application filed Jan. 27, 1930. Serial No. 423,851. 4 Claims. (Cl. 198—119.)

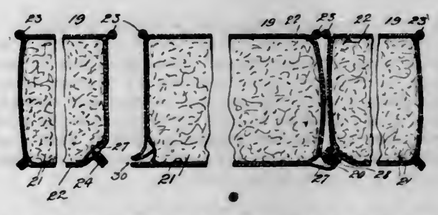
1. A stacker of the class described comprising a pair of main bearings mounted in vertical alignment; a vertically disposed hollow shaft journalled in said main bearings; a horizontally disposed secondary bevel gear keyed on said vertically disposed hollow shaft, between said vertically aligned bearings; a horizontally disposed drive shaft provided with bearings and carrying a bevel pinion meshed with said secondary bevel gear; a horizontally disposed main bevel gear keyed on said hollow shaft, above said main bearings; a vertically disposed solid shaft mounted

in said hollow shaft and carrying a bracket; a horizontally disposed conveyer actuating shaft journalled in said bracket, and carrying a bevel gear mounted on one end and meshed with said main bevel gear.



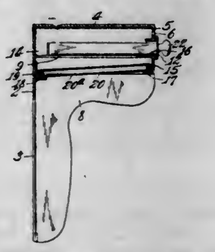
1,785,250. METHOD OF AND APPARATUS FOR MAKING TICKETS. STANLEY LEOPOLD HENRY EBERHARDT, London, England. Filed Jan. 29, 1929, Serial No. 335,972, and in Great Britain Jan. 31, 1928. 10 Claims. (Cl. 93—87.)

1. Apparatus for making tickets from a single blank each adapted to carry a removable slip, wherein the continuous section of the blank from which the removable slips are made is interposed between two other continuous sections of the blank adapted to form the outer layers of the ticket proper, comprising a blank reel, printing units for printing advertising matter on the sections of a blank, a stamping unit for severing the appropriate section of the blank along three lines which correspond with three sides of the removable slip, gluing rollers for applying glue to predetermined portions of the blank, a folding device for folding the printed section to lie between the unprinted sections, a cutting device for releasing the inset sections, and a cutting device for severing the tickets one from the other.



1,785,251. SUPPORT FOR RAILWAY RAILS. HARRY ETHERIDGE, Zelienople, Pa. Filed Feb. 12, 1930. Serial No. 427,829. 2 Claims. (Cl. 238—283.)

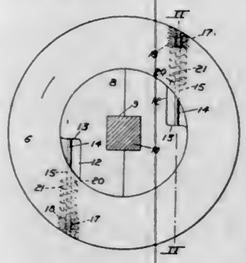
1. In a railway track construction, the combination with a rail support extending beneath the rail and longitudinally thereof and having formed in its upper surface a seat extending longitudinally of the rail support and beneath the position of the base of the rail and means carried by the support and engaging the sides of the base of the rail to prevent lateral displacement of the rail but permitting a limited vertical movement, of a resilient pad stepped in said seat and extending sufficiently above the top surface of the support to at all times hold the rail out



of contact with the support, and an inverted metal box having its bottom interposed between the rail base and the top of the pad and having its sides extending down into the seat and having a sliding fit with the walls of the seat, the upper portion of the pad being inclosed by the box.

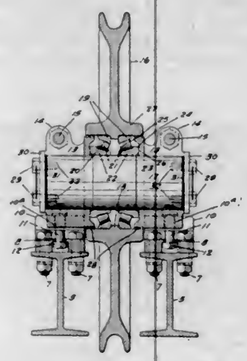
1,785,252. FOLDING MATTRESS. BENJAMIN M. FRANK, New York, N. Y., assignor to Greenpoint Metallic Bed Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Sept. 20, 1929. Serial No. 393,905. 1 Claim. (Cl. 5—357.)

A folding mattress for a davenport type of bed, including a lower mattress section and an upper mattress section secured to the lower mattress section at the front of the upper section and front of the lower section to provide a fold connection, the upper mattress section comprising cushions connected at the lower edges of their adjacent sides so as to expose when inverted a substantially continuous bed surface in the plane of the upper surface of the lower mattress section, the complete lower edge at the side of one of said cushions lying between the fabric of the side and bottom of the adjacent cushion and being secured thereto.



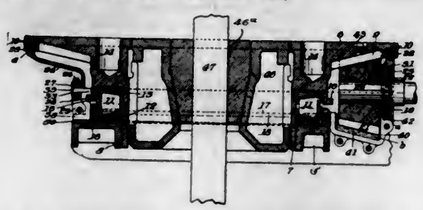
1,785,253. COVER FOR REGISTERS AND RADIATORS. WILLIAM K. GAMMETER, Cadiz, Ohio. Filed July 21, 1928. Serial No. 294,522. 2 Claims. (Cl. 237—79.)

1. In an air filtering and humidifying attachment for registers and radiators, a casing-like shield comprising side walls, front and rear walls and a top, all occupying permanently fixed relation, a drawer-like water pan occu-



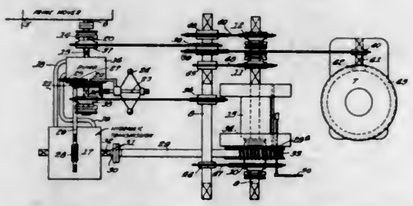
pying a position wherein it is enclosed by said shield walls, said pan being slidable through the front shield wall to and from said position, said pan being spaced from the top wall to provide an intermediate horizontal air passage and having its rear edge spaced from the rear shield wall to provide a vertical air passage opening into said horizontal passage, said front wall having therein air discharge openings located above the level of said pan, and means for filtering air passing to said vertical passage.

1,785,254. EARTH-BORING ROTARY. EDGAR E. GREVE, Bellevue, Pa., assignor, by mesne assignments, to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Apr. 17, 1923. Serial No. 632,672. 4 Claims. (Cl. 64—100.)



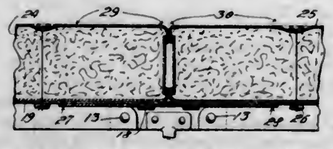
4. An apparatus of the class described comprising a driving member, a driven member, one of said members being cut away peripherally and having a portion thereof forming a radially disposed shoulder, a kick-out device tangentially disposed on the other member and normally engaging said shoulder to drive one device from the other device, said kick-out device being adapted to yield upon predetermined resistance being encountered to overcome the driving relation of the members.

1,785,255. CROWN-BLOCK-PULLEY CONSTRUCTION. EDGAR E. GREVE, Bellevue, Pa., assignor, by mesne assignments, to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Apr. 6, 1927. Serial No. 181,593. 7 Claims. (Cl. 308—208.)



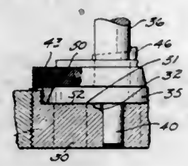
1. A crown block pulley including a relatively fixed shaft, a sheave, conical anti-friction bearings for the sheave, adjustable shaft bearings adapted to be anchored on supporting means and jointly with the sheave enclosing the anti-friction bearings and arranged for movement on the shaft for adjusting the sheave bearings, and means for moving the shaft bearings on the shaft.

1,785,256. ROTARY-DRILLING MACHINE. EDGAR E. GREVE, Bellevue, Pa., assignor, by mesne assignments, to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 23, 1928. Serial No. 256,143. 3 Claims. (Cl. 255—23.)



1. In a rotary drilling machine, the combination with a base, of a rotary table having a peripheral gear, an annular raceway between the table and the base, anti-friction bearings disposed in said raceway and interposed between the base and table, a drive pinion for the table, and a closure structure mounted on the base and cooperating with the table for enclosing the gear, anti-friction bearings and pinion, said closure structure including upper and lower members, said lower member mounted on and secured to the base and having hold-down means cooperating with means on the table, and lubricant-receiving means positioned outside of the base.

1,785,257. CONTROL MECHANISM FOR ROTARY DRILLING APPARATUS. EDGAR E. GREVE, Bellevue, Pa., assignor, by mesne assignments, to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 21, 1929. Serial No. 341,665. 5 Claims. (Cl. 255—19.)

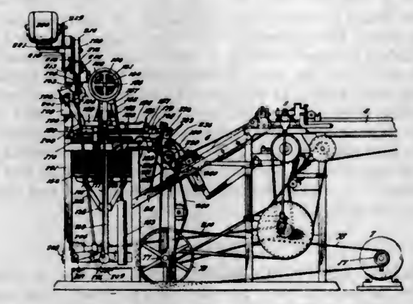


1. In a well drilling apparatus, the combination with a prime mover having a drive shaft, a rotary table, driving means between the prime mover and the table, a variable speed rotatable hoist mechanism, a drill stem suspended from the hoist mechanism and rotated by the table, and automatically operable means associated with the rotating and hoist mechanism including a hydraulic transmission mechanism having a shaft connected with the said drive shaft, means connecting the transmission mechanism and the hoist mechanism, and a governor for controlling the operation of the hydraulic transmission, said governor operatively connected with the drive shaft and actuated in accordance with the speed of rotation imparted to the drill stem.

1,785,258. FOLDING COT. HYMAN GURSKY and MORRIS VOLKES, Brooklyn, N. Y. Filed May 4, 1929. Serial No. 360,390. 4 Claims. (Cl. 5—357.)

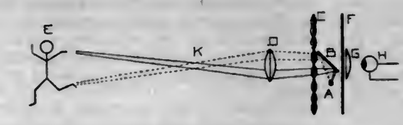
2. A combined canvas top and mattress for cots, the mattress being in two sections stitched to the top by transverse, spaced, lines of stitching at a considerable distance back of the adjoining edges of the sections, and which lines are at the middle portion of the top, and lines of stitching connecting the mattress sections with the top and extending some distance back of the side and end edges of the top, so as to leave the corresponding edge portions of the top and of the mattress sections free from each other, the mattress being of greater area than the top, whereby each of the mattress sections is provided with free edge portions all around, which when the top and mattress are flat, may abut at the adjacent edges of the sections, and which at the side and outermost extend a considerable distance beyond the edges of the top.

1,785,259. VALVE CONSTRUCTION FOR SLUSH PUMPS. HENRY P. HICKERSON, Anaheim, Calif., assignor to Ernest Koppl, Long Beach, Calif. Filed Jan. 10, 1927. Serial No. 160,123. 20 Claims. (Cl. 251—144.)



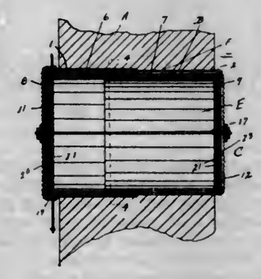
2. A valve construction for slush pumps comprising: a seat; a valve adapted to engage said seat; and a resilient sealing member carried by said valve and being operable to engage said seating member should any portion of the valve fail to engage said seats but being normally substantially disengaged from said seating member.

1,785,260. STENCIL SHEET. SHINJIRO HORII, Tokyo, Japan. Filed Nov. 17, 1928, Serial No. 320,215, and in Japan June 15, 1928. 1 Claim. (Cl. 41—38.6.)



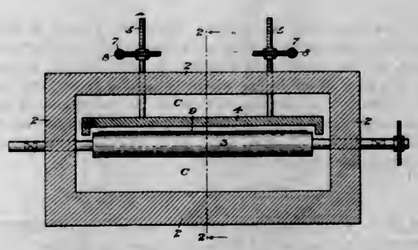
A stencil sheet adapted for stencilizing by pressure, comprising a base of fibrous material coated with a coating composition consisting of a solution of esters of polysaccharides, tempering agents and stabilizing coloring substances which absorb the ultra-violet rays of the sunlight.

1,785,261. MEANS FOR ASSEMBLING SHEETS AND APPLYING ADHESIVE THERETO. CHARLES C. HOWARD, Louisville, Ky. Original application filed Nov. 22, 1928, Serial No. 321,216. Divided and this application filed Sept. 20, 1929. Serial No. 394,006. 14 Claims. (Cl. 11—1.)



1. In a book-making machine, the combination of glue devices, and means for feeding sheets having folded ends to said devices and presenting the folded ends thereof thereto.

1,785,262. DUPLEX SCANNING DISK. CHARLES FRANCIS JENKINS, Washington, D. C., assignor to Jenkins Laboratories, Washington, D. C., a Corporation of the District of Columbia. Filed Sept. 6, 1928. Serial No. 304,353. 11 Claims. (Cl. 178—6.)

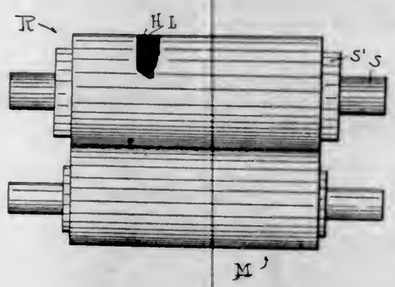


1. In spot scanning of electrically transmitted subjects, the combination of a rotatable scanning disk common to both spot illumination and spot cell-pickup; a source of light from which light is passed through said scanning disk; a disk having apertures in alignment with the scanning elements of said scanning disk and a light-sensitive cell upon which light from the source falls after passing through the said scanning disks.

1,785,263. VENTILATOR. JEDD L. JENSEN, Salt Lake City, Utah. Filed Mar. 1, 1930. Serial No. 432,287. 4 Claims. (Cl. 98—118.)

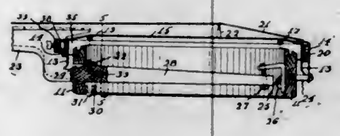
1. In a ventilator the combination of two telescoping cylindrical members having the outer end of each closed with openings therethrough; another set of similar telescoping cylindrical members carried therein having openings in the ends thereof adapted to be partially rotated into alignment with the openings in the first members as desired.

1,785,264. METHOD OF AND APPARATUS FOR ANNEALING MATERIALS. CHARLES B. KINGSLEY, Clairton, Pa., assignor to Mississippi Glass Company, a Corporation of New York. Filed Mar. 8, 1927. Serial No. 173,675. 6 Claims. (Cl. 49—47.)



1. The method of annealing a continuously formed sheet of glass, comprising advancing the sheet of glass through an annealing chamber of fixed cross section, and controlling the rate of cooling of the sheet of glass as it

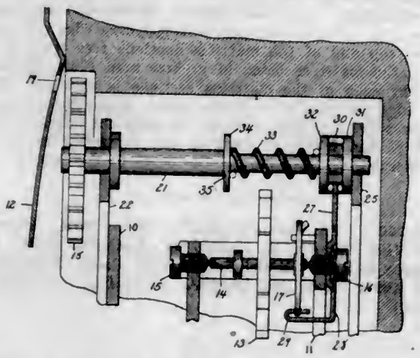
passes through said chamber by interposing between the upper surface of the sheet and the upper wall of said chamber a heat absorbing and heat retaining element without restricting the cross sectional area of the chamber.



4. In an apparatus for annealing a continuously formed sheet of glass, the combination comprising an open ended treating chamber of fixed cross section, means for conveying a sheet of glass through said chamber, and a heat absorbing and heat retaining curtain disposed immediately above the sheet of glass and away from the walls of said open ended chamber.

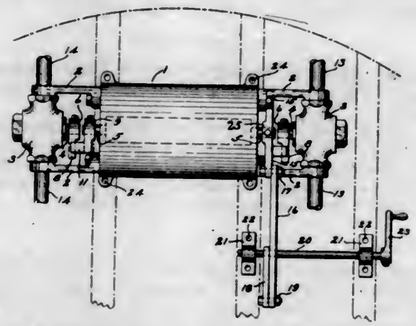
1,785,265. CALENDER ROLL. ARCHIBALD LADE, Northampton, Mass., assignor to B. F. Perkins & Son, Inc., Holyoke, Mass., a Corporation of Massachusetts. Filed Dec. 21, 1928. Serial No. 327,651. 2 Claims. (Cl. 92—71.)

1. A pair of calender rolls for finishing paper comprising in combination, a metallic roll having a relatively rigid body and a non-yieldable surface, a roll having a relatively non-rigid heat resisting body and a yieldable surface, the latter roll including a metallic shaft and paper and asbestos laminations intermingled to form a body which are held together in pressed relation by flanges at opposite ends of said shaft.



1,785,266. NECK ADJUSTER FOR BANJOS. WILLIAM L. LANGE, New York, N. Y. Filed July 11, 1929. Serial No. 377,376. 8 Claims. (Cl. 84—293.)

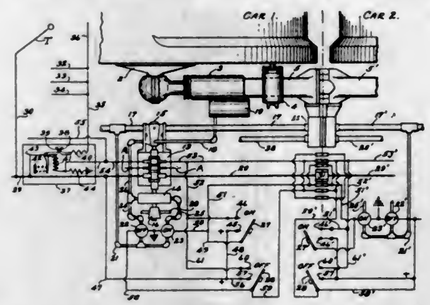
1. In a banjo and the like an inner rim, a neck, a dowel forming an extension of said neck adjustably pivotally connected at the lower end thereof to said rim at a point near the part of said rim, which is remote from said neck, and a means for turning said neck in the plane of said rim around said point as a pivot, thereby adjusting the angular position of said neck with relation to said rim in a plane parallel to the latter.



1,785,267. REGULATOR FOR CLOCK MOVEMENTS. WILLIAM J. LARGE and JOHN O. SIMPSON, Bristol, Conn., assignors to The E. Ingraham Co., Bristol, Conn., a Corporation. Filed Nov. 2, 1928. Serial No. 316,702. 2 Claims. (Cl. 58—109.)

1. In a clock, the combination with a time-movement having an escapement, of regulating-mechanism for the said escapement, a dial having a regulating-opening extending from front to rear therethrough, a toothed regulating-wheel located behind the said dial in the plane thereof in

position to have its teeth directly engaged through the said opening therein and mounted with capacity for full rotation, and movement-reducing connection between the said wheel and the said regulating-mechanism.

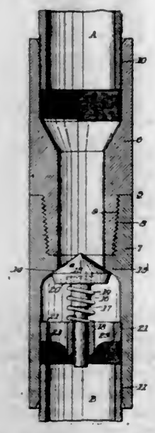


1,785,268. VALVE AND SWITCH OPERATING MEANS. ERNST A. LARSSON, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed May 16, 1927. Serial No. 191,707. 3 Claims. (Cl. 200—53.)

1. Electric and air control mechanism comprising a pair of valves spaced apart to control separate air lines, a drum type switch interposed between the valves and rotatable about a separate axle, but the axes of the switch and valves being in substantial alinement, an arm secured to each valve and projecting at right angles to the axis thereof to transmit motion to the valves, an arm secured to each end of the axle of the switch drum and projecting at right angles to the axle, spaced members projecting laterally from one pair of said arms, engaging with the other pair of said arms between said spaced members to cause said pairs of arms to rotate in unison and means on one of said arms to transmit motion alternately in two directions to the said arm to rotate the valves and drum switch in unison.

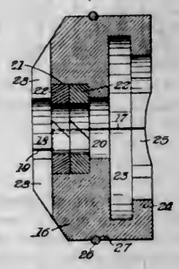
1,785,269. COUPLING MECHANISM. ERNST A. LARSSON, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Sept. 7, 1929. Serial No. 391,044. 19 Claims. (Cl. 246—62.)

1. The combination with an electrically operated car, of car, air and electric couplers, an air system and electric circuits connected to the air and electric couplers respectively, a valve to control the air current, a circuit switch to control the electric circuits to the coupler, air operated means to operate the switch and valve to open the valve when the switch is closed, a conductor switch to control the current from a conductor and electrically operated



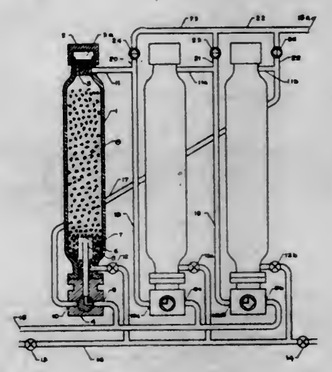
means to automatically close this switch whenever the conductor is energized and to hold the switch closed, means to open the switch when the conductor is de-energized, and manually operated means to short circuit the electrically operated means to open the last said switch at will of the operator prior to the opening of the circuit switch.

1,785,270. PROCESS OF PREPARING PETROLATUM AND THE LIKE AND PRODUCT OBTAINED THEREBY. FRANCOIS LAVIROTTE, Lyon, France, assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Sept. 30, 1925, Serial No. 59,518, and in France Oct. 4, 1924. 13 Claims. (Cl. 196—40.)



7. In a process of preparing petrolatum of substantial purity, the improvement which comprises reacting at an elevated temperature with fuming sulfuric acid upon a material containing petrolatum associated with carbonizable substances, continuing the acid treatment until the said substances are converted into non-liquid carbonaceous bodies, and separating the residual petrolatum.

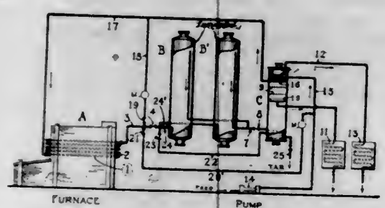
1,785,271. BACK-PRESSURE JOINT. JOHN D. LEMEX, Tulsa, Okla., assignor, by mesne assignments, to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed June 5, 1928. Serial No. 283,011. 3 Claims. (Cl. 137—69.)



1. A drill pipe float joint comprising a hollow body having an interiorly extending portion integral therewith formed with a reduced bore portion, said portion on one side being adapted for abutment by the adjacent element of the drill pipe line and on its other side providing a valve seat, a valve guide within and supported by the hollow body below the seat, and a spring pressed valve interposed between the guide and the seat, said guide having a fluid passage area greater than the valve area to permit of an uninterrupted flow of fluid through the joint.

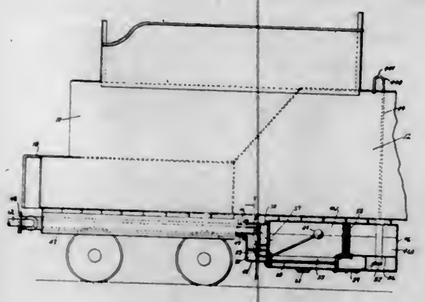
1,785,272. SAND CAP. JOHN D. LEMEX, Tulsa, and DEWEY R. SMITH, Ardmore, Okla., assignors, by mesne assignments, to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed June 13, 1928. Serial No. 284,920. 1 Claim. (Cl. 286—18.)

A sand cap for the purpose specified having a bore therethrough, said cap being in separable sections, said bore being enlarged to form a groove, packing disposed in said groove for engagement with a polish rod, said cap below said groove having a depending marginal flange adapted to surround the stuffing-box below its upper end, said bore being further enlarged to provide a recess adapted to receive parts of a stuffing-box for attachment of the cap thereto, a contractile ring securing said sections together, said sections adjacent the top having oppositely extending lateral flanges, and the sections having recesses receiving said latter flanges.



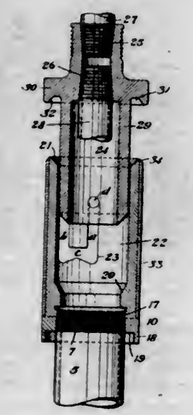
1,785,273. METHOD AND APPARATUS FOR TREATING FLUIDS WITH SOLIDS. ISAAC H. LEVIN, Pittsburgh, Pa., assignor, by mesne assignments, to Gas Industries Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 1, 1925. Serial No. 34,073. 12 Claims. (Cl. 183—39.)

1. In an apparatus for treating fluids, a casing having a fluid inlet end and a fluid outlet end, a cap associated



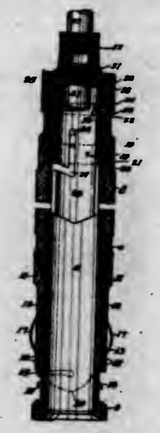
with the inlet end, and a valve controlled pipe dually functioning to discharge water into the inlet end to flush same and to accommodate drainage therethrough.

1,785,274. ART OF PYROLYSIS. NATHANIEL E. LOOMIS, ALBERT H. TOMLINSON, and FRANK A. HOWARD, Elizabeth, N. J., assignors to Standard Oil Development Company, a Corporation of Delaware. Filed May 31, 1923. Serial No. 642,400. 8 Claims. (Cl. 196—51.)



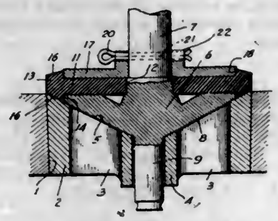
6. The improvement in the art of pyrolytic conversion under pressure of hydrocarbon oils to lower boiling products, which comprises flowing a stream of the hydrocarbons through a heating zone under conditions of temperature, pressure, and time such as to give substantial cracking and substantial evaporization, then through a zone in which the oil is held for a relatively longer time, introducing relatively cool oil into the last mentioned zone to hold a temperature therein substantially lower than the temperature in the first zone but not below an effective cracking temperature, and withdrawing substantially all the fluid products together from the last mentioned zone.

1,785,275. HEATING UNIT FOR LOCOMOTIVE TENDERS. NATHAN M. LOWER, Pittsburgh, Pa., assignor, by mesne assignments, to The Standard Stoker Company Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 7, 1924. Serial No. 684,802. 4 Claims. (Cl. 122—434.)



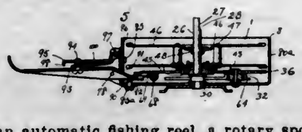
1. In a tender for locomotives, a tank, a reservoir associated with said tank from which water is supplied to the boiler of said locomotive, means for conducting the exhaust steam of said locomotive to said reservoir, means associated with said reservoir and controlled by the water level therein admitting said steam thereto, and means controlled by the pressure in said reservoir for admitting water to said reservoir from said tank.

1,785,276. OIL-WELL PACKER. PATRICK H. MACK, Bradford, Pa., assignor, by mesne assignments, to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed July 6, 1927. Serial No. 203,804. 2 Claims. (Cl. 166—12.)



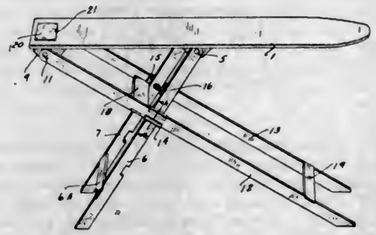
1. A device of the class described comprising a head including a body portion formed with a slot, a sleeve embracing the body portion of the head, a member associated with the head and having a pin connection with the slot of the head.

1,785,277. OIL-WELL PACKER. PATRICK H. MACK, Bradford, Pa., assignor, by mesne assignments, to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed July 6, 1927. Serial No. 203,805. 1 Claim. (Cl. 166—12.)



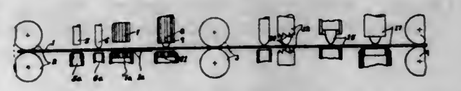
The combination with a tubular body of a packer, a relatively short head on said body having its bore of substantially the same diameter as the adjacent portion of the body, a cap surmounting the head and having sealing engagement therewith, a depending tubular portion carried by the cap and substantially snugly fittting the bore of the head and the body, said tubular member having an irregular slot opening through the lower end thereof, and a pin carried by the head and disposed in said slot.

1,785,278. VALVE. JOHN W. MACCLATCHIE, Compton, Calif. Filed July 6, 1927. Serial No. 203,780. 5 Claims. (Cl. 251—127.)



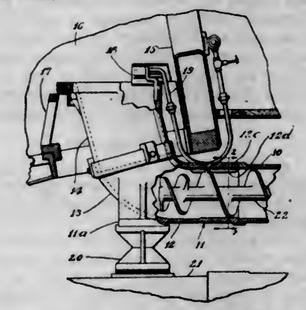
1. In a valve the combination of a valve seat comprising an annulus having inwardly extending ribs with the end of the annulus and ribs forming a tapering seating surface, and a valve including a body and packing thereon, the body forming a wear-resisting seating surface, and the packing forming seating surfaces at its opposite faces and adapted for reverse mounting relative to the body for juxtaposing either of said packing seating surfaces and the wear-resisting seating surface so as to form a continuous tapering seating surface of which the packing and wear-resisting portions are adapted for respective engagement with the annular portion and the rib portion of the tapering seating surface of the valve seat.

1,785,279. BRAKE FOR AUTOMATIC REELS. ALFRED D. MAURY, Ilion, N. Y., assignor to Martin Automatic Fishing Reel Company, Incorporated, a Corporation of New York. Filed Apr. 14, 1927. Serial No. 183,877. 5 Claims. (Cl. 242—84.5.)



1. In an automatic fishing reel, a rotary spool, a horseshoe shaped brake member having arms with leather strips thereon adapted to make contact with said spool for stopping the rotation of said spool, and a pivotally mounted lever to release said brake member.

1,785,280. IRONING BOARD. HUBERT C. MORRIS, Albany, Oreg. Filed May 12, 1928. Serial No. 277,275. 4 Claims. (Cl. 68—10.)



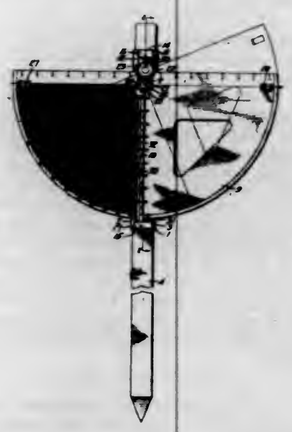
1. An ironing board including folding legs for the same, the legs being fixedly hinged upon one end to the board member, sleeves carried by one pair of such legs within which the other pair of such legs are slidable, each of said sleeves constituting a single member formed of sheet material having a base or bed, upwardly turned side walls spaced apart, inwardly turned rear walls spaced from the bed and parallel thereto, the edges of the rear walls being spaced apart to provide an opening therebetween, and means for pivotally supporting such sleeve upon its associated carrier leg.

1,785,281. MECHANISM FOR FORMING LOCK WASHERS. CARL G. OLSON, Chicago, Ill., assignor to Shakeproof Lock Washer Company, Incorporated, Chicago, Ill., a Corporation of Delaware. Filed Nov. 17, 1927. Serial No. 233,749. 2 Claims. (Cl. 10—73.)

1. Means for producing two different kinds of pronged lock washers from the same stock strip, comprising strip-feeding means, dies for progressively piercing and piloting the strip, a ribbed punch and a complemental ribbed die adapted to blank one of said washers and to push it part way only through the strip, a second ribbed punch and a ribbed die having beveled work-engaging faces on its ribs adapted to push said washer completely through the stock and to simultaneously twist its prongs, the spaces for the prongs between adjacent ribs in said last mentioned die being narrower than those in the said blanking die, a pilot, a tooth-twisting punch and die adapted to twist the prongs remaining in the stock strip after passing the above mentioned dies, a die for flattening the area of the annular ring of material surrounding the said last mentioned prongs and a blanking punch and die for severing said flattened ring from the stock strip, thereby producing a second washer.

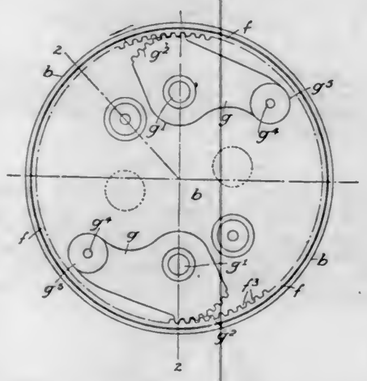
1,785,282. CONVEYER FOR STOKERS. FRANK C. PICKARD, Erie, Pa., assignor to The Standard Stoker Company, Incorporated, a Corporation of Delaware. Filed Dec. 18, 1928. Serial No. 326,869. 6 Claims. (Cl. 198—15.)

1. A conduit elbow for a stoker having upright sides and a roof portion, the inner face of its roof portion being provided with a curved bearing surface terminating short of said upright sides.



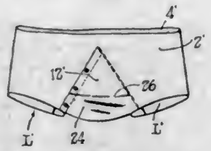
1,785,283. PROCESS FOR PRODUCING LAMELLIFORM METAL POWDERS. EMIL PODSZUS, Berlin-Friedrichshagen, Germany, assignor to Hartatoff-Metall Aktiengesellschaft (Hametag), Berlin-Copenick, Germany. Filed Sept. 6, 1923, Serial No. 661,331, and in Germany Sept. 12, 1922. 2 Claims. (Cl. 134—76.)

1. The method of producing a lustrous metal product composed of lamelliform particles for use in the manufac-



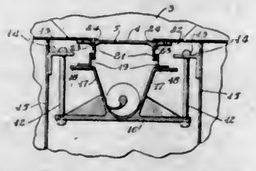
ture of bronze paints, comprising subjecting the particles of previously finely comminuted metal to continual impact between a large number of tiny steel balls by imparting to said steel balls a revolving motion.

1,785,284. SURVEYING INSTRUMENT. WILLIAM T. RHODES, Mariposa, Calif. Filed Oct. 24, 1927. Serial No. 228,289. 10 Claims. (Cl. 88—2.2.)



4. In a surveying instrument of the class described, a support, staff means for locating said support at a predetermined distance above a surface, a sector rotatably mounted at an axis of the support, a level carried by said support, sights on said sector, and means between the sights enabling an operator to observe the level while looking through said sights to maintain the staff means in a desired angular position relative to said surface.

1,785,285. CENTRIFUGAL GOVERNOR. JOHN HOGG ROBERTSON, London, England. Filed July 7, 1928, Serial No. 291,121, and in Great Britain Apr. 10, 1928. 7 Claims. (Cl. 264—16.)

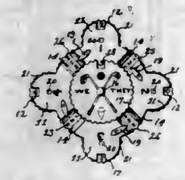


1. A governor comprising a rotary casing, an annular member mounted concentrically within said casing and capable of angular movement in relation thereto, a plurality of weighted levers pivoted upon said casing and interiorly of said annular member, each of said levers including a toothed sector, said annular member having internal teeth meshing with the toothed sectors of said levers, the centers of gravity of said levers being so disposed in relation to their respective fulcra that said sectors co-operate in producing angular movement of said annular member as a result of centrifugal force, and resilient means for opposing the angular movement of said annular member.

1,785,286. UNDERWEAR GARMENT. ERNEST W. ROBISCHON, Mount Vernon, N. Y., assignor, by direct and mesne assignments, of one-half to Frank Chodorov and one-half to Step-in-all Underwear, Corporation, a Corporation of Massachusetts. Filed May 7, 1929. Serial No. 361,114. 1 Claim. (Cl. 2—78.)

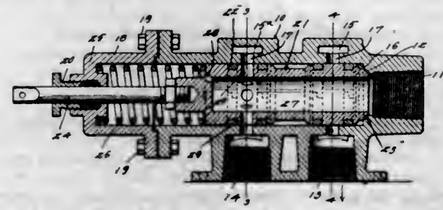
A step-in underwear garment comprising in combination, front and rear sections of fabric joined together at upper and side marginal edges providing unsecured lower edges and having neck and arm openings at the upper and side edges thereof, the said sections being provided with V-shaped cutouts having side edges which converge upwardly from points on the lower marginal edges of the sections which are spaced inwardly from the sides thereof, a gusset member having converging V-shaped ends, the side edges of the rear end and one side edge of the front end of said gusset being secured to the side edges of the cut-outs on said sections leaving a free edge of the gusset for overlying a free edge of the cut-out in the front section, the said gusset joining the sections together to provide leg openings at either side thereof and including end portions and a central portion of fabric which is relatively more elastic than the fabric of the garment having its upper rear and forward edges secured to said end portions of the gusset, the said central portion being arranged to distend between the leg openings.

1,785,287. LOCOMOTIVE TENDER. EDWARD RYAN, Knox, Ind., and ERNEST R. FUNK, Galesburg, Ill., assignors to The Standard Stoker Company, Incorporated, New York, N. Y., a Corporation of Delaware. Original application filed Nov. 24, 1928, Serial No. 321,541. Divided and this application filed Jan. 7, 1930. Serial No. 419,099. 7 Claims. (Cl. 105—234.)



1. In a tender, the combination of a fuel bin having a floor with an opening therein, a pair of members positioned beneath said floor and extending along the opposite sides of said opening and having inclined upper surfaces providing a pair of parallel supporting guideways, and a plurality of plates having angularly formed edges slidable on said guideways to control the supply of fuel through said opening.

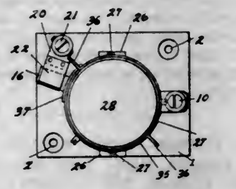
1,785,288. GOLF SCORING DEVICE. JAMES E. SWARTHOUT, Elmira, N. Y. Filed Apr. 16, 1928. Serial No. 270,339. 1 Claim. (Cl. 235—114.)



An article of manufacture, a golf scoring device comprising a substantially square cover plate having at the ends of each of its normally arranged diameters and diagonals a sight opening, two rotatable registering disks

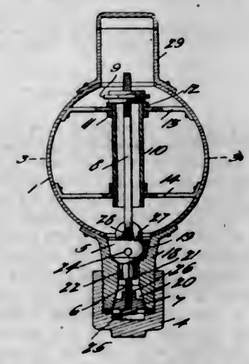
with medal play indices and arranged on the inner side of and rotatably connected with said cover plate, said disks superimposed and overlapping each other at their inner sides and their indices adapted to register with the sight openings at the ends of one of the diameters of said plate, a rotatable registering disk with stroke play indices and arranged on the inner side of said plate at each end of each of said diagonals with their indices adapted to register with the sight openings at the ends of said diagonals, a second substantially square cover

plate, two rotatable registering disks with medal play indices similar to aforesaid first mentioned disks and arranged on the other diameter at the inner side of and rotatably connected with said second plate, said last mentioned disks superimposed and overlapping each other at their inner sides, said cover plates surrounding said disks and secured together so that their diameters and diagonals coincide and the indices of the two rotatable disks on one of said cover plates register with the sight openings at the ends of the diameter of the other cover plate.



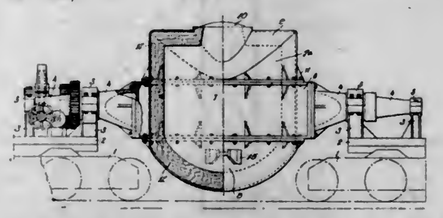
1,785,289. BALANCED VALVE. JOHN WILSON TUCKER, Beaumont, Tex. Filed Apr. 24, 1928. Serial No. 272,485. 1 Claim. (Cl. 251—76.)

In a valve, a barrel provided at one end with an axial port and provided between its ends with longitudinally spaced intake and exhaust ports, the barrel being provided with annular passages communicating with the intake and exhaust ports and with annular series of radial ports communicating therewith and with said axial port, a bonnet secured to the other end of the barrel, an annular valve seat within the barrel about the axial port, a piston slidable within the barrel for adjustment into closed or opened position and provided with a longitudinal bore opening out through its inner and outer ends and in constant communication with the bonnet and axial port, the piston extending across one of the annular series of radial ports when in closed position and having its inner end arranged between the series of these ports when in opened position, the piston being provided with radial ports communicating with the bore and communicating with one of the series of radial ports when the piston is in closed position, and an annular seat on the inner end of the piston contacting with said first seat when the piston is in closed position.



1,785,290. SAFETY ELECTRICAL DEVICE. GEORGE E. WADSWORTH, Erlanger, Ky., assignor, by mesne assignments to The George B. Wadsworth Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 4, 1929. Serial No. 368,244. 8 Claims. (Cl. 200—50.)

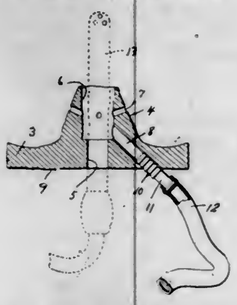
1. In an electrical device, a series of concentric tubes, one of said tubes comprising a housing, another a cover movable longitudinally with respect to said housing, and a third an operating tube movable in a rotary manner with respect to said housing, and means interrelating the movements of the said tubes whereby when the second



of said tubes is in one longitudinal position, the third may not be rotated, and when the third has been rotated to a given position, the second may not be moved longitudinally.

1,785,291. HERMETICALLY-CLOSING-UP DEVICE FOR CARS. ANDREW YAKUNIN, Calgary, Alberta, Canada. Filed June 8, 1929, Serial No. 369,355, and in Canada May 2, 1929. 1 Claim. (Cl. 137—21.)

A tank car or the like formed with an outlet having inwardly converging upper and lower valve seats, a valve cooperating with the upper seat, a stem depending therefrom, a valve adapted to be threaded on said stem and having wedging cooperation with the lower seat, a valve stem for the upper valve, a cylindrical guard for the stem arranged within the tank car, and a nut threaded on the upper stem and supported on the guard for adjusting the position of the upper valve.

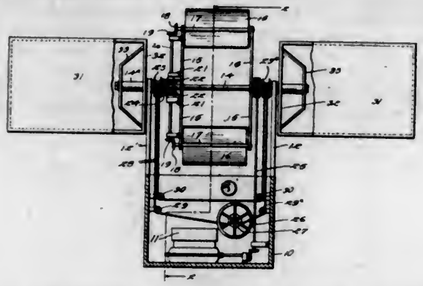


1,785,292. HOT-METAL CAR. CARL P. ASTROM, East Orange, N. J., assignor to M. H. Treadwell Company, New York, N. Y., a Corporation of New York. Filed Apr. 23, 1929. Serial No. 357,589. 1 Claim. (Cl. 22—81.)

In a vertical type hot metal car, a multisection body comprising a dished bottom, a central cylindrical section joining said dished bottom at one end, a top cylindrical section joining said central cylindrical section at its other end, and a spout on the top section, said top section hav-

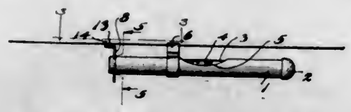
ing its axis in a plane substantially at right angles to the plane of the axis of the central cylindrical section, the sides of said spout lying within a projection of the walls of the central cylindrical section of the body and the uppermost portion of said spout lying closely adjacent to a plane perpendicular to the axis of the central cylindrical body section and passing through the intersection of the axis of the central cylindrical body section with the cylindrical portion in which the top cylindrical section of the body lies.

1,785,293. SYRINGE ATTACHMENT. JOSEPH W. BRUNETTE, Fordson, Mich. Filed Mar. 2, 1929. Serial No. 343,975. 1 Claim. (Cl. 128—244.)



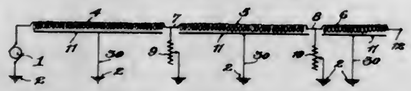
A shield for a syringe comprising a substantially solid body of resilient material having a flat base of substantial thickness concaved on its upper side, and a tapering protuberance extending centrally from the concaved side of the base, said body having an opening extending centrally through the base and protuberance for the reception of a syringe nozzle and having the opening restricted at the lower portion of the body to dispose the material of the latter closely about the nozzle for substantially the full thickness of the base and being enlarged at the upper portion of the body to provide a relatively large waste collecting chamber around the nozzle, said body being further provided with end flow openings communicating with the chamber through the side walls of the protuberance and a drain opening communicating with the chamber from the bottom side of the base.

1,785,294. TOBACCO CAN. ARTHUR E. CALVIRD, Farmington, Mo. Filed Jan. 13, 1930. Serial No. 420,427. 3 Claims. (Cl. 206—38.)



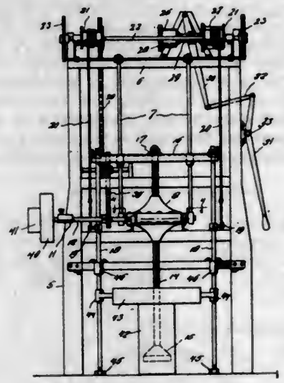
1. A tobacco container of the class described open at each end, covers for each end of the container and a match holder positioned in one end of the container and movable longitudinally thereof.

1,785,295. AEROPLANE. JOHN A. CASHEL, Worthington, Minn. Filed Aug. 6, 1929. Serial No. 383,866. 6 Claims. (Cl. 244—16.)



1. In an aeroplane, a driven shaft, a plurality of pairs of spaced arms secured thereto, a blade rotatable between the outer ends of each pair of arms, a drum rotatably mounted upon the shaft and a connection between each blade and said drum whereby each blade is rotated once for each two rotations of the shaft, each blade at a corresponding point with relation to the shaft being radial to the shaft and a pair of wings mounted on said driven shaft and connected to said drum and adapted to be adjustably rotated therewith.

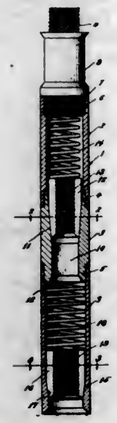
1,785,296. LINE LEVEL. ANDERS E. CHRISTENSEN, Mayfield Heights, Ohio. Filed July 21, 1927. Serial No. 207,460. 3 Claims. (Cl. 33—207.)



1. A line level of the class described, comprising, in combination, an elongated casing having slots near one end thereof, said end being crimped, a suspension member secured to the casing, a member slidable in said slots and having a screw threaded aperture therein, a washer within said casing and interposed between the last named member and the crimped end of the casing, said washer having a slot therein, and a screw passing through the slot in the washer and engaging the screw threaded aperture in said member, whereby the member may be adjusted in respect to the casing.

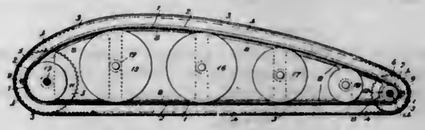
1,785,297. ELECTRIC SIGNALING. LOUIS COHEN, Washington, D. C. Filed Nov. 17, 1927. Serial No. 233,919. 12 Claims. (Cl. 250—20.)

1. A system for the selective reception of electric signals of a particular frequency which consists in interposing between the source where the signals are received and the detecting means, a sectional wave conductor comprising several sections each of said sections except the last adjusted to a half wave length corresponding to the frequency of the signal, and the last section of said sectional wave conductor adjusted to a quarter wave length corresponding to said signal frequency; also providing resistance leaks connected at the juncture points of adjacent sections of said sectional wave conductor and associating with said sectional wave conductor means for detecting said electric signals.



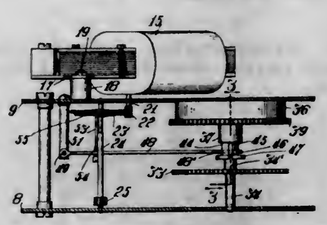
1,785,298. MACHINE FOR MAKING CONCRETE PIPES. STEPHEN H. COOGAN, Elsinore, Calif., assignor to Coogan Concrete Machinery Company Ltd., Elsinore, Calif. Filed May 8, 1928. Serial No. 276,072. 2 Claims. (Cl. 25—30.)

1. A machine for making concrete pipes comprising a vertically movable frame, a vertically disposed packer carrying shaft swivelly connected at its upper end to said movable frame and supported thereby for vertical movement with said frame, a gear splined on said packer shaft, means for holding said gear in a fixed given horizontal plane, a worm gear meshing with said gear, a horizontally disposed power shaft for driving said worm gear, power means for driving said power shaft and for operating said packer shaft vertically, and hand operatable means for actuating said power means, said hand operatable means adapted when moved in one direction to actuate the packer shaft upwardly and adapted when moved in the other direction to brake the gravity descent of the packer shaft and all parts movable therewith



---

1,785,299. WELL-FISHING TOOL. LOUIS E. DAVIS, Seminole, Okla. Filed Sept. 28, 1929. Serial No. 395,926. 1 Claim. (Cl. 294—102.)

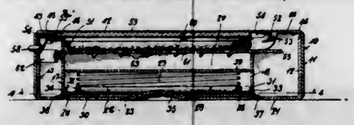


A well fishing tool comprising similar upper, lower and intermediate tubular sections of like external diameter and having openings therethrough of different diameters, the intermediate and lower sections having the bottom portion of the openings of uniform diameter and the part immediately thereabove tapered, slips in the respective sections having their lower ends tapered and their upper ends of uniform diameter, the slips in the intermediate section being of less external diameter than the slips in the lower section, and springs coacting with the slips to exert a downward pressure thereon to hold their tapered ends in the tapered openings of the respective sections.

1,785,300. ROLLING APRON FOR AIRPLANE WINGS. FILIBERTO DE LA TOUR CASTELCICALA, Rome, Italy. Filed Aug. 2, 1929, Serial No. 383,084, and in Italy Aug. 3, 1928. 5 Claims. (Cl. 244—14.)

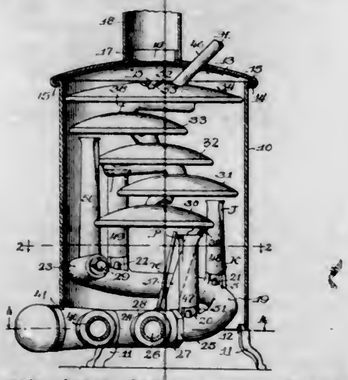
1. A device for producing an unbalanced pressure on the wings of an aircraft comprising a plurality of rotatable supporting elements secured to said wings and having perimeters of varying sizes, a plurality of endless members trained about said supporting elements so as to assume the contour of said wings, means rigidly connecting the sides of said endless members and means housed by said first named means cooperating with other means fixed to certain of said supporting elements for driving said endless members.

1,785,301. ELECTRICALLY-WOUND CLOCK. CHARLES E. DE LONG, Springfield, Ill., assignor to Sangamo Electric Company, Springfield, Ill., a Corporation of Illinois. Filed Oct. 4, 1926. Serial No. 139,293. 3 Claims. (Cl. 185—40.)



1. In an electrically wound clock, the combination of a clock spring, an electric motor, a gear train operatively connecting said electric motor with said spring, a rotating brake surface associated with said gear train adjacent to the motor end thereof, a pair of threaded members operatively connected to the opposite ends of said spring, brake mechanism responsive to relative threading motion between said members for applying frictional braking pressure to said brake surface, and means for relatively adjusting said brake mechanism and said brake surface.

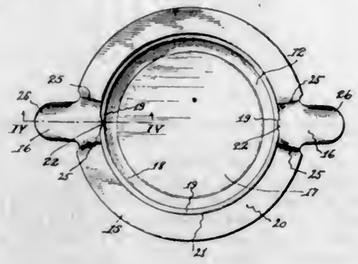
1,785,302. ORE CLASSIFIER. THOMAS A. DICKSON, Denver, Colo., assignor to Colorado Iron Works Company, Denver Colo., a Corporation of Maine. Filed Jan. 10, 1928. Serial No. 245,709. 10 Claims. (Cl. 209—464.)



1. In apparatus of the class described, a trough having feed and delivery means, a tubular shaft therein having one end submerged, means for supporting and driving the unsubmerged end, and a bearing block closing the submerged end of the shaft and having a cylindric bearing part fitting within said end.

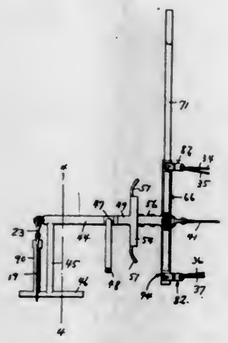
1,785,303. VANITY CASE. GEORGE WALTER DUNNICAN, Bloomfield, N. J., assignor to Dorothy Gray, Inc., a Corporation of New Jersey. Filed July 16, 1929. Serial No. 378,793. 6 Claims. (Cl. 132—83.)

6. A vanity case comprising a casing formed with external walls forming the edges thereof, internal walls parallel with and spaced from said external walls and defining a powder chamber, said internal walls of less height than said external walls, a slidable perforated diaphragm supported on the inner edges of said internal walls and separating said powder chamber from a powder puff chamber, means overlying said diaphragm to guide its movement and forming a portion of the puff chamber enclosure, a cover for said puff chamber hinged upon the casing, a projection upon said cover extending beyond the hinge acting upon an edge of said diaphragm in one of the spaces between said walls to cause movement of said diaphragm when the cover is opened, a cover for said powder chamber, a plate for pressing powder toward said diaphragm and a spring abutting said last named cover to move said plate.



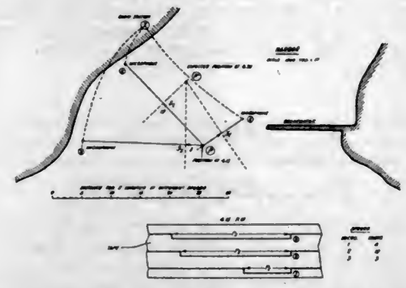
1,785,304. WATER HEATER. LEO GANZ, Chicago, Ill. Filed Feb. 10, 1926. Serial No. 87,315. 8 Claims. (Cl. 122—25.)

1. In a water heater, having a series of vertically spaced plates of hollow construction, and water conductors inter-connecting the plates; the combination of a fuel conductor entirely below the plate assembly, and a series of direct burner columns upon said fuel conductor upwardly extended from the fuel conductor to the vicinity of the respective plates for the discharge of flame in the direction of the bottoms of the plates and thereagainst.



7. In a water heater, a series of vertically-spaced plates of substantially circular contour, said plates also being hollow to accommodate a sheet-like body of water, a series of conduits for successively connecting said plates and entering the same tangentially at the periphery, and leaving said plates at substantially the center, the supply forming a water body in each plate which is composed of inherent currents describing a twirling spiral commencing at the supply and ending at the discharge.

1,785,305. ASH TRAY. ERNEST MYRON GRILLEY, Waterbury, Conn., assignor, by mesne assignments, to George E. Alling & Sons, Winsted, Conn. Filed Jan. 21, 1928, Serial No. 248,411. Renewed Nov. 4, 1930. 2 Claims. (Cl. 131—51.)



1. A tray comprising a thin single sheet of material having a depressed circular bowl portion bordered at its top edge by an annular outwardly projecting rim, and having narrow integral troughs formed solely from the material of said rim and extending radially across said rim and arranged along a diameter of and on opposite sides of said bowl and provided with a lip adjacent to end of said troughs and projecting slightly over the top edge of said bowl portion, whereby said depressed circular bowl portion may be slightly distorted into an oblate form for the insertion of a lining in said bowl portion.

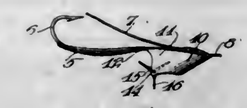
1,785,306. AEROPLANE-STEERING APPARATUS. ROMEO GUILLEMETTE, Taunton, Mass. Filed Dec. 30, 1929. Serial No. 417,505. 3 Claims. (Cl. 244—29.)

1. In a control mechanism for aeroplanes, comprising a longitudinal shaft adapted to be journaled in a fuselage of an aeroplane, a cross bar on the forward end of the shaft having control wires secured to its opposite free ends for moving the ailerons of an aeroplane, a frame rockable on the shaft at its rear end, control wires for the elevators secured to opposite vertical points of the frame, control wires for the rudders secured to the frame at opposite horizontal points on the frame, the opposed vertical and horizontal points having a pivotal connection between the frame and the control wires, a steering post projecting from the frame and secured thereto, and stop members secured to the shaft and fuselage for limiting the movement of the frame and the cross bar respectively.

1,785,307. SYSTEM AND METHOD OF COMMUNICATION. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Sept. 2, 1926. Serial No. 133,094. 22 Claims. (Cl. 177—352.)

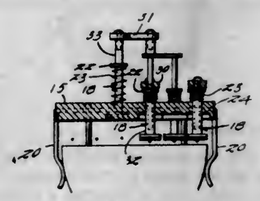
22. The method for determining the speed of a ship relative to a fixed point which includes the step of transmitting an audio frequency signal by a slow transmitting medium between the two, receiving and retransmitting the signal in the reverse direction between the two through an instantaneous transmitting medium, receiving the retransmitted signal at the transmitting station and comparing the frequencies of the transmitted signal and the signal finally received thereat.

1,785,308. VALVE PUSH ROD. BERT R. HEIMENDINGER, Britt, Iowa. Filed May 20, 1929. Serial No. 364,556. 4 Claims. (Cl. 123—90.)



1. In combination with an internal combustion engine, a sectional push rod, the upper of said sections being formed with a socket and the upper end of the lower section movably confined in said socket, a shoulder formed on said other section intermediate the ends thereof and in spaced relation to the edges of said socket, a coil spring circumposed about said other section having its opposite ends in abutment with said shoulder and the edges of the socket for urging said sections apart, said upper section having a passage extending axially therethrough from the upper end and in communication with said socket for conducting oil into the socket to form a film to provide a cushion for the abutting parts.

1,785,309. METHOD AND PRODUCT FOR PREVENTING EFFLORESCENCE IN CERAMICS. ARTHUR HOUGH, Summit, N. J., and JOHN GEORGE HARRISON, New York, N. Y.; said Hough assignor to said Harrison. Filed June 15, 1927. Serial No. 199,124. 5 Claims. (Cl. 106—11.)

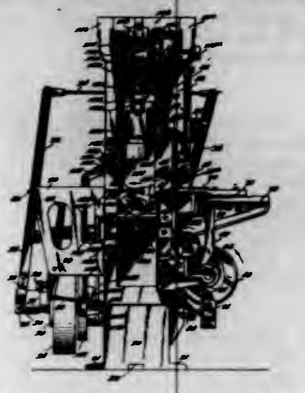


1. The process of preventing efflorescence or scumming in ceramics which comprises adding barium silicate to the material from which the ceramics are made.

1,785,310. ARTIFICIAL FISH LURE. LOUIS JOHNSON, Chicago, Ill. Filed Apr. 3, 1930. Serial No. 441,345. 11 Claims. (Cl. 43—45.)

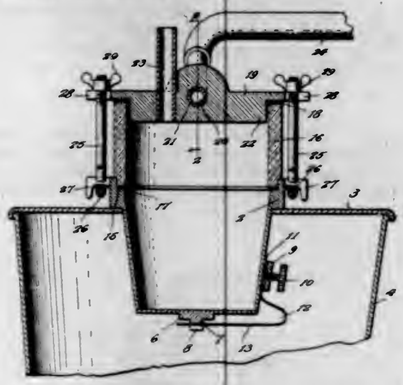
1. An artificial fish lure comprising a plate pointed at its forward end and curved laterally to form a conoidal body from the point wholly beneath the plane of the top surface of the plate.

1,785,311. ATTACHMENT FOR FRETTED MUSICAL INSTRUMENTS. SAMUEL W. JOHNSON, Port Allegany, Pa., assignor of one-half to Ralph L. Springstead, Port Allegany, Pa. Filed Sept. 29, 1928. Serial No. 309,232. 4 Claims. (Cl. 84—317.)



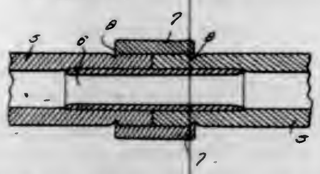
1. An attachment for use in playing a group of chords upon a fretted musical instrument comprising an elongated base, holding means mounted at opposite ends of said base for removably holding said base on the neck of the instrument, adjustable means in said base for spacedly positioning the base above the finger board, a plurality of string engaging members in the base having enlarged lower portions adapted to selectively engage the strings of the instrument, and padding carried by the lower portions of the string engaging members.

1,785,312. SOAP PRESS. RUEL ANDERSON JONES, Covington, Ky., assignor to R. A. Jones & Company, Inc., Covington, Ky., a Corporation of Kentucky. Filed Oct. 8, 1928. Serial No. 310,965. 40 Claims. (Cl. 25—7.)



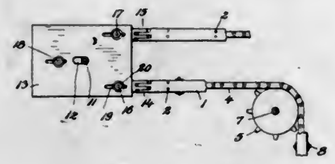
1. In a machine for successively pressing bars of plastic material, a magazine supporting a stack of said bars, carrier means for transporting the lowermst bar of the stack from the magazine, a pair of dies disposed transverse to the path of movement of said carrier means, one die re-

ciprocable toward and from the other die, said latter die mounted for oscillation transverse to the pressing move-



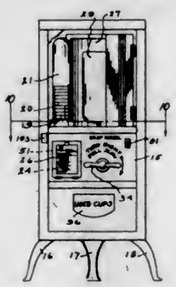
ment of the reciprocable die for ejecting the pressed article, and a conveyor moving laterally away from the forward side of the dies.

1,785,313. VALVE FOR MILKING MACHINES. MONROE KEENER, Lititz, Pa., assignor to Howard J. Hull, Lancaster, Pa. Filed Aug. 23, 1928. Serial No. 301,619. 2 Claims. (Cl. 31—86.)



1. A valve cup for milking machines comprising a cup, a ring resting on the upper edge of the cup, a valve block resting on the upper edge of the ring, a milk inlet passage extending across said block and downwardly therethrough from the upper edge portion thereof to the opposite lower edge portion thereof and terminating in proximity to the inner concave surface of the ring, and an air passage through the block eccentric to the milk inlet passage and remote from the outlet of the same.

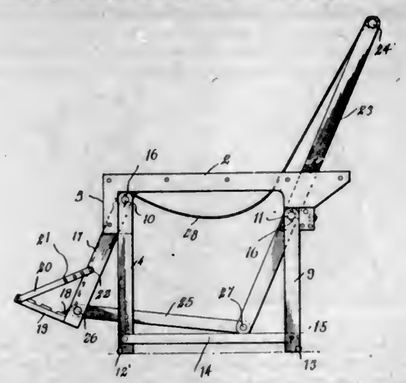
1,785,314. HOSE MENDER. SIDNEY R. KELLY, Gem, Idaho. Filed Mar. 11, 1927. Serial No. 174,530. 1 Claim. (Cl. 285—77.)



In a mending device for the adjacent ends of a pair of hose sections, a tube of greater diameter than the inner diameter of the hose section, said tube being of uniform diameter throughout its entire length and having a smooth outer surface, the end portions of the tube being forcibly fitted in the respective ends of the abutting hose sections, a pair of identical semi-circular clamping sections arranged around the hose sections at their abutting ends, said tube being of such length as to have its ends extending beyond the respective ends of the clamping sections, means for securing the sections together in tight engagement around the hose sections, an inwardly extending tapered lip formed at the ends of each section for biting engagement with the outer surface of the respective hose sections and for compressing the ends of the hose sections between the internal tube and the sections of the clamp.

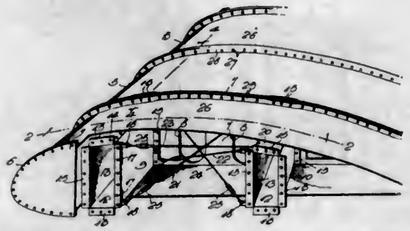
1,785,315. MEANS FOR ADJUSTING THE RAILS OF CONVEYERS RELATIVE TO THE CHAINS THEREOF. EDWIN E. KENNEDY, North Olmsted, Ohio. Filed June 3, 1929. Serial No. 367,871. 4 Claims. (Cl. 104—107.)

1. In a means for adjusting the rails of conveyers relative to the chains thereof, the combination of a chain, a rail, the chain being supported from the rail, the rail being separated transversely into two portions, a wheel for driving said chain, the wheel being supported in an adjustable position relative to said chain, and one of said portions of said rail being adjustable relative to said wheel.



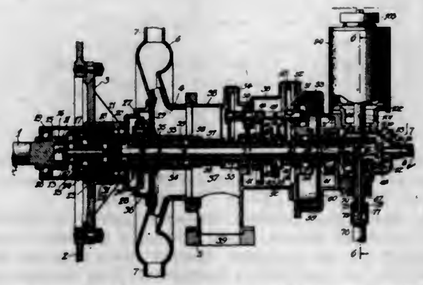
1,785,316. LIQUID-DISPENSING DEVICE. FREDERICK C. KIMMEL, Columbus, Ind. Filed Apr. 10, 1929. Serial No. 354,092. 16 Claims. (Cl. 225—21.)

14. In a liquid dispensing device having a cup dispensing means, a liquid container, an operating shaft movable both rotatively and axially, means actuated by rotary movement of said shaft for operating said cup dispensing means, and means actuated by axial movement of the shaft to cause withdrawal of liquid from said container, both of said means being operated in sequence by rotative and axial movement of said shaft.



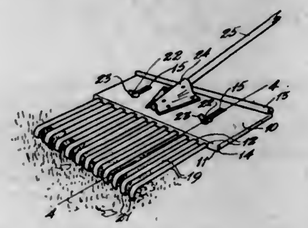
1,785,317. CHAIR. RUSSELL L. KLOTZ, Little Falls, N. J. Filed Sept. 26, 1928. Serial No. 308,351. 2 Claims. (Cl. 155—106.)

1. A chair comprising side arms each having pendent portions at its front and rear ends, a bar rigidly connecting the rear ends of the side arms, legs pivoted to the depending portions of the side arms, stops on said depending portions holding the front legs against forward



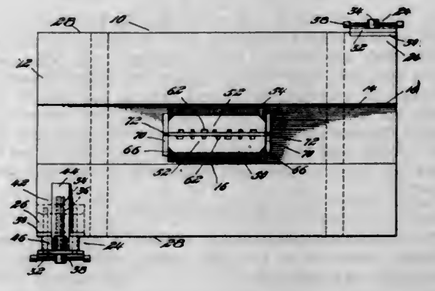
movement and the rear legs against rearward movement, connections between the lower ends of the legs, and a seat structure pivotally mounted between the side arms.

1,785,318. WING STRUCTURE FOR AIRPLANES. WILLIAM C. LAMBERT, Ironton, Ohio, assignor, by direct and mesne assignments, of one-fourth to Dean McG. Gilfillan, Ironton, Ohio, and one-fourth to Elmer Stewart, Washington, D. C. Filed Jan. 26, 1929. Serial No. 335,221. 8 Claims. (Cl. 244—31.)



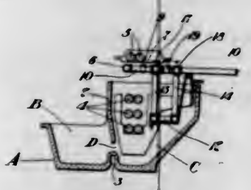
1. In an airplane wing, a pair of longitudinal ribs, a pair of transverse tubular spar sections having end flanges in abutting engagement with the ribs, bracing means between opposite end flanges of the spar sections, a cover extending between the ribs and cover strips over the edges of the ribs.

1,785,319. ENGINE STARTER. RAYMOND P. LANSING, Montclair, N. J., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Jan. 10, 1927. Serial No. 160,236. 81 Claims. (Cl. 123—179.)



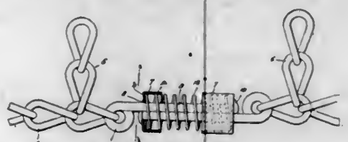
1. In combination with an internal combustion engine and its carburetor and with a supercharger therefor adapted to be operated by the engine, an engine starter drive adapted to be engaged with and to crank the engine for starting the same and to be operatively connected with the supercharger to operate it independently of the engine.

1,785,320. LAWN RAKE. CHARLES LORBER, Louisville, Ky., assignor to Eastern Tool and Manufacturing Company, Bloomfield, N. J., a Corporation of New Jersey. Filed June 19, 1929. Serial No. 372,149. 4 Claims. (Cl. 55—10.)



1. In a rake, a body consisting of a metal sheet having a flange at its forward edge provided with spaced openings, rake teeth slidably mounted for adjustment in said openings, means slidably supported by said body beneath the same to secure said teeth in fixed position relative to each other to cause the teeth to move in unison in said openings, and means to secure said teeth in adjusted position.

1,785,321. MANUAL-TRAINING BENCH. CHARLES H. MASON, East Providence, R. I. Filed June 8, 1928. Serial No. 283,892. 6 Claims. (Cl. 144—286.)

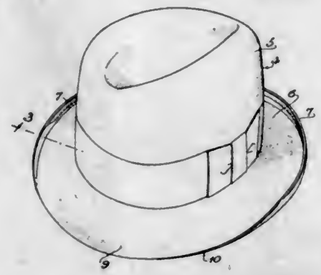


1. A double manual training bench comprising a flat top having a central longitudinally extending flat edged groove therein, four longitudinally and transversely braced legs supporting said top, vises for each student mounted on obliquely opposite ends of each side thereof so as to have the supper surface of the movable gripping jaws thereof substantially level with the bench top, T-braces for board ends having T-stems adapted to overlie the bench top surface for abuttal of a board end thereon and T-heads of substantial depth secured to the upper under surface of the T-head adapted to be detachably clamped between the vise jaw surfaces, a common removable tool holding stand having a top having separate sets of vertical tool snpporting holes therein on opposite sides thereof, one set for each student and a base of substantially the width of the flat edged groove adapted to rest in the central groove below the bench top, and means to detachably secure said tool stand base against longitudinal movement within said central groove comprising arms spaced from each other substantially the length of the tool stand base pivotably mounted centrally of said central groove pivotable to longitudinal alignment within said groove for cleaning purposes on removal of said stand for said groove.

1,785,322. TIN POT. JESSE T. MCQUISTON, Sharon, Pa., assignor to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Jan. 12, 1927. Serial No. 160,651. 3 Claims. (Cl. 91—59.4.)

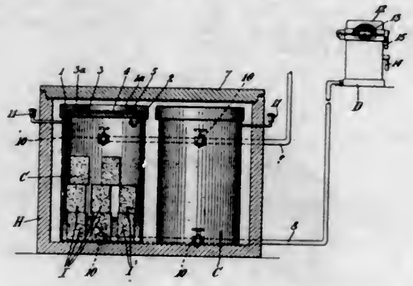
1. The combination with a tin pot having a pair of plate cooling lances, of a cooling coil mounted in the exit side of the pot to cool the body of oil normally maintained on the tin, a source of air supply for said air lances and said coil, and means for controlling the flow of air to said coil and said lances so that the air may be caused to flow through said coil before entering said lances or to said lances direct as desired.

1,785,323. NONSKID-CHAIN TIGHTENER. JAMES F. PERSINGER, Lander, Wyo. Filed Apr. 19, 1929. Serial No. 356,490. 1 Claim. (Cl. 267—72.)



A spring device of the class described comprising a pair of cup shaped members each including cylindrical bodies with one disc end apiece, the disc ends being provided with off center adjoining openings, bolts extending through the openings, heads and eyes on the ends of the bolts, the bolts and the eyes being oppositely disposed, a spring disposed about the bolts and impinging against the disc plates, said heads being formed with notches to receive the bolts, so that said bolts may be disposed close together.

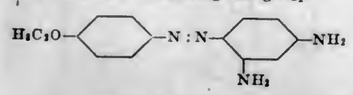
1,785,324. RAILROAD TIE. EDWARD C. RASSEL, Mio, Mich. Filed Apr. 5, 1930. Serial No. 441,943. 3 Claims. (Cl. 238—59.)



3. A railroad tie of the class described comprising an elongated channel-shaped body open at the bottom comprising an elongated substantially rectangular top plate, and substantially rectangular side plates depending rightangularly from and extending completely the length of the longitudinal edges of the top plate, said top plate being provided with a pair of inset portions forming shoulders for seating a rail, a bendable rectangular tongue rising from the top plate adjacent one shoulder, and another bendable rectangular tongue rising adjacent the opposite shoulder of each inset portion, said tongues being diagonally opposed near opposite longitudinal edges of the top plate and adapted to be bent upon the feet of a pair of rails seated in said inset portions, and webs formed transversely of the tie and between and attached to said top plate and said sides and supporting said inset portions.

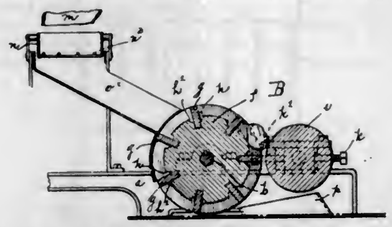
1,785,325. HAT BRIM. HARRY ROLNICK, Dallas, Tex., assignor of fifty per cent to Byer-Rolnick Company, Dallas, Tex., a Corporation. Filed June 10, 1930. Serial No. 460,264. 2 Claims. (Cl. 2—178.)

1. A hat comprising a brim, having a raw edge in front and a welted portion in the rear so that the front portion may be turned down and the rear portion turned up, the welted portion serving to reinforce and retain the shape of the hat.



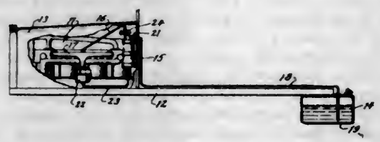
1,785,326. METHOD OF AND APPARATUS FOR UTILIZING PHASE-CHANGEABLE MATERIAL. HARRY B. RUDD, Douglaston, N. Y. Filed June 24, 1929. Serial No. 373,134. 7 Claims. (Cl. 220—24.)

1. The method of sealing the filling opening of a container, which comprises introducing phase-changeable solid material into said container through said opening, and thereafter retaining a closure plate in sealed relation with respect to said opening solely by the pressure exerted thereon by gas arising from change in phase of said solid material.



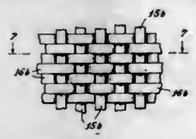
1,785,327. ALKYL-PHENYL ETHER. IWAN OSTROMISLENSKY, New York, N. Y., assignor to Ostro Research Laboratories, Inc., New York, N. Y., a Corporation of New Jersey. Filed Apr. 11, 1930. Serial No. 443,615. 7 Claims. (Cl. 260—97.)

2. A new compound comprising the group



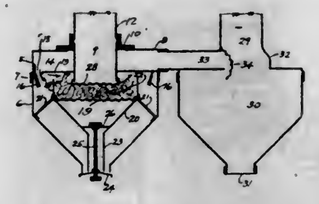
1,785,328. NUTCRACKER. CLINTON B. REPP, Plainfield, N. J. Filed Mar. 12, 1926, Serial No. 94,151. Renewed Apr. 25, 1930. 9 Claims. (Cl. 146—11.)

1. A nut cracker embodying therein a rotatable cylinder having pocket forming means projecting substantially radially from the perimeter thereof and extending continuously for substantially the full length of the cylinder, an idly mounted, heavy cylinder adjacent but spaced away from said first named cylinder, and means rotating said first named cylinder, the pockets formed by said radially extending means being relatively greater peripherally of the cylinder than the dimensions of a nut to be cracked and of a length to simultaneously accommodate a plurality of nuts, whereby all of the nuts in each pocket will be readjusted in a pocket so that with continued rotation of said rotatable cylinder each nut will be brought to a position to be engaged at three points thereof by said cylinders, and said radially extending means, and the crushing power will be applied at a substantially single point during the rotation of said cylinder, and portions of the shell and the cracked nut during, and immediately following, the application of the crushing strains will pass from the operative relation to both of said cylinders.

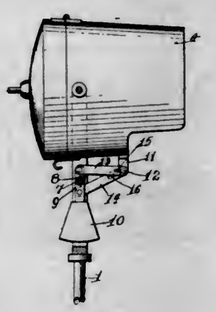


1,785,329. FUEL-SIGNAL DEVICE. RAYMOND D. SCHNOOR, Park Ridge, Ill. Filed Mar. 25, 1929. Serial No. 349,700. 19 Claims. (Cl. 116—109.)

1. A device of the character described, comprising a housing, said housing having a suction connection, a vacuum connection, and a connection to the outside air, an alarm device in said last named connection, and a fluid controlled piston associated with and adapted to actuate said alarm device when a predetermined volume of fluid passes between said suction connection and said vacuum connection.



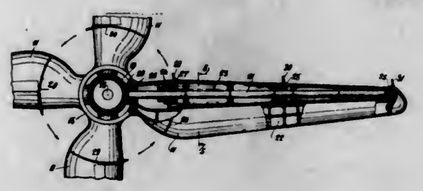
1,785,330. MOVING-PICTURE SCREEN FOR USE IN CONNECTION WITH SOUND PICTURES. WILLIAM J. SCHOONMAKER, New York, N. Y. Filed Mar. 7, 1929. Serial No. 345,032. 4 Claims. (Cl. 88—24.)



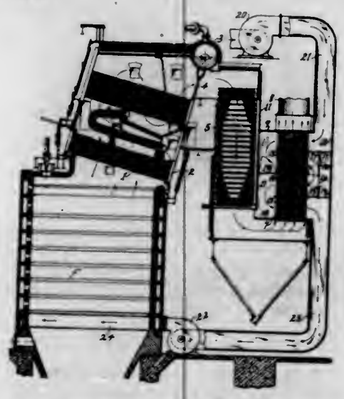
1. A woven sound picture screen comprising a plurality of adjacent substantially rectangular warp strips interwoven with a plurality of spaced weft strips so as to produce air passages on either side of the weft strips and between the warp strips, said warp strips having adjacent edges tightly engaged with each other for providing substantial light proof seams.

1,785,331. ELASTIC-FLUID DUST SEPARATING AND COLLECTING SYSTEM. GEORGE M. SPENCER, St. Louis, Mo. Filed Aug. 14, 1928. Serial No. 299,471. 9 Claims. (Cl. 183—85.)

1. An air cleaner comprising a casing having a body portion and a cover portion, said cover portion having an outlet therein, a diaphragm having a part of its edge spaced from the wall of said casing to define a narrow peripheral passageway, and an interior casing surrounding the lower end of said outlet and having its upper edge spaced from said diaphragm and inwardly from the periphery thereof.

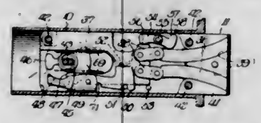


1,785,332. HEADLIGHT. GUSTAV A. THOM, West Allis, Wis. Filed Sept. 16, 1929. Serial No. 392,844. 4 Claims. (Cl. 240—62.)



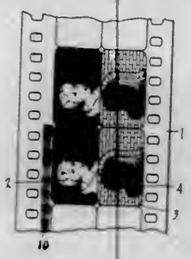
1. In a vehicle headlight, means for pivotally supporting the headlight, a counter-balance weight pivotally mounted below the headlight and links forming a direct connection between the weight and the headlight for normally maintaining the headlight in the same general plane as the vehicle.

1,785,333. HELICOPTER. SERGE TREY, Stamford, Conn. Filed Nov. 18, 1926. Serial No. 149,034. 11 Claims. (Cl. 244—19.)



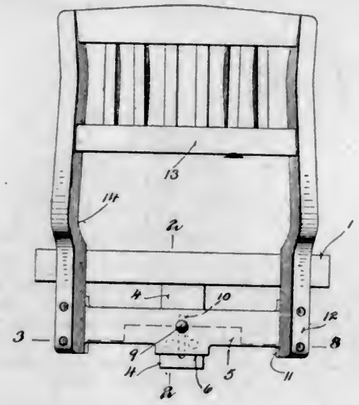
1. In an aerofoil, the combination with a rotor forming the leading edge thereof, of a fairing and one or more fins surrounding said rotor and said fairing.

1,785,334. AIR HEATER. JOHN E. BLACK, Rumson, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Mar. 4, 1926. Serial No. 92,191. 10 Claims. (Cl. 257—224.)



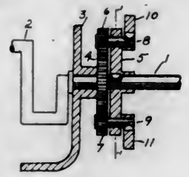
1. A fluid heater having hollow heating elements, means for passing one fluid through the elements and another fluid in contact with the other surface of the elements a multiplicity of times, and means for varying the number of passes for the latter fluid.

1,785,335. LOCK. LOUIS L. BRESLER, Chicago, Ill., assignor to H. T. Pollan, Chicago, Ill. Filed Feb. 23, 1929. Serial No. 341,911. 10 Claims. (Cl. 70—91.)



1. In a door lock, a spring-projected bolt, inside and outside means operable independently of each other to retract the bolt, a supplemental locking member carried by the bolt, and inside and outside means operable independently of each other to project said member with respect to the bolt.

1,785,336. MOVING-PICTURE FILM AND METHOD OF MAKING. JACOB BURKHARDT, Detroit, Mich., assignor to Third Dimension Pictures, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 22, 1929. Serial No. 357,146. 6 Claims. (Cl. 88—16.)

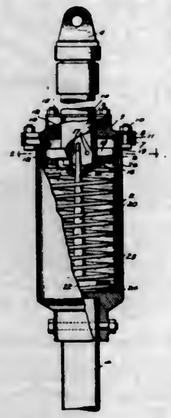


4. A motion picture film of standard width comprising a series of background pictures and a series of action pictures arranged in pairs and disposed transversely of the film, each background picture of each pair having a mask of the foreground picture of the pair.

1,785,337. CHAIR. LEON H. CLARK and WILLIAM S. SENGPIEL, Philadelphia, Pa., assignors to The Sikes Company, Philadelphia, Pa. Filed June 21, 1928. Serial 287,173. 1 Claim. (Cl. 155—157.)

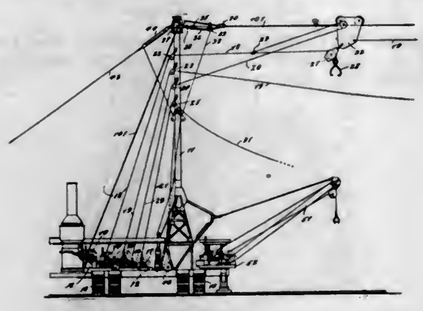
In a device of the class described, a seat member, an arm extending downwardly from the back portion of the seat member and having a longitudinal slot, a back including spaced side arms normally projecting below the seat, a transverse bar having its ends rigidly connected to the lower ends of the side arms, a transverse enlargement at the intermediate portion of the bar extending beyond one of the longitudinal edges of the bar and formed with a plurality of depressions arranged in spaced relation longitudinally of the enlargement, a bolt carried by the transverse bar at its intermediate portion and movable in the slot in the arm, spring pressed plungers carried by the arm and adapted to engage the depression for retaining the back in various adjusted positions with respect to the seat and spaced ribs extending transversely of the bar upon opposite sides of the arm to form a guide for said arm.

1,785,338. TORQUE-IMPULSE MULTIPLIER. GEORGE B. COLEMAN, Detroit, Mich. Filed Apr. 1, 1930. Serial No. 440,856. 4 Claims. (Cl. 74—34.)



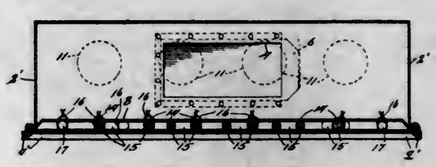
1. A torque impulse multiplier comprising a planet carrier, planetary gears rotatably carried by said planet carrier, a mass member operatively secured to said planetary gears, and a non-rotatable gear meshing with said planetary gears.

1,785,339. SHOCK ABSORBER FOR LANDING GEARS OF AIRPLANES. ELLIOT DALAND, Torresdale, Pa., assignor to Keystone Aircraft Corporation, Bristol, Pa., a Corporation of Delaware. Filed Aug. 20, 1928. Serial No. 300,875. 4 Claims. (Cl. 267—8.)



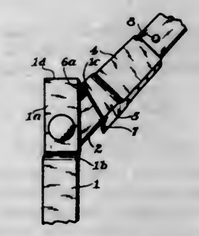
1. A device of the character described including a cylinder and a piston, the former including an element for connection to the wheel and axle mounting of an airplane,

the piston including a piston rod for connection to an airplane structure, the said piston being restricted to a central opening in its head and having a plurality of small ports above the piston head, and having a chamber communicating with said small ports and open to the cylinder above the piston to establish and maintain communication between the contents of the cylinder on both sides of the piston at all times, a tapered metering pin within the said cylinder, having its upper end extending through the said central opening in the piston head to provide a space around the tapered stud to control displacement of a



fluid through piston head upon movement of the piston in the cylinder in either direction, and a spring within the cylinder and under the piston to normally hold the piston in operative position, the whole arranged whereby upon inward movement of the piston in the cylinder and along the tapered metering pin, the displacement of fluid below the piston head is progressively restricted by the progressively diminishing area of the space in the piston-head around the tapered metering pin and upon outward movement of the piston in the cylinder, a rapid displacement of the fluid from above the piston is restricted by the said small ports above the piston.

1,785,340. PORTABLE CABLEWAY. JOSEPH H. DICKINSON, Winter Park, Fla., and MERIAN H. DICKINSON, Seattle, Wash., assignors to Lidgerwood Manufacturing Company, Elizabeth, N. J., a Corporation of New York. Filed Oct. 3, 1929. Serial No. 397,004. 5 Claims. (Cl. 104—117.)

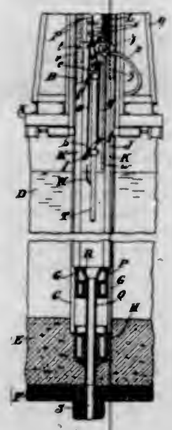


1. In combination, an engine comprising a drum, a spar, a main cable wound upon said drum, a clamp adapted to grip said cable, and means for connecting said clamp to said spar, said drum then serving merely to store cable.

1,785,341. LUMINOUS SIGN. ROBERT W. FISHER, Chicago, Ill., assignor to Peter Riess, Chicago, Ill. Filed Aug. 27, 1928. Serial No. 302,243. 9 Claims. (Cl. 40—133.)

1. In a luminous sign, a panel piece of relatively opaque material having character formations through which light may pass, and similarly shaped rods of material through which light will pass forming characters fitted over and covering said character formations, said rods being so arranged as to permit substantially no light to be emitted through said character formations except that which passes through said rods.

1,785,342. FOLDING JOINT FOR BRACES AND THE LIKE. HENRY J. GILBERT, Saginaw, Mich., assignor to Saginaw Manufacturing Co., Saginaw, Mich., a Corporation of Michigan. Filed Sept. 20, 1928. Serial No. 307,208. 2 Claims. (Cl. 287—98.)

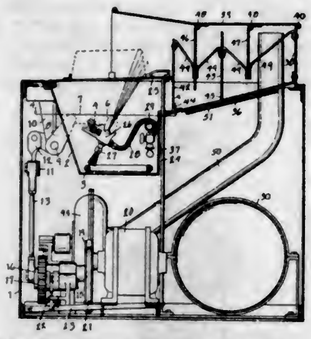


2. In a folding brace including two pivotally joined bars one having an end portion of uniform cross sectional shape throughout its length in overlapping relation with the other bar, a slidable catch on the other bar having two side walls of different lengths, the shorter adapted to slide first upon the side edge and then upon the end edge of the overlapping end portion of said first mentioned bar during the sidewise movement of the said end portion, the longer wall of said catch constituting a sidewise alinement stop for said bars.

1,785,343. LATCH FOR FOLDING BRACES. HENRY J. GILBERT, Saginaw, Mich., assignor to Saginaw Manufacturing Co., Saginaw, Mich., a Corporation of Michigan. Filed Sept. 20, 1928. Serial No. 307,210. 3 Claims. (Cl. 387—99.)

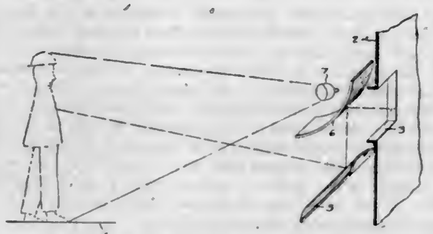
1. In a brace comprising two bars pivotally joined, one having an extension member in overlapping relation to the other bar, and stop means for limiting the movement sidewise of said member, a keeper formed in the end of said member, a pivotally mounted gravitational latch on the second bar whose path of angular movement intercepts the path of angular movement of the keeper.

1,785,344. CHARGING DEVICE. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 24, 1930. Serial No. 430,860. 9 Claims. (Cl. 102—5.)



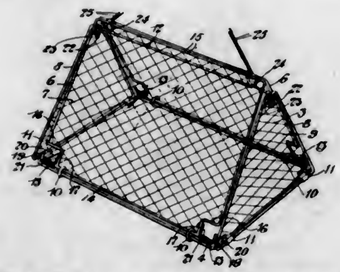
1. In a charging device for drill holes, the combination of a support and parallel members thereon to form a guide frame, means forming a container for explosive material, and means secured to the container and cooperating with the guide frame to guide the container to the drill hole.

1,785,345. CASING FOR FLEXIBLE SHAFTS. JOHN L. HASEMANN, Caldwell, N. J., assignor to American Flexible Shaft Manufacturing Corporation, Newark, N. J. Filed May 19, 1928. Serial No. 278,980. 2 Claims. (Cl. 64—30.)



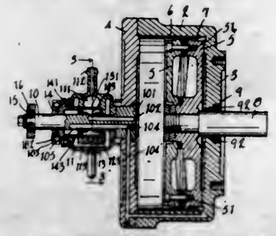
1. A casing for flexible shafts comprising a spiral bearing strip, a liquid-proof sleeve surrounding said spiral strip, a woven cover on the sleeve and a closely wound protecting strip on the outside of the cover, all said elements being of limited flexibility.

1,785,346. SEPARATOR. CHARLES T. HATCH, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Original application filed May 1, 1926, Serial No. 106,025. Divided and this application filed Jan. 6, 1928. Serial No. 244,872. 6 Claims. (Cl. 183—110.)



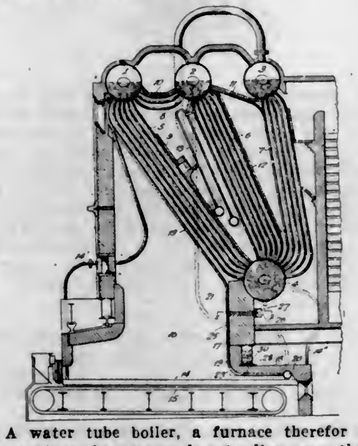
6. In a structure of the class described, a separator chamber provided with a top hinged at one end to swing in a vertical plane, baffles mounted in spaced relation within said separator chamber, and coacting baffles pivotally mounted on said top to coact with the first mentioned baffles.

1,785,347. MEANS FOR PRODUCING THEATRICAL EFFECTS. WILLIAM HERRSCHAFT, New York, N. Y. Filed Sept. 24, 1926. Serial No. 137,455. 4 Claims. (Cl. 88—24.)



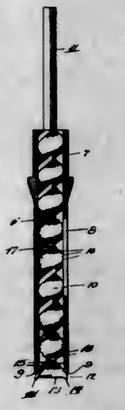
1. The combination with a concealed stage and means forming a proscenium opening, of means for forming a reduced reflected image of actors visible to the audience through said proscenium opening, said means comprising two cylindrical mirrors disposed with their curvatures at right angles, so that one reduces the image in width, while the other reduces it in height, substantially as set forth.

1,785,348. CRAB TRAP. JOSEPH HOLOUBEK, New York, N. Y. Filed Nov. 21, 1929. Serial No. 408,735. 7 Claims. (Cl. 43—102.)



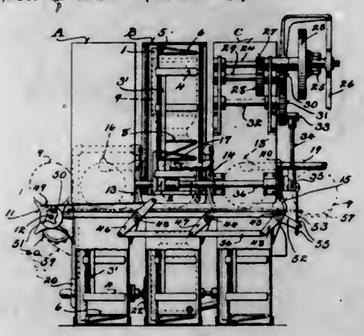
1. A trap of the type described comprising a bottom member; a plurality of leaves to form the sides of the trap; hinge means between said leaves and the bottom member adapting the leaves to fold upwardly and downwardly to close and open the trap; spring mountings in the form of pintles carried by the leaves at the opposite ends thereof, extending axially outwardly beyond the hinge means and having their outer ends free; and coiled torsion springs encircling said pintles outwardly of the hinge means and engaging the leaves to swing them downwardly, the spring mountings adapting the springs to be inserted or removed endwise.

1,785,349. PNEUMATIC ENGINE CYLINDER AND CONTROL FOR LATHE CHUCKS AND THE LIKE. GEORGE F. HOPKINS, Jackson, Mich.; William K. Sagendorph executor of said George F. Hopkins. Filed Feb. 19, 1927. Serial No. 169,501. 4 Claims. (Cl. 121—38.)



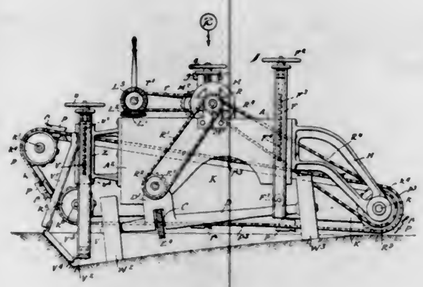
1. An engine cylinder with means to secure the same to the hollow spindle of a lathe, a piston with rod extended and adapted to actuate the lathe chuck, an axially disposed journal rod on the opposite cylinder head with longitudinal bores and lateral ports at different distances thereon, the longitudinal bores being extended into and connecting the opposite ends of the engine cylinder, a slide valve supported on the said journal rod having a central supply chamber and exhaust chambers at each side, a packing within the valve comprising oppositely disposed cup members with opposed tube parts in spaced relation to each other, each having an outwardly projecting flange, a clamping thimble between the said cup members forming a chamber around the tubular parts and perforated laterally midway of its length, and a clamping head for retaining the said cup members and clamping thimble in place to reciprocate and revolubly engage the said rod.

1,785,350. SLAG SCREEN AND WALL-COOLING MEANS. HOWARD J. KERR, Westfield, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New York. Filed Jan. 4, 1926. Serial No. 79,126. 3 Claims. (Cl. 122—235.)



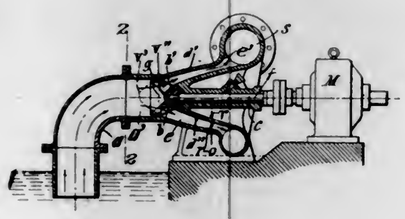
1. A water tube boiler, a furnace therefor having a chain grate stoker, an arch extending over the rear of the stoker, and a vertical wall extending upwardly from the inner end of said arch, some of the tubes of said boiler extending along the inside of said vertical wall and rearwardly beneath said arch.

1,785,351. MORTISING TOOL. WILLIAM M. KNOUREK, River Forest, Ill. Filed May 19, 1930. Serial No. 453,728. 2 Claims. (Cl. 145—122.)



1. A mortising tool comprising a hollow chisel, and a bit rotatably mounted therein, the cylindrical face of said bit being formed with clip reducing elements adjacent the cutting end of the bit.

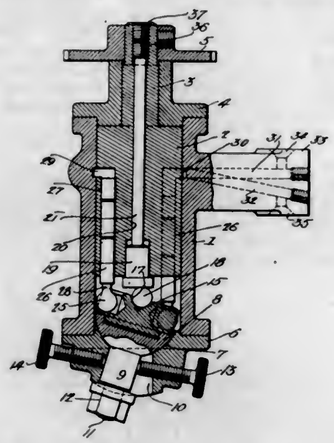
1,785,352. CAN-WASHING MACHINE. HERMANN KRAUSE, Menomonee Falls, Wis., assignor to Stout Manufacturing Company, Menomonee Falls, Wis., a Corporation of Wisconsin. Filed Mar. 8, 1928. Serial No. 260,160. 1 Claim. (Cl. 141—7.)



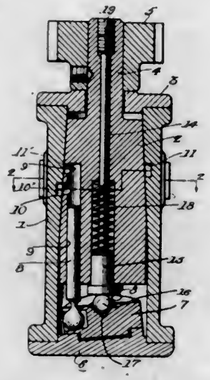
A can washing machine comprising a plurality of compartments adjacent to each other, a driven shaft extending substantially horizontally through said compartments, means for imparting rotation to said shaft at predetermined intervals, a rotary frame mounted on the shaft in each of said compartments, means for depositing cans on said frame in the end compartments at the feed end of the machine, means for moving cans from the frame in one compartment to the frame in the next succeeding compartment during the periods of rest of said frames, substantially horizontal fingers carried by each frame and positioned in pairs at each side and at each end of the cans carried by each frame for supporting the cans in said frame, and means for discharging the cans from the frame in the end compartment at the discharge end of the machine.

1,785,353. EXCAVATING MACHINE. ROBERTO KURTZ, Buenos Aires, Argentina. Filed May 19, 1924. Serial No. 714,197. 14 Claims. (Cl. 37—109.)

1. An excavating machine comprising a main body, wheels for supporting the same, an adjustable excavating unit carried by the body, and a rear axle, on which a pair of such wheels is mounted, equipped with driving mechanism therefor, enclosed within a casing joined to the main body by means of a hollow pivot.



1,785,354. HYDRAULIC MACHINE. FRANZ LAWACZECK, Munich, Germany, assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed May 19, 1926, Serial No. 110,266, and in Germany Jan. 19, 1926. 6 Claims. (Cl. 103—89.)

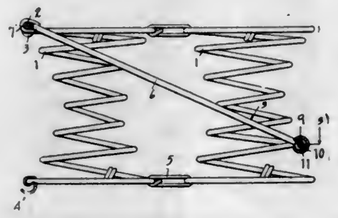


1. A hydraulic machine comprising a rotor, a casing, and a suction pipe, said casing having on that side of the rotor opposite the suction pipe an annular liquid passage, the water-contacting surfaces of the walls of said liquid passage being formed to coincide with surfaces of paraboloids.

1,785,355. SPINNING PUMP. CHARLES W. LAWSER, Bala, Pa., assignor to Wicaco Machine Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 15, 1926. Serial No. 154,977. 11 Claims. (Cl. 103—162.)

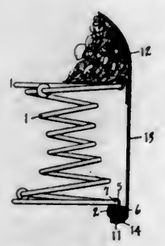
2. In a spinning pump, the combination with a cylindrical casing, of a rotor in said casing having a longitudinal bore, a plunger adapted to operate in said bore, and an actuating member adapted to rotate within the casing about an axis at an angle to the axis of said rotor, said member having a cylindrical recess extending radially inwardly from its edge and having a radial slot opening into said recess from the face of the member adjacent the said rotor, and said plunger having at its outer end a spherical part adapted to fit slidably within said recess and having adjacent thereto a restricted part adapted to pass loosely through the said slot in the actuating member whereby to permit relative movement between the plunger and the actuating member in a plane transverse to the longitudinal axis of said recess.

1,785,356. SPINNING PUMP. CHARLES W. LAWSER, Bala, Pa., assignor to Wicaco Machine Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 3, 1927. Serial No. 230,792. 7 Claims. (Cl. 103—162.)



1. In a spinning pump, the combination with a casing having intake and discharge ports and a tapered chamber with which said ports communicate, of a correspondingly tapered rotor mounted in and seated upon the tapered wall of said chamber whereby the contacting tapered surfaces determine the position of the rotor axially in the casing, said rotor having cylindrical openings adapted to be brought into alternate and successive communication with the said ports as the rotor is rotated, plungers in said cylindrical openings, and means in the casing for reciprocating the plungers as the rotor is rotated.

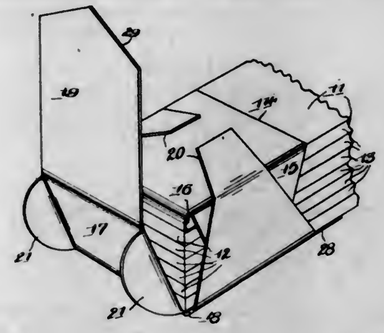
1,785,357. WATERPROOF FIBROUS PRODUCT. HAROLD L. LEVIN, Worcester, Mass., assignor to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 7, 1927. Serial No. 231,790. 11 Claims. (Cl. 92—21.)



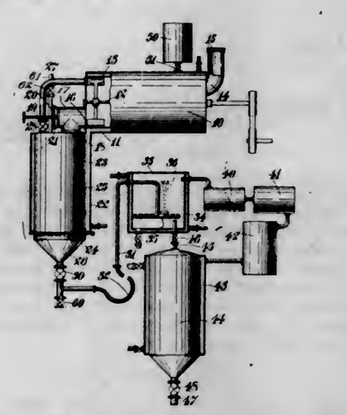
1. A felted fibrous sheet, containing in addition to the fibres thereof, filler and thermoplastic material fused onto the fibres thereof, the fibre content of said sheet being so low as to be incapable, in the absence of said thermoplastic material, of fabrication into a felted form-sustaining sheet.

1,785,358. SPRING STRUCTURE. FALCONER O'BRIEN, Detroit, Mich., assignor to L. A. Young Spring & Wire Corporation, Detroit, Mich. Filed Sept. 19, 1929. Serial No. 393,638. 4 Claims. (Cl. 5—262.)

1. The combination in a spring structure of a plurality of coiled body springs, a top border frame, a member of channel cross section clamped upon intermediate coils of a plurality of body springs, a coiled coupling member clamped within the channel of said member, and a brace secured at one end to said border frame and having a laterally disposed pintle-like coupling engaging portion disposed within the coils of said coupling member.



1,785,359. SPRING STRUCTURE. JOHN M. OLDHAM, Detroit, Mich., assignor to L. A. Young Spring & Wire Corporation, Detroit, Mich. Filed Feb. 13, 1930. Serial No. 428,041. 7 Claims. (Cl. 155—180.)

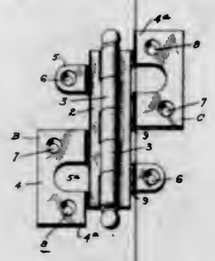


7. A channeled spring structure frame element having spaced overlapping flanges providing body spring securing means, and a tacking strip arranged within the frame channel, one wall of the frame having openings therein through which tacks may be driven into the tacking strip for securing the upholstery covering thereon.

1,785,360. LUMBER PACKAGE. HENRY H. PAYZANT, Everett, Wash., assignor to Weyerhaeuser Timber Company, Tacoma, Wash., a Corporation of Washington. Filed May 16, 1927. Serial No. 191,602. 17 Claims. (Cl. 206—60.)

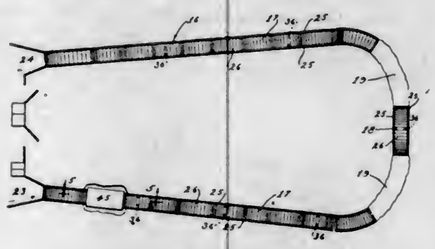
1. In fastening means for a bundle containing a plurality of boards disposed face to face, one upon another, the combination with a retaining band encircling said boards near an end thereof, a hinge member extending across the ends of said boards, flaps on said member positioned upon opposite outer faces of said boards, at least one of said flaps overlapping said band and means securing the otherwise free ends of said flaps upon the outer surfaces of said boards.

1,785,361. APPARATUS FOR RECOVERY OF FATS, OILS, OR OLEAGINOUS SUBSTANCES FROM MATERIALS YIELDING THEM. WILLIAM THOMAS POWLING, London, England, assignor to John William Pittock, Philadelphia, Pa. Filed Jan. 13, 1927, Serial No. 160,834, and in Great Britain Jan. 29, 1926. 15 Claims. (Cl. 87—13.)



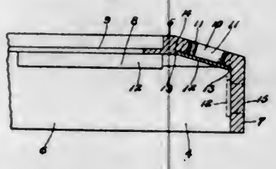
6. Apparatus for dry-render recovery of fat from fat-yielding materials, comprising, in combination, a closed rendering vessel, a closed draining vessel to receive cracklings discharged from the rendering vessel, a closed fat-collector, means placing these three elements in air-sealed series connection with one another, a vapour-exit in the fat-collector, and means to "collect" the vapour at said vapour-exit.

1,785,362. HINGE STRUCTURE. EUGENE A. REGAN, Oakland, Calif. Filed Jan. 3, 1928. Serial No. 244,155. 3 Claims. (Cl. 16—128.)



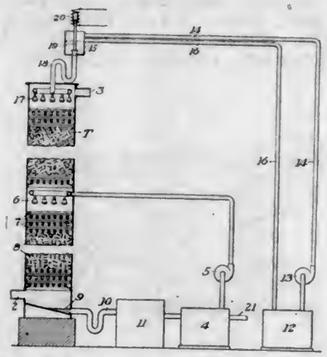
1. In a hinge of the character described, a pair of leaves each having a bearing plate, a plurality of spaced pintle bearings formed on one edge of each bearing plate, a pintle extending through the said bearings, a plurality of attaching plates connected to each bearing plate, one of said attaching plates on each leaf having a cut-out

portion and diagonally spaced from the corresponding plate of the other leaf, and the other attaching plate of each leaf being of reduced size to fit within the cut-out portion of the wider plate in the opposite leaf, the attach-



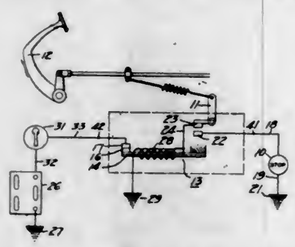
ing plates of one leaf being offset from the plane of their bearing plates such distance that when the hinge leaves are moved to closed position, the attaching plates will all lie in end-to-end relation.

1,785,363. AUTO THRILLER AND AMUSEMENT APPARATUS. HARRY ROCKS, Jr., Torrance, Calif. Filed May 14, 1929. Serial No. 362,889. 7 Claims. (Cl. 104—63.)



1. An auto thriller and amusement apparatus comprising a hill and dale runway for automobiles, said runway including cross members, one of said cross members being movably mounted, an electric contact connected with the movably mounted cross member, a stationarily mounted electric contact engageable by the first mentioned electric contact when the movably mounted cross member is depressed, and an electrically operated signal electrically connected with said contacts.

1,785,364. ORNAMENTED JEWELRY. JOHN SCHUMER, Cincinnati, Ohio. Filed Nov. 29, 1927. Serial No. 236,537. 2 Claims. (Cl. 41—34.)

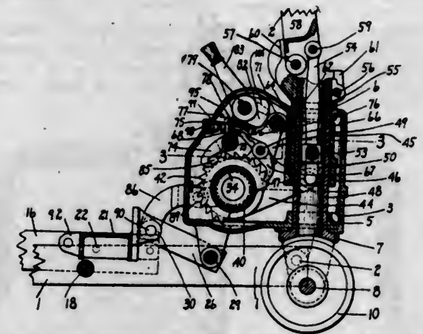


1. A watch case member comprising a stamping of thin sheet metal provided with an interior channel and an opposed exterior face to be decorated, the channel being ornamentally pierced and cut through, and an imperforate strip secured interiorly within the channel for closing the perforations and presenting an appearance of deep engraving.

1,785,365. PROCESS FOR THE REMOVAL OF NAPHTHALENE AND CARBON BISULPHIDE FROM GASES. GILBERT E. SEIL, Newark, N. J., assignor to Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 6, 1926. Serial No. 107,062. 4 Claims. (Cl. 23—3.)

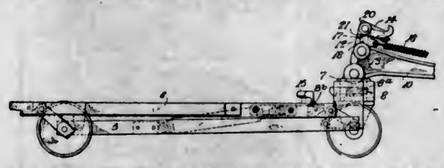
1. In a process of removing both naphthalene and carbon bisulphide from flowing fuel gas containing them, the steps comprising recirculating in the path of the gas a solvent which will absorb both naphthalene and carbon bisulphide, withdrawing portions of the solvent to reduce the amount of naphthalene contained in the recirculated body of solvent, adding relatively fresh solvent to maintain the solvent at a substantial degree of purity, and treating the recirculated solvent to remove carbon bisulphide therefrom and thus maintain in the solvent a substantial capacity for absorbing carbon bisulphide from the gas.

1,785,366. SIGNALING SYSTEM. MILTON H. SHOENBERG and LESTER SCHON, San Francisco, Calif.; said Schon assignor to said Shoenberg. Filed June 7, 1927. Serial No. 197,057. 3 Claims. (Cl. 177—339.)



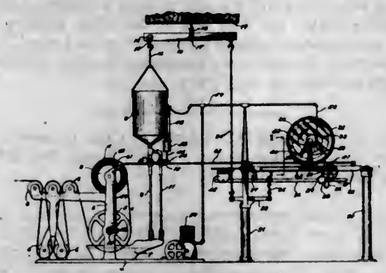
2. In combination with an automobile having the usual engine ignition switch, a signaling system including a signal lamp, a circuit for said lamp including a source of current, a switch adapted to be operated by a driver to open and close the lamp circuit, and a thermostatic flasher connected to said source of current in series with the ignition switch whereby the flasher is continually operated when the ignition switch is closed, the contacts of said flasher being connected in series with said driver operated switch.

1,785,367. COATING COMPOSITION AND METHOD OF PREPARING THE SAME. CARL H. SIEVER, Oak Park, Ill. Filed Feb. 2, 1927. Serial No. 165,503. 3 Claims. (Cl. 134—17.)



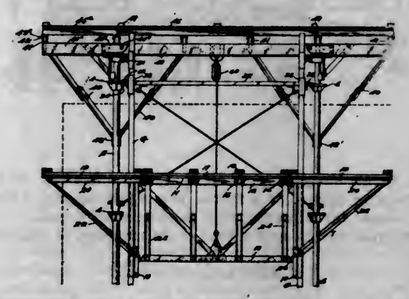
1. A coating composition including a cellulose derivative, an organic solvent, and an artificial isomer of rubber obtained by heating rubber with an acid reagent having the formula $R—SO_2—X$, where R is an organic radicle or a hydroxyl group, and X represents a halogen or a hydroxyl group.

1,785,368. TRUCK. WILLIAM STUEBING, Jr., Cincinnati, Ohio, assignor, by mesne assignments, to The Yale & Towne Manufacturing Company, Stamford, Conn., a Corporation of Connecticut. Filed Aug. 14, 1922, Serial No. 581,724. Renewed Apr. 22, 1930. 40 Claims. (Cl. 254—10.)



1. A lifting truck including a wheel supported frame, an elevating platform carried by said frame, a steering handle for said frame, means actuated by said handle for raising said platform and including an operating member, locking means for the platform including a pawl-carrying member, a pawl pivoted thereto, and a control member engageable with and disengageable from the operating member and pawl-carrying member to effect disengagement of the operating member and the pawl.

1,785,369. LIFT TRUCK. WILLIAM STUEBING, Jr., Cincinnati, Ohio, assignor, by mesne assignments, to The Yale & Towne Manufacturing Company, Stamford, Conn., a Corporation of Connecticut. Filed Oct. 14, 1927. Serial No. 226,072. 22 Claims. (Cl. 254—10.)

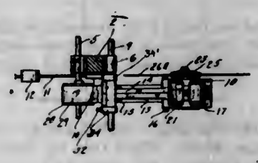


1. A lifting truck comprising in combination an elevating frame, a steering lever arranged to swing in a vertical plane, and means for connecting the steering lever and the elevating frame to raise the latter comprising an extensible link connected to one part and arranged to be manually engaged with the other part.

1,785,370. FLOW-CONTROLLING SCALE. EDWARD G. THOMAS, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Sept. 10, 1923. Serial No. 661,733. 3 Claims. (Cl. 91—18.)

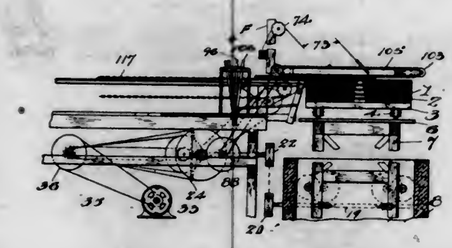
1. In a device of the class described, in combination, means for delivering sheet material, means for applying liquid treating compound thereto, means for squeezing a portion of the compound so applied from said sheet material, to secure a definite degree of saturation, and means for indicating variations in the ratio of the rate of producing said saturated sheet material to the rate of accretion of weight of the product.

1,785,371. ADJUSTABLE SKIP HOIST. WILLIAM G. VENARD, Long Beach, Calif. Filed Apr. 9, 1928. Serial No. 268,729. 9 Claims. (Cl. 214—95.)



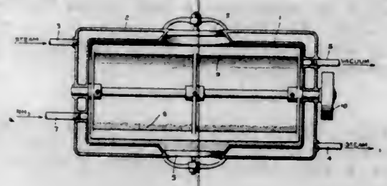
1. A skip hoist and scaffold apparatus including a standard and guide structure including a header means, and an unloading deck adjustably connected to the header means.

1,785,372. ALLOY. JONATHAN NEWTON WHITE, New York, N. Y. Filed Nov. 12, 1929. Serial No. 406,722. 2 Claims. (Cl. 75—1.)



2. An alloy comprising 93 to 95% copper, 1 to 1¼% manganese, and the balance zinc.

1,785,373. HAND-OPERATED LUMBER TRIMMER. CHARLES WILLIAM WILLETTE, Portland, Oreg. Filed Apr. 9, 1928. Serial No. 268,728. 3 Claims. (Cl. 143—41.)



1. In a device of the class described, in combination with a lumber trimmer, a saw arbor frame comprising two complementary arm members extending forward and rearward respectively, a support bracket comprising a sleeve having a downwardly and rearwardly directed elbow provided with a bore in parellel alignment with the sleeve, the sleeve being pivotally connected with a journal bearing block by a supporting shaft, the rearwardly extending arm member, having a weighted element adjustably positioned thereupon being removably secured to elbow of the support bracket, the forwardly extending arm member being pivotally connected to the support bracket by a secondary shaft extending through bores of the support bracket, the forwardly extending arm being split and having housings with inwardly projecting annular faces, a pulley positioned within annular faces and round saw arbor maintained in alignment with driving shaft pulley.

1,785,374. UNSTACKING MACHINE. ALBERT E. BRONSON and ALFRED M. BRADEN, Gibbs, Idaho; assignors to Union Iron Works, Spokane, Wash. Filed July 16, 1928. Serial No. 293,209. 2 Claims. (Cl. 214—8.5.)

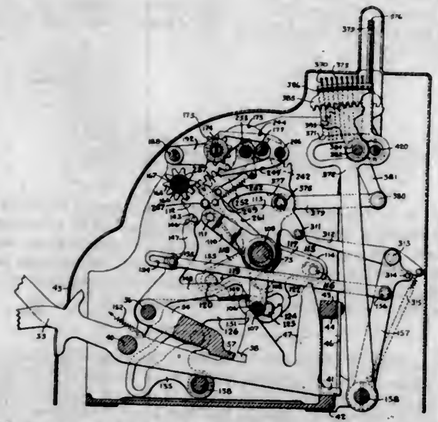
1. In an unstacking machine, the combination with an unstacking device, of a frame, a movable housing thereon and means for adjusting said housing with relation to the unstacking device, and a feed chain mounted in said housing.

1,785,375. AMMONIUM-PHOSPHATE FERTILIZER COMPOSITION AND METHOD OF MAKING THE SAME. GUY H. BUCHANAN, Westfield, N. J., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Jan. 28, 1927. Serial No. 164,345. 7 Claims. (Cl. 23—106.)

1. A method of making an ammonium phosphate composition which comprises treating mono-ammonium phosphate in a substantially dry condition with ammonia.

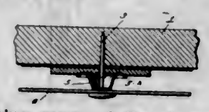
1,785,376. ORTHOPEDIC APPLIANCE. IRWIN BUCKNER, Spokane, Wash. Filed Dec. 22, 1928. Serial No. 327,822. 2 Claims. (Cl. 128—81.)

1. An orthopedic appliance comprising a pair of angular clamp levers each having an end hook and an intermediate fulcrum point, said levers having eyes at their adjoining ends and a flexible tension tie connecting said eyes, and a tension link on the tie, whereby the link may be turned to vary the tension of the tie.



1,785,377. LOUD-SPEAKER. LEE DE FOREST, New York, N. Y., and RICHARD HALPENNY, Washington, D. C., assignors, by mesne assignments, to General Talking Pictures Corporation, a Corporation of Delaware. Filed Dec. 1, 1926. Serial No. 151,857. 12 Claims. (Cl. 181—27.)

1. In a loud speaker, the combination with a logarithmic horn and a cone mounted thereon of separate means for vibrating said horn and cone.



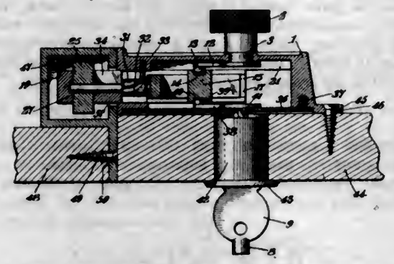
5. In a sound producing device, the combination with a horn having a bell and a baffle plate in said bell of a vibratile cone mounted on back of said plate.

1,785,378. CASH REGISTER. JOHN P. FRANK, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Jan. 28, 1926. Serial No. 84,350. 21 Claims. (Cl. 235—7.)

3. In a machine of the class described, the combination of complementary movable pivoted members, a slidable actuating plate, pin and slot connections between said plate and members, means for operating said plate, and a differentially movable arm for controlling the adjustment of said members by said plate.

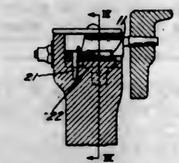
1,785,379. SHEATHING PAPER. CARL GILMORE, Oakland, Calif. Filed June 1, 1929. Serial No. 367,806. 4 Claims. (Cl. 154—50.)

1. In sheathing paper of the character described, a sheet of paper, a plurality of relatively narrow spaced



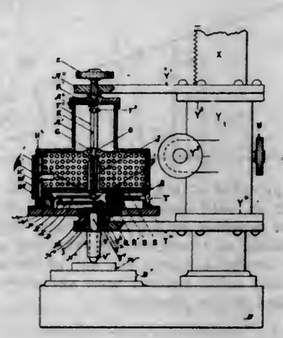
binding strips disposed flat against one side thereof and cemented thereto and forming an integral part thereof, said strips formed of a composition containing a larger percentage of mineral substance than is contained in the composition comprising said sheet of paper.

1,785,380. BAG-FRAME CLASP. WILLIAM C. HIBBING, Newark, N. J., assignor to J. E. Mergott Company, Newark, N. J., a Corporation of Delaware. Filed Oct. 11, 1928. Serial No. 311,750. 3 Claims. (Cl. 298—228.)



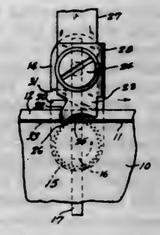
1. A clasp for latching bag frame members comprising a base plate, a cap, and a body portion intermediate said base plate and cap, said body portion having integral loop extensions passing through the base plate by which it may be pivotally mounted on a bag frame member.

1,785,381. LOCK. JOHN HOLTZMAN, New York, N. Y., assignor to Francis Keil & Son, Inc., a Corporation of New York. Original application filed May 12, 1925, Serial No. 14,980. Divided and this application filed June 13, 1925. Serial No. 36,801. 24 Claims. (Cl. 70—14.)



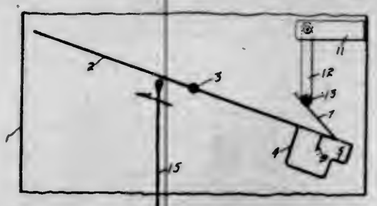
1. A lock having a bolt, a rotary bolt member carried by the bolt, adapted to be thrown out of the path of movement of the bolt when the bolt is in locking position, and a detent adapted to be moved into the path of movement of the rotary bolt member to prevent the movement of said rotary bolt member.

1,785,382. WEIGHING SCALE. SAMUEL N. HURT, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Mar. 12, 1828. Serial No. 260,862. 7 Claims. (Cl. 308—2.)



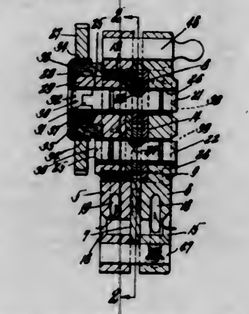
1. In a device of the class described, a frame, a member provided with a pivot, a bearing carried by said frame and supporting said pivot, a resilient clip adapted to secure said bearing against displacement, the parts being arranged so that said clip may be distorted to permit removal of the bearing.

1,785,383. PRECISION GAUGE. WILLIAM JANDUS and HERBERT S. JANDUS, East Cleveland, Ohio. Filed June 5, 1922. Serial No. 566,119. 10 Claims. (Cl. 33—147.)



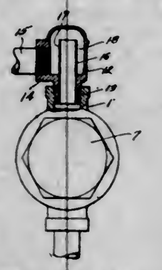
1. A gauge of the character set forth comprising a base, a measuring element disposed in operative relation to said base and adapted to move relative thereto, a lever system connected to said element, torsional spring means connected to said lever system, an indicating needle carried by said torsional spring means, and means for varying said lever system to vary the ratio of movement between said element and needle.

1,785,384. CAN OPENER. JOHN KOVATS, Bridgeport, Conn., assignor to Lorraine Metal Manufacturing Company, Bridgeport, Conn., a Corporation of New York. Filed Sept. 26, 1927. Serial No. 221,924. 1 Claim. (Cl. 30—3.)



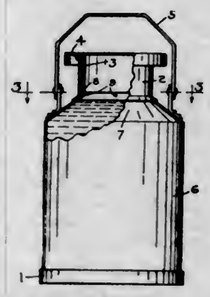
In a can opener, an upright support, an upright toothed wheel mounted in the lower part of said support to engage under the outer side of the flange at the end of the can, a finger piece for operating said wheel, said support having a lateral guide and stop to extend inwardly over and engage the top of the flange to the rear of the wheel, a lever pivoted to the support above the wheel to swing in an upright plane, and a cutter on said lever in front of the guide having a point to pierce the can and an inclined cutting edge forwardly of the point to cut the end of the can after the point is forced through it, said cutter also having a lateral flange extending over one edge of the lever to cause the cutter to turn with the lever, said lever being mounted between the cutter and the support to space the cutter inwardly from the support and including an operating handle to swing the cutter to cutting position, said cutter and lever being limited by said stop in its turning movement under action of the top being cut by said guide.

1,785,385. FLUE DAMPER AND LATCHING MECHANISM. GEORGE E. LAUER, Oakland, Calif. Filed Nov. 1, 1928. Serial No. 316,380. 7 Claims. (Cl. 126—285.)



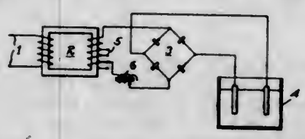
1. A flue provided with a pivoted damper, a catch member provided on said damper, a pendulum supported by said flue and provided with a horizontally extending portion for guilding said horizontally extending portion in a closed path around and into and out of latching engagement with said catch member upon successive movement of the damper in one direction.

1,785,386. METERING PUMP. FREDERIC MCINTYRE, Newton, Mass. Filed Sept. 8, 1927. Serial No. 218,340. 11 Claims. (Cl. 103—126.)



1. A metering pump for delivering fluid cellulose compound to be spun into artificial silk comprising a casing having interior circular chambers for the reception of pump gears and inlet and outlet passages to and from such chambers, straight spur gears located in said chambers, and rotatable shafts on which said gears are mounted and rigidly fixed, having bearings in the casing, said bearings extending and opening to the exterior of the casing and providing channels for the flow from said chambers past the gears and shafts of a controlled quantity of the fluid being pumped, for lubrication.

1,785,387. DIRT TRAP FOR THERMOSTATS. CLARENCE H. MONROW, Cleveland, Ohio, assignor to The Hotstream Heater Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 9, 1927. Serial No. 204,652. 1 Claim. (Cl. 183—75.)



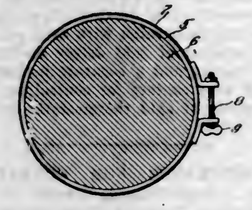
A dirt trap for thermostatic regulators, comprising a one-piece hollow casing having a closed end and provided at the other end with an elongated extension threaded externally for direct connection with a thermostatic regulator, the threaded extension having a through bore, a split tube press-fitted in said bore and extending into the chamber of the casing, said casing having a lateral opening towards the extending portion of said tube and internally threaded for connection with a gas supply pipe, whereby the trap may take the place of a standard elbow pipe fitting and will serve its purpose in any position.

1,785,388. SELF-DRAINING OIL CAN. SWAN E. NORD, Seattle, Wash. Filed Oct. 23, 1928. Serial No. 314,524. 4 Claims. (Cl. 220—1.)

1. A self-draining oil can, comprising a body portion, a neck, a top slidably engaged within the neck, an apertured extension to the body portion projected into the neck, providing, when the can is inverted, a member for diverting drainings of oil from the body portion away from the joint formed between the top and neck, in their sliding engagement, and directing the same into said top, and affording, when the can is upright, a circumferential channel located between the extension and the neck for draining oil from the top into the body portion.

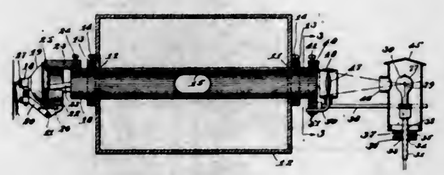
1,785,389. PROCESS FOR CONTROLLING ELECTROPLATING. ROBERT J. PIERSOL, Pittsburgh, Pa. Filed Jan. 14, 1929. Serial No. 332,896. 5 Claims. (Cl. 204—1.)

1. A plating system including a plating solution having two electrodes therein, and means for supplying a plating current thereto comprising a source of alternating current, a transformer having its primary winding connected to said source, and rectifying means connected between the secondary winding of the transformer and the electrodes in the plating solution, and means for controlling the amplitude and the phase condition of the current supplied to the rectifying means.



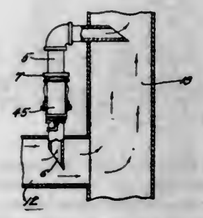
1,785,390. TIRE BOOT. WALTER R. PINNEO, Marshalltown, Iowa. Filed May 28, 1927. Serial No. 193,546. 1 Claim. (Cl. 152—24.)

A device of the character described comprising a flexible body consisting of superposed layers of pliable material, rows of flat metal disks disposed in spaced relation to opposite side edges of said body, the disks of each row being spaced from each other longitudinally of the body, and fasteners for said disks passed through the disks centrally thereof and through said body and having heads at their outer ends bearing against the outer faces of the disks, portions of each disk between its fastener and the margin of the disk being struck outwardly to form circumferentially spaced openings through the



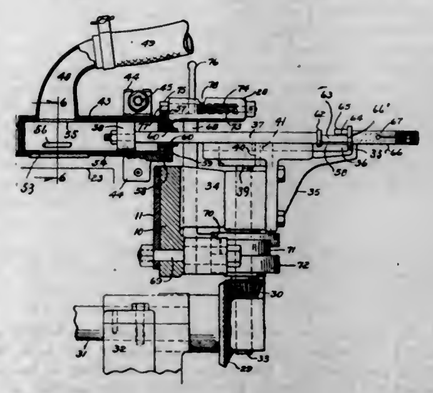
disk and an outstanding bordering flange for each opening, the bordering flanges being serrated to form teeth adapted to bite into a tire casing and prevent the device from slipping.

1,785,391. METHOD OF MAKING BRAKE BANDS AND THE LIKE. THOMAS M. RUSSELL, Middletown, Conn., assignor to The Russell Manufacturing Company, Middletown, Conn., a Corporation of Connecticut. Filed Nov. 26, 1926. Serial No. 150,787. 8 Claims. (Cl. 18—47.5.)



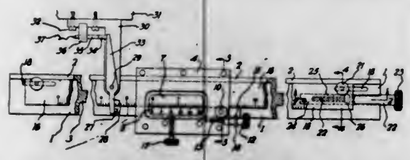
1. The method of making brake bands and other articles of the class described which consists in producing a strip of material comprising or including suitable indurating material, then condensing the strip by compression in the presence of heat, then relieving the strip of compression and while the strip is still warm and sufficiently pliable bending the same into the required curved form of the desired brake band or the like, and then allowing the article to cool and become permanently set in the said curved form.

1,785,392. DEVICE FOR INDICATING AND RECORDING THE QUALITY OF SMOKE. FRANK SAWFORD and FRANK SAWFORD, Jr., Vancouver, British Columbia, Canada. Filed Mar. 28, 1927. Serial No. 178,963. 3 Claims. (Cl. 88—14.)



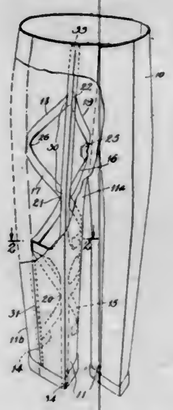
1. In combination, a flue or smoke passage having two oppositely disposed open orifices to permit the entrance of air into the flue, a source of light outside the flue adjacent one of said orifices, a light-sensitive device outside the flue adjacent the other of said orifices, said light source and light sensitive device being aligned with said orifices and spaced therefrom to provide an annular passage between said orifices and the outside air, an indicator, electric connections between the light-sensitive device and said indicator, and means for enclosing the path of the ray through the flue except for a predetermined distance.

1,785,393. APPARATUS FOR DETERMINING THE DENSITY OF SMOKE. FRANK SAWFORD, Vancouver, British Columbia, Canada, assignor of one-half to Frank Sawford, Jr., Vancouver, British Columbia, Canada. Filed Nov. 19, 1928. Serial No. 320,387. 1 Claim. (Cl. 84—14.)



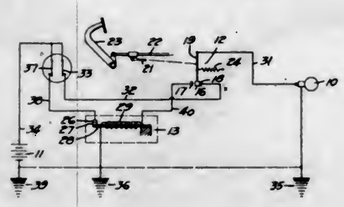
In an apparatus for indicating the density of smoke in a flue, stack, or the like, in combination, a by-pass pipe extending in the direction of flow of smoke in said flue, two oppositely disposed alined orifices in said by-pass pipe, a source of light arranged to throw a ray through said orifices, a light sensitive device for receiving said light ray, said orifices being disposed in a line perpendicular to the path of travel of smoke in said by-pass pipe, and means for indicating the density of the smoke in response to the impression of said light upon said device, said by-pass pipe extending into and being arranged in said flue so as to receive for passage therethrough a representative sample of smoke passing through said flue.

1,785,394. BATTER-FEEDING DEVICE FOR PASTRY-CAKE MACHINES. CHARLES SCHROEDER and HARRY TATOSIAN, Bridgeport, Conn., assignors to Ice Cream Cone Machinery Inc., Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 3, 1928. Serial No. 244,164. 2 Claims. (Cl. 107—28.)



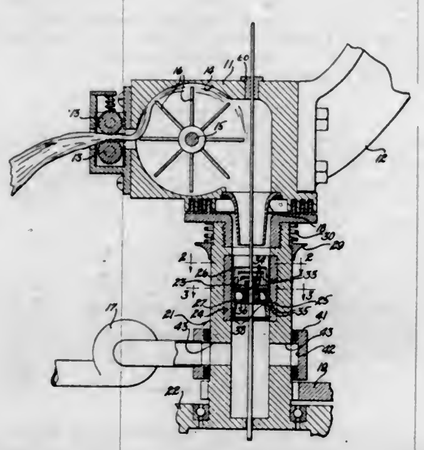
1. In a batter feeding device, a casing having inlet and outlet openings, a rocker cylinder in the casing and having an inlet and an outlet, a piston within the cylinder, a driven shaft, means on the shaft for reciprocating the piston, a cam on the shaft, means rocked by the shaft, a retractable spring, pressed pin connecting said means with the cylinder whereby the cylinder will rock with the means, and means to retract the pin and secure it in inoperative position whereby the cylinder will not be moved by said means.

1,785,395. ZEROIZING SCALE FOR WORK-POSITIONING MECHANISM FOR MACHINE TOOLS. JOHN C. SHAW and ROBERT D. SHAW, Brooklyn, N. Y., assignors to Keller Mechanical Engineering Corporaton, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 3, 1928. Serial No. 244,167. 5 Claims. (Cl. 90—58.)



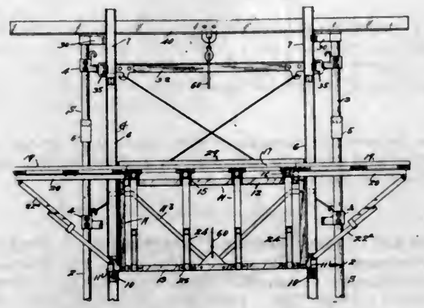
1. A zeroizing scale for work positioning mechanism for machine tools wherein a work table is movable relative to the tool, comprising a graduated scale, means for supporting said scale on the work table parallel to the direction of motion thereof, a slide-way on said supporting means, a slide block mounted on said slide-way for adjustment along the scale, a vernier bar on said slide block adjustable relative to said scale, means for clamping the vernier bar to the slide-way in any adjusted position relative to the scale, a lever, carrying contacts controlling motion of the work table, located in position to be actuated by said vernier bar, as the latter moves with the work table, to open the contacts and stop said motion, and means for adjusting said scale relative to the vernier bar, after the latter has stopped motion of the work table, for zeroizing the scale, whereby the work may be positioned by adjusting the vernier bar according to measurements from the zero of the zeroized scale.

1,785,396. KNEE PROTECTOR FOR TROUSERS. CHARLES SHEFFOLD, Clinton, Conn. Filed Sept. 19, 1929. Serial No. 393,636. 8 Claims. (Cl. 2—231.)



1. In combination with the leg portions of a pair of trousers including side seams, a protector for each leg portion comprising a transverse band adapted to be positioned at the forward part of the knee portion of a trouser leg, means involving strap members attached to the ends of said band and arranged diagonally with reference thereto for taking up the stress to which said transverse band is subjected, the ends of said transverse band being attached to the side seams of the trouser leg, the ends of said strap members being also attached to the side seams of said trouser leg and other strap members extending from the ends of one set of the first named strap members at said side seams to a point in alignment with the crease in the trousers, and means for supporting the last named ends of said strap members in connection with the trousers.

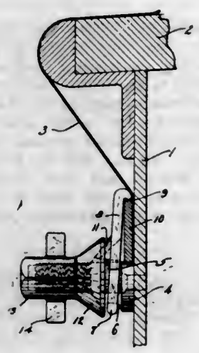
1,785,397. AUTOMOBILE SIGNALING SYSTEM. MILTON H. SHOENBERG and LESTER SCHON, San Francisco, Calif.; said Schon assignor to said Shoenberg. Filed Oct. 5, 1927. Serial No. 224,123. 4 Claims. (Cl. 177—337.)



2. In a signaling system adapted to be used with a motor vehicle having an ignition switch, a signal lamp, a thermostatic flasher switch having its heating coil and normally closed contacts connected in series with said ignition switch, a driver operated switch having front and back contacts and connected to said lamp, said front contacts connected to said heating coil so that said signal lamp is connected in parallel with said coil to flash said lamp upon operation of said driver operated switch in applying the brakes, and a separate manual switch connected to said back contact for controlling the lamp circuit independently of said thermostatic switch.

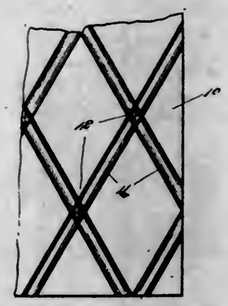
1,785,398. APPARATUS FOR COVERING CORES. BRUNO MAX ALFRED TREBES, Berwyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 11, 1927. Serial No. 225,458. 12 Claims. (Cl. 19—145.)

1. In an apparatus for applying a fibrous covering to a core, means for feeding fibrous material to the apparatus at a predetermined rate, a wheel having a plurality of paddles and provided with pins on one of the paddles for separating the fibrous material into individual fibers, and means for applying the fibers to the core.



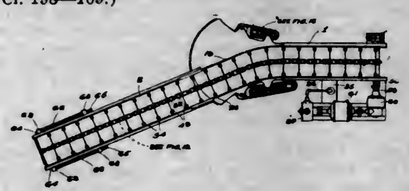
1,785,399. SCAFFOLD. WILLIAM G. VENARD, Los Angeles, Calif. Filed Nov. 4, 1929. Serial No. 404,620. 6 Claims. (Cl. 304—2.)

1. A skip hoist and scaffold apparatus, including a pair of sectional standards and a pair of channel guides, spaced forwardly thereof, foot-irons and crown-irons connecting the respective parts of the standards and guides and transverse braces connecting the standards and having forwardly reaching arms to gage the guides.



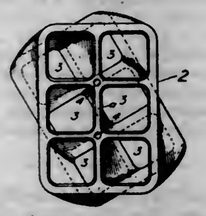
4. In a skip hoist, a skip structure including upper and lower cross-bars which are connected by upright stiles forming a rigid frame; the upper bar having at its ends back shoes to run in guides, and lugs attached to the ends of the lower bar and having front shoes to run in said guides.

1,785,400. BATTEN CLAMP. FREDERICK W. WATSON, Cleveland Heights, Ohio. Filed Dec. 31, 1928. Serial No. 329,595. 2 Claims. (Cl. 114—203.)



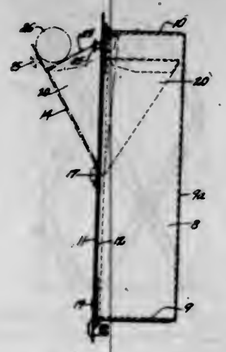
1. In combination with a hatch combing, batten stop means arranged thereon, loose battens engaging the stop means and a plurality of batten clamps each having a single hook engaging the outer face and upper edge of the batten, clamp stop means for resisting the inward thrust of the clamps to force their upper ends toward said batten, and means engaging said clamps and exerting inward and downward thrust thereon.

1,785,401. GLASS ORNAMENTATION. EMANUEL ZUCKERBERG, Providence, R. I. Filed Nov. 6, 1929. Serial No. 405,205. 9 Claims. (Cl. 41—21.)



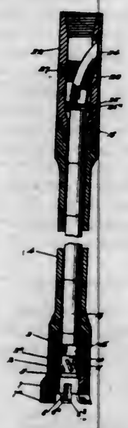
8. A glass panel provided on one face thereof with ornamental grooves having convex bottom walls and diverging side walls.

1,785,402. ARTICULATED CONVEYER. EINAR M. AARENTZEN, Franklin, Pa., assignor to Joy Manufacturing Company, Franklin, Pa., a Corporation of Delaware. Filed Dec. 26, 1928. Serial No. 328,500. 3 Claims. (Cl. 198—109.)



2. A conveyer organization of the endless chain and scraper type comprising in combination a main frame for said conveyer consisting of two longitudinally-alined, articulated, abutting sections one of which is adapted to have horizontal, radial adjustment relative to the other section. means operable to cause such adjustment, a deck for each of said sections the adjacent abutting ends of which decks are so arranged that material may be moved uninterruptedly thereover, a vertically-disposed flange for each side of said decks each of said flanges having a laterally flexible portion extending across the articulated area of said sections, scrapers adapted to travel upon and throughout the combined length of said decks to move material thereover, an endless chain connected and transmitting motion to said scrapers and means for driving said chain.

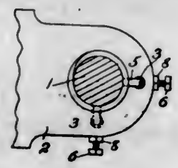
1,785,403. CONDUIT. EDWIN BABB, Aultman, Ohio, assignor, by mesne assignments, to National Fireproofing Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 2, 1928. Serial No. 274,533. 14 Claims. (Cl. 247—33.)



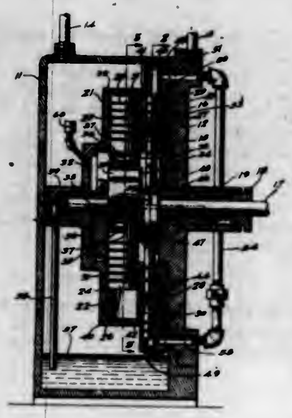
1. A transposing conduit section having substantially parallel end faces and having a curved duct for containing a current carrying conductor.

1,785,404. MAIL BOX. ALBERT EDGAR BLACKMAN, Mount Vernon, N. Y. Filed Sept. 8, 1927. Serial No. 218,193. 2 Claims. (Cl. 232—21.)

1. In a mail-box having a plurality of compartments open at the front, a master door, for closing the upper portions of all of said compartments, a plurality of hoods extending inwardly of the box and fixed upon the master door, a hood corresponding to each compartment and adapted to come within its corresponding compartment when the door is closed, each hood having a top and side portions in fixed relation to each other and being provided with a slot in its top for the introduction of mail, said hoods, except for their slots, obstructing access to the interior of their corresponding compartments when the master door is open.



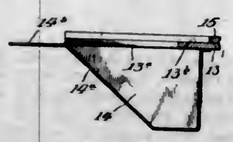
1,785,405. CORE-DRILLING BIT. RAPHAEL ROGERS CANDEE, McKittrick, and OSCAR FRED HARDING, Coalinga, Calif. Filed Oct. 5, 1927. Serial No. 224,197. 4 Claims. (Cl. 255—72.)



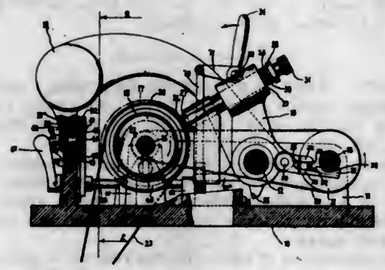
1. In combination, in a drill, a bit body head having a series of helical reaming blades with straight bottom cutting edges extending under the bottom of the body and a series of bottom cutting blades; the bottom edges of both series of blades lying in a common plane.

1,785,406. SCREW-THREAD CLEANER. ROBERT M. CORNETT, Kansas City, Mo. Filed Jan. 23, 1930. Serial No. 422,964. 6 Claims. (Cl. 74—40.)

1. In a screw thread cleaner, the combination with a screw and an internally threaded member fitted thereon, of a device rotatable on and slidably fitted to and adjustable inwardly on said member to a thread cleaning position between the threads of said screw, and means for forcing said device to said position and for holding said device from turning on said member.



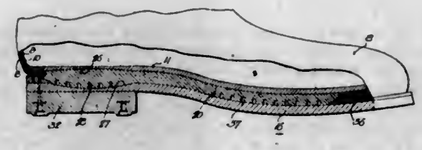
1,785,407. COMPRESSOR MECHANISM. WILFRED FOURNESS, Oakland, Calif., assignor to The Fourness Development Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 12, 1928. Serial No. 318,736. 7 Claims. (Cl. 230—185.)



1. In a compressor mechanism the combination of a casing, a detachable cover for the casing, a shaft extending across the casing, said casing having one or more cylinder bores radial to the shaft, pistons in said bores, and a slide in the casing arranged to be reciprocated by the shaft and guided by the casing, said slide being in mechanical connection with the pistons, said connection being characterized by the fact that the slide is detachably dovetailed to the pistons, and that the cover prevents relative axial movement of the slide and the shaft, to prevent disconnection of the dovetailed connection.

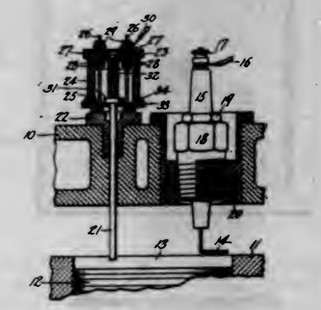
1,785,408. ROTATABLE INDEXING TABLE. PHILIP A. FRAZIER, Chicago, Ill., assignor to R. R. Donnelley & Sons Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 10, 1928. Serial No. 318,383. 6 Claims. (Cl. 45—26.)

1. An indexing table comprising a stationary top having an opening therein, a movable member beneath said top having a series of pockets each adapted to hold indexing tabs of a given kind and each having an outer wall inclined to facilitate the removal of the tabs upwardly through the opening, and means on said movable member uncovered by said opening for identifying each of said pockets.



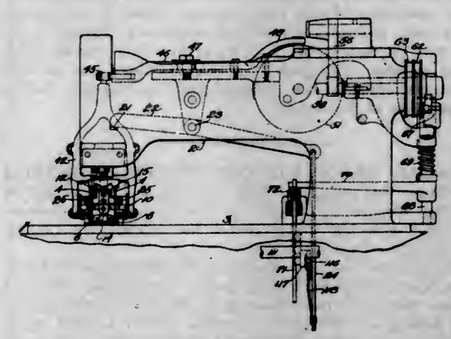
1,785,409. RECORD-RESURFACING MACHINE. VICTOR L. FRYKMAN, Bridgeport, Conn., assignor to Dictaphone Corporation, Bridgeport, Conn., a Corporation of New York. Filed July 23, 1927. Serial No. 207,848. 22 Claims. (Cl. 82—1.1.)

1. In a record-resurfacing machine, the combination of a mandrel for supporting a record to be resurfaced, a carriage, means determining the position of said carriage relative to said record, and means automatically operated as an incident to each successive movement of the carriage to initial resurfacing position for changing step by step the position of said determining means to bring said carriage into closer relation to said record.



8. In a record-resurfacing machine, the combination of a frame; a mandrel for supporting a record to be resurfaced; a carriage mounted on said frame; a settable knife mounted on said carriage; means for locking said knife in set position; means for automatically advancing the knife toward the record; manually operable means for ejecting the record from said mandrel; and means operated coordinately with the operation of the record-ejector for restoring the knife-advancing means and releasing the knife-locking means.

1,785,410. CUSHIONED SHOE. FRANCIS M. GILKERSON, Beloit, Wis. Filed Feb. 13, 1930. Serial No. 428,109. 5 Claims. (Cl. 36—17.)

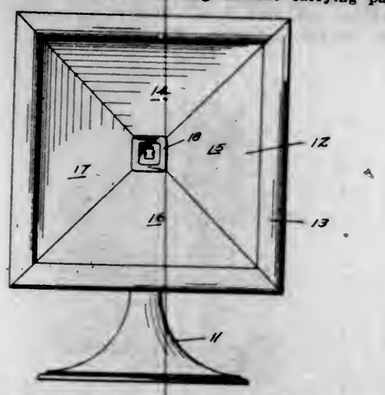


1. In a Goodyear welt shoe having a nailed seat, a cushion heel construction comprising a soft rubber member interposed between the inner and outer soles, a marginal frame member of stiffer material surrounding the outer edge portion of said soft rubber member and nailed to the heel seat, a heel, and nails passing through the outer sole, frame member and into the inner sole, said soft rubber member having a portion projecting over the inturned edge of the upper and counter flange at the heel seat.

1,785,411. IGNITION SYSTEM. WILLIAM F. HAMILTON, New York, N. Y., assignor of one-half to Frank S. Rollins, New York, N. Y. Filed Jan. 10, 1929. Serial No. 331,496. 5 Claims. (Cl. 123—148.)

1. An ignition system for internal combustion engines, comprising primary and secondary circuits, the primary circuit including a normally closed piston actuated circuit breaker, and the secondary circuit including a spark electrode disposed in a combustion chamber within sparking distance of a wall thereof.

1,785,412. LABEL-SEWING MACHINE. PERCY W. HATFIELD, Wakefield, Mass., assignor to Winship, Boit & Co., a Copartnership consisting of Charles N. Winship and Elizabeth S. Boit, Wakefield, Mass. Original application filed Feb. 4, 1924, Serial No. 690,359. Divided and this application filed July 24, 1925. Serial No. 45,861. 10 Claims. (Cl. 112—252.)



1. In a label sewing machine, the combination of sewing instrumentalities adapted to stitch simultaneously across opposite ends of a label, said instrumentalities including two needles spaced apart and shuttles cooperating with said needles, means for holding the label and the work in operative relationship to said instrumentalities, mechanism cooperating with said means to feed the work and the label past said instrumentalities, cutters operative to sever both the needle and shuttle threads, and a common actuating means for said cutters.

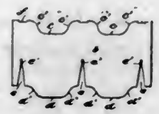
1,785,413. ELECTRIC REFLECTING HEATER. WILLIAM WESLEY HICKS, San Francisco, Calif. Filed June 23, 1927. Serial No. 200,885. 3 Claims. (Cl. 219—34.)

1. In an electrical heater, a reflector having an axis and of such form that sections perpendicular to the axis

are polygonal figures, and an electrical heating unit arranged on the axis and having current carrying parts

substantially paralleling the sides of said figures and forming a polygon at said sections similar to the said figure.

1,785,414. TYING STRING FOR SKEINS. HUGO HOFMANN, Johnson City, Tenn., assignor to American Bemberg Corporation, New York, N. Y. Filed May 14, 1930. Serial No. 452,494. 6 Claims. (Cl. 40—1.)



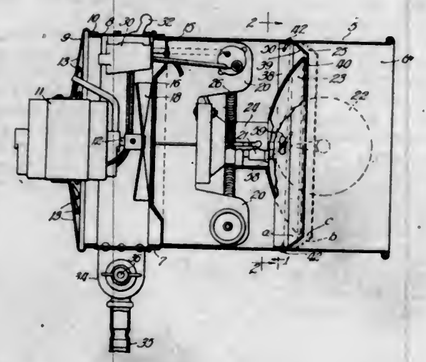
1. The method which consists in tying around a supported skein of artificial filaments a flexible marking member, consisting of only two portions, joined to each other, and each having a distinctive individual characteristic, so that the knot appears to the right of the person tying said member, and part of a predetermined one of said portions, adjacent the point of junction, appears on the upper face of the skein.

1,785,415. REMOVAL OF CARBON BISULPHIDE FROM GAS. WALTER J. KLAIBER, Pittsburgh, Pa., assignor to The Koppers Company, a Corporation of Delaware. Filed Apr. 22, 1927. Serial No. 185,927. 2 Claims. (Cl. 23—3.)

1. In a process of removing both naphthalene and carbon bisulphide from flowing fuel gas containing them, the steps comprising recirculating in the path of the gas an oil having solvent properties with respect to both naphthalene and carbon bisulphide, withdrawing portions of the solvent oil to reduce the amount of naphthalene contained in the recirculated body of solvent oil, adding relatively fresh solvent oil to maintain the solvent at a substantial degree of purity, and treating the recirculating solvent oil with an aqueous alkaline sulphide solution to remove carbon bisulphide therefrom and thus maintain in the solvent oil a substantial capacity for absorbing carbon bisulphide from the gas.

1,785,416. BOX PARTITIONING. LEON E. LA BOMBARD, Waltham, and MELVIN H. SIDEBOTHAM, West Newton, Mass., assignors to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed Dec. 2, 1929. Serial No. 411,090. 2 Claims. (Cl. 217—30.)

1. Box partitioning comprising two sets of strips crossing each other, both edges of each strip presenting alternating convexities and concavities, the convex portions of one edge being opposite the concave portions of the other edge, and one edge of each strip having notches alternating with its convexities, the middle portions of the

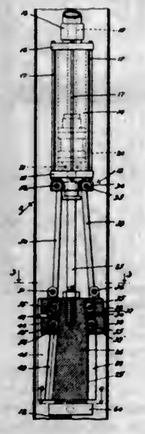


convexities and concavities presenting straight edge portions, there being only one straight projecting edge of substantial length on each strip for each pocket whereby an elongated bearing foot is provided.

1,785,417. PAINT AND VARNISH REMOVER. JOSEPH J. MCEVOY and CHARLES H. UPSON, Waterbury, Conn. Filed Mar. 17, 1928. Serial No. 262,598. 5 Claims. (Cl. 87—5.)

3. A pasty composition of matter for the removal of paint, varnish, and lacquer resulting from the mixing together in a colloidal suspension of a caustic alkali, an alkaline silicate, water, a water soluble iron salt and a thickening agent.

5. A composition of matter for the removal of paint, resulting from the mixing together of about 10.45% caustic soda, 9.14% water glass (40—42 degrees Baumé), 69.55% water, .71% copperas, and 10.15% flour.



1,785,418. HAIR DRIER. WILLIAM MEYER, Chicago, Ill. Filed Sept. 4, 1928. Serial No. 303,893. 13 Claims. (Cl. 34—96.)

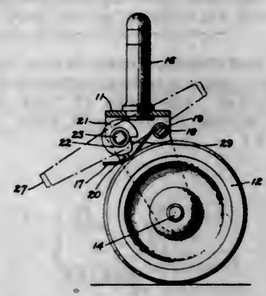
1. In a device of the class described, the combination of a casing, means for projecting a blast of air therefrom, means for simultaneously heating the air and means for adjusting the volume of the air blast projected from said casing for adjusting the heat effect upon the head, said means comprising a deflector spaced peripherally from the interior of the casing with a peripheral passage between the periphery of the deflector and the interior of the casing and a ring adjustable within the casing for adjusting said peripheral passage.

1,785,419. WELL-CASING PERFORATOR. ROSCOE MOSS, Los Angeles, Calif., assignor to Roscoe Moss Company, a Corporation of California. Filed Apr. 15, 1929. Serial No. 355,074. 3 Claims. (Cl. 81—188.)

1. A casing perforator embodying: a mandrel; a holding block and a cutter guide-block in sliding engagement with surfaces on said mandrel and adapted to move laterally into engagement with the inner surface of a casing; supporting means for said mandrel; supporting means for said holding block and said cutter guide-block; and means for effecting relative transverse movement between said mandrel and said blocks, the surface of said mandrel

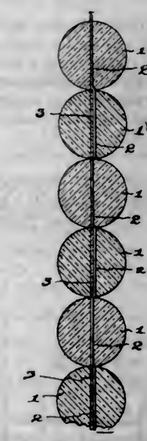
which engages said holding block comprising a tapered section and an untapered section and the surface of said mandrel, which engages said cutter guide-block comprising a tapered section which extends beyond the point at which the tapered and untapered section merge on the surface engaging said holding block.

1,785,420. SEPARABLE FASTENER SLIDER AND METHOD OF MAKING SAME. ROBERT H. NICHOLSON, Meadville, Pa., assignor to Hookless Fastener Company, a Corporation of Pennsylvania. Filed Oct. 12, 1928. Serial No. 312,097. 20 Claims. (Cl. 29—148.)



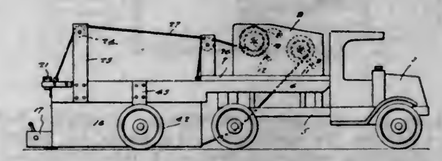
1. The herein described method of making a slider for separable fasteners which has superposed wings with guide flanges projecting from the opposed faces of the wings, which comprises coining flanged wing blanks from flat metal stock, separating the blanks from the stock, and disposing the coined wings in opposing relation.

17. A one piece separable fastener slider formed of metal and comprising parallel wings having overlying flat-faced coined flanges extending inwardly from the side edges thereof to stiffen the slider and having the inner edges of said flanges formed to guide interlocking members between them.



1,785,421. BRAKE STRUCTURE FOR CASTER WHEELS. HANS P. NIELSEN, Alameda, Calif., assignor to Eames Company, San Francisco, Calif., a Corporation of California. Refiled for application Serial No. 247,048, dated Jan. 16, 1928. This application filed Feb. 19, 1930. Serial No. 429,839. 3 Claims. (Cl. 16—35.)

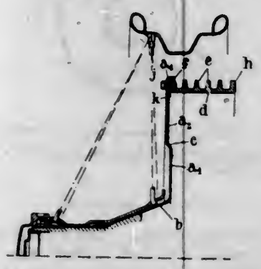
1. A caster including a fork, a wheel embraced thereby, a pivotal brake member carried by the fork and adapted to engage the peripheral surface of the wheel, spring means constantly tending to maintain said brake member out of



contact with the wheel, and operative cam means adapted to press said brake member into firm contact with the periphery of the wheel.

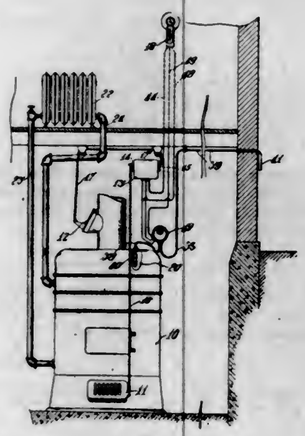
1,785,422. HIGHWAY SIGNAL. NIELS JORGEN NIELSEN-KLOPSKOV, Ringsted, Denmark. Filed Aug. 18, 1927, Serial No. 213,936, and in Denmark Aug. 18, 1926. 2 Claims. (Cl. 40—125.)

1. A highway signal comprising a frame, and a plurality of translucent coloured bodies and light-reflecting bodies alternately arranged on said frame and visible from either side of the highway.



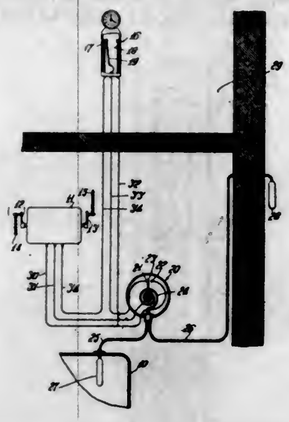
1,785,423. SNOW-HAULING TRUCK. JOSÉ ANGEL ORTIZ, New York, N. Y. Filed Dec. 7, 1929. Serial No. 412,454. 5 Claims. (Cl. 37—5.)

1. In an apparatus of the class described, a wheeled truck, a frame on the truck having an opening, a body mounted in the opening in the frame, means for lowering and raising the body through said opening, a bottom clos-



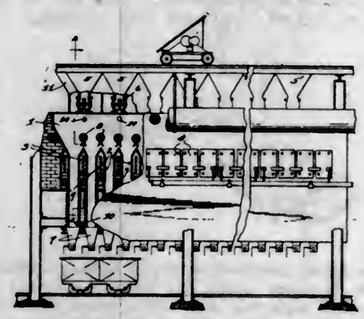
ure in the body having a knife edge at its inner end, means movably mounting the bottom closure, and means for sliding the bottom structure to open and closed position.

1,785,424. BRAKE DRUM. JOHN VERNON PUGH, Coventry, England, assignor to Rudge-Whitworth, Limited, Coventry, England. Filed Nov. 22, 1926, Serial No. 150,094, and in Great Britain Dec. 1, 1925. 12 claims. (Cl. 188—218.)



1. A vehicle wheel braking device having in combination a thin plate metal disc upset centrally from a flat plate to afford increased rigidity and a vehicle wheel brake ring of not less than double the thickness of the material of said disc fastened thereto by a series of attachment means distributed around the axis of rotation.

1,785,425. APPARATUS FOR CONTROLLING HEATING SYSTEMS. FRED I. RAYMOND, River Forest, Ill. Filed Jan. 3, 1928. Serial No. 244,225. 23 claims. (Cl. 236—9.)

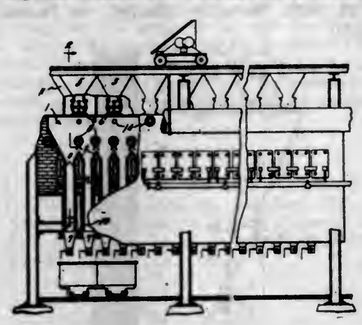


1. In a heating system employing a circulating fluid as a medium, the combination of a heater for heating the circulating medium, a thermostat responsive to temperature fluctuations in the space to be heated, a thermostat the response of which is conditioned upon temperature fluctuations of the medium and also of the outdoors atmosphere, and mechanism for controlling the heater which is governed by the joint action of said thermostats.

1,785,426. METHOD OF HEATING. FRED I. RAYMOND, River Forest, Ill. Filed July 16, 1928. Serial No. 293,293. 15 claims. (Cl. 236—9.)

1. Method of heating which comprises controlling the introduction of heat to the space heated in accordance with temperature fluctuations of said space and also of the heating medium, and varying the temperatures at which the heating medium effects its control in accordance with temperature changes of the outside atmosphere.

1,785,427. COMBINED ORE-REDUCING AND HYDROCARBON-REFINING APPARATUS. WILLIAM H. SMITH, Detroit, Mich. Filed Dec. 27, 1926. Serial No. 157,225. 24 claims. (Cl. 263—10.)

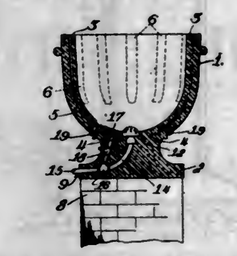


1. Apparatus of the type described comprising a retort for receiving one or more continually moving streams of ore and a heat unit positioned intermediate the ends of and substantially confined within the mass of continually moving ore to define a fixed limited heating zone, the heat being produced by electrical resistance means.

1,785,428. PROCESS OF REDUCING ORE AND CONVERTING HYDROCARBONS. WILLIAM H. SMITH, Detroit, Mich. Filed Apr. 4, 1927. Serial No. 180,746. 21 claims. (Cl. 75—14.)

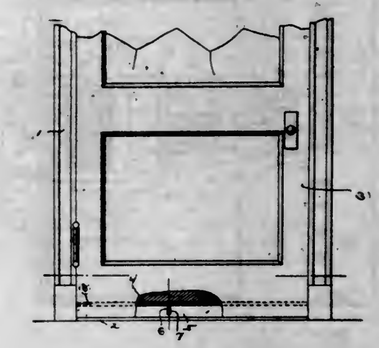
1. In the art of reducing metallic oxides and cracking hydrocarbons without melting the charge, the steps of preparing a charge containing the oxides to be reduced, adding a heavy hydrocarbon to the charge, continuously feeding the charge through a fixed temperature zone

maintained at a temperature sufficient to crack the hydrocarbons in the presence of the materials of the charge removing the cracked hydrocarbons at a predetermined



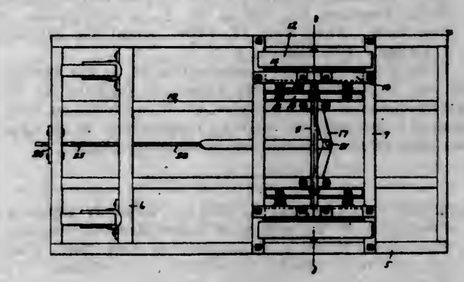
point, relative to said zone and completely reducing the ore without melting during the same operation by a reducing agent present in the charge.

1,785,429. METHOD OF AND MEANS FOR PRODUCING AND DISPLAYING CHANGEABLE SIGNS FOR ADVERTISING PURPOSES. ALBERT EDWARD TILBURN, Melbourne, Victoria, Australia. Filed May 2, 1929. Serial No. 359,854, and in Australia May 8, 1928. 14 Claims. (Cl. 40—28.)



1. A method of producing and displaying luminous signs, announcements and the like for advertising or other purposes, which consists in arranging a translucent sheet or screen between a source of light and a reflector, coating that surface of the sheet which is remote from the reflector with an opaque substance, and progressively removing portions of the opaque coating from said screen whereby light will pass through the resultant translucent portions of the screen onto said reflector so that the desired luminous sign appears progressively upon said reflector and is thereby reflected clear of said screen.

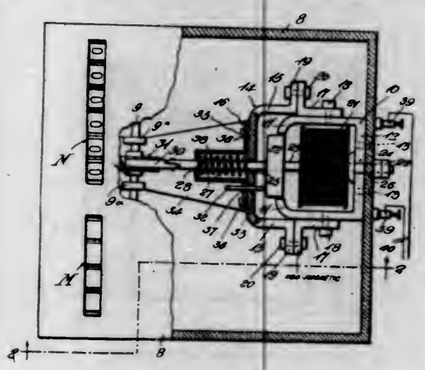
1,785,430. FLOWER URN. CARL LEONARD AGNELL, Chicago, Ill. Filed Sept. 9, 1929. Serial No. 391,204. 5 claims. (Cl. 47—38.)



1. In a device of the character set forth, inner and outer receptacles, the inner receptacle being supported by a pillar within said outer receptacle so as to provide a reservoir space between said receptacles, and spacers between said receptacles dividing said reservoir, said inner receptacle being porous to permit the gradual passing of water therethrough.

1,785,431. THRESHOLD WEATHERSTRIP. WILLIAM B. BAILEY, Olympia, Wash. Filed July 31, 1929. Serial No. 382,412. 1 claim. (Cl. 20—68.)

The combination with a door having an elongated groove in its bottom edge, a pin extending transversely through said groove and positioned substantially midway between the hinged side of the door and the middle thereof, an elongated weatherstrip bodily movably mounted in said groove and free to move bodily downward by gravity and provided with an elongated slot extending vertically above the longitudinal axis of the strip, and adapted to receive said pin, whereby the strip is free to move vertically in said groove and adapt itself to the threshold of the door to form a tight joint therewith, and a cushion in the top of the groove at the hinge side of the door.



1,785,432. BRAKE MECHANISM. STANLEY BEATTY, Highland, N. Y. Filed Jan. 9, 1930. Serial No. 419,634. 5 Claims. (Cl. 188—21.)

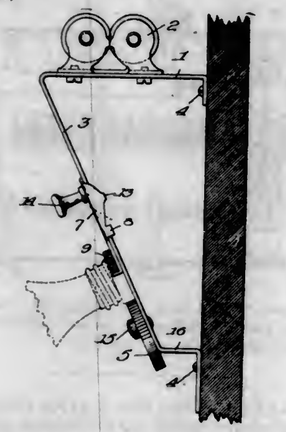
1. In a truck structure of the class described, a frame, a pair of spaced cross members under the frame, a pair of longitudinally disposed blocks under the cross members, an axle mounted under the blocks transversely of the frame, wheels journaled on the axle, shoes slidably mounted on top of the blocks, bolts extending inwardly from the shoes, a pair of bars through which the bolts are slidable, springs on the bolts between the bars and

the shoes, and means for moving the bars laterally in respect to the frame for tensioning and untensioning the springs to apply or disengage the brake.

1,785,433. MINE-CAR DUMP-REGISTERING MEANS. JOSEPH J. BODY and REBECCA A. BODY, Dante, Va. Filed May 12, 1928. Serial No. 277,300. 3 Claims. (Cl. 175—344.)

1. A mechanism of the class described comprising a U-shaped member of magnetic metal and means for magnetizing said member, a second U-shaped member having its arms secured to the arms of the first named member, the arm-connecting portion of said second U-shaped member being outwardly spaced from the ends of said arms of the first named member, the arm-connecting portions of the two members having alined rod-receiving openings, a rod passing through said openings and having an armature shiftable in one direction under the influence of said magnetizing means, spring means acting against said rod and reacting against one of said arm-connecting portions for returning the rod after each magnetically effected movement thereof, and a stop on the rod at the outer side of the other of said arm-connecting portions for limiting the movement of said rod under the influence of said spring means.

1,785,434. WATERPROOFING OF MATERIALS. WALTER A. BRIDGEMAN, Owego, N. Y., assignor to The Wilbur White Chemical Co., Owego, N. Y., a Corporation of New York. Filed Apr. 17, 1928. Serial No. 270,807. 3 Claims. (Cl. 134—11.)

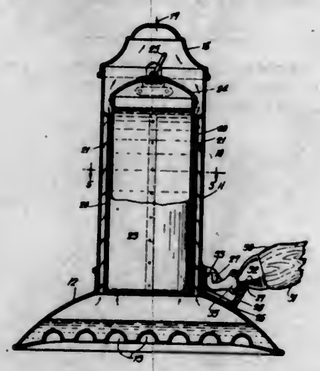


1. As a new product, a composition of matter suitable for use in conjunction with aluminum sulphate for the waterproofing of textile fabrics which comprises an emulsion of a fat, solid at ordinary temperature, in an aqueous soap solution containing an aromatic phenol.

1,785,435. PULVERIZING MILL. FRED J. BULLOCK, Shortsville, N. Y., asignor to Papec Machine Company, Shortsville, N. Y., a Corporation of New York. Filed Jan. 21, 1930. Serial No. 422,402. 11 Claims. (Cl. 83—11.)

1. In a pulverizing mill of the character described, hammers formed of laminated metal, the outer laminæ being relatively hard and the intermediate lamina or laminæ being relatively soft, said hammers being arranged to operate through travel in the plane of lamination.

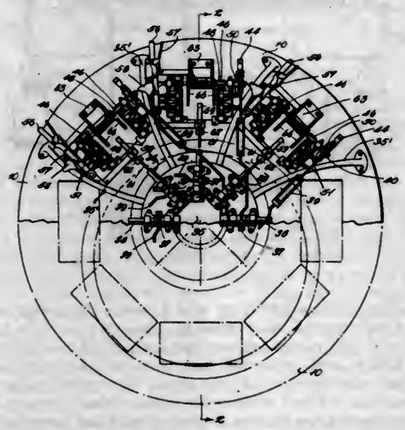
1,785,436. CLOSURE-REMOVING DEVICE. GUSTAV A. CARLSON, Chicago, Ill., assignor to The Boye Needle Company, Chicago, Ill., a Corporation of Illinois. Filed July 21, 1928. Serial No. 294,498. 11 Claims. (Cl. 81—3.1.)



1. A utensil of the character set forth, comprising a bracket having a guide-member, means for securing said bracket to a stationary support, an eccentric device connected with said guide-member, and a sliding body mounted on said guide-member and opposed to said eccentric device.

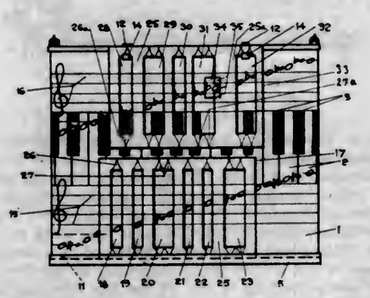
1,785,437. PROCESS OF MAKING ABRASIVE DISKS. ALBERT J. DOERMANN, Chicago, Ill. Filed Aug. 12, 1927. Serial No. 212,550. 2 Claims. (Cl. 51—278.)

1. The process of making an abrasive disk comprising, mixing powdered abrasive and bakelite cement, placing the same in a mold with a layer of finely powdered abrasive on the bottom, and baking the same.



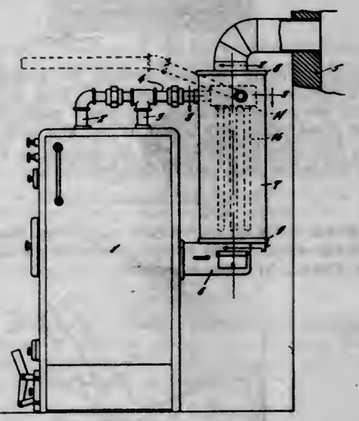
1,785,438. NURSING-BOTTLE HEATER. WALTER F. EDLIN, Union City, N. J. Filed Nov. 19, 1929. Serial No. 408,303. 1 Claim. (Cl. 53—1.)

A nursing bottle heater comprising a hollow dome like base, a cylindrical body rising centrally from said base,



and being open at its top, a cover closing the open top of said body, spaced tubes rising upward from the bottom of said cylindrical body, and opening directly into the interior of said dome like base, said tubes extending inwardly from the side walls of the body for spacing a container adapted to be placed therein in spaced relation to the walls of said body, and said tubes having perforations therein, and means on said base for facilitating the filling of the same with water, substantially as and for the purpose specified.

1,785,439. SHINGLE AND VENEER CUTTING MACHINE. JAMES E. ECKENSLEY, Aberdeen, Wash., assignor of one-half to Alexander Polson, Hoquiam, Wash. Filed July 16, 1929. Serial No. 378,702. 6 Claims. (Cl. 143—8.)

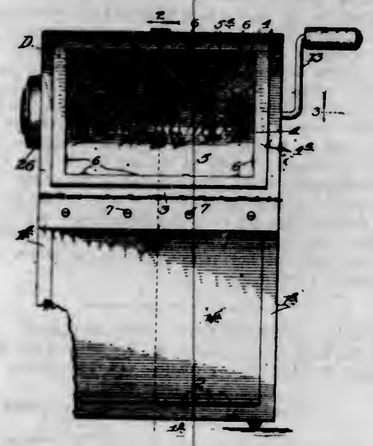


1. In a machine of the character described, the combination with the bed plate, and its base, of a vertical fixed shaft in said base, a gear wheel keyed to said shaft, a support frame journalled on said shaft, a stub shaft revolubly mounted in said frame, intermeshing gears keyed to the said shaft and stub shaft, a knife revolubly mounted on said frame, block feeding devices on said bed plate, means connecting the said stub shaft and feeding devices for operating said feeding devices in timed relation to the travel of the knife.

1,785,440. DEVICE TO BE USED IN TEACHING MUSIC. GUSTAF M. EKSTEDT, Gottenborg, Sweden. Filed Feb. 1, 1929, Serial No. 336,849, and in Sweden Oct. 31, 1928. 6 Claims. (Cl. 84—472.)

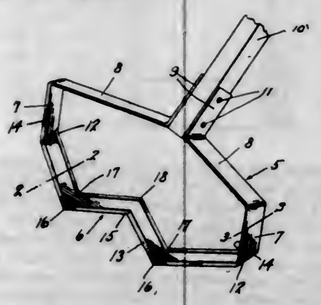
1. A music teaching device comprising a chart with music staffs and a screen movable along the staffs to designate any desired group of music symbols, said chart including two staffs parallel to each other, one staff showing the chromatic sharp scale, and the other staff showing the flat scale and a plan of a key board arranged between the two staffs, the two staffs and the key board plan being arranged on a line directly above each other with the individual note symbol in the sharp scale in the same relative position as the same individual note symbol in the flat scale, the line passing over the representation in the key board plan which corresponds to the individual note symbol, said screen including a plate with windows therein so arranged in relation to the width of the keys in the key board plan as well as to the distance between the key board and each of the staffs, that in any selected dispositon of the screen, each of its windows renders visible the required note symbol in the sharp scale or the flat scale, as the case may be, as well as the corresponding key in the key board plan whereby, in consideration of the configuration of the groups of notes for which the said screen is provided, either one single note symbol and the corresponding single key representation or two adjacent note symbols and the corresponding two adjacent key representations is visible in each individual window.

1,785,441. SUPERHEATER FOR BOILERS. ROBERT H. M. ERDMANN, Jamaica, N. Y. Filed Dec. 20, 1928. Serial No. 327,275. 1 Claim. (Cl. 122—460.)



In a super heater for association with a smoke flue that leads from a boiler, a vertically disposed casing mounted exteriorly of the boiler forming a section of the smoke flue and having intake and outlet openings at its lower and upper ends, respectively, a manifold arranged within the casing and spaced from the inner walls thereof, a steam supply pipe extending from the boiler through one wall of the casing into the manifold, superheated steam outlet pipes extending from the manifold through opposite walls of the casing, said pipes constituting means for supporting the manifold in the casing in spaced relation to the walls thereof, and a series of spaced U-tubes communicating at their upper ends with the bottom of the manifold and having their lower ends disposed adjacent the intake opening in the casing and adapted to collect water globules from the steam in the manifold and vaporize said globules, the steom in the manifold being superheated by the products of combustion passing upwardly through the casing from the smoke flue.

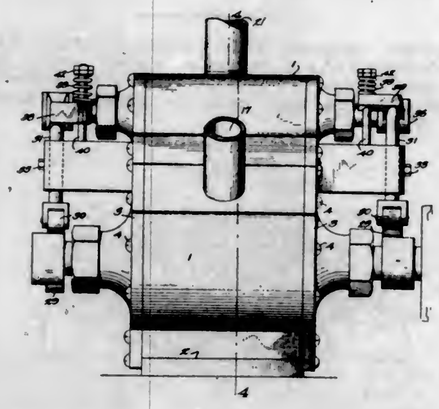
1,785,442. EDUCATIONAL TOY AND DISPLAY DEVICE. CHARLES FISHER, New York, and CHARLES D. FISHER, Beacon, N. Y.; L. Stewart Gatter executor of said Charles Fisher, Deceased. Filed Sept. 12, 1925. Serial No. 55,960. 20 Claims. (Cl. 40—96.)



1. In a machine of the character set forth, the combination of a cabinet provided at its upper front portion

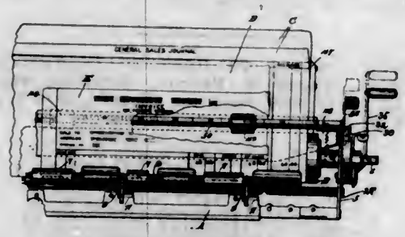
with a window, a film-guide in the upper portion of said cabinet and open to said window and projecting rearwardly therefrom and affording an upper film-confining wall, the space below said wall serving to receive the film folds, an endless film pasing between said film-guide and said window, and a friction-feed device back of said film-guide

serving to draw the film through the passage between said window and said film-guide and force it to form in folds below the film-guide, the lower walls of said cabinet co-operating with a wall of the film-guide to confine the film, whereby folds will be formed in the film as the film issues from said friction-feed device.



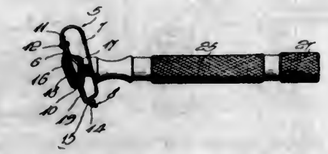
1,785,443. WEED CUTTER. ISAAC W. FISHER, Long Beach, Calif. Filed July 31, 1929. Serial No. 382,574. 1 Claim. (Cl. 30—9.)

In a hand tool of the class described, an oblique main blade having its opposite edges cut in a zig-zag fashion to provide on one of said edges a tooth arranged substantially in line with the transverse center line of said blade, and a pair of teeth at the other of said edges, one to each side of said transverse center line of the main blade, end blades extending upwardly at an angle to said main blade and obliquely with respect to said main blade, said end blades respectively being sharpened on one edge only, and said end blades adjacent their free ends terminating in inwardly directed end portions provided with means for securing therebetween one end of a handle.



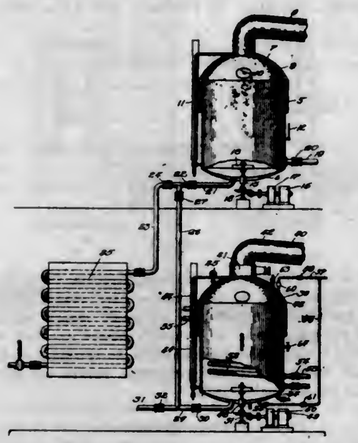
1,785,444. ROTARY PUMP OR ENGINE. ERNIE GROESBECK, Oshkosh, Wis. Filed May 26, 1925. Serial No. 33,029. 1 Claim. (Cl. 103—123.)

A device of he character described comprising a cylindrical casing, a partition arranged in said casing to divide it into two cylindrical sections, a solid cylindrical rotor mounted in each section of said casing, and having its periphery spaced from the walls of the casing, a main shaft extending through said casing and carrying said rotors, rigid radial abutments carried by and integral with said rotors at substantially 180° from each other, an outlet chamber communicating with each section of said casing, gates mounted in said outlet chambers, each gate being arranged to project into different sections of said casing



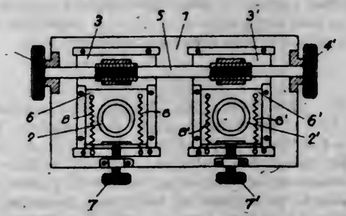
to engage the periphery of said rotors, said casing being provided with an inlet opening forwardly of said gates whereby fluid enters between the casing and the rotors on one side of said gates and flows into said outlet chamber on the opposite side of said gates, said gates being provided with pivoted arms, an auxiliary shaft arranged to operate said arms, cranks secured to said last named shaft, tappet means for actuating said cranks, and cams carried by the main shaft for actuating said tappet means.

1,785,445. TYPEWRITING MACHINE. GEORGE F. HANDLEY, Glendale, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 15, 1928. Serial No. 326,317. 1 Claim. (Cl. 197—127.)



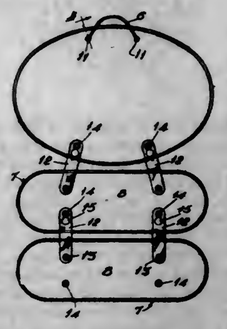
In a typewriting machine, the combination with a carriage, of a platen journaled thereon, releasable pressure rolls cooperating therewith, means for releasing said pressure rolls including a manually operable lever fulcrumed on the carriage, a line spacing mechanism for the platen including a manually operable lever fulcrumed on the carriage, both of said levers being fulcrumed on a common axis in rear of the platen axis, a pin fixed to the line spacing lever and projecting in rear of the roll releasing lever for engaging and actuating the latter upon movement of the line spacing lever, a guide pin fixed to the carriage and located eccentrically relative to the travel of the pin, a link pivoted at one end to the roll releasing lever and having a sliding pivotal connection at its other end with said guide pin, and a tooth projecting downwardly from the link and movable in an eccentric path relative to the pivot of the levers and adapted to be positioned in rear of the pin when the levers are in operative position, whereby when the line spacing lever is returned to its initial position the pin will engage the tooth and move the roll releasing lever towards its initial position.

1,785,446. SAFETY RAZOR. HUBERT C. HART, Unionville, Conn. Filed Mar. 28, 1930. Serial No. 439,699. 1 Claim. (Cl. 30—12.)



A safety razor comprising a spring metal blank bent into U-shape and having widened end portions forming a front plate and a rear plate, the free edge of said rear plate being bent into channel form and slotted transversely of the channel to provide a guard comb, a relatively stiff plate at the rear side of said front plate and having its outer edge disposed beyond the outer edge of said front plate but spaced inwardly from said comb, said outer edge of said stiff plate being provided at its ends with projecting rearwardly turned fingers adapted to lie upon the ends of said comb, means securing the inner edge portions of said front plate and said stiff plate together, whereby the former may act to clamp a blade against the latter, said front plate and said stiff plate being transversely bowed away from each other to hold the head of the blade, and a combined handle and adjuster for drawing said front and stiff plates toward said rear plate, said combined handle and adjuster having a portion abutting said rear plate, and a portion connected with said stiff plate, said rear plate having an opening through which the last-named portion passes.

1,785,447. ALDEHYDE-FREE ALCOHOLIC LIQUIDS. HERMAN HEUSER, Chicago, Ill. Filed June 28, 1926. Serial No. 119,057. 13 Claims. (Cl. 202—43.)

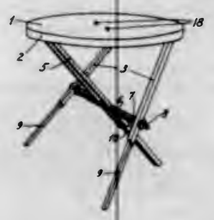


12. The method of producing an aldehyde-free liquid from an alcoholic liquid in which fusel oil or aldehydes are present which comprises charging a portion of such liquid into a closed chamber, heating it therein to evaporate and remove therefrom its entire aldehyde contents together with a portion of its alcoholic contents, similarly heating a second portion of said liquid in a second chamber, discharging the aldehyde-free residue from the second chamber while boiling into the first chafber to completely fill the latter, sealing the first chamber while its contents are at boiling temperature, subsequently cooling its contents, and permitting an oxygen-free gas to enter the space formed by contraction of the contents of the chamber.

1,785,448. STEREOSCOPIC MEASURING INSTRUMENT. REINHARD HUGERSHOFF, Dresden, Germany, assignor to "Ikarus" Internationale Patent-Verwertungs A. G., Vaduz im Furstentum, Liechtenstein, Germany. Filed June 1, 1927, Serial No. 195,821, and in Germany Oct. 5, 1926. 3 Claims. (Cl. 88—2.7.)

1. A double eyepiece assembly for stereoscopic measuring instruments, comprising the combination with an eyepiece support of a pair of eyepieces mounted on said support and adapted to be displaced horizontally thereon, at least one of said eyepieces being displaceable also upwardly and downwardly, means connected to said eyepieces for simultaneously adjusting the eyepieces towards and away from one another to suit the interocular distance of the observer and means connected to the upwardly and downwardly displaceable eyepiece for displacing said eyepiece upwardly and downwardly independently of the other eyepiece for adjusting the eyepieces to suit the difference in level of the eyes of the observer.

1,785,449. DISPLAY DEVICE. LOUIS E. KAHN, Chicago, Ill., assignor to Parisian Novelty Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 20, 1930. Serial No. 430,031. 2 Claims. (Cl. 40—128.)

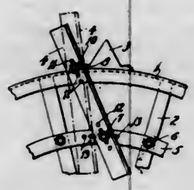


1. A display device comprising a plurality of separate plate-like members, and means dependingly supporting one of said members from the other thereof comprising strip-like members of transparent material.

1,785,450. FOLDING TABLE. JACQUES JEAN LAFFILLÉE, Paris, France. Filed Nov. 18, 1929, Serial No. 406,939, and in France Nov. 27, 1928. 6 Claims. (Cl. 45—11.)

1. A portable table of the type described, comprising a cup-shaped table top, a pair of legs pivoted to said table

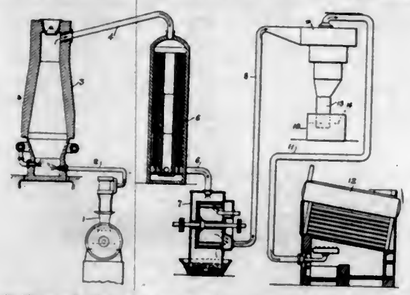
top and adapted to be folded therein, a third leg opposite said first two legs pivoted to said table top and adapted



to be folded therein, a cross piece rigidly secured at the middle to said third leg and means for releasably securing said cross piece to said first two mentioned legs.

1,785,451. INSECTICIDE. JOSEPH H. LAMBERT, Chicago, Ill., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Dec. 6, 1924. Serial No. 754,437. 2 Claims. (Cl. 167—43.)

1. A concentrated tree spray composition adapted to be mixed with large volumes of water and emulsified therein for application to fruit trees and the like, which composition comprises straw oil mixed with a small amount of an oil soluble sulfonic compound derived from the treatment of heavy hydrocarbon oils with concentrated sulfuric acid, small amounts of a water soluble emulsifying soap, and small amounts of an alcohol.

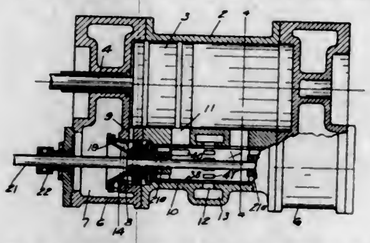


1,785,452. ATTACHMENT FOR TRACTION WHEELS. WALTER JONATHAN LEWIN, Mathoura, New South Wales, Australia. Filed June 8, 1928, Serial No. 283,926, and in Australia Mar. 1, 1928. 2 Claims. (Cl. 301—50.)

1. An attachment for a traction wheel consisting of a metal ring detachably secured to one side of the wheel, a series of gripping members arranged against the ring and the rim of the wheel and projecting beyond the rim of the wheel, means engaged in various positions of adjustment of the gripping members and detachably engaged with the remote side of the wheel for adjustably connecting each of the gripping members in position and at the same time permitting of a pivotal movement of each of said members, and means detachably engaged with the inner portions of the members and the ring for holding the members in various positions of adjustment.

1,785,453. DUST COLLECTION. CLARK T. MORSE and EDWARD L. HOGAN, Detroit, Mich., assignors, by mesne assignments, to American Blower Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 15, 1927. Serial No. 212,892. 6 Claims. (Cl. 183—22.)

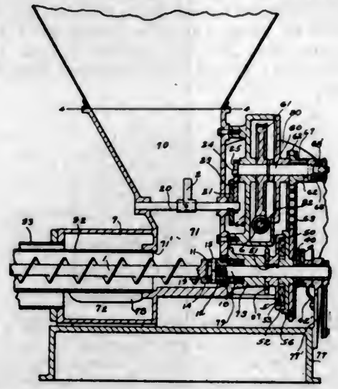
1. In a method of dust collection, incorporating moisture with a dust laden gas stream, subjecting the stream to centrifugal action comprising moving the dust and moisture in a continuous path, extracting the clean gas therefrom by moving the dust laden gas in a horizontal path for approximately a revolution, conveying it to a next lower horizontal level, again moving it in a horizontal plane in a path of lesser diameter than that of the first, said path becoming increasingly closer to the center of



revolution of the stream and continuing this operation until said center of the stream is reached, and dropping the moisture laden dust by gravity downwardly through the center of the stream and discharging the dust free gas upwardly in a path which is the prolongation of the central portion of the stream.

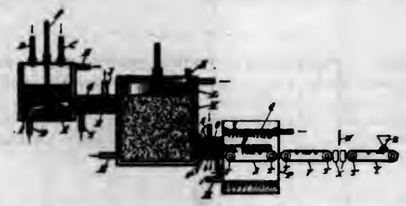
1,785,454. RAILWAY-SWITCH STRUCTURE. HARRY L. MILLER, Chicago, Ill., assignor to Pettibone Mulliken Company, Chicago, Ill., a Corporation of Delaware. Filed May 15, 1930. Serial No. 452,673. 16 Claims. (Cl. 246—443.)

1. A switch structure comprising a base member, a pivoted switch tongue member, and ball and sectional socket means on said tongue member and base member for preventing upward displacement of said tongue member.



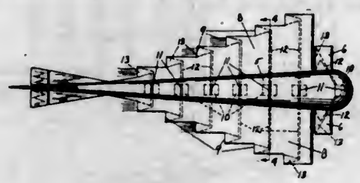
1,785,455. STEAM ENGINE. HERMAN G. MUELLER, Erie, Pa., assignor to Skinner Engine Company, Erie, Pa., a Corporation of Pennsylvania. Filed Sept. 7, 1923. Serial No. 661,341. 10 Claims. (Cl. 121—180.)

1. In a steam engine, the combination of a cylinder having steam ports at its ends; valve seats, said seats having cylindrical extensions through which said ports extend; packing rings on the extensions at each side of the ports; a rotatable shaft parallel to the axis of the cylinder and opposed tapered rotatable valves on the shaft operating on the said seats.



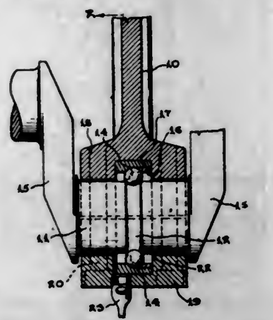
1,785,456. AUTOMATIC COAL BURNER. ADOLPH OUSDAHL, Seattle, Wash. Filed Feb. 10, 1925. Serial No. 8,294. 12 Claims. (Cl. 110—101.)

2. In coal-burning apparatus, in combination, a feed screw including a shaft, an extension operatively connected to said shaft, a two-part cam upon said extension of the feed screw shaft, one part being stationary, a sleeve mounted upon said extension and carrying the other part of said cam, means for adjusting said sleeve and the cam member carried thereby angularly relative



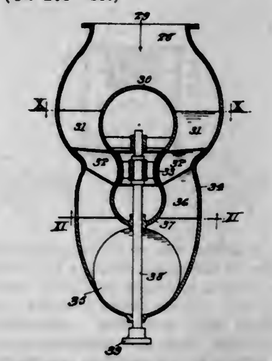
to the stationary cam member, a clutch upon said extension and comprising one member fixed thereto and a second member continuously rotatable thereabout, and means carried by said rotatable clutch member and engageable by said cam to determine the period of engagement of the clutch members.

1,785,457. APPARATUS FOR MOLDING BITUMINOUS MATERIALS. ANTHONY J. PFOHL, Lockland, Ohio. Filed June 25, 1925. Serial No. 39,619. 9 Claims. (Cl. 18—12.)



1. An extrusion mold consisting of a removable member formed of Babbitt metal, a support having an orifice, the removable member providing walls for an extrusion orifice, and means for heating said member.

1,785,458. PNEUMATIC AIRCRAFT-PROPELLING MEANS. OTTO KARL QUAST, Spokane, Wash. Filed Oct. 29, 1929. Serial No. 403,189. 3 Claims. (Cl. 244—18.)

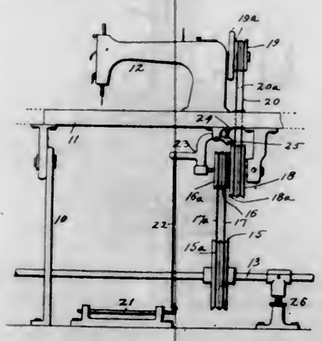


1. The combination of an air-craft having a round body tapering from a semi-globular head to a pointed tail, relatively small upper and lower gill wings adjacent said head, a relatively large wing extending a greater portion of the body, steps forming the outer edges of said wing, a plurality of rotary propelling mechanisms mounted within the body, vacuum means for forcibly drawing air from above into said mechanisms, discharge means for forcibly expelling the air rearwardly through the steps of the large wing, and intake and discharge means for the propelling mechanisms of the gill wings.

1,785,459. CONNECTING-ROD BEARING. SILAS G. REINHARD, Toledo, Iowa. Filed Mar. 8, 1928. Serial No. 260,024. 1 Claim. (Cl. 308—179.)

In combination with a crank shaft and connecting rod, a ball bearing having balls running in a groove formed directly upon the crank pin of the crank shaft and a race ring in surrounding relation to said balls, the connecting rod having a head portion in surrounding relation to said race ring, the head portion of the connecting rod being provided with a removable cap, the ball bearing being provided with a retainer enclosed by said race ring and said retainer and race ring having interior diameters sufficient to permit the two being slipped around the crank on to the crank pin in the mounting of the ball bearing.

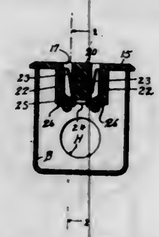
1,785,460. PUMP OR THE LIKE. GEORG ARTHUR SCHLOTTER, Dresden, Germany, assignor of ten per cent to Robert Suczek, New York, N. Y. Filed Feb. 27, 1926, Serial No. 91,112, and in Germany Mar. 2, 1925. 24 Claims. (Cl. 103—89.)



1. A turbine syatem comprising, a casing provided with an inlet and an outlet, a running wheel interposed in said casing between said inlet and outlet, said wheel having blades, blades located in the casing adjacent said running wheel, all of said blades formed by portions of curved surfaces, whereby the curved surfaces are portions of surfaces of bodies generated by rotation of a conical section line as of a sphere, ellipsoid, paraboloid or hyperboloid.

1,785,461. ART AND PROCESS OF PRESERVING EGGS. DELASKA E. SEAWARD, Oklahoma City, Okla. Filed May 31, 1928. Serial No. 282,048. 4 Claims. (Cl. 99—8.)

1. The art and process of preserving eggs in good condition consisting in subjecting suitable wrapping material

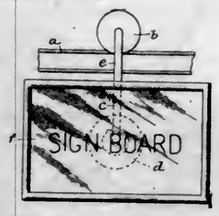


to a solution of silver nitrate and water, then permitting it to dry, then wrapping a suitably sized portion of same around the egg, then twisting the corners together thereby shutting out the light, air, germs and bacilli.

1,785,462. OPERATING MECHANISM FOR SEWING MACHINES. SAMUEL P. STEIN, Williamsport, Pa. Filed Mar. 15, 1917, Serial No. 155,007. Renewed July 1, 1924. 5 Claims. (Cl. 74—21.)

1. As an improvement in power mechanism for sewing machines, the combination of a driving shaft, a plurality of pulleys thereon, a plurality of pulleys through which power is transmitted to the same sewing machine, and belts connecting the driving and driven pulleys in pairs each belt alone being able to transmit the required driving power.

1,785,463. DUPLEX RECEPTACLE. HERMAN L. STRONGSON, New York, N. Y. Filed Oct. 19, 1925. Serial No. 63,235. 15 Claims. (Cl. 173—330.)



1. A wall outlet of the multiple receptacle type comprising, a plate of insulation forming an outlet box cover and provided with a plurality of plug-in receptacle slots made therethrough, contact blades disposed and held within the receptacle slots, a housing of insulation material on the back of the plate and surrounding each contact blade, and a circuit bar disposed to the rear of the housing and connected with the contact blades.

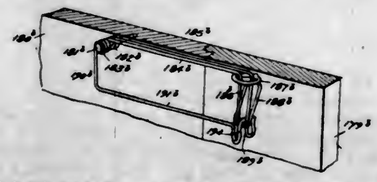
1,785,464. PROCESS OF PREPARING PURE ALUMINA. TSUNEO SUZUKI and HIROSHI TANAKA, Tokyo, and TORAO KURITA, Tokyo Prefecture, Japan, assignors to Zaidan Hojin Rikagaku Kenkyujo, Tokyo, Japan. Filed July 6, 1927, Serial No. 203,869, and in Japan Feb. 3, 1927. 2 Claims. (Cl. 23—142.)

1. The process of purifying impure alumina containing silicon, iron, ferro-silicon and oxides of iron as impurities which comprises heating the impure alumina with a carbonaceous reducing agent to reduce the major portion of any iron oxide contained therein and thereafter subjecting the alumina to the action of chlorine gas and carbon monoxide at an elevated temperature until the iron and silicon constituents have been removed as their volatile chlorides.

1,785,465. MOVING LAMP FOR SIGNS AND ADVERTISEMENTS. KARL FREIHERR ROEDER VON DIERSBURG, Graefelfing, near Munich, Germany. Filed July 17, 1928, Serial No. 293,413, and in Germany Jan. 15, 1928. 2 Claims. (Cl. 40—130.)

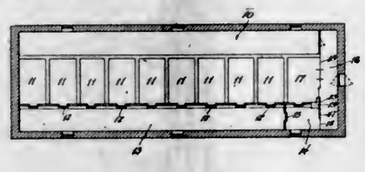
1. In an advertising or signal device, a track, a bracket having an axle portion, a roller carried by the axle portion and mounted to travel on the track, a lamp carried by the bracket and arranged at one side of the vertical plane of the roller, an arm depending from the axle portion, and a counter-balance for the lamp carried by said arm and arranged therewith on the opposite side of the vertical plane of the bracket.

1,785,466. PROCESS FOR THE MANUFACTURE OF MIXED ESTERS OF CELLULOSE. CHARLES S. WEBBER and CYRIL J. STAUD, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 2, 1929. Serial No. 383,148. 27 Claims. (Cl. 260—101.)



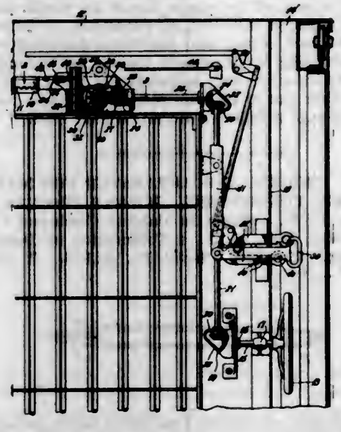
22. Cellulose-acetate-toluate.

1,785,467. PLEASURE SLED OR SLEIGH. FRANZ WELS, Schloss Harta, near Hohenelbe, Czechoslovakia, assignor of one-half to Christian Krönig, Schloss Harta, near Hohenelbe, Czechoslovakia. Filed Dec. 3, 1929, Serial No. 411,359, and in Austria Nov. 29, 1928. 6 Claims. (Cl. 208—157.)



1. In a pleasure sled the provision of a rocking lever pivoted to the sled, a resiliently movable driving member rotatably attached to the free end of said lever, and means connected with said lever for rocking the same and operating said driving member.

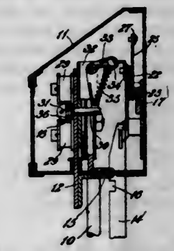
1,785,468. LATCH. ARCHELOUS B. YANCEY, Pasadena, Calif. Filed Oct. 31, 1927. Serial No. 229,934. 8 Claims. (Cl. 292—87.)



1. A latch made from a single piece of resilient material formed into an inner bearing coil and an outer bearing coil, a pivot element on which the coils are mounted, the coils being prolonged at their inner ends to form approximately parallel strips which constitute the body of the latch, the strips being extended to fashion a loop-shaped member disposed at an angle to the body, a keeper through which the loop-shaped member passes, the outer end of the outer bearing coil being extended to form an arm comprising an inner terminal part and an outer terminal part disposed at an angle to each other, the outer terminal part being engaged with said loop-shaped member.

1,785,469. JAIL. DAVID FRANKLIN YOUNGBLOOD, San Antonio, Tex. Filed June 25, 1929. Serial No. 373,532. 10 Claims. (Cl. 189—7.)

1. In a cell room having a row of cells and cell doors arranged to be operated by a master locking and operating system, a partition at one end of the row of cells providing a corridor; a master control box providing a housing for said operating mechanism set inside of the partition in substantial alinement with the cell doors; and a sliding door for the control box substantially flush with the partition.

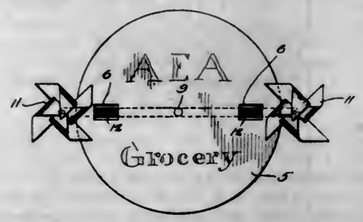


1,785,470. MASTER OPERATING MECHANISM FOR CELL DOORS AND LOCKS. DAVID FRANKLIN YOUNGBLOOD, San Antonio, Tex. Filed Aug. 15, 1929. Serial No. 386,035. 31 Claims. (Cl. 189—7.)

1. In a master operating system for cell doors and locks having locking mechanism and door propelling mechanism, a single actuating element; and means to connect said element so that it will actuate either the locking mechanism or the door propelling mechanism.

1,785,471. MASTER-CONTROL SYSTEM FOR CELL DOORS AND LOCKS. DAVID FRANKLIN YOUNGBLOOD, San Antonio, Tex. Filed Aug. 15, 1929. Serial No. 386,036. 20 Claims. (Cl. 189—7.)

1. In combination with a master operating system for cell doors and locks, selector mechanism for each door including movable latch means to effect a mechanical connection to the lock; and means connected to the movable latch means automatically to connect the door to its propelling mechanism so that it can be opened when it is unlocked, said door-connecting means being connected to the lock-actuating mechanism so that it is operated simultaneously therewith.



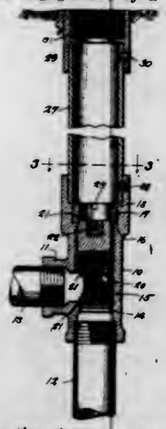
1,785,472. SEED FUNGICIDE AND DISINFECTANT. HOWARD ADLER and GUY A. MCDONALD, Chicago Heights, Ill., assignors to Victor Chemical Works, Chicago, Ill., a Corporation of Illinois. Filed Dec. 10, 1927. Serial No. 239,262. 4 Claims. (Cl. 167—16.)

2. A fungicide and seed disinfectant comprising particles of simultaneously formed copper oxalate and calcium sulfate.

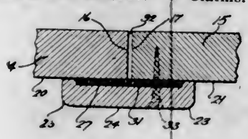
1,785,473. GRANULAR CALCIUM PHOSPHATE. HOWARD ADLER and GUY A. MCDONALD, Chicago Heights, Ill., assignors to Victor Chemical Works, a Corporation of Illinois. Filed Jan. 7, 1929. Serial No. 330,961. 5 Claims. (Cl. 23—109.)

1. A mechanically resistant mono-calcium phosphate containing less than 0.5% iron phosphate, and from 0.6 to 2% MgO.

1,785,474. ADVERTISING DEVICE. JOHN W. ALLEN, Fresno, Calif. Filed May 20, 1930. Serial No. 454,041. 2 Claims. (Cl. 40—39.)



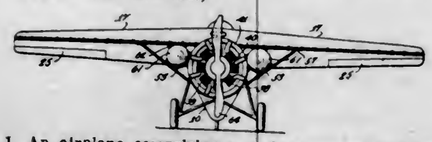
1. An advertising device comprising a disk-like body portion having openings extended therethrough, a bar mounted for rotary movement at the rear of the body portion and having colored portions to be viewed through the openings, rotary members operated by wind pressure, supported adjacent to the front surface of the body portion, a support for the body portion, and the front surface of the body portion adapted to receive printed matter.



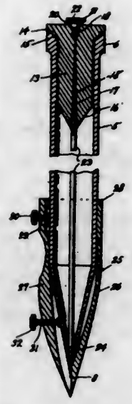
1,785,475. SHUT-OFF VALVE. CHARLES H. BLIVEN, Norfolk, Va. Filed Apr. 12, 1928. Serial No. 269,381. 1 Claim. (Cl. 251—35.)

A stop valve comprising a T coupling having a vertically disposed run and a lateral outlet arm intermediate its ends, the lower end of the vertical run being adapted to be connected with a supply pipe, an upwardly facing valve seat in said run below the outlet arm, an upper por-

tion of the vertical run being of increased internal diameter to form a socket, the walls of the run being threaded in one direction between the valve seat and lower end of the socket and the walls of the socket being threaded in an opposite direction, an externally threaded ring screwed tightly into said socket and having its lower end shaped to define a valve seat exposed through the bottom of the socket, the upper portion of the ring being adapted for engagement by a wrench when inserting and removing the ring, and a threaded valve plug screwed into said run between the lower valve seat and socket, said plug being of less length than the distance between the outlet arm and socket but of greater depth than the diameter of the outlet arm and having its upper and lower ends formed with surfaces conforming to the valve seats of the run and ring and adapted to seat firmly against the seats to form tight closures, the upper end of the plug being adapted for engagement by an operating element passed downwardly through said ring.



1,785,476. WEATHER STRIP. MAURICE E. BOSLEY, Chicago, Ill., assignor to The D. W. Bosley Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 25, 1928. Serial No. 314,917. 4 Claims. (Cl. 20—69.)



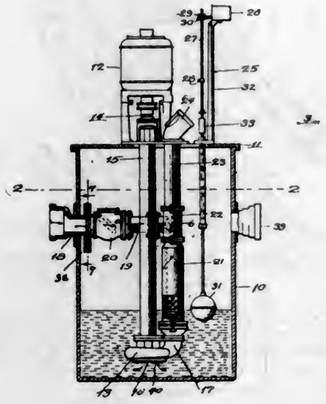
1. The combination with a pair of double doors having adjacent free edges, of a weatherstripping therefor, including, a door batten strip applied to one of the doors and having a recess let into its inner surface facing said doors, and an insulating packing retained in the recess of said strip and extending across the gap between said doors and in engagement with the door surfaces adjacent said free edges.

1,785,477. AIRPLANE. THOMAS F. COONEY, Las Cruces, N. Mex. Filed Sept. 5, 1928. Serial No. 304,062. 11 Claims. (Cl. 244—31.)

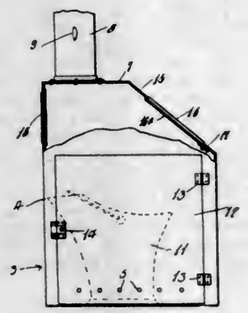
1. An airplane comprising a main structure including a fuselage and supporting wings, a portion of said structure being provided with a chamber for receiving exhaust gases from the motor of the airplane, a conduit for conducting exhaust gases from the motor to said chamber, and an outwardly opening check valve associated with said chamber and operable to open under the influence of the pressure of exhaust gases in the chamber.

1,785,478. DRAFTSMAN'S FOUNTAIN AND LETTERING PEN. EDWARD L. DELANEY, Elyria, Ohio, assignor to Irene A. Delaney, Elyria, Ohio. Filed July 29, 1929. Serial No. 381,837. 1 Claim. (Cl. 120—43.)

A fountain drawing pen comprising a barrel tapered at one end, said tapered end of the barrel being provided with a duct opening through one side thereof adjacent its extremity, a pen structure against which the tapered end of the barrel is adapted to engage, means for regulating the flow of ink through said duct, an adjustable air admitting plug for the said barrel, said plug being provided with a channel extending longitudinally therein and terminating inwardly of its outer end, and a needle valve projecting from the inner end of the said plug and adapted to have its free end seat within the aforementioned duct.



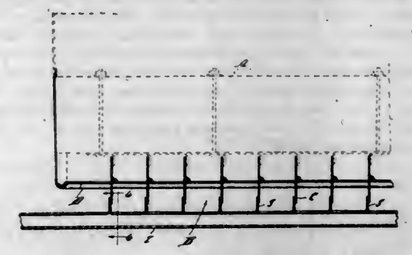
1,785,479. PROCESS AND APPARATUS FOR MAKING ELECTRIC CONDENSERS. WILLIAM DUBILIER, New Rochelle, N. Y., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 15, 1926. Serial No. 81,527. 7 Claims. (Cl. 175—41.)



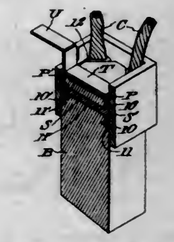
1. The process of making condensers which consists in enveloping sections in a wrapping, piling said sections one upon another, and then treating said sections simultaneously.

1,785,480. PUMPING APPARATUS FOR SEWAGE AND OTHER LIQUIDS. AUGUSTUS C. DURDIN, Jr., Chicago, Ill. Filed Apr. 27, 1927. Serial No. 187,007. 8 Claims. (Cl. 103—1.)

1. Pumping apparatus comprising in combination a liquid receiving receptacle, an inlet conduit entering said receptacle and adapted to be connected with a source of liquid supply, a centrifugal pump contained in said receptacle and having an inlet side and a discharge side within said receptacle, the inlet side opening directly into said receptacle, an upright discharge pipe leading away from the discharge side of the pump and connected to said inlet conduit, and a screen within said pipe and located between the discharge side of the pump and the connection between the inlet conduit and discharge pipe.



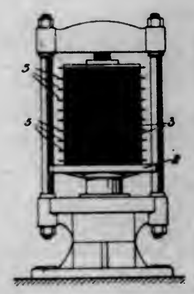
1,785,481. ASH-DUST ELIMINATOR. FRANCIS R. DYKE, Dartmouth, Nova Scotia, Canada. Filed Apr. 21, 1927 Serial No. 185,534. 1 Claim. (Cl. 126—242.)



An ash dust eliminator comprising a casing adapted to receive a receptacle and provided adjacent its bottom with air inlet openings, an inwardly movable door in a wall of the casing, said door inclining upwardly and rearwardly, hinge means adjacent the lower edge of the door securing it to the casing, and spring means normally holding the door in closed position and urging it thereto, said door being of a size and so arranged that a shovel may be placed against the same in emptying ashes into the receptacle to control its opening and closing movement.

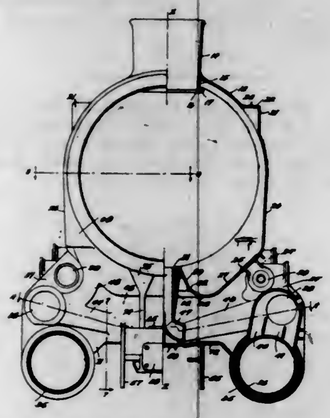
1,785,482. AUTOMOBILE RADIATOR SHUTTER. JOSEPH GUY GIAMPAOLI, Elkridge, Md. Filed Oct. 27, 1928. Serial No. 315,538. 2 Claims. (Cl. 280—152.)

2. An anti-vibrating device for automobile radiator shutters comprising, in combination, a horizontally disposed brace bar for the headlights of the automobile, said bar being provided with a plurality of obliquely disposed spring fingers adapted to be tensioned by disposing the usual panels of the shutter in open position and against the said fingers.



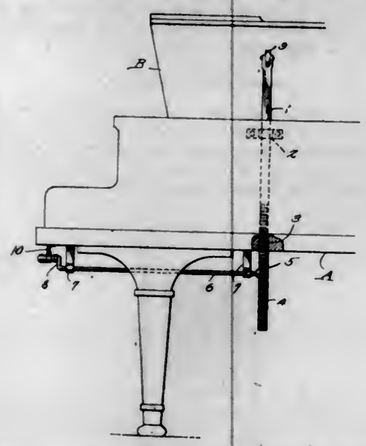
1,785,483. CURRENT-COLLECTING BRUSH. CHARLES HANSEN and HORACE S. ELLSON, Lakewood, Ohio, assignors to National Carbon Company, Inc., a Corporation of New York. Filed July 22, 1924. Serial No. 727,519. 7 Claims. (Cl. 171—326.)

1. A current-collecting brush comprising a block containing carbon or graphite and having part of one of its longitudinal corners removed at the outer end of the block, a flexible conductor, a plate bearing against said block and having one end thereof bent upon itself to clamp an end of said conductor, said bent end and conductor end therein being disposed in the space corresponding to said removed part of said block and extending substantially parallel to the main axis of the brush and transversely of the length of said plate, and means securing said plate to said block.



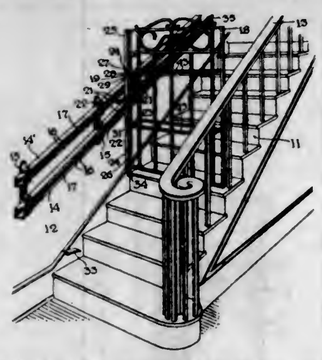
1,785,484. PROCESS OF AND APPARATUS FOR TREATING PAPERBOARD AND THE LIKE. RICHARD KASTNER, Steyrermuhl, and HERBERT SCHMOLKA, Vienna, Austria. Filed Jan. 21, 1928, Serial No. 248,450, and in Austria Jan. 29, 1927. 2 Claims. (Cl. 34—24.)

1. A process for removing water from wet sheets of pasteboard and the like, which consists in forming a pile



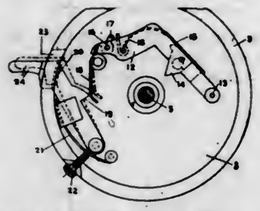
of the sheets, subjecting the pile of sheets to mechanical pressure at ordinary temperature so as to remove a portion of the water therefrom, passing electric alternating current through the sheets while the pile is subjected to pressure so as to supply heat to the pile so as to reduce the viscosity of the water remaining therein, allowing a further quantity of water to flow off from the pile of sheets without increasing the pressure, increasing the supply of heat to the pile so as to raise the temperature of the sheets and then reducing the pressure, as and for the purposes set forth.

1,785,485. LOCOMOTIVE. WILLIAM F. KIESSEL, Jr., Altoona, Pa. Filed Aug. 26, 1927. Serial No. 215,726. 19 Claims. (Cl. 105—44.)



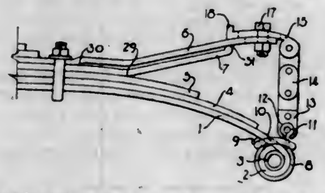
1. In a locomotive, in combination, a smoke-box of non-circular transverse section, and a cylinder saddle, the lower wall of said smoke-box forming a portion of said saddle.

1,785,486. PIANO-LID ADJUSTER. EDMUND B. KURSHEEDT, Daytona Beach, Fla. Filed Oct. 5, 1928. Serial No. 310,643. 3 Claims. (Cl. 84—177.)



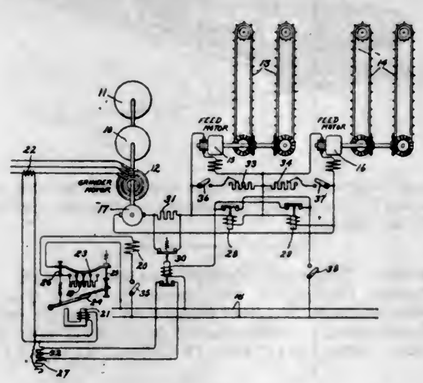
1. The combination with a piano having a hinged lid, of a lifting member supported by the piano, and means actuated from a point outside of the piano for sliding said member upwardly and downwardly to raise or lower the lid.

1,785,487. STAIRWAY GUARD. DANIEL EDWARD MCAVOY, Long Island City, N. Y. Filed Jan. 24, 1930. Serial No. 423,144. 10 Claims. (Cl. 189—43.)



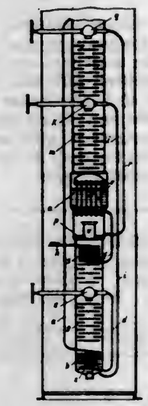
1. A guard for stairs, comprising a gate, guide means disposed in parallel relation to said stairs, and means engaging said guide means for supporting said gate, said supporting means being slidable longitudinally of the stairs along the guide means.

1,785,488. CASTING REEL FOR FISHING RODS. ANDREW MCDOUGALL, Parel, Bombay, India. Filed May 27, 1927, Serial No. 194,811, and in India July 9, 1926. 3 Claims. (Cl. 242—84.5.)



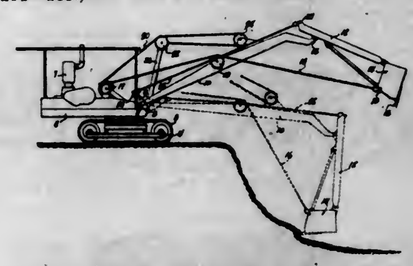
1. A casting reel comprising a plate, a drum rotatably mounted on said plate, a braking member pivoted on said plate, a pawl arm pivoted to said plate, a ratchet on said drum adapted to cooperate with said pawl, spring means secured to said plate and cooperating with said braking member to move said member into engagement with said drum, yieldable means secured to said pawl arm and adapted to move said member out of engagement with said drum against the action of said spring means, and means for locking said pawl arm and yieldable means in engagement with said ratchet and said braking member respectively.

1,785,489. SPRING. RUPERT E. MCGEE, Tampa, Fla., assignor of one-half to D. E. Walters. Filed Aug. 27, 1928. Serial No. 302,249. 6 Claims. (Cl. 267—48.)



1. A laminated spring consisting of a main leaf and a plurality of shorter leaves, and a snubbing leaf having its end spaced from the end of the main leaf and connected therewith under tension by means including a flexible element having a terminal member adjustable longitudinally of the snubbing leaf.

1,785,490. DRIVE FOR WOOD-PULP GRINDERS AND THE LIKE. WILBUR L. MERRILL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 10, 1925. Serial No. 8,289. 9 Claims. (Cl. 83—75.)

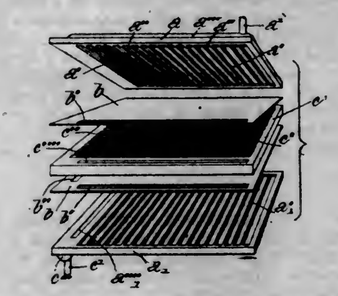


1. A wood pulp grinder drive comprising a grinder motor for driving a plurality of grinder stones, a separate feed motor for feeding the wood to each grinder stone, a generator for supplying power to said feed motors, the said feed motors being connected in series relation to automatically maintain a predetermined relation between the loads imposed on said grinder motor by said feed motors, and means responsive to the load on said grinder motor for automatically regulating the voltage of said generator to maintain substantially constant the load of said grinder motor.

1,785,491. METHOD FOR THE COMPLETE SEPARATION OF LIQUID AIR INTO OXYGEN AND NITROGEN. ADOLF MESSER, Frankfort-on-the-Main, Germany. Filed Feb. 18, 1927, Serial No. 169,400, and in Germany Feb. 18, 1926. 3 Claims. (Cl. 183—115.)

3. The process of separating liquid air into oxygen and nitrogen, which includes maintaining two rectification columns under different pressures, delivering to the higher pressure column at a point intermediate the ends of the latter the liquid condensed at still higher pressure by the liquid collecting in the bottom of said column, completely liquefying the vapors in the higher pressure column above the point of admission of said liquid, and in two successive stages, returning the liquid formed in the first stage to said column, delivering to the lower pressure column the liquid formed in the said second stage and the liquid collecting in the bottom of the higher pressure column, effecting the said liquefaction in the said two stages by the liquid collecting in the bottom of the lower pressure column, and withdrawing as entirely separate gases the separate vapors produced from the liquids used in cooling said first and second stages.

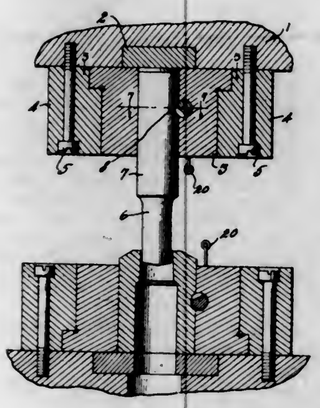
1,785,492. BACK DIGGER. ARTHUR ORLOFF, Green Bay, Wis., assignor to Northwest Engineering Corporation, Green Bay, Wis., a Corporation of Wisconsin. Filed Apr. 22, 1929. Serial No. 357,067. 9 Claims. (Cl. 214—138.)



1. In an excavating machine, the combination of a base, a movable boom support mounted on said base, a boom pivotally mounted on said support for up and down movements and so that its pivot moves relative to the base of the machine during the digging cycle, a dipper handle pivotally mounted on the outer end portion of said boom and carrying a dipper working toward the machine during digging, a hoisting cable associated with the boom, and means associated with said support and moved thereby under the forces exerted thereon by the boom for effecting shifting movements of the dipper and dipper handle relative to the boom.

1,785,493. METHOD OF MAKING PLATED SHOT. EDWIN PUGSLEY, New Haven, Conn., assignor, by mesne assignments, to Winchester Repeating Arms Company, a Corporation of Delaware. Filed Jan. 9, 1929. Serial No. 331,395. 3 Claims. (Cl. 91—68.2.)

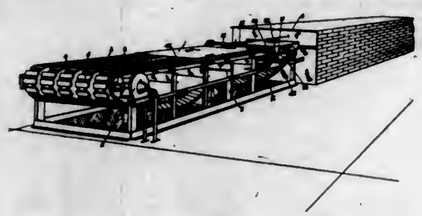
1. The process of making plated lead shot which comprises dropping globules of molten lead into a solution of a metallic salt containing a metal adapted to replace the metal of the salt when lead is dipped in the solution whereby the globules are formed into shot and plated with the metal of the salt.



1,785,494. FILTER PRESS. LOUIS REVEL, Le Vigan, France. Filed June 6, 1928, Serial No. 283,155, and in France June 14, 1927. 2 Claims. (Cl. 210—188.)

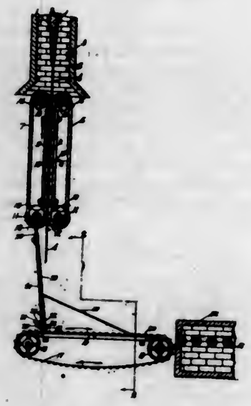
1. In a filter press assembly, a first feed plate having a plurality of depressions formed therein, conduit means

communicating with said depressions, a discharge plate having a slot formed therethrough and positioned so that when said feed and discharge plates are in operative position, said slot crosses a plurality of said depressions, said discharge plate also having a plurality of grooves formed therein which are substantially co-directional with said slot, said grooves being separated from and independent of said slot, a discharge conduit system communicating with said grooves, and a second feed plate having a plurality of depressions formed therein positioned so that, in operating position, said slot crosses the direction of, and communicates with the depressions of said second feed plate, said second feed-plate having a slot formed therein separate from and independent of the depressions formed therein, said last named slot being positioned to communicate with, and form part of, the discharge conduit system.



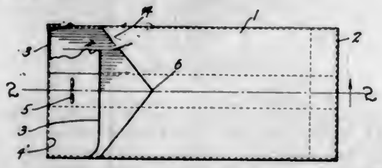
1,785,495. PUNCH AND DIE RETAINER. CLEMENT C. RICHARD, Detroit, Mich., assignor to Allied Products Corporation, Detroit, Mich., a Corporation of Illinois. Filed Oct. 22, 1927. Serial No. 228,095. 3 Claims. (Cl. 279—97.)

1. In a retainer for punches, dies and similar tools, a member having an aperture for a tool shank or body, a lock member having a seat in the said first named member and having a part movable into the aperture for the shank, said tool shank having an arcuate notch formed therein on one side, the radius of which is greater than the radius of the part of the lock member turning thereinto and the axis of which is eccentric to the axis about which the lock member turns whereby by a mere turning of the lock member on its axis it may assume a wedging relation relative to the notch to prevent longitudinal movement of the tool in its aperture, and a spring tending to turn the lock member on its axis to locking engagement with the notch of the shank, the said first member, lock member, and notch of the tool being so complementally formed and arranged as to hold the tool shank from rotative movement in its aperture in said first member.



1,785,496. APPARATUS FOR CUTTING SHEET GLASS. CLIFFORD A. ROWLEY, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed May 19, 1924. Serial No. 714,416. 17 Claims. (Cl. 33—32.)

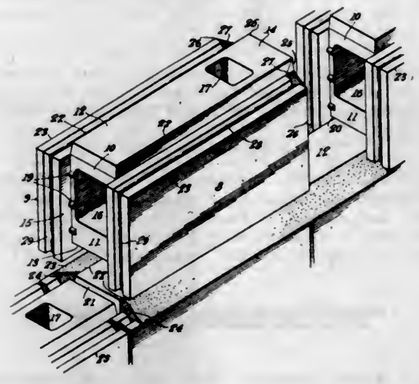
1. An apparatus for transversely scoring a moving sheet of glass, comprising a carriage movable parallel with the movement of the sheet and including a guide-bar for a scoring tool extending transversely of the sheet, and



means connected to the carriage and engageable with the free end of the advancing sheet for moving the carriage with the sheet.

1,785,497. DRAWING SHEET GLASS. CLIFFORD A. ROWLEY, Chicago, Ill., and JOSEPH A. REECE, Toledo, Ohio, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 23, 1926. Serial No. 137,360. 13 Claims. (Cl. 49—3.)

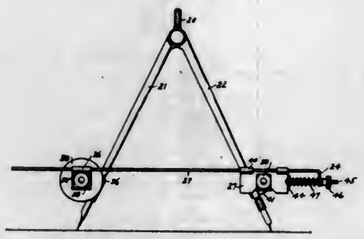
1. In a sheet glass making apparatus, means for flowing glass continuously downward in sheet form, means for successively severing the sheet into sections, and for suspending the severed sections until set, a horizontal conveyor having a series of cleats, means for guiding the lower edge of each sheet as it is released from the suspending means into engagement with one of the cleats, and means for supporting the sheet at its upper edge until the sheet is laid upon the conveyor.



1,785,498. BAG CLOSURE AND SUPPORT. FRED L. SAVAGEAU, Denver, Colo., assignor to Independence Coffee and Spice Company, a Corporation of Colorado. Filed Dec. 24, 1928. Serial No. 328,281. 4 Claims. (Cl. 229—76.)

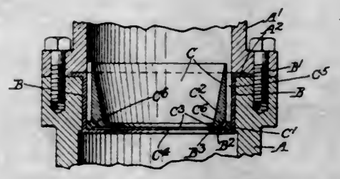
1. A bag for merchandise having one open end, a keeper having a supporting end and opposite thereto a sealing edge extending the full width of the bag and about which both sides of the said open end of the bag

are adapted to be tightly folded forming a double thickness flap on the side of the keeper opposite the bag and extending along the keeper for a portion only of its length, and means passing through the bag and the flap and through the keeper spaced from the extremity of its supporting end and adapted to maintain their respective relations.



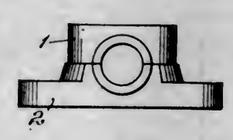
1,785,499. BUILDING BLOCK. FRED SAYERS, Yonkers, N. Y. Filed Apr. 7, 1928. Serial No. 268,105. 6 Claims. (Cl. 72—41.)

1. A building block having tongue and groove elements for interlocking in a wall construction, and gauge elements for spacing the interlocked blocks in predetermined relation in the wall, said block having further mortar gauges for measuring predetermined quantities of mortar requisite for the spacing predetermined by said gauges.



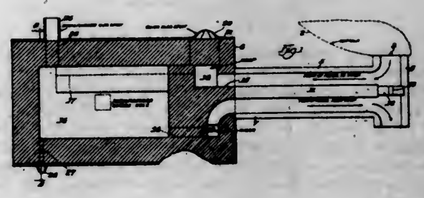
6. A hollow building block having a longitudinal passage extending completely therethrough and having intermediate the ends of said block an annular rib extending inwardly into said longitudinal passage and forming an annular reinforcement about said passage for strengthening the intermediate hollow portion of the block between the ends of the same.

1,785,500. MICROMETRIC DRAWING INSTRUMENT. FRANK SCHWARTZ, New York, N. Y. Filed Feb. 11, 1927. Serial No. 167,383. 5 Claims. (Cl. 33—154.)



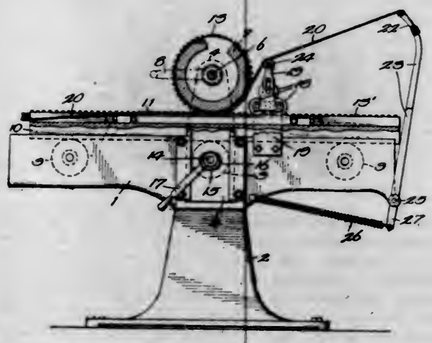
1. A device of the character described comprising a beam, an element slidably mounted thereon and provided with means for engaging a leg of a drawing instrument, said means being independent of said leg and adapted to engage the latter at any point thereof, and micrometric means operatively interposed between the beam and said element for minutely adjusting the element and leg longitudinally along the beam.

1,785,501. METHOD OF AND APPARATUS FOR REATOMIZING FUEL. JOHN A. SECOR, La Porte, Ind., assignor to Advance-Rumely Company, La Porte, Ind., a Corporation of Indiana. Filed Feb. 17, 1928. Serial No. 255,165. 12 Claims. (Cl. 48—180.)



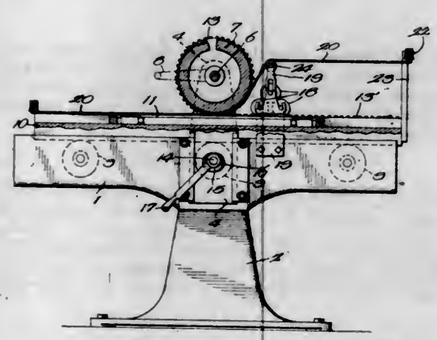
6. A reatomizer including an outer member having an inwardly extending flange, an inner member positioned within the first and provided with an outwardly and downwardly extending flange which contacts the outer member and holds the inner member away from contact with the first and provided with an inwardly extending flange, the inner member provided with a perforation communicating with its exterior and with the space between the flanges of the two members.

1,785,502. METAL BEARING MEMBER AND PROCESS OF TREATING SAME. CHARLES H. SEYMOUR, Kansas City, Mo. Filed Aug. 26, 1927. Serial No. 215,625. 16 Claims. (Cl. 148—11.5.)



1. The process consisting in cooling in contact with an oleoresinous material a bearing member of the kind described comprising soft non-hardening metal heated to a temperature between the boiling point of said material and the fusing point of the metal.

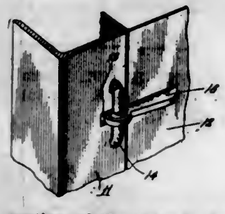
1,785,503. APPARATUS FOR DESULPHURIZING CAST IRON. LAVERNE W. SPRING, Chicago, Ill., assignor to Crane Co., Chicago, Ill., a Corporation of Illinois. Original application filed June 16, 1928, Serial No. 285,898. Divided and this application filed June 22, 1929. Serial No. 372,914. 2 Claims. (Cl. 266—40.)



1. In combination with a cupola having a metal discharge opening, a treating receptacle disposed adjacent to said opening and substantially tangentially of said cupola at said opening, a trough leading from said opening substantially radially of said cupola and inclined downwardly and outwardly, a second gravity trough leading from the first said trough adjacent said cupola opening to said receptacle, and a third gravity trough leading from said receptacle to the first said trough outwardly of the connection of the latter to the second said trough.

1,785,504. PRINTING PRESS. HENRY R. TROTTER, Chicago, Ill., assignor to Hacker Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 10, 1928. Serial No. 324,925. 9 Claims. (Cl. 101—421.)

1. A printing press including two cooperating printing members, one of said members being a rotatable cylinder, a frisket interposed between the members and having one end attached to one of the printing members and its other end to an anchorage, and positioning means for the frisket, said means including said cylinder.



1,785,505. PRINTING PRESS. HENRY R. TROTTER, Chicago, Ill., assignor to Hacker Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 10, 1928. Serial No. 324,926. 1 Claim. (Cl. 101—421.)

A printing press including two cooperating printing members between which the sheet to be printed upon is received, one of said members being a rotatable cylinder, the printing form being carried by one of said members and being subject to printing pressure from the other member, a frisket interposed between said printing members and having relative fixed anchorages at its ends, and frisket positioning means, said means including said cylinder.

1,785,506. HINGE. WALTER N. VANCE, Chicago Heights, Ill., assignor, by mesne assignments, to Lyon Metal Products, Incorporated, Aurora, Ill., a Corporation of Illinois. Filed Jan. 20, 1928. Serial No. 248,110. 1 Claim. (Cl. 16—128.)

A hinge construction comprising a U-shaped member having a vertical stem and bent over legs, an integral enlarged conical portion having tapered flaring walls formed on the stem, an arm cooperating with the stem and having an enlargement thereon, said enlargement being provided with a bore, the walls of said bore being tapered, the tapering walls of the bore in the enlargement on the arm engaging and bearing on the walls of the

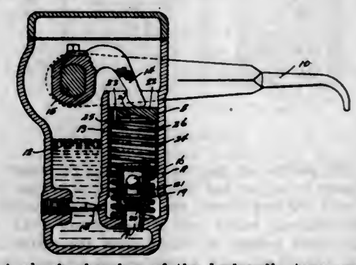
enlarged conical portion of the stem to form a support for the arm, means for fastening the arm to a door, and means for fastening the legs of the U-shaped member to a jamb.

1,785,507. FACING MEMBRANE FOR SOUND-ABSORBING MATERIALS. HOWARD F. WEISS, Madison, Wis., assignor to C. F. Burgess Laboratories, Inc., Madison, Wis., a Corporation of Delaware. Filed Jan. 21, 1928. Serial No. 248,523. 6 Claims. Cl. 20—4.)

1. A shallow, pan-shaped facing unit for sound-absorbing material comprising a membrane of fuzz-free paper-thread fabric, said fabric being stiffened sufficiently to retain said pan-shape and woven to leave apertures therein.

1,785,508. METHOD FOR PRODUCING CEMENT. ELIAS R. WILNER, New York, N. Y., assignor to Eddystone Cement Corporation, New York, N. Y. Filed July 28, 1928. Serial No. 296,097. 2 Claims. (Cl. 106—26.)

1. The method of producing cement consisting in separately heating lime and clay, shale or other silicious earths to a relatively low point, mixing the heated lime and clay, shale or other silicious earths, grinding the said mixture to a suitable fineness, and introducing a jet of water or steam into the mixture under agitation.



1,785,509. FLAGSTAFF HOLDER. JOHN S. BITNER, Fort Wayne, Ind., assignor to Wayne Novelty and Publishing Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Apr. 22, 1930. Serial No. 446,257. 8 Claims. (Cl. 248—37.)

1. A flag staff holder having a standard made of a flat steel bar, the lower end portion of which is upturned to

form a spring loop and a movable jaw, and the upper end portion of which is downturned to form a spring tongue normally spaced from the adjacent portion of the bar, a portion of said bar between its ends having a quarter turn formed therein; a cushion disposed on said bar opposed to said jaw; a clamping means consisting of a yoke and a lever provided with a cam pivoted in said yoke, disposed on the lower part of said standard for actuating said jaw; a perforated lug swiveled to said tongue and extending through an opening in the adjacent portion of the standard and adapted for the reception of a flag staff when the spring is depressed and to clamp said flag staff against the standard when the tongue is released; a stop on the standard for the lower end of said flag staff; and a projection on said standard having a series of notches for adjustably positioning the flag staff.

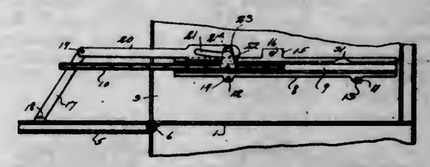
1,785,510. SHOCK ABSORBER. GEORGE W. BLACKINTON, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed Apr. 26, 1929. Serial No. 358,184. 15 Claims. (Cl. 267—8.)

15. A shock absorber of the hydraulic type comprising a pressure chamber, a piston movable therein valve means controlling relief of pressure developed by the piston, said piston provided with an air chamber on the inner side of the head of the piston, a port through the piston head adjacent said air chamber, and a disc closing said port against the substantial escape of oil therethrough, and a spring maintaining the disc in position and also urging the piston in one direction of its movement.

1,785,511. PAPER CLIP. GEORGE BODEN, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Dec. 12, 1927. Serial No. 239,363. 1 Claim. (Cl. 24—261.)

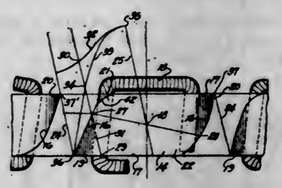
A paper clip comprising a wire length bent on itself to form closely adjacent portions or legs nested one within the other on each side of the clip, the wire being formed with four spaced sets of gripping surfaces, so that when the wire is bent to form the clip adjacent sides of two portions or legs will be provided with such surfaces which will act to firmly grip convolutions of paper held between them as well as the face and back of such paper.

1,785,512. CLEANER FOR SHOE LININGS. HAROLD S. BUTTENHEIM, Brooklyn, N. Y. Filed Sept. 20, 1929. Serial No. 393,864. 3 Claims. (Cl. 15—210.)



1. A cleaner for shoe linings, comprising a trapezoidal sheet of unvulcanized crepe rubber rolled closely upon itself with external helical scrubbing shoulders provided by the convergent side edges of the sheet and a stiffening rod at the center of said roll.

1,785,513. SOLVENT INHIBITOR FOR THE ACID TREATMENT OF METALS. WILLIAM S. CALCOTT, Penns Grove, N. J., and IRA E. LEE, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 17, 1929. Serial No. 355,978. 14 Claims. (Cl. 148—8.)

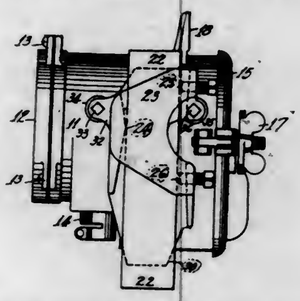


1. The process of treating metals which comprises subjecting the metal to an acid solution containing a mercaptan of the type:

1,785,514. DROP-DOOR OVEN. ERNEST A. CHANDLER and JOHN H. MCCANN, Nashville, Tenn., assignors of one-third to Isaac S. Wampler, Nashville, Tenn. Filed Aug. 31, 1929. Serial No. 389,852. 4 Claims. (Cl. 126—340.)

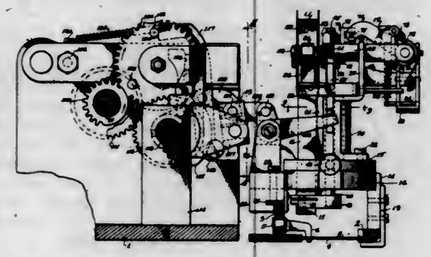
1. In combination, an oven provided with a hinged door, guides secured within the oven, means for detachably securing said guides in said oven, a rack slidably supported by the guides, an arm secured to the inner side of the door, a link pivotally connected to the arm and resting upon one of the guides, and means connecting the link to the rack to permit the door to move the rack outwardly during the final phase of its opening movement and to permit the door to move the rack inwardly during the first phase of its closing movement.

1,785,515. DYNAMO-ELECTRIC MACHINE. JOHN F. H. DOUGLAS, Milwaukee, Wis., assignor of one-half to Edward W. Kane, Milwaukee, Wis. Filed June 28, 1926. Serial No. 119,135. 8 Claims. (Cl. 171—252.)



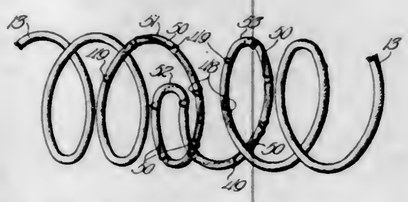
1. In a synchronous dynamo electric machine, the combination with the armature conductors, of poles having pole faces of rhomboidal shape with their edges inclined relative to said armature conductors, the inclination of the pole edges relative to the conductors being greater at points nearest the pole center line than at points near the pole edges.

1,785,516. RAILWAY SIGNAL LAMP. EDWARD A. EVERETT, New York, N. Y. Filed Feb. 18, 1929. Serial No. 340,842. 3 Claims. (Cl. 240—57.)



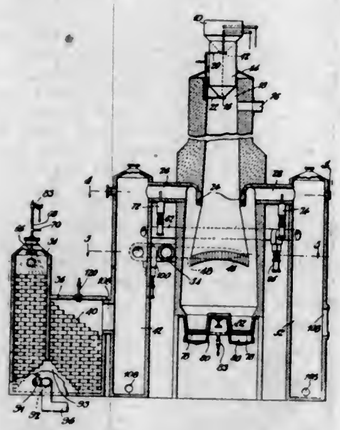
1. In a light projector support, the combination, a projector housing, a rectangular fixed arm, a sliding bracket

adjustably clamped to said arm, pivotal means connecting said housing to said sliding bracket and screws in said



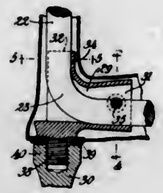
bracket, one on either side of said pivot, engaging said housing for adjusting the horizontal position of said housing on said pivot.

1,785,517. RECORDING DEVICE FOR ADDRESSING MACHINES. PAUL A. GOLLNICK and FRANK W. BRODERICK, Chicago, Ill., assignors, by mesne assignments, to Selectograph Company, Chicago, Ill., a Corporation of Illinois. Filed July 26, 1928. Serial No. 295,447. 16 Claims. (Cl. 101—57.)



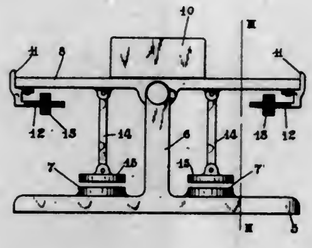
1. In a device of the class described, the combination with a guideway for stencils, a recording mechanism adapted to mark certain indicia upon the stencils, and operating means including an accumulator arranged to actuate said recording mechanism.

1,785,518. COILING DEVICE. GROVER B. HIGGINS, Chicago, Ill. Filed Feb. 5, 1930. Serial No. 426,180. 2 Claims. (Cl. 173—367.)



1. A coiling device for electric extension cords, comprising a resilient metal wire member, having the general shape of a helix and adapted to support the extension cord in helical form to take up slack in said cord, and a multiplicity of clamping loops formed in said wire and adapted to secure said extension cord to said wire, said loops having open sides disposed oppositely with respect to adjacent loops, to facilitate insertion of said cord in said loops and confine said cord at opposite sides of said cord.

1,785,519. MANUFACTURE OF COMBUSTIBLE GAS. HENRY O. LOEBELL, New York, N. Y., assignor to Henry L. Doherty, New York, N. Y. Filed June 29, 1921. Serial No. 481,195. 13 Claims. (Cl. 48—208.)

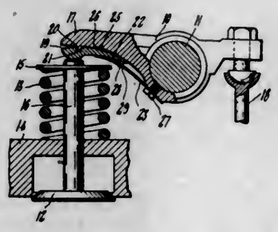


1. In the process of making water-gas in which a gas-making zone in a fuel bed is blasted in alternate periods of time with air and steam, the improvement, which comprises introducing water into a vaporizing zone during the steam blast period, in which zone the water is substantially instantaneously converted to steam, supplying the resulting steam to the gas-making zone during said steam blasting period, and automatically decreasing at a predetermined time-controlled rate the supply of water to said vaporizing zone during said steam blasting period thereby to maintain a substantially constant excess of steam in the water-gas leaving the gas-making zone.

1,785,520. AWNING FIXTURE. FREDERICK E. MARKERT, Bogota, N. J., assignor to John Boyle & Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 6, 1930. Serial No. 433,572. 6 Claims. (Cl. 156—42.)

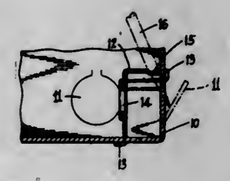
4. An awning fixture comprising an angular device having one tubular leg and one saddle-shaped leg adapted to be threaded on and around the bent portion of a rod to be used as an awning frame, a set screw in said tubular leg having its axis perpendicular to a plane determined by the axes of the two legs of the fixture, the axis of said set screw being spaced from the inner surface of the outer wall of said tubular leg a distance slightly greater than half the diameter of the rod on which the fixture is to be used, whereby the rod may be firmly clamped between the set screw and the outer wall of said tubular leg, and a fastening element whereby an ornamental device may be secured to the fixture.

1,785,521. DEVICE FOR TESTING CLAYS AND THE LIKE. JOSEPH F. MACKIN, Columbus, Ohio. Filed Nov. 15, 1928. Serial No. 319,504. 4 Claims. (Cl. 265—16.)



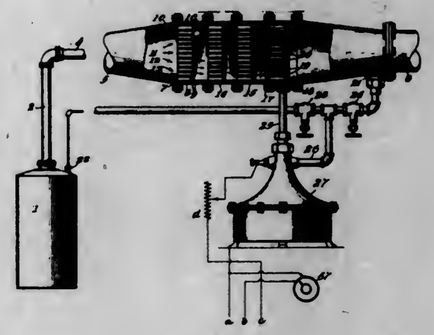
1. A device for testing the bonding strength of plastics and the like including a base, a table pivoted on said base, a bed adapted to receive said material to be tested, a compression member carried by the table to cooperate with said material receiving bed and a slidable weight on said table serving to separate the compression member from the material tested and indicate the bonding strength thereof.

1,785,522. CONNECTING DEVICE. SAMUEL S. MATTHES, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Nov. 28, 1925. Serial No. 71,926. 5 Claims. (Cl. 287—77.)



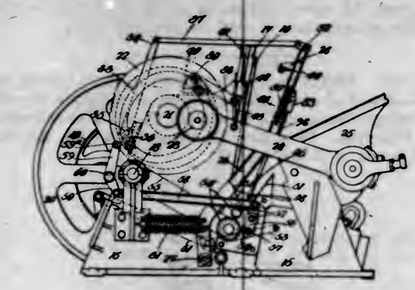
1. A connection comprising a pair of adjacent cable ends to be connected, each cable end being composed of a plurality of members, a sleeve through which each cable end extends with the end face exposed and secured to each cable end and engaging each other throughout substantially their entire lengths and having transverse ribs interlocked with each other, an interposed film of metal united to the cable and sleeve to prevent the cable ends moving longitudinally relative to each other, each sleeve having its exposed side surface unbroken and a slidably mounted collar encircling the interlocked sleeves to prevent disengagement of the sleeves.

1,785,523. VALVE-SILENCING MECHANISM. CLIFFORD J. MCLEOD, Quincy, Mass. Filed Sept. 26, 1928. Serial No. 308,415. 8 Claims. (Cl. 123J90.)



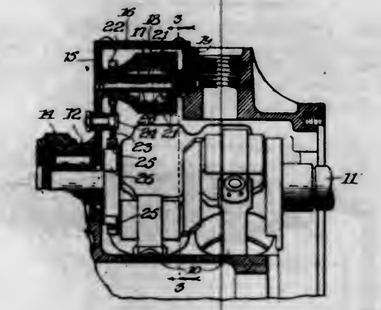
1. The combination with a valve, a stem thereon, and a valve-closing spring, of a member movable to open the valve against the pressure of the spring, a stem-contacting element rockably carried by said member and arranged to engage said stem adjacent to one end of said element, and a spring secured to said member and engaging said element selectively at various points extending from the central portion of the element to the end remote from said stem-engaging end, the point of contact between the element and the element-engaging spring depending on the position of operation of said member and stem.

1,785,524. SWITCH AND OUTLET BOX. JOSEPH E. MILCOFF, Leetsdale, Pa., assignor to National Electric Products Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 27, 1928. Serial No. 328,782. 6 Claims. (Cl. 247—25.)



1. An outlet box having knock-outs and provided with a rigid inflexible bushing plate within the box, said bushing plate being provided with supplemental openings disposed at points substantially above the center of the knock-outs to permit an implement to be inserted therethrough and fulcrumed upon the rigid inflexible bushing plate for the purpose described.

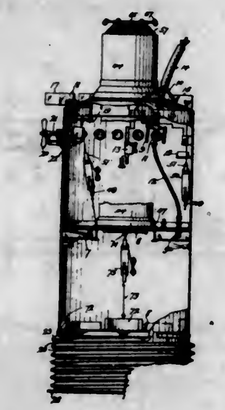
1,785,525. INTEGRATOR AND RECORDER. MONTFORD MORRISON, Chicago, Ill. Original application filed Oct. 8, 1923, Serial No. 667,397. Divided and this application filed Oct. 22, 1928. Serial No. 314,167. 20 Claims. (Cl. 234—34.)



1. In a flow measuring device, a source of electric current, a manometer having an electric impedance element deriving current from said source and conductance values responsive to variation in the flow to be measured, a second circuit deriving current from same said source and having a conductance value independent of said variation, an electromagnetically operated measuring means having two electromagnetic windings, one in series with said manometer element and one in said second circuit, whereby the measurement produced is substantially proportional to the quotient of the currents in the above said circuits.

1,785,526. CUTTING AND CREASING PRESS FOR PAPER, CARDBOARD, OR THE LIKE. JOHN IRVING NASMITH, Erith, England, assignor to Vickers Limited, Westminster, England, a British Company. Filed Oct. 2, 1928, Serial No. 309,702, and in Great Britain Dec. 13, 1927. 27 Claims. (Cl. 101—287.)

1. A cutting and creasing press for paper comprising, an impression forme, means enabling paper to be introduced into the press, means for pressing the forme and the paper together, and means operating with a peeling action for removing the paper from the forme.



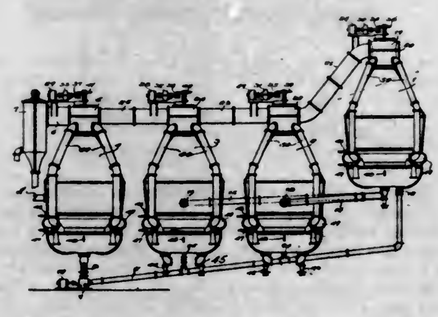
1,785,527. VENTING MEANS FOR PNEUMATIC DRILLS. REINHOLD A. NOBLING, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 25, 1927. Serial No. 186,269. 3 Claims. (Cl. 121—33.)

1. In a fluid actuated rotary tool, the combination with a casing, of a crank shaft journalled therein and having crank arms, a hollow drum rotatably mounted within the casing at one side of the crank shaft, said drum having vent apertures and being open to the atmosphere through the casing for venting the same, said drum having gear teeth about the same, a ring gear on one of the arms of the crank shaft, and a pinion within the casing and meshing with said ring gear and teeth on the drum, respectively, whereby the drum will be rotated by the crank shaft.

1,785,528. DIVING APPARATUS. JOHN F. O'ROURKE, New York, N. Y. Filed Mar. 24, 1928. Serial No. 264,522. 2 Claims. (Cl. 61—69.)

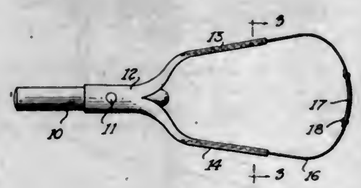
1. A diving apparatus comprising a chamber having an open bottom and adapted to contain compressed air, an accordion member attached to the open bottom of said chamber and having means for attachment to a deck or hull plate of a vessel whereby said chamber will form an enclosure for a portion of said plate, and means operable from within said chamber for adjusting the angle of the lower portion of said accordion member in relation to the

angle of said chamber, comprising a series of turnbuckles connected between said chamber and the lower portion of said accordion member.



1,785,529. BLASTING-EXPLOSIVE ASSEMBLY. CARL D. PRATT, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 10, 1930. Serial No. 420,013. 10 Claims. (Cl. 102—1.)

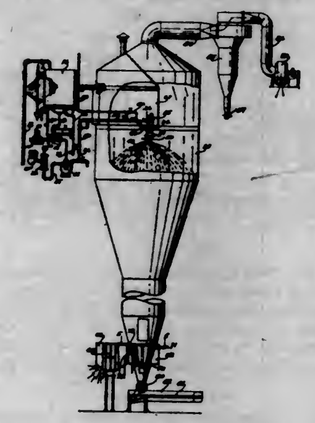
1. An explosive assembly of the character described, consisting of a main charge of a deflagrating but non-high explosive composition, in which is located, longitudinally, a core with a minimum diameter of ¾ inch, consisting of a high explosive composition comprising no less than 2% and no more than 50% of the total weight of the assembly and which core extends entirely through the main charge.



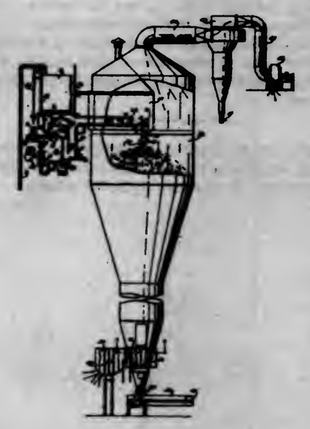
1,785,530. METHOD OF CRYSTALLIZATION. JOSHUA R. RAY and THOMAS RAY, Manistee, Mich. Filed Jan. 18, 1928. Serial No. 247,541. 9 Claims. (Cl. 159—50.)

8. In a quadruple effect of the kind described, means for transferring liquid from the fourth effect to the first, second and third effects, valves in said means at each of said effects, means for discharging said first effect into said second and third effects by gravity flow, valves in said last-mentioned means located at each of said first, second and third effects, means for circulating the liquid in each of said effects, means for utilizing the vapor generated in said first effect to heat said second effect, means for utilizing the vapor generated in said second effect for heating said third effect, means for utilizing the vapor generated in said third effect for heating said fourth effect, and a condenser for condensing the vapor generated in said fourth effect.

9. A method of crystallizing sugar in multiple effect comprising partially filling an evaporating pan with liquor, then evaporating a grain, then slowly feeding more of said liquor to said evaporating pan, then making a cut strike into a plurality of associated evaporating pans of said multiple effect, and feeding the second mentioned pans with fresh liquor.



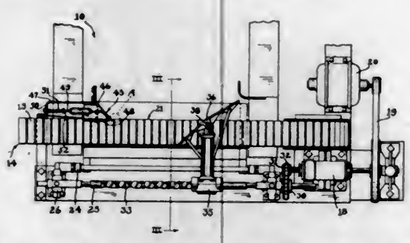
1,785,531. WEEDING TOOL. ALFRED ROESCH and JOHN ROETTINGER, Rahway, N. J. Filed Mar. 5, 1929. Serial No. 344,197. 2 Claims. (Cl. 97—63.)



1. A welding tool comprising a handle, a forked holder having a socket adapted to be riveted to the end of said handle, a pair of arms U-shaped in cross-section to form channels integral with said socket, and a loop member having elastic arms or ends adapted when bent towards each other to engage the said channels and to be frictionally held therein upon their release for expansion, and a means attached at the apex of said loop for uprooting weeds by pulling on said handle.

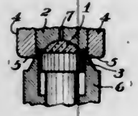
1,785,532. APPARATUS FOR PRODUCING SHREDDED SOAP. JULIUS A. SCHWANTES, Wauwatosa, Wis., assignor to Colgate-Palmolive-Peet Company, Chicago, Ill., a Corporation of Delaware. Filed June 28, 1928. Serial No. 288,950. 11 Claims. (Cl. 83—91.)

1. In an apparatus for producing shredded soap, the combination with a drying chamber, of soap-shredding apparatus for delivering soap shreds thereto in semi-liquid form, means for moving heated drying air upwardly through said chamber, and means for directing said upwardly moving current of air downwardly in the vicinity of the shredding apparatus to prevent soap deposition thereon.



1,785,533. SOAP MANUFACTURE. JULIUS A. SCHWANTES, Wauwatosa, Wis., assignor to Colgate-Palmolive-Peet Company, Chicago, Ill., a Corporation of Delaware. Filed June 28, 1928. Serial No. 288,951. 3 Claims. (Cl. 87—16.)

1. The method of making shredded soap which comprises beating a mixture of hot, semifluid soap and air, under pressure, into a frothy condition, delivering the mixture so formed to a shredder, shredding said soap while in its semifluid condition, and drying said shreds as nonadhering entities.

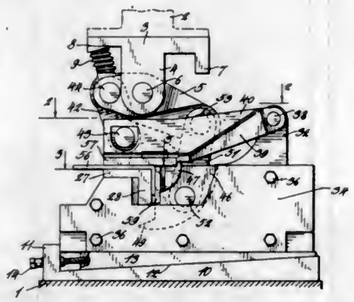


3. The method of making shredded soap which comprises delivering soap in semifluid condition to a shredder, shredding the soap as it is discharged from the shredder, drying the shredded soap particles by downward descent in an upwardly moving current of heated air, and inducing a downward flow of the drying air adjacent the shredder to prevent deposition of soap particles thereon.

1,785,534. LEER FEEDER. IRVING SIMONIS, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 12, 1928. Serial No. 269,317. 7 Claims. (Cl. 198—31.)

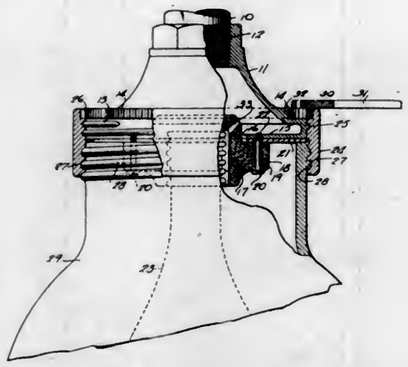
1. A leer feeder comprising, in combination, a ware conveyor, a plow arranged over the conveyor, means to reciprocate the plow longitudinally of the conveyor to move ware from the conveyor to one side thereof, and means to transversely incline the ware supporting areas of the conveyor to facilitate removal of ware therefrom.

1,785,535. METHOD OF FORMING THIN-WALLED GLASS ARTICLES. THEODORE H. SLOAN, Charleroi, Pa., assignor to Macbeth-Evans Glass Company, a Corporation of Pennsylvania. Filed Sept. 28, 1929. Serial No. 395,894. 5 Claims. (Cl. 49—80.)



1. The method of forming a thin-walled glass article, comprising pressing molten glass to form a blank having a dome-shaped upper surface surrounded by a chilled flange, holding the blank horizontally by its chilled flange while its central portion sags and elongates downwardly therethrough, and blowing a finished article from the elongated blank.

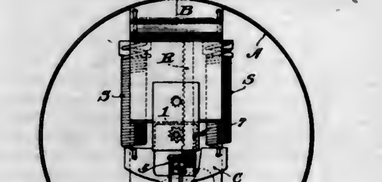
1,785,536. DRY MOP. FRANK SPAETH and TAMARA SPAETH, Hamden, Conn. Filed July 23, 1930. Serial No. 470,059. 2 Claims. (Cl. 15—228.)



1. A dry mop comprising a frame covered with fibrous material, said frame provided with cross-bars, a handle pivotally connected with said crossbars, a rod movably mounted on said handle, the lower end of the rod deflected and connected with one side of the frame.

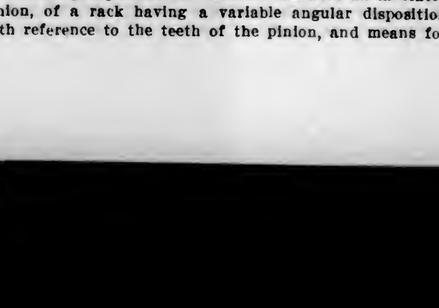
1,785,537. FLANGING MACHINE. DOUGLAS E. STEVENS, Denver, Colo. Filed July 30, 1929. Serial No. 382,159. 6 Claims. (Cl. 153—16.)

1. A flanging machine comprising, in combination, a stationary flanging block, a clamping member, a main bearing block mounted for movement towards and away from the flanging block, a lever pivoted intermediate its ends to the main bearing, a plate clamp, links extending from the plate clamp to one end of the lever, a flanging arm pivotally connected with the plate clamp, links connecting the other end of the lever with the flanging arm, a stop for one end of the lever and resilient means for normally holding the lever against the stop.



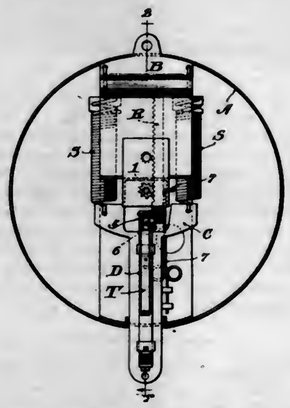
1,785,538. VAPORPROOF LIGHTING UNIT. JOSEPH A. VOLK, Norwalk, Conn. Filed Apr. 4, 1929. Serial No. 352,363. 8 Claims. (Cl. 240—128.)

1. The combination with a closed glass envelope having a threaded neck, of a ring threaded onto the neck, a support threaded into the ring, and a gasket interposed between the support and neck of the glass envelope, the threads between the ring and the neck and the support being of different pitch whereby a differential action is obtained by turning the ring while the support and envelope are stationary.



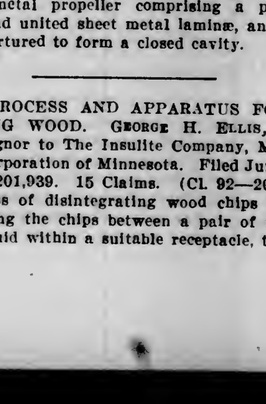
1,785,539. METHOD AND MEANS FOR STORING AND REMOVING REFUSE. FRANK B. ALLEN, Lower Merion Township, Montgomery County, Pa., assignor to The Allen-Sherman-Hoff Company, a Corporation of Pennsylvania. Filed Apr. 13, 1929. Serial No. 354,787. 11 Claims. (Cl. 110—171.)

1. The method of handling refuse which comprises collecting heated refuse in a hopper and, during substantially the entire time of said collection, submerging the refuse under water, maintaining the water below a temperature at which marked steaming occurs, discharging the refuse mixed with water from the hopper into a separately formed moving stream of water at a rate consistent with



the ability of the latter to handle such discharge, and transporting such refuse to a point of disposal by said separately formed stream.

1,785,540. VENTILATOR. GEORGE E. BLACK, Sewickley, Pa., assignor to H. H. Robertson Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 13, 1928. Serial No. 269,691. 4 Claims. (Cl. 98—85.)



1. The combination with a ventilator provided with an eduction pipe, of a valve cooperating with said pipe to close and open the same, and a gutter below said valve open at its top and provided with side and end walls, and having a water outlet pipe extended from one of said end walls through said eduction pipe to the outside thereof.

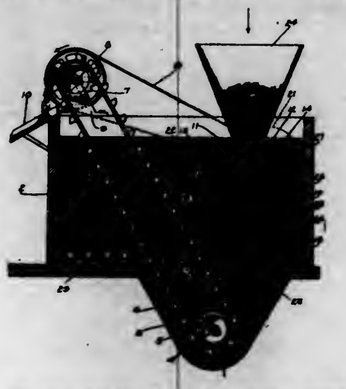
1,785,541. SPRING SCALE. HENRY M. BRIGHAM, Brooklyn, N. Y., assignor to John Chatillon & Sons, New York, N. Y. Filed June 6, 1929. Serial No. 368,858. 9 Claims. (Cl. 265—69.)

1. In a spring scale, the combination with an indicator pinion, of a rack having a variable angular disposition with reference to the teeth of the pinion, and means for so controlling the angular position of the rack that it will correct errors of the indicator due to changes in temperature.

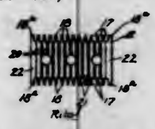
1,785,542. WEIGHING DEVICE FOR DIAL BALANCES. JOHANN DOCKL, Graz, Austria, assignor to Aktiebolaget Sveaexport, Stockholm, Sweden. Filed Dec. 31, 1928, Serial No. 329,353, and in Austria Dec. 1, 1927. 5 Claims. (Cl. 265—48.)

1. In combination, in a device for placing the weights on the weight pan of a weighing machine, a group of disc-shaped weights, telescopically arranged tubes for suspending the weights, a cam cylinder supporting the tubes and having therein a slot partly helical and partly horizontal, and means for placing the weights upon or lifting them from, one by one, the weight pan by rotation of said cam cylinder or cylinders and by coaction with said slot or slots.

1,785,543. METAL PROPELLER. CLAUDIUS DORNIER, Friedrichshafen-on-the-Bodensee, Germany, assignor of one-half to the Firm Dornier-Metallbauten, Gesellschaft mit beschränkter Haftung, Friedrichshafen-on-the-Bodensee, Germany. Filed Nov. 3, 1924, Serial No. 747,700, and in Germany Nov. 14, 1923. 2 Claims. (Cl. 170—159.)



1. An all-metal propeller comprising a plurality of superposed and united sheet metal laminæ, an inner lamina being apertured to form a closed cavity.



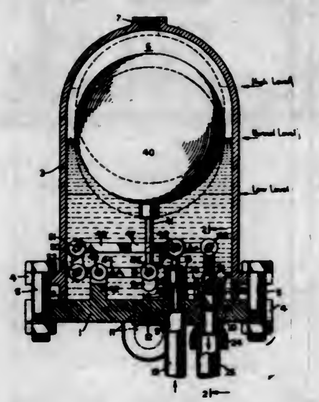
1,785,544. PROCESS AND APPARATUS FOR DISINTEGRATING WOOD. GEORGE H. ELLIS, St. Paul, Minn., assignor to The Insulite Company, Minneapolis, Minn., a Corporation of Minnesota. Filed June 27, 1927. Serial No. 201,939. 15 Claims. (Cl. 92—20.)

1. A process of disintegrating wood chips which consists in passing the chips between a pair of rollers submerged in liquid within a suitable receptacle, to force the

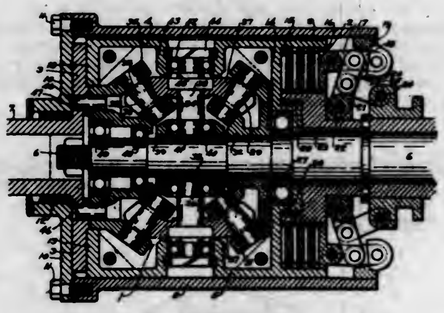
air out of the wood, then allowing the squeezed chips to expand and absorb the liquid, and immediately subjecting the liquid-soaked chips to a second pressing operation to quickly force the liquid out of the chips to separate the fibers.

1,785,545. SAFETY RAZOR. ERIC W. ERICSSON, Brooklyn, N. Y. Filed Mar. 21, 1930. Serial No. 437,642. 12 Claims. (Cl. 30—12.)

1. A guard plate for razors of the class described having a plurality of projecting members spaced longitudinally of opposite side edges of said plate and a plurality of recesses arranged transversely of the plate and in alinement with each of said projecting members.



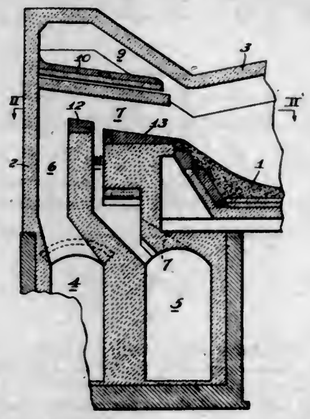
1,785,546. MACHINE FOR MAKING LOOSE LEAVES FOR BOOKS. WILLIAM FLETT, Melrose, Mass., assignor to National Publishing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 24, 1928. Serial No. 321,658. 26 Claims. (Cl. 270—82.)



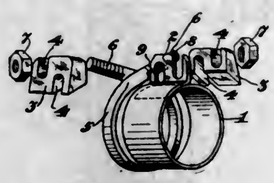
1. The combination of a supporting frame, supporting means for a roll of paper, mechanism for advancing a strip of paper from a roll supported by the supporting means, means for folding a longitudinal edge portion of the paper strip downwardly and inwardly and upwardly adjacent to the main body of the strip, mechanism for punching holes through the paper strip and the folded edge portion thereof, and mechanism for cutting the paper strip transversely into separate sections.

1,785,547. DUPLEX FEEDER FOR LOW-PRESSURE HEATING BOILERS. LEO P. FLOOD, Sunnyside, N. Y., assignor to Nason Manufacturing Company, New York, N. Y., a Corporation of New York. Filed June 8, 1928. Serial No. 283,876. 7 Claims. (Cl. 137—101.)

1. A duplex feeder for low pressure heating boilers comprising a chamber adapted to have a certain water level therein corresponding to the water level in the boiler, the floor of said chamber having an outlet opening, a fulcrum in said casing, the floor of said casing having an inlet opening between said outlet opening and fulcrum, a float having a stem between said inlet opening and fulcrum, a lever pivoted between its ends to said fulcrum and at one end to said stem, said openings having valve guides, valves in said guides, a member pivoted to said valves, a link connecting the free end of said lever and adjacent end of said member, and spring means normally holding the valve for said outlet opening closed.



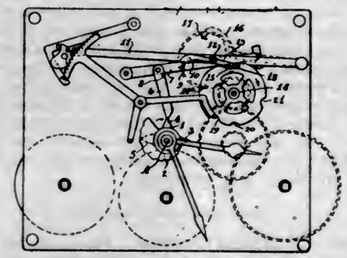
1,785,548. DOUBLE-END-DRIVE REVERSE CLUTCH. RALPH GERBER, Raymond, Wash. Filed Dec. 30, 1929. Serial No. 417,323. 5 Claims. (Cl. 74—34.)



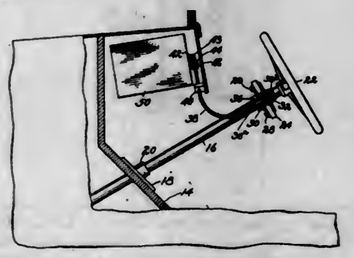
1. In a reverse gear of the character described, coaxially arranged driving and driven elements each having circumferential sets of rollers, an assembly of rotatably mounted sprockets each of which is in permanent engagement with both of said sets of rollers, a floating split drum shaped housing, in which the said elements are mounted, friction clutches at both ends of the housing for holding the said driving and driven elements in relation to the said housing, means for operating the said clutches from one end through the housing, a suitable surrounding casing, and releasable means for holding the said surrounding casing.

1,785,549. OPEN-HEARTH REGENERATIVE FURNACE. JOHN O. GRIGGS, Steubenville, Ohio. Filed Apr. 1, 1929. Serial No. 351,490. 1 Claim. (Cl. 263—15.)

An open hearth regenerative furnace provided at each end with a horizontally disposed gas port, an air port above the gas port, passages for conducting gas and air to said ports, and a by-pass conduit leading from said air passage to the bottom of said gas port at a point anterior of its outlet, the bottom of said gas port adjacent to but anterior of the outlet of said by-pass being provided with an upwardly extending baffle to cause uniform flow of air from the by-pass into the gas port.

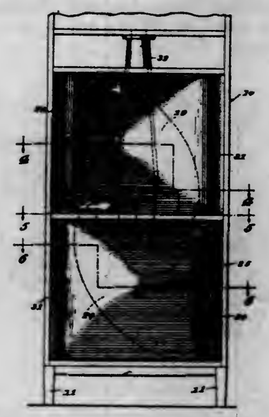


1,785,550. HOSE CLAMP. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 16, 1930. Serial No. 468,330. 3 Claims. (Cl. 24—19.)



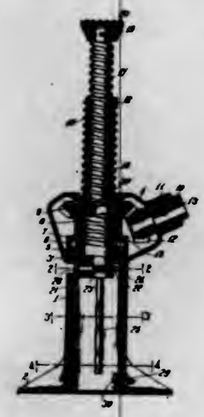
1. In a hose clamp or the like, a helical member, a strap fitting inside thereof having overlapping ends, a flange on said strap to engage the ends of the helical member, and means to reduce the diameter of the helical member.

1,785,551. AUTOMATIC STRIKE-REGULATING MEANS FOR CLOCKS. FRITZ HECKERT, Schwenningen-on-the-Neckar, Germany, assignor to Kienzle Uhrenfabriken A. G., Schwenningen-on-the-Neckar, Wurttemberg, Germany, a Corporation of Germany. Filed Nov. 13, 1924, Serial No. 749,686, and in Germany Feb. 25, 1924. 18 Claims. (Cl. 58—13.)



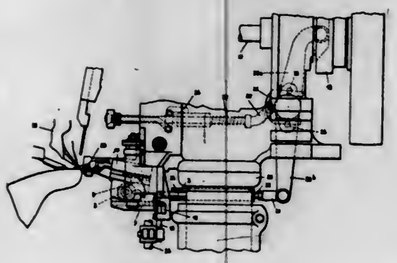
18. In combination, a warning lever; a detent lever; a two arm lever pivoted to one of the first named levers and forming an operative connection between the two to raise the detent lever a releasing distance when the two arm lever is in one position and the warning lever is raised a certain distance and to raise the detent lever said releasing distance when the two arm lever is in another position only when the warning lever is raised a greater distance; a rotatable member provided with points for operating the warning lever, one of the points being more remote from the center of said member than the others for raising the warning member said greater distance; and a quarter striking disk having means thereon cooperating with the two arm lever, at one quarter position of the striking disk, for permitting said two arm lever to move to said other position.

1,785,552. PORTABLE RADIO APPARATUS. WILLIAM M. HEINA, Long Island City, N. Y., assignor to Automobile Radio Corporation, a Corporation of Delaware. Filed Dec. 14, 1928. Serial No. 326,100. 8 Claims. (Cl. 250—14.)



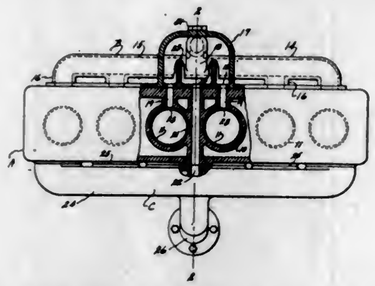
1. In combination with a vehicle having means for controlling movement thereof positioned for operation by the driver of said vehicle, said means including a steering column, a radio telephonic instrument mounted at a distance from said column, and apparatus extending from said column for governing said instrument.

1,785,553. SOUND-AMPLIFYING MEANS. FRANK C. HINCKLEY, Stratford, Conn., assignor to Columbia Phonograph Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed Mar. 12, 1926. Serial No. 94,177. 16 Claims. (Cl. 181—27.)



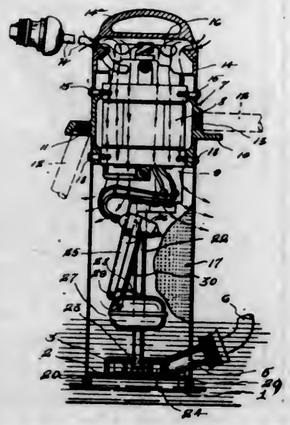
1. In an amplifier, an enclosure having a plurality of superposed compartments, amplifying means in each of said compartments, and said amplifying means being arranged relatively to cause the sound directed from one of them to intersect the plane in which sound is directed from another of them.

1,785,554. LIFTING JACK. BEN F. JOHNSON, Racine, Wis., assignor to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Oct. 11, 1926. Serial No. 140,857. 4 Claims. (Cl. 254—102.)



1. In a lifting jack comprising a standard, and a lifting member capable of either vertical or rotary movements in the standard, means for controlling the movements of the lifting member comprising a yieldable plunger projecting from the member, a substantially vertical guide rib in the standard adapted to engage the plunger and prevent continued rotation of the member, the rib terminating short of the limit of vertical movement of the member, and means carried by the standard beyond the end of the rib but entirely out of vertical alignment therewith for engaging the plunger to prevent continued rotation in one direction, this means serving to depress the plunger to permit continued rotation of the plunger in opposite direction.

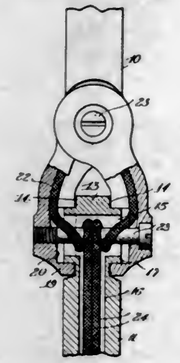
1,785,555. LASTING MACHINE. FRITZ KENNEL, Weissenfels, O. S., Germany, assignor to the Firm of Nollesche Werke Komm.-Ges., Weissenfels, O. S., Germany. Filed Mar. 27, 1929, Serial No. 350,363, and in Germany Apr. 5, 1928. 7 Claims. (Cl. 12—2.)



5. In a lasting machine of the class described, lasting pincers in the front of the machine, slitting knives supported behind the pincers, and means for moving said slitting knives along broken paths.

1,785,556. INTERNAL-COMBUSTION ENGINE. ARCHIE MACPHAIL NIVEN, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed Mar. 7, 1927. Serial No. 173,320. 24 Claims. (Cl. 123—122.)

1. A sleeve valve engine having a ported cylinder and a ported sleeve controlling the intake and exhaust gases said cylinder having an auxiliary port, and means controlled by said ported sleeve for supplying exhaust gases through said auxiliary port to a point suitably for applying heat to the fuel mixture.



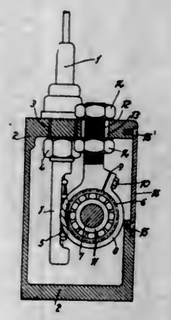
1,785,557. SUMP PUMP. JONAS L. OBERDORFER, Syracuse, N. Y., assignor to M. L. Oberdorfer Brass Company, Syracuse, N. Y., a Corporation of New York. Filed Apr. 4, 1928. Serial No. 267,211. 2 Claims. (Cl. 103—87.)

1. A sump pump comprising a base, a pump casing mounted on the base and having an outlet, a body, an electric motor mounted in the body and arranged in vertical position, the motor shaft extending into theypump housing and an impeller mounted on the lower end of the shaft within the pump casing, the casing having an inlet and a perforated wall secured at its upper end to the body and at its lower end to the base, the body having two sets of sockets arranged at different angles for receiving supporting arms, one set being arranged substantially radially whereby the arms extend horizontally and the other set being downwardly facing whereby the arms extend downwardly to serve as standards.

1,785,558. UNIVERSAL JOINT. ALPHONSE F. PIEPER, Rochester, N. Y. Filed Feb. 23, 1923. Serial No. 620,700. 6 Claims. (Cl. 247—31.)

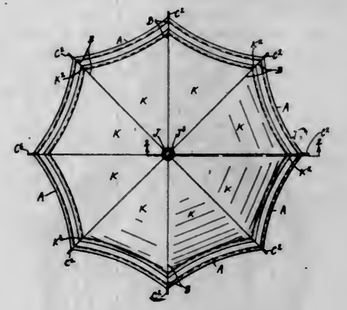
2. The combination with a pair of relatively movable conduit sections having their adjacent ends formed with opposed bearing surfaces and with lateral openings communicating with the bores of said conduit sections, said surfaces of one section end being disposed transversely to the surfaces of the other, of a pair of channeled links disposed on opposite sides of said opposed bearing surfaces and having bearing surfaces at opposite ends ar-

ranged transversely with respect to each other for cooperation with the bearing surfaces of said section ends, means for holding the bearing surfaces of said section ends and links together to form a universal joint for said sections, and electrical conductors housed in said conduit section and the channels in said links.



1,785,559. STRESS AND STRAIN COMPENSATING JOINT FOR ROTARY WELL-DRILLING COLUMNS. ARTHUR J. PONTI, Los Angeles, Calif. Filed Oct. 28, 1927. Serial No. 229,388. 6 Claims. (Cl. 255—28.)

1. In a drilling apparatus, a pipe column comprising in its length a telescopic joint provided with means for compensating longitudinal stresses in the column, and means for applying hydrostatic pressure inside the joint to counter-balance the hydrostatic pressure outside the joint during drilling.

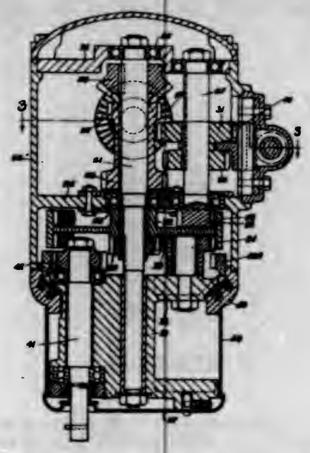


1,785,560. SPINNING AND TWISTING MACHINE. JOSÉ SERRA RABERT, Barcelona, Spain. Filed May 3, 1928, Serial No. 274,876, and in Spain May 12, 1927. 3 Claims. (Cl. 118—45.)

1. In machines for continuous spinning and twisting having a plurality of spindles, a driving spindle and means for mounting the driving spindle, comprising a supporting frame for the spindles, supports for the driving spindle, which supports are provided with suspension parts which traverse the supporting frame through holes giving clearance, whereby lateral adjustment of the supports may be effected to facilitate adjustment of the engagement of

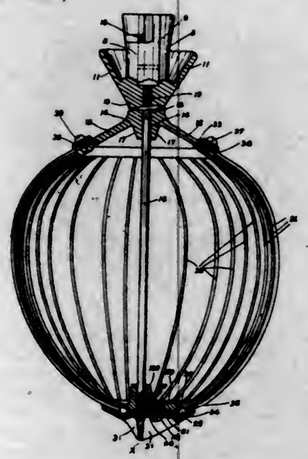
the gears by which transmission of movement to the spindle is effected, and screw-threaded nuts screwing upon the said suspension parts and between which the supporting frame is engaged for the retention of the supports in the relative position of adjustment.

1,785,561. DETACHABLE COVER FOR UMBRELLAS. EVA M. RILEY, Glenwood City, Wis. Filed Oct. 31, 1928. Serial No. 316,608. 1 Claim. (Cl. 135—34.)



In a detachable umbrella cover for umbrellas having a main stick with radially expansible ribs hinged near its top end and a removable flanged stick cap for securing said cover at its center and means for removably securing said cover at its perimeter to the free ends of said ribs; said cover means comprising a main cover attachable as described and an auxiliary cover over the main cover and securable to said flange means at its center, the perimeter of said auxiliary cover being inwardly of the perimeter of the main cover and fixed at predetermined points to said main cover, to expose a corresponding area of the main cover outwardly of the perimeter of the auxiliary cover.

1,785,562. DIFFERENTIAL-SPEED AGITATOR DRIVE. SIGMUND SCHIFF, Cincinnati, Ohio, assignor to The J. H. Day Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 8, 1927. Serial No. 238,643. 7 Claims. (Cl. 74—34.)

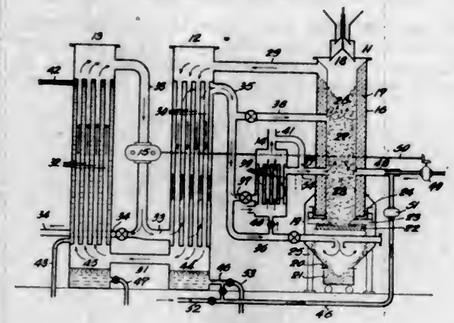


1. In a device of the class described the combination of a driven member comprising a revoluble disc, a pinion mounted eccentrically on the disc, a drive shaft co-axial with the disc, a ring gear freely revoluble on the drive

shaft, a pinion on the drive shaft meshing with the pinion on the disc, a counter-shaft having geared connection with

the ring gear, means for driving the countershaft from the drive shaft and means for locking the counter-shaft against rotation.

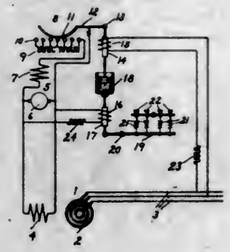
1,785,563. EGG WHIP AND THE LIKE. SIGMUND SCHIFF, Cincinnati, Ohio, assignor to The J. H. Day Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 27, 1928. Serial No. 295,830. 11 Claims. (Cl. 259—102.)



1. A beater of the class described comprising a plate having an annular group of perforations therein, a central socket on the plate adapted for attachment to an actuating shaft, a rod depending from said socket portion, a clamp plate secured to the free end of the rod, a co-operating clamp plate adapted for attachment with the first mentioned clamp plate, said co-operating plates having between them an internal channel of substantially elliptical form and a series of spaced transverse grooves communicating with said channel, a plurality of single wires of uniform length having shoulders disposed in said channel, the wires being retained between said co-operating plates, lugs on the opposite ends of the wires for entry into the perforations in the first mentioned plate and an annular clamping member secured to said plate and retaining the wires in position thereon.

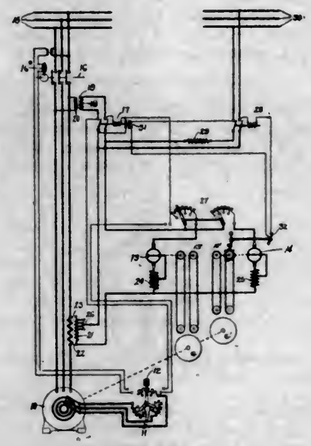
1,785,564. PUSH-BROOM-HANDLE BRACKET. FREDERICK SCHWEIGERT, New York, N. Y. Filed July 11, 1930. Serial No. 467,295. 3 Claims. (Cl. 306—22.)

1. A push broom handle bracket, comprising a ring portion for encircling a broom handle, a base portion connected with said ring portion for non-rotative connection with the body of said broom, and coacting means on said ring portion for non-rotatively connecting the ring portion with said handle, comprising a bolt extended through said ring portion and having a curved central portion for extending around a peripheral groove formed in the broom handle and having radial bottom sections for engaging in radial slots formed in the broom handle, and a spring attached upon the top of the central portion of said bolt for engaging the top of the groove in said broom handle and urging the radial portions together.



1,785,565. APPARATUS FOR DISTILLING SOLID CARBONIZABLE MATERIALS. FREDERICK T. SNYDER, New Canaan, Conn. Filed June 8, 1925, Serial No. 35,806, and in Canada May 14, 1925. 10 Claims. (Cl. 202—109.)

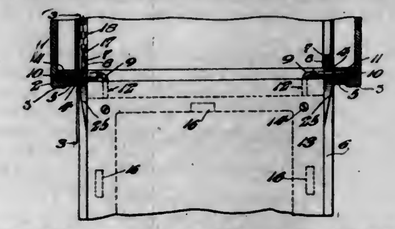
1. In apparatus for distilling carbonaceous material, a vertical distillation chamber including an upper evaporating section, an intermediate carbonizing section and a bottom cooling section, a conduit leading to the bottom of the cooling section to supply cooling gas, a second conduit leading to the bottom of the carbonizing section to supply hotter gas, and a third conduit leading to the bottom of the evaporating section to supply cool gas thereto, and a fourth conduit leading from the top of the distillation chamber for withdrawing all the gas supplied by the other conduits, a heat exchanger into which the fourth conduit discharges, a condenser connected to the heat exchanger to receive gas therefrom, and a reflux connection between the condenser and heat exchanger to deliver cooled gas from the condenser to the exchanger for reheating, connections between the heat exchanger and the first, second and third conduits for supplying reheated gas thereto.



1,785,566. REGULATOR. LOUIS W. THOMPSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 26, 1929. Serial No. 388,357. 5 Claims. (Cl. 171—229.)

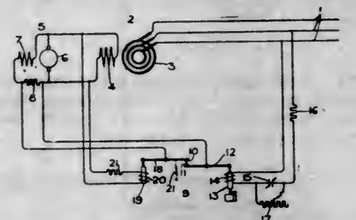
1. In combination, a distribution circuit, a dynamo electric machine connected to said circuit, a variable resistance type regulator for said dynamo electric machine, said regulator having an operating means connected to be responsive to changes in an electrical condition of said distribution circuit, and an anti-hunting means connected to be responsive to an electrical condi-

tion of the field circuit of said dynamo electric machine, and a yielding connection having a time element function between said operating means and said anti-hunting means whereby said operating means and said anti-hunting means are normally in a state of independent static equilibrium.



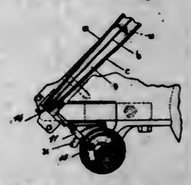
1,785,567. MOTOR-CONTROL SYSTEM. PAUL WEISKE and KONRAD RUPPRECHT, Berlin, Germany, assignors to General Electric Company, a Corporation of New York. Filed Jan. 27, 1925, Serial No. 5,042, and in Germany Feb. 11, 1924. 15 Claims. (Cl. 83—75.)

1. In a control system for a dual feed wood pulp grinder, the combination of a motor for driving a pair of grinder stones, a separate electric motor for feeding the wood to each grinder stone, and means responsive to the loads on said feed motors for automatically regulating the said feed motors to cause the loads imposed on the grinder stones by said feed motors to bear a predetermined relation to each other.



1,785,568. GAS RANGE. RUSSELL D. WELLS, Pottstown, Pa. Filed Feb. 28, 1927. Serial No. 171,426. 3 Claims. (Cl. 126—191.)

1. A gas range having standards and a front wall provided with a door opening, a door to close said opening and having rearwardly extending arms, pivot pins passing through said arms and journalled on said standards and having deflected portions, said door having means to limit

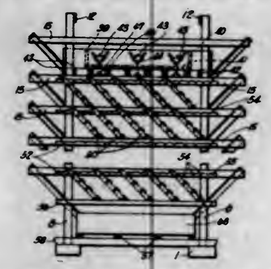


longitudinal movement in one direction of said pins and a lining for the door overhanging said deflected portions to retain said pivot pins in assembled position.

1,785,569. ELECTRICAL REGULATOR. FRED H. WINTER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 19, 1929. Serial No. 415,330. 8 Claims. (Cl. 171—119.)

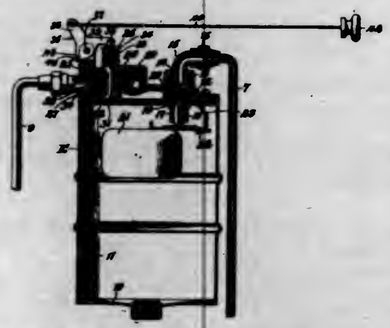
1. In a regulator of an electrical condition of alternating current circuits, in combination, an alternating current circuit, a magnet coil connected to said circuit, and means associated with said coil for causing the circuit containing the latter to operate at substantially unity power factor.

1,785,570. TACK-FEEDING DEVICE. KARL WOLLNY, Weissenfels, O. S., Germany, assignor to the Firm Nollesche Werke Komm.-Ges., Weissenfels, O. S., Germany. Filed June 10, 1929, Serial No. 369,650, and in Germany Jan. 1, 1929. 4 Claims. (Cl. 1—6.)



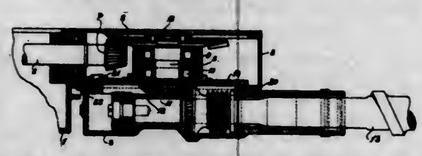
2. In a tack-feeding device of a lasting machine, a tack-hopper, three separate compartments within the hopper, a fixed conduit for the tacks to be driven, three raceways leading from the compartments of the hopper, means for aligning any of the raceways relatively to the fixed conduit, a cam moving the aligning means, means for moving the cam, and means for adjusting the relative position between the cam and its moving means to adapt the aligning means, to successively align any selected two of the raceways with the fixed conduit.

1,785,571. PROCESS FOR TREATING WOOD. ARTHUR P. ALLEN, Burlingame, Calif. Filed May 23, 1925. Serial No. 32,444. 2 Claims. (Cl. 99—12.)



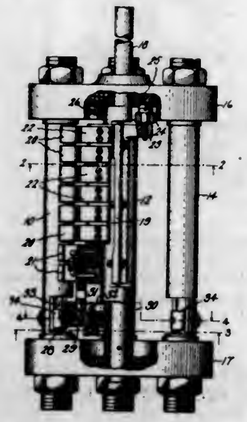
1. The process of treating wood which consists in subjecting it to the action of a saccharide solution under pressure to secure complete penetration by said solution and adding a mineral or vegetable oil to the solution to form an emulsion.

1,785,572. COOLING TOWER. REXFORD O. ANDERSON, Seminole, ULYSSES S. RUDY, Oklahoma City, and BENJAMIN M. GESSEL, Tulsa, Okla. Filed Dec. 9, 1929. Serial No. 412,892. 5 Claims. (Cl. 261—113.)



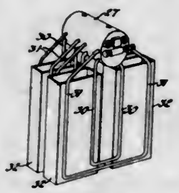
1. In a cooling tower, the combination with a superstructure of suitable uprights and tiers of cross members, of a plurality of baffles adapted to be selectively positioned in a sloping manner between two of said tiers of cross members, said baffles each having a plurality of baffle members each having serations for preventing the accumulation of liquid.

1,785,573. FUEL-FEED SYSTEM FOR INTERNAL-COMBUSTION ENGINES OF AUTOMOBILES. LESTER P. BARLOW, Detroit, Mich. Filed Oct. 2, 1929. Serial No. 396,891. 16 Claims. (Cl. 158—36.)



1. In a fuel feed system, the combination with an internal combustion engine having an intake manifold, of a carbureter connected to said manifold, a main supply fuel tank, a fuel feed connection between the main tank and the carbureter including a fuel pump and an auxiliary fuel tank having an air vent, a vacuum connection between the auxiliary tank and the intake manifold, valve means for the auxiliary tank normally closing the vacuum connection and opening the air vent, and means for moving said valve means to open the vacuum connection and close the air vent.

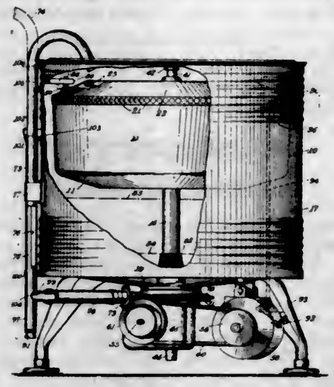
1,785,574. COAL-CUTTING MACHINE AND THE LIKE. WILLIAM CHRISTIE BLACK, Dudley, England, assignor to Matthew Smith Moore, Brussels, Belgium. Filed May 2, 1928, Serial No. 274,437, and in Belgium May 12, 1927. 7 Claims. (Cl. 262—30.)



1. In a coal cutting machine, the combination of a gear head having a vertical shaft, a casing therefor, a cutting mechanism, a carrier rotatably seated in said casing, said carrier forming a permanent bearing for said shaft, and means for detachably securing said mechanism to said carrier.

1,785,575. RATIO-ADJUSTING SWITCH. LOUIS F. BLUME, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 3, 1929. Serial No. 397,124. 4 Claims. (Cl. 200—8.)

1. A switch including a plurality of terminals, a main terminal connector, an auxiliary terminal connector, means for moving said main connector from one terminal connecting position to another, and means for moving said auxiliary connector between the same terminal connecting positions during the motion of the main connector, whereby the main connector is protected from arcing.



1,785,576. REFRIGERATING MECHANISM. HENRI A. BRYSSELBOUT, Detroit, Mich., assignor to Copeland Products, Inc., a Corporation of Michigan. Filed Jan. 18, 1928. Serial No. 247,581. 6 Claims. (Cl. 62—95.)

1. In combination, a looped refrigerant passage lying in a single plane, a second looped refrigerant passage lying in a plane parallel to the first mentioned plane and within the first mentioned loop, and a box-like structure of heat conducting material having an open top and bottom and having a face secured in thermal contact with one leg of each of said loops.

1,785,577. LAUNDRY MACHINE. GEORGE WILLIS DUNHAM, Utica, N. Y., assignor to Whirldry Corporation, Utica, N. Y., a Corporation of New York. Filed Mar. 25, 1925. Serial No. 18,086. 46 Claims. (Cl. 68—15.)

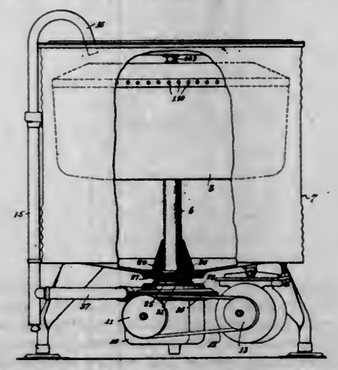
5. In apparatus of the character disclosed, a tank, a clothes receptacle operating in the tank, a pump including a casing in communication with the tank and an impeller operating in said casing, a gear case below the pump casing, a drive shaft for the clothes receptacle extending from the gear case up through the pump casing and inside the impeller, a water retaining tube extending from the gear case up over said drive shaft, a drive shaft for the impeller connected with the receptacle drive shaft over the top of the water retaining tube, an agitator shaft extending from the gear case up through the receptacle drive shaft and an agitator within the receptacle adapted to be driven by said agitator shaft.

15. In apparatus of the character disclosed, a tank, a clothes receptacle journaled therein, a pump, a conduit extending from the pump and including a riser at the side of the tank, a nozzle slidably engaged in said riser for directing a discharge of the pump back into the receptacle and a bypass from the riser into the tank controlled by said slidable nozzle.

16. In apparatus of the character disclosed, a tank having an opening in the bottom of the same, a pump casing secured over said opening and open to the tank, a column extending from said pump casing up into the tank and a conical strainer removably seated in the tank opening extending from the pump casing upwardly and inwardly to the column.

19. In apparatus of the character disclosed, a rotatably mounted clothes receptacle, a spring buffer for cushioning rotative movements of said receptacle and a pivoted stop on the receptacle adapted to be swung into position for engagement with or clear of the buffer.

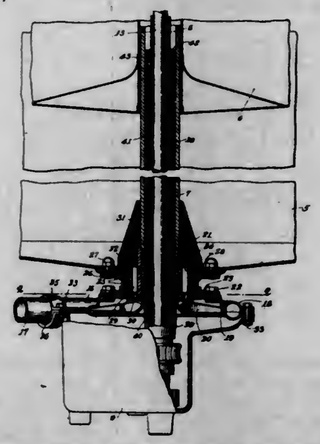
20. In washing apparatus, a tank, a clothes receptacle journaled in said tank, drive gearing for the receptacle on the bottom of the tank, a motor for operating said gearings, legs for supporting the tank, a switch for the motor mounted in one of said supporting legs and an operating rod for said switch extending from said leg up the side of the tank.



24. In apparatus of the character disclosed, a tank, a clothes receptacle operating in said tank, a circulating conduit extending from the bottom of the tank, up the side of the tank and provided with a discharge nozzle at the upper end of the same and a drain from the upright portion of the conduit into the side of the tank and including a bracket for holding said upright portion to the tank wall and provided with an upstanding rim forming a drainage cup, the tank wall having an opening in line with said drainage cup.

25. In apparatus of the character disclosed, a tank, a clothes receptacle operating in said tank, a pump suspended from the bottom of the tank and subject to vibrations, a riser secured to the side of the tank and piping from said pump to the riser including a section of flexible tubing to prevent the vibrations of the pump from being communicated to said riser.

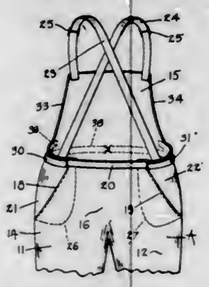
31. In a laundry machine, a laundry receptacle having a clutch sleeve, a support for said receptacle, a tubular drive shaft within said clutch sleeve, a clutch collar slidably interposed between said clutch sleeve and drive shaft, means whereby, in the upper position of said collar, said receptacle and shaft are coupled and in the lower position of said collar said receptacle and shaft are uncoupled, an agitator, an agitator drive shaft within said tubular shaft, means whereby said agitator may be positioned on said agitator shaft only when said clutch collar is in its lower position.



37. In apparatus of the character described, a horizontally disposed rotary pump, a drive shaft extending freely up through the rotary element of the pump, a tubular water well extending from the bottom of the pump casing up around said shaft and a tubular shaft connected with the rotary element of the pump, extending upwardly around the water well and connected with the drive shaft over the top of the water well.

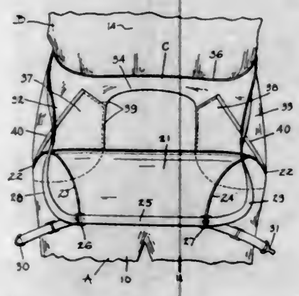
1,785,578. LAUNDRY MACHINE. GEORGE W. DUNHAM, Utica, N. Y., assignor to Whirldry Corporation, Utica, N. Y., a Corporation of New York. Filed May 16, 1925. Serial No. 30,760. 16 Claims. (Cl. 210—63.)

1. In a laundry machine, a tank, a laundry receptacle within the tank, a pedestal for said receptacle rising from and supported by the bottom of the tank and a resilient connection between said pedestal and the tank bottom, means for supporting said receptacle on the top of said pedestal in rotatable relation thereto, and a drive shaft for said receptacle.



1,785,579. PUMPING MECHANISM FOR WASHING MACHINES. GEORGE W. DUNHAM, New York, N. Y., assignor to Whirldry Corporation, Utica, N. Y., a Corporation of New York. Filed June 18, 1925, Serial No. 37,896. Renewed Sept. 17, 1930. 9 Claims. (Cl. 68—15.)

4. In combination, a rotary pump casing having upper and lower flanged sections, a gear box below said pump

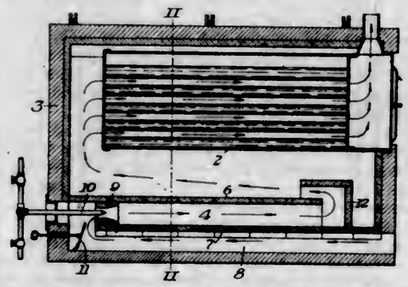


casing having a flange matching the flanges of the casing, fastenings securing said gear box and casing flanges, shafting extending from the gear box up through the pump casing, an impeller within the pump casing concentrically disposed about said shafting, a tubular drive member connected to said shafting at a point above the pump casing and to said impeller and a tubular well extending from the lower section of the pump casing up about the drive shafting inside the tubular drive connection.

1,785,580. OVERALLS. ERICK O. FELLROTH, Minneapolis, Minn., assignor to Martin Brothers Company, Minneapolis, Minn., a Corporation of Minnesota. Filed June 21, 1926. Serial No. 117,385. 10 Claims. (Cl. 2—227.)

1. A garment of the class described, comprising a body portion having a drop seat having free edges along its sides and a waist band at the top thereof, loops secured to the ends of said waist band, a pair of straps passing through said loops, said straps being attached to said body portion forwardly of said drop seat at points above the waist line, and fastening means at the other ends of said straps for securing the same together at the front of the garment, said straps serving to draw the drop seat upwardly to close the same upon being tightened so as to cause said free edges of said drop seat to become taut and to cause said drop seat to fit snugly upon the body of the wearer.

1,785,581. OVERGARMENT. ERICK O. FELLROTH, Minneapolis, Minn., assignor to Martin Brothers Company, Minneapolis, Minn., a Corporation of Minnesota. Filed June 21, 1926, Serial No. 117,386. Renewed Sept. 3, 1929. 5 Claims. (Cl. 2—79.)



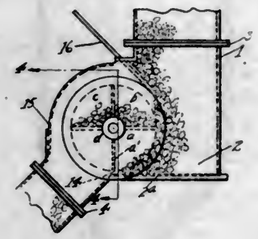
1. A garment of the class described comprising a trouser portion, a jacket portion, the front of said trouser portion and the front of said jacket portion being continuous to partly support said trouser portion through the front of said jacket portion, a band joined to said trouser portion along the sides thereof, immediately below the waistline, and adapted to extend across the hips and the small of the back of a wearer for further supporting said trouser portion, said band being enlarged adjacent its line of joinder to said trouser portion to provide facing flaps, the back of said jacket portion being full and joined at its lower extremity to said band, said trouser portion being formed to provide a drop seat, the marginal portions of said drop seat at the sides and top thereof being adapted to lie upon said band, and means for holding said drop seat in such closed position.

1,785,582. MORTUARY-RECORD CONTAINER. HANS P. HANSEN, Syracuse, N. Y. Filed July 2, 1928. Serial No. 290,008. 1 Claim. (Cl. 40—19.)

In a mortuary record container, outer and inner tubular shells unattached to each other, the interior length and interior diameter of the outer shell being appreciably longer than the corresponding outer dimensions of the inner shell to allow for endwise and radial movement of said inner shell within the outer shell when the shells are assembled for use, the inner shell having both ends provided with removable caps having annular flanges for engaging the inner walls of the outer shell and normally holding the major portions of both shells in spaced relation.

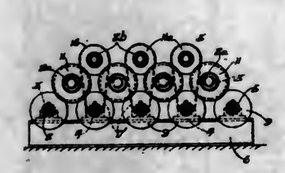
1,785,583. COMBUSTION CHAMBER. CLARENCE E. HAWKE, Metuchen, N. J., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed Dec. 27, 1926. Serial No. 157,108. 4 Claims. (Cl. 263—43.)

3. In a fuel burning apparatus, a radiating combustion chamber of the type especially constructed for the dissipation of heat through the walls thereof to an external means for utilizing the heat, a supporting structure therefor, an air circulating passage between the supporting structure and the combustion chamber, said passage being closed against the escape of air around the sides of the combustion chamber, means for inducing a flow of air through the passage, means for conducting such air from the passage into the chamber, and means located entirely outside the chambe rfor utilizing the heat radiated therefrom.



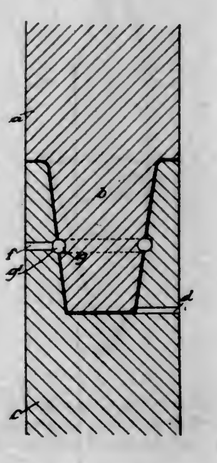
1,785,584. SCREEN FOR CASEMENT WINDOWS. HENRY HIGGIN, Newport, Ky., assignor to The Higgin Manufacturing Company, Newport, Ky., a Corporation of West Virginia. Filed Sept. 20, 1926. Serial No. 136,684. 5 Claims. (Cl. 156—14.)

1. In combination with a vertical edge portion of a horizontally slidable screen, means operatively connected with said edge extending beyond said edge of said screen, said means comprising a channel portion separately secured to said screen, and a strip of flexible material mounted within said channel.



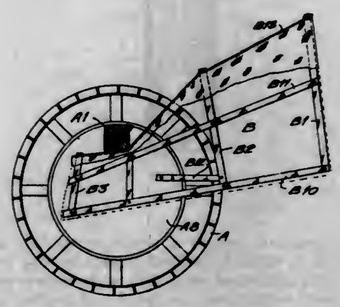
CARNEGIE LIBRARY OF ATLANTA

1,785,585. HOPPER FEEDING DEVICE. ERNEST H. HUMBERSTONE and HARRY R. WELCH, Columbus, Ohio, assignors to The Marble Cliff Quarries Company, Columbus, Ohio, a Corporation of Ohio. Filed Dec. 23, 1926. Serial No. 156,701. 1 Claim. (Cl. 214—35.)



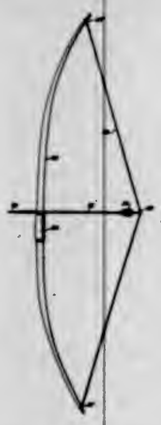
A feeding device comprising a casing with offset side walls for seating the sides of a feeding device, and a feeding device rotatably mounted in said casing, said device having disc-like sides with a hub extending across between said sides, and vanes extending radially from said hub subdividing said device into feeding compartments, said disc-like sides extending into said offset side walls, and said casing forming a seal against the outer edges of vanes in the lowermost position thereof, and having clearance at the uppermost position of the vanes, and a plate extending diagonally into said casing tangentially to the periphery of said disc-like sides for diverting material from a direct gravity drop into said compartments, said plate being extendible to carry material within said casing and into a compartment therein having a bottom extending substantially in horizontal alignment with the lowermost portion of said feeding device.

1,785,586. MANUFACTURE OR LINING OF PIPES BY CENTRIFUGAL ACTION. EDWARD SHOTTON HUME, Perth, Western Australia, Australia, assignor to Hume Steel Limited, Melbourne, Australia. Filed Dec. 27, 1928, Serial No. 328,667, and in Australia Jan. 10, 1928. 8 Claims. (Cl. 25—30.)



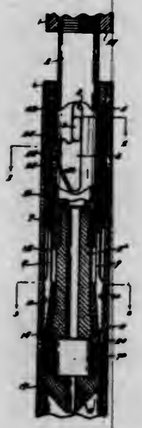
1. The method of manufacturing or lining pipes by centrifugal action which consists in arranging a series of rotary casings in a plurality of superposed tiers whereby the upper tier or tiers of said casings are supported by and receive rotary motion from the casings of the tier or tiers beneath, inserting the pipes or pipe moulds to be lined with cementitious or plastic material lengthwise within said casings, detachably securing said pipes or moulds concentrically within said casings, rotating the casings of the superposed tiers by frictional contact with adjacent casings or rings thereon, and withdrawing said pipes or moulds from said casings without disturbing the tier arrangement of the latter after the centrifugal moulding operation.

1,785,587. ELECTRODE JOINT. CLEMENS KUHLMANN, Ratibor, Germany, assignor to Siemens Planiawerke Aktiengesellschaft für Kohlefabrikate, Berlin-Lichtenberg, Germany, a Corporation of Germany. Filed June 7, 1928, Serial No. 283,727, and in Germany July 2, 1927. 1 Claim. (Cl. 266—1.5.)



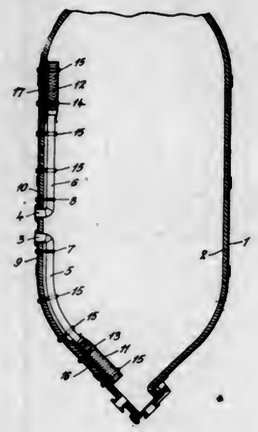
For carrying out the method of uniting the stump of an old electrode to a new electrode in electric furnaces requiring a continuous feed of the electrodes into the furnace to make up for the electrode material consumed in the furnace, the combination of carbon electrodes having a spigot at one end and a socket at the other end forming a counterpart of said spigot and grooves in the walls of said socket and spigot, with cement interposed between said socket and spigot so as to cover the entire engaging surfaces of the spigot and socket and cement passed into said grooves, as and for the purposes set forth.

1,785,588. PLANT-DIGGING MACHINE. LEE MCCLAIN, Knoxville, Tenn. Filed Feb. 26, 1929. Serial No. 342,870. 16 Claims. (Cl. 55—18.)



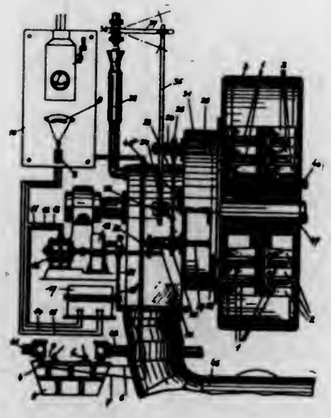
1. In a plant digging machine, in combination, a tractor having a transverse under structure, and a funnel-form guiding structure mounted longitudinally of the tractor with its smaller end directed rearward and extending beneath and rearwardly beyond the transverse under structure.

1,785,589. STREAM-LINE ARROW AND STRING-ENGAGING MEANS THEREFOR. EARL G. MEAD, Cleveland Heights, Ohio. Filed Mar. 17, 1928. Serial No. 262,396. 12 Claims. (Cl. 273—106.5.)



1. The combination of a stream-line arrow and a bow-string provided with an added arrow seat symmetrically disposed with respect to the axis of the bow-string.

1,785,590. AUTOMATIC RESETTING SPEAR. WILLIAM J. MILLER, Sulphur, La. Filed Mar. 1, 1930. Serial No. 432,546. 8 Claims. (Cl. 294—96.)



1. An automatic resetting spear comprising an elongated shank, a tapered mandrel carried by and surrounding the lower portion of the shank, a slip sleeve surrounding the shank and having its lower end portion provided with gripping arms, the tapered mandrel engaging said gripping arms from within, said slip sleeve having a slot disposed along the upper portion thereof, said slot having its lower portion transversely enlarged in one direction, the lower portion of the edge wall of the slot opposed to the enlarged portion being inclined toward the lower end of the slot, said inclined wall being entirely to one side of the slot, said shank having a part working in the slot of the sleeve.

1,785,591. DIGESTER FOR SULPHITE WOOD PULP. EINAR MORTERUD, Torderod, near Moss, Norway. Filed Feb. 26, 1929, Serial No. 342,743, and in Norway Jan. 25, 1929. 11 Claims. (Cl. 92—7.)

1. A digester for sulphite wood pulp comprising a brick-lined sheet iron shell having intake and outlet openings for circulating heated digesting liquor, characterized by that the said intake and outlet openings which are located adjacent each other near the middle of the digester communicate with circulation pipes located inside the digester, each comprising at least two sections loosely fitted into each other and fastened to the digester shell at one point only by a tight fastening clamp secured to the shell of the digester.

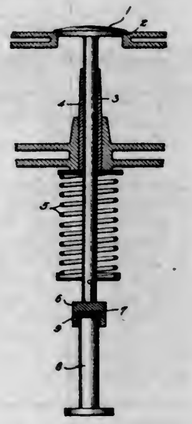
1,785,592. ELECTRIC GAS PURIFIER. HEINRICH FERDINAND JOHANN NOLZE, Kaiserslauten, Pfalz, Germany. Filed May 24, 1926. Serial No. 111,433. 1 Claim. (Cl. 261—90.)

An apparatus for freeing gas from dust and steam like impurities, comprising in combination with an electric gas purifier in which an electric current of high voltage jumps over from one electrode to another electrode the gas being conducted through the interval between said electrodes, an exhauster for conveying the purified gas from said purifier, baffle surfaces in said exhauster, means for pushing said baffle surfaces into or withdrawing the same from said exhauster in accordance with the temperature of the gas coming from the electric purifier, spraying nozzles in said exhauster for injecting water, and means for increasing the quantity of injected water when the electric precipitator is at a high temperature and for reducing the same at low temperature.

1,785,593. APPARATUS FOR USE IN LOADING MINE CARS. JAMES A. PAISLEY, Cleveland, Ohio, assignor to The Valley Camp Coal Company, Cleveland, Ohio, a Corporation of Pennsylvania. Filed May 28, 1929. Serial No. 366,654. 5 Claims. (Cl. 198—126.)

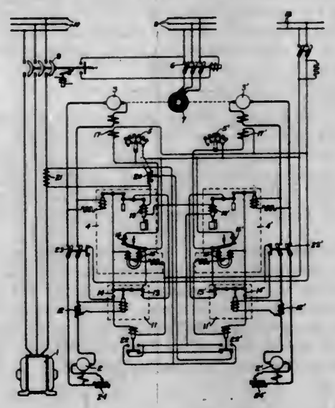
5. In an apparatus for loading cars, the combination with a longitudinal conveyor and means thereon for loading cars arranged below said conveyor, of a pair of lifting jacks arranged adjacent each end of the conveyor, a horizontal supporting member extending through a portion of the conveyor between each pair of jacks, sleeves connected with the movable portion of each jack and slidable on said member, and means for securing said sleeves in adjusted positions on said members.

1,785,594. METHOD OF AND APPARATUS FOR HANDLING GRANULAR MATERIAL. JAMES A. PAISLEY, Cleveland, Ohio, assignor to The Valley Camp Coal Company, Cleveland, Ohio, a Corporation of Pennsylvania. Filed July 17, 1929. Serial No. 379,009. 7 Claims. (Cl. 198—7.)



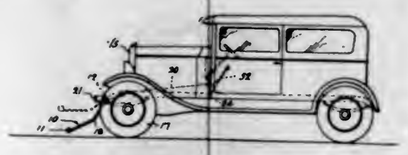
3. Apparatus for loading cars comprising a horizontal conveyor having distributing means for loading cars therefrom, driving means for said conveyor, a loading conveyor comprising an inclined and a horizontal portion the latter having its discharge end overlying the receiving end of the first-named conveyor, driving gearing therefor, a motor supported from the side of the frame of said conveyor, and having its shaft operatively connected with a shaft of said gearing, a flexible shaft arranged to extend from the driving gearing of the loading conveyor to the rear end of the loading conveyor, and a detachable coupling for connecting the end of said flexible shaft with the driving means for the first-named conveyor.

1,785,595. MOUTHPIECE FOR PIPES AND CIGAR HOLDERS. EVARISTO PAREDES, El Paso, Tex. Filed Sept. 3, 1927. Serial No. 217,347. 1 Claim. (Cl. 131—12.)



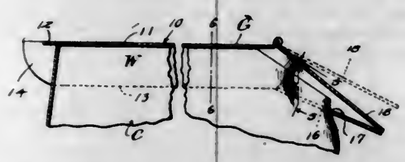
A mouthpiece for pipes or the like, comprising a nipple composed of a bulbous body of stiff material having its forward end open and contracted, and having side orifices, a separate elastic neck member having its forward end fitted over the tip of the stem of the pipe, the rear end of the neck member being fitted over the contracted open forward end of the bulbous body, an annular outwardly pressed bead formed in the contracted forward end portion of the bulbous body, and a removable strainer disk for disposition within said bead and adapted to be disposed against the tip of the stem of the pipe.

1,785,596. ADJUSTABLE SHIM-HOLDER CAP. SVEND PETERSEN, Askov, Minn. Filed Oct. 2, 1929. Serial No. 396,744. 3 Claims. (Cl. 123—90.)



1. A shim holder end cap for push rods, comprising a cap adapted to fit upon the end of a push rod, said cap having an opening through which shims may be introduced between the cap and rod end without disconnecting the rod and cap, said opening being displaced from the plane of contact of the cap and push rod terminal to prevent displacement and loss of the shims.

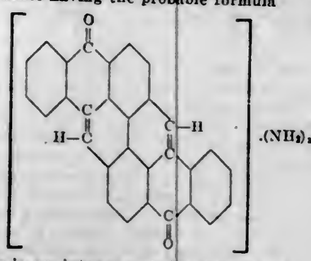
1,785,597. MOTOR-CONTROL SYSTEM. KONRAD RUPRECHT, Berlin, and RICHARD DIETZE, Pankow, Germany, assignors to General Electric Company, a Corporation of New York. Filed Dec. 22, 1927, Serial No. 241,908, and in Germany Dec. 31, 1926. 5 Claims. (Cl. 172—239.)



3. The combination with a plurality of grinders, a common driving motor therefor, a separate feed mechanism for each of said grinders, a separate electric motor for operating each of said feed mechanisms, a separate electric generator provided with a field winding for supplying power to each of said feed motors, means responsive to the load on said driving motor for regulating the field windings of said generators so as to maintain a predetermined load on said driving motor, and means responsive to the current supplied to each of said feed motors for regulating the field winding of its respective generator.

1,785,598. SAFETY MEANS FOR MOTOR VEHICLES. GIUSEPPE SANTANJELO, New York, N. Y. Filed May 31, 1930. Serial No. 458,671. 4 Claims. (Cl. 293—44.)

1. A vehicle safety fender including a plate structure hingedly mounted on the front end of an automobile, a resilient buffer on the front portion of said structure, a shaft mounted on the upwardly inclined pedal section of the floor board of the automobile, a plurality of drums fixedly carried by said shaft, a plurality of cables for raising and lowering said fender, said cables being secured at one end to the fender and at their opposite ends to said drums, a ratchet wheel carried by said shaft, a dog to engage said ratchet and a lever to actuate said dog for raising said plate member.



1,785,599. COMBINED OPENER AND CLOSURE FOR PAPER MILK CONTAINERS. JOSEPH J. SCHMERLER, New York, N. Y. Filed Feb. 28, 1929. Serial No. 343,375. 10 Claims. (Cl. 229—1.5.)

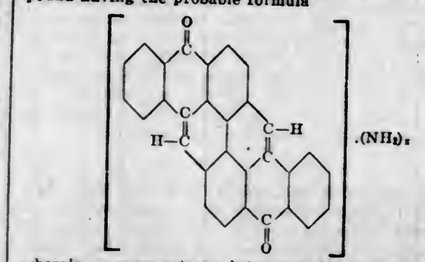
1. In a device for the purpose described, a pair of guides adapted to receive therebetween the walls of a container a portion of which is to be severed, a knife associated with said walls for severing said portion, and means associated with said guide and knife for clampingly receiving the upper edge of the container when the severing operation is completed.

1,785,600. MANUFACTURE OF PYRANTHRONE DERIVATIVES. ARNOLD SHEPHERDSON and SIDNEY THORNLEY, Blackley, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, England. Filed Sept. 29, 1927, Serial No. 222,932, and in Great Britain Oct. 3, 1926. 5 Claims. (Cl. 260—61.)

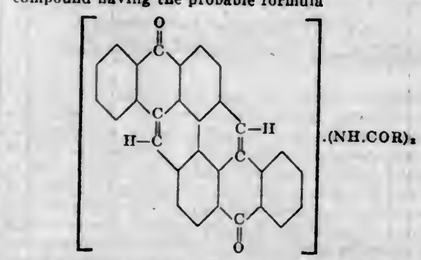
4. As a new composition of matter useful for dyeing and as an intermediate in the production of acylated dyestuffs, a dark colored substance produced by the reaction of pyranthrone with hydroxyl amine, said substance dyeing cotton from a hydrosulphite vat in deep brown shades changed in shade by cold sodium hypochlorite solution, said substance having the probable formula

wherein x is an integer probably less than 4.

1,785,601. MANUFACTURE OF PYRANTHRONE DERIVATIVES. ARNOLD SHEPHERDSON and SIDNEY THORNLEY, Blackley, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, England. Original application filed Sept. 29, 1927, Serial No. 222,932, and in Great Britain Oct. 8, 1926. Divided and this application filed May 9, 1929. Serial No. 361,844. 6 Claims. (Cl. 260—61.)



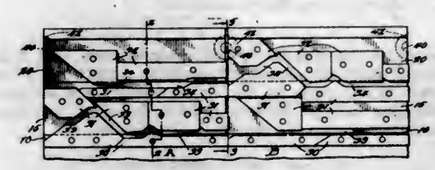
5. In the manufacture of acylated vat dyestuffs from amino pyranthrone compounds of the class consisting of pyranthrone and halogenated pyranthrones, the process which comprises reacting an acylating agent having the probable formula



wherein

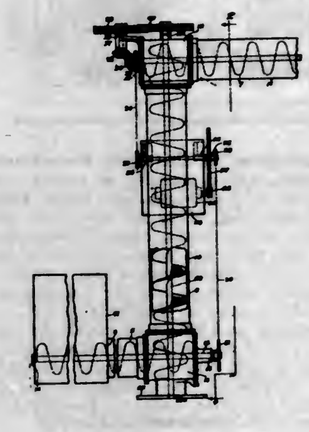
represents an acyl group with an amino pyranthrone compound having the probable formula

wherein x represents an integer probably less than 4, to convert the said amino pyranthrone into an acyl amino compound having the probable formula



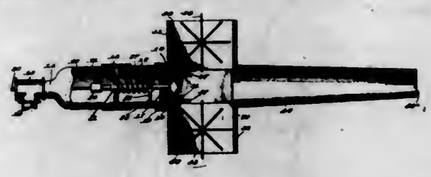
wherein x represents an integer probably less than 4 and —COR represents an acyl group.

1,785,602. STREET MARKER. WARREN S. SHERMAN, Oklahoma City, Okla. Filed Mar. 8, 1928. Serial No. 260,175. 2 Claims. (Cl. 40—125.)



1. In a street marker the combination with a curb having the upright street facing surface thereof provided with a pocket spaced from and entirely below the top of said curb, the pocket having the counter facing surfaces thereof relatively divergent from the outer face of the curbing to the bottom of the pocket, a slab dove-tailed in snug fitting relation within said pocket, said slab having a countersunk face, said slab inwardly of the countersunk face having pockets therein, the counter facing surfaces of said last mentioned pockets being relatively divergent from the countersunk face, and contrasting characters snug fitting and dove-tailed permanently in said pockets of the slab with the faces of said characters exposed in flush relation on the countersunk face of the slab.

1,785,603. SEGMENTAL CAM RING. HARRY SWINGLEHURST, Orange, N. J., assignor to Scott and Williams, Inc., New York, N. Y., a Corporation of Massachusetts. Filed Oct. 7, 1929. Serial No. 398,019. 8 Claims. (Cl. 66—57.)

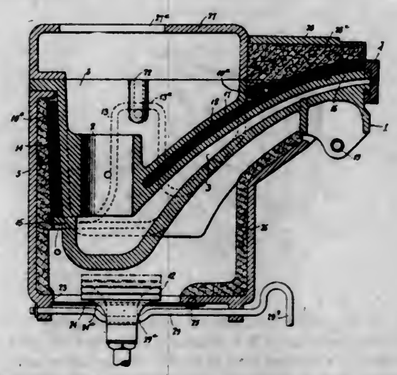


1. A needle cam ring segment comprising a base section with a rib presenting an inner face, an intermediate section resting against the outer face of said rib and presenting a face flush with the inner face thereof, and a third section resting against the outer face of the intermediate section and presenting a face flush with the inner face of the rib, said sections being adapted to support needle cams, and means for securing said intermediate and said third section to the base section.

1,785,604. MEANS FOR ELEVATING PULVERULENT MATERIALS. THEODORE J. TELLEFSEN, Cincinnati, Ohio, assignor to The J. H. Day Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 9, 1928. Serial No. 260,426. 5 Claims. (Cl. 198—213.)

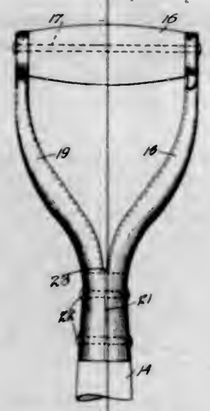
1. In an elevating device for powdered substances the combination of an upright housing having upper and lower ports, an elevating screw rotatable in the upright housing and extending beyond said ports, a tubular second screw housing having a port in communication with the lower port of the first housing, a feed screw in the second housing for feeding powdered substance to the lower portion of the elevating screw, the screws being disposed transversely of one another in different planes with their peripheries in close proximity.

1,785,605. BURNER. DENNIS H. TURNER, Seminole, Okla. Filed Oct. 27, 1928. Serial No. 315,474. 10 Claims. (Cl. 158—99.)



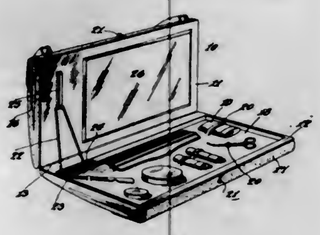
1. A burner comprising a casing, a partition dividing the casing into a gas chamber and a mixing chamber, said partition having a plurality of restricted passages for placing the compartments into communication with each other, fans mounted in the mixing chamber, a pipe in communication with a source of steam and provided with nozzles adapted to impinge steam against the fans for causing rotation of the fans, the mixing chamber adjacent the fans being open to the atmosphere whereby said fans will draw in air and mix it with the gas from the gas chamber, the gas chamber being in communication with a source of gas.

1,785,606. PRELIMINARY TREATMENT OF METAL PLATES FOR THE PRODUCTION OF PRINTING PLATES. FRIEDRICH ULLMANN, Zwickau, Germany. Filed Mar. 7, 1927, Serial No. 173,615, and in Germany Mar. 10, 1926. 1 Claim. (Cl. 91—69.)



A process for the preparatory treatment of zinc blocks for the purpose of applying light sensitive layers containing chrome, consisting in treating the zinc plates with an aluminium chloride solution.

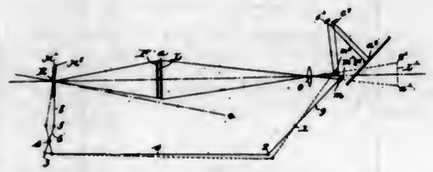
1,785,607. METAL POT FOR LINE-CASTING MACHINES. LE ROY W. WILLIS, Brooklyn, N. Y., assignor to Intertype Corporation, New York, N. Y., a Corporation of New York. Filed July 5, 1929. Serial No. 376,173. 10 Claims. (Cl. 22—70.)



1. A metal pot for line casting machines comprising a main reservoir, a metal discharging cylinder therein, a metal injecting throat leading from said cylinder through a portion of such reservoir and to the exterior thereof, the entire upper wall of said throat, including a portion thereof within the reservoir, being relatively thin and having a heating surface on its upper side which extends from said cylinder to the discharge mouth of the throat, and electric heating means mounted upon the upper side of said heating surface and extending throughout the length thereof.

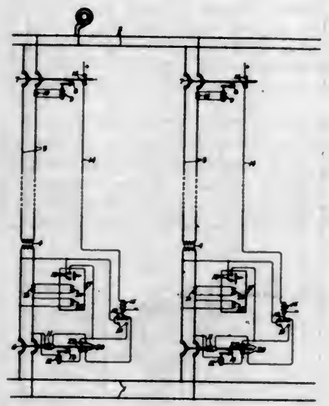
1,785,608. TOOL HANDLE. HENRY LEE BASSETT, Columbus, Ind., assignor to Columbus Handle and Tool Corporation, Columbus, Ind., a Corporation of Indiana. Filed Dec. 13, 1929. Serial No. 413,925. 3 Claims. (Cl. 294—57.)

1. A Y-handle for shovels and such tools comprising arms of sheet metal bent into tubular form with the inner edges of each arm abutting and with the lower ends of each arm formed to provide a half-socket which lower ends of said arms mate at their lower edges and are welded together thus providing a socket for receiving the tool handle, a shouldered edge being provided at the upper end of the socket where the mating edges meet, and the upper ends of said arms being shaped to receive the handgrip, substantially as set forth.



1,785,609. LADY'S HAND BAG. GEORGE BAUMANN, Brooklyn, N. Y. Filed Sept. 8, 1928. Serial No. 304,679. 2 Claims. (Cl. 150—46.)

1. In a lady's handbag a pair of hingedly connected sections, and means for securing said sections in a closed position, a V-shaped bail hingedly connected to one of said sections, and a guide on the other of said sections with which the bight portion of said bail slidably engages for supporting one of said sections in an open position with respect to the other section.

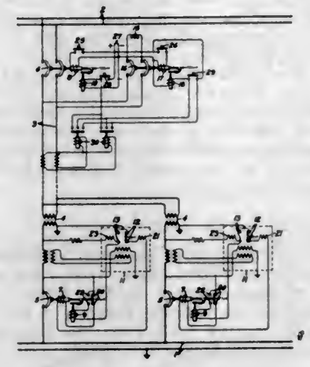


1,785,610. OPTICAL RECORDING DEVICE FOR TELEGRAPHIC SIGNALING. EDOUARD BELIN, Paris, France. Filed Nov. 30, 1928, Serial No. 322,841, and in France Dec. 22, 1927. 2 Claims. (Cl. 178—15.)

1. Apparatus for translating telegraphic code characters optically from a movable film having said code characters in the form of light transparent spots thereon, comprising a source of light, an oscillating mirror for reflecting the rays from said source of light upon said film, a linear element located behind said film and bearing a row or line of signs, a sensitized surface for selectively record-

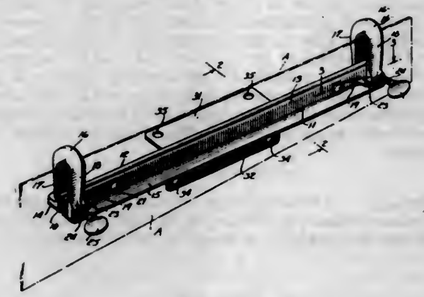
ing said signs, and an optical relay between said linear element and said sensitized surface, comprising a lens device in the path of the emitted beam, and a second oscillating mirror connected with the first mentioned oscillating mirror for movement in unison.

1,785,611. CONTROL SYSTEM. DAVID K. BLAKE, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 26, 1927, Serial No. 208,647. Renewed May 2, 1930. 4 Claims. (Cl. 171—97.)



1. In combination, an alternating current supply circuit, a network, and a plurality of feeders connecting said circuit to said network, each feeder including a transformer, switching means for connecting the transformer to the supply circuit, overload responsive means for opening said switching means, other switching means for connecting the transformer to said network, reverse power responsive means for effecting the opening of said other switching means, a pilot wire circuit, electroresponsive means in said pilot wire circuit for controlling the opening and closing of said other switching means, and contacts in said pilot wire circuit arranged to be actuated in response to the opening and closing of the first mentioned switching means in the feeder to effect the operation of the electroresponsive means.

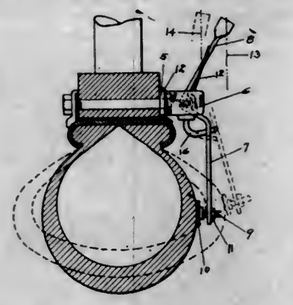
1,785,612. SYSTEM OF ELECTRIC DISTRIBUTION. DAVID K. BLAKE, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 23, 1927. Serial No. 214,951. 11 Claims. (Cl. 175—294.)



1. In combination, two electric circuits, switching means for connecting said circuits together, power directional means for controlling the opening and closing of said switching means, and means responsive to the move-

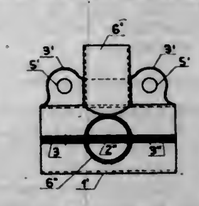
ment of said power directional means to its opening position while a certain one of said circuits is energized

for maintaining said power directional means in its opening position as long as said one of said circuits is energized.



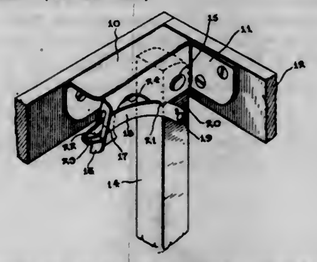
1,785,613. SAW VISE. JAMES BLUMER, Norwalk, Conn. Filed Oct. 20, 1928, Serial No. 313,791. 2 Claims. (Cl. 76—78.)

1. In a saw vise, fixed and movable jaws constructed of angle iron to provide vertically disposed parallel flanges and horizontal flanges at the lower edge of each vertical flange projecting respectively in opposite directions, inverted U-shaped brackets rigidly secured to the fixed jaw and straddling the vertical flanges of both jaws, a flexible resilient U-shaped spring carried by each bracket and secured to the movable jaw, a stud projecting outwardly from the vertical flange of the movable jaw and extending between the legs of the U-shaped spring and means extending through the free ends of the bracket, adapted to coact with the movable jaw for advancing the same toward the fixed jaw.



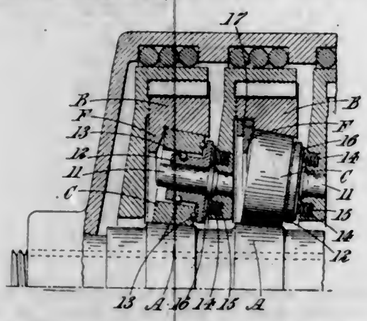
1,785,614. INDICATOR. CHARLES A. BOYER, Tiggard, Oreg. Filed May 8, 1929. Serial No. 361,348. 2 Claims. (Cl. 200—58.)

1. In an indicator for pneumatic tires: a bracket adapted to be mounted upon the wheel; a lever pivoted upon said bracket and having an arm adapted to contact with the tire; a second arm upon said lever extending in a substantially opposite direction to said former arm; spring means for retaining said former arm in contact with the tire; and a spring mounted upon said bracket and engaging an orifice in the arm contacting with the tire, from which orifice said spring is removed by move-



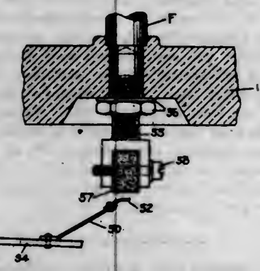
ment of said arm and caused to bear against said arm to retain the same in position to operate an electric switch.

1,785,615. FUSELAGE FITTING. GIANNI CAPRONI, Rome, Italy. Filed Dec. 5, 1929, Serial No. 411,942, and in Italy Dec. 10, 1928. 9 Claims. (Cl. 244—31.)



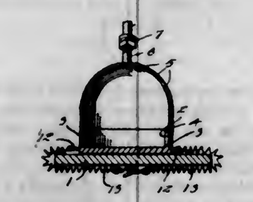
1. Attachment for the connection of the longitudinal, transversal and diagonal elements of the tubular structures used in aeronautical constructions, consisting in a main sleeve obtained by bending one or more sheet metal plates suitably, cut out, folded and joined together so as to form a cylindrical surface provided with radial ribs having anchoring lugs for the diagonal elements, on one or more of the said radial ribs being arranged connecting tubes notched as far as to reach a certain extent along diametrically opposite generating lines, in order to leave a free passage for the ribs, and cut out at one end according to their intersection with the main sleeve with which they are connected.

1,785,616. TABLE-LEG LATCH. GEORGE J. CORPORON, Portland, Me. Filed Jan. 18, 1929. Serial No. 333,299. 9 Claims. (Cl. 45—11.)



2. A device for the purpose indicated comprising in combination with a table having a swinging leg, a latch pivotally mounted on the leg, and a keeper fixed with reference to the table, the latch having spaced seats for engagement with the keeper respectively in the extended and folded positions of the leg, the seats being disposed on opposite sides of the latch and the latter being yieldingly impelled in opposite positions depending on whether the leg is in extended or folded position.

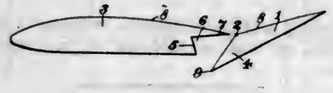
1,785,617. ROLLER BEARING. FREDERICK CAMERON COWBURN, Gosport, England. Filed Nov. 5, 1928, Serial No. 317,257, and in Great Britain Nov. 25, 1927. 6 Claims. (Cl. 308—174.)



1. The combination with roller bearings and the like of the kind herein referred to, and wherein the outer race and the rollers are capable of movement longitudinally together in relation to the inner race, of an abutment on the movable outer race to contact with the broad ends of the rollers and means to apply end thrust to the rollers in a direction to force their broad ends into contact with the abutment.

1,785,618. COPPER-CARBON CONTACT. SALISBURY M. DAY, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y., a Corporation of New York. Original application filed Apr. 9, 1920, Serial No. 372,585. Divided and this application filed Sept. 22, 1926. Serial No. 137,137. 5 Claims. (Cl. 200—166.)

1. In a relay adapted for railway signaling systems, a contact element of a highly conductive non-corrosive metal, and a cooperating contact element of hard dense carbon of a crystalline structure impregnated with approximately ten per cent by volume of pure copper.



1,785,619. GARMENT AND FUR STEAMER. HENRY P. EASTON, Jr., Nutley, N. J. Filed July 9, 1929. Serial No. 377,018. 5 Claims. (Cl. 68—9.)

1. A steaming device of the character described comprising an elongated casing of substantially parabolic cross sectional design having an open bottom, a tray having upstanding walls inset from the edges of the bottom thereof, said walls being adapted to extend into the casing, means for introducing steam into the casing, and means for drawing-off condensed steam from the tray, said casing wall from one end throughout the major portion thereof having steam outlet apertures, said steam introducing means being adjacent the other end.

3. In a steaming device of the character described including a base, means for securing said base to a supporting table structure, comprising eye members secured to opposite side edges of the base, and spring members secured at one end to certain of said eyes and adapted to be passed beneath the supporting structure and connected at their other ends to adjacent eyes.

1,785,620. CONTROL SURFACE FOR AIRCRAFT, SUBMERSIBLES, AND THE LIKE. LESLIE GEORGE FRISE, Bristol, England, assignor to The Bristol Aeroplane Company, Limited, Bristol, England, a British Company. Filed Oct. 15, 1928, Serial No. 312,684, and in Great Britain Oct. 26, 1927. 2 Claims. (Cl. 244—29.)

1. In an aeroplane, the combination with a fixed aerofoil, of an adjustable trailing aileron which is pivoted about an axis situated rearwardly from the leading edge of the aileron and which is so shaped that the leading edge of the aileron is of less thickness than the adjacent trailing edge of the aerofoil, and that in the neutral position of the aileron, its lower surface is continuous with the lower surface of the aerofoil, and that in the upward position of the aileron, an unobstructed passage is provided between the aileron and the aerofoil, and means extending from the trailing edge of the aerofoil providing a continuous upper surface to the combined aerofoil and aileron.

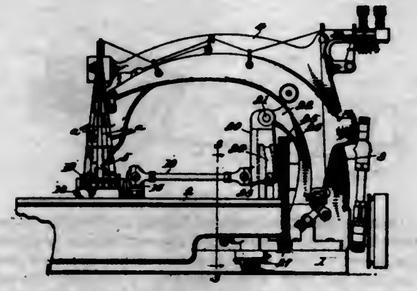
1,785,621. ATTACHABLE RADIATING ELEMENT. JOSEPH GABOR, New York, N. Y. Filed Mar. 10, 1930. Serial No. 434,668. 1 Claim. (Cl. 257—139.)

A removable heat radiating attachment for a radiator having spaced steam pipes, comprising U-shaped heat radiating members, the respective legs of said members including parallel spaced flanges, the bight portions of said members including also parallel spaced flanges, which latter are integral with said first flanges, the respective legs of said members embracing opposite sides of the spaced steam pipe portions, and the bight portions of said members adapted to rest on one of the steam pipe portions.

1,785,622. COTTER PIN. ERNEST G. GOODWIN, Pelham, N. Y., assignor to Standard Coupler Company, New York, N. Y., a Corporation of New Jersey. Filed May 11, 1929. Serial No. 362,241. 8 Claims. (Cl. 74—8.)

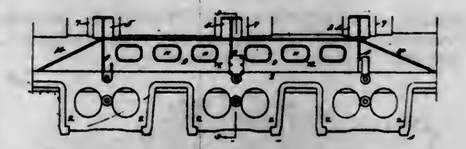
1. A retaining device of cotter pin stock consisting of two legs and an eye, characterized by the projection of one leg beyond the other and said projected end being twisted about the axis of the pin.

1,785,623. BATHING SHOE. ELSA GORJAN, Zagreb, Yugoslavia. Filed Feb. 19, 1929, Serial No. 341,141, and in Austria Mar. 22, 1928. 4 Claims. (Cl. 36—1.)



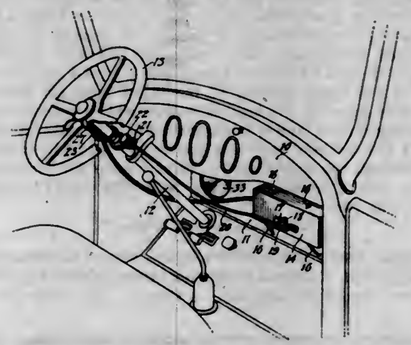
1. A bathing shoe, comprising in combination a sole and heel formed as a unit in cork, a cover of fabric entirely surrounding the same, a fabric upper, a cork toe stiffener and a cork heel stiffener, each sewn into or embedded in the upper at the toe and heel end respectively and means for uniting said upper and said sole and heel.

1,785,624. TOOTH CLAMP. LUDWIG HALLER, Stuttgart, Germany. Filed May 12, 1928, Serial No. 277,325, and in Germany Sept. 1, 1927. 1 Claim. (Cl. 32—20.)



A tooth clamp comprising a bow, two parallel arms extending on the inner side and on the outer side along a row of teeth, bent extensions of said bow holding said arms on the clamp bow in the direction of the tooth roots, said arms adapted to hold an elastic tying-off element of rubber thread for pressing back the gum between two tooth-crowns.

1,785,625. RUG-TUFTING MACHINE. NATHAN E. HANSON, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 31, 1928. Serial No. 296,522. 9 Claims. (Cl. 112—79.)



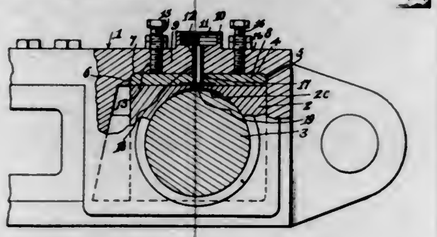
1. A rug tufting machine comprising a feeding mechanism, a thread carrying needle, a complemental stitch forming mechanism cooperating therewith, a forming plate extending in the direction of feed over which the needle thread is laid between consecutive stitches, means for shifting said plate across the path of the needle for each reciprocation thereof, and a cutter associated with said plate for cutting the threads laid over the plate.

1,785,626. LOCOMOTIVE-BOILER SUPPORT. HENRY K. HARWICK, Darby, Pa. Filed Nov. 9, 1929. Serial No. 405,994. 4 Claims. (Cl. 105—172.)

1. The combination in a locomotive, of a main frame; and a series of boiler-supporting members made integral with the main frame; and webs connecting the several boiler-supporting members, said webs being made integral with the frame and the supporting members.

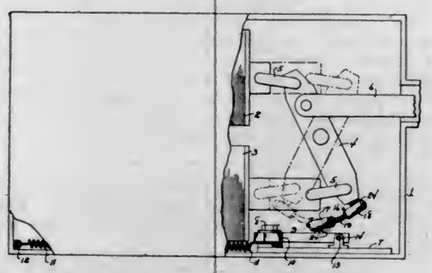
1,785,627. RADIO. JOSEPH J. HAZARD, Saratoga Springs, N. Y. Filed Aug. 9, 1929. Serial No. 384,728. 9 Claims. (Cl. 250—14.)

1. In a device of the character described, the combination of a motor vehicle, having an apertured motor board, a radio receiving apparatus, and a dynamic speaker for said apparatus, said speaker being mounted on the motor board and positioned to speak through the aperture therein and utilizing the board as a baffle board.



1,785,628. GRIP FOR ELECTRIC CABLES. PAUL FRIEDRICH HELLERMANN, Hamburg, Germany. Filed May 25, 1928, Serial No. 280,621, and in Germany May 31, 1927. 1 Claim. (Cl. 173—322.)

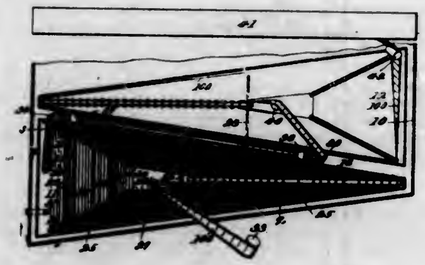
In combination, an insulated multi-wire electrical cable, and a member adapted to be retained by a connector, said



member having a bore through which said cable is passed, with the free ends of the wires of said cable extending beyond one end of said member, said cable being formed with strands of its insulation separated therefrom to a point substantially where it enters said member, but still left integral with the insulation of said cable, said member being formed at its ends with shoulders forming abutments about which said strands are wrapped to unite said member and said cable, one end of said member being formed with projecting lugs for holding said strands in place.

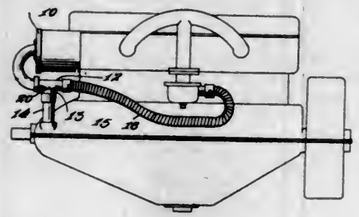
1,785,629. TAKE-UP DEVICE. WALTER P. HUNTER, Vancouver, Wash. Filed May 23, 1929. Serial No. 365,484. 4 Claims. (Cl. 308—68.)

1. A take-up device for bearing brasses comprising an inwardly shiftable gib adapted to be slidably seated in the inner face of the upper portion of the strap of a connecting rod for abutment against the bearing brasses, combined adjusting and retaining elements bearing against the gib at spaced points and adapted to be carried by the upper portion of the strap, said gib having that face opposing the brasses formed with a transversely extending groove, and a lubricant conducting tube carried by the gib, opening into said groove and slidably extending through the upper portion of the strap for communication with a lubricant supply, said tube bodily carried with said gib.



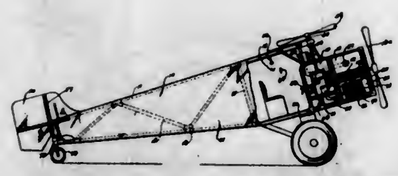
1,785,630. SWITCH-POINT LOCK. FRED ISAACSON and WALTER M. CAUGHLAN, Denver, Colo. Filed Apr. 14, 1930. Serial No. 444,263. 3 Claims. (Cl. 246—318.)

1. In combination with a switch point operating mechanism having an operating arm, a pivotally mounted bell crank lever, tension means connected to one end of the bell crank lever, a link pivotally connected to the other end of the bell crank lever and to the arm and capable of adjustment as to length and adapted to permit a limited movement of the bell crank lever relative to said arm.



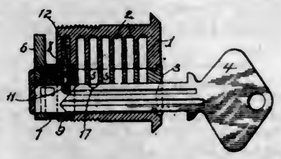
1,785,631. APPARATUS FOR PROCESSING FILM. HUGH V. JAMIESON, Dallas, Tex. Filed June 11, 1927. Serial No. 198,165. 9 Claims. (Cl. 95—94.)

1. In a film treating apparatus, a mechanism for effecting travel of a film tape composed of a plurality of driven and idle rotatable members over which the film tape is trained, and a positively driven sprocket wheel having positive engagement with the delivery end portion of the tape, said sprocket wheel of less diameter than the diameters of the driven rotatable members and adapted to



move the tape at a slower speed than it is moved by the driven rotatable members, whereby the tape is maintained under tension and in frictional engagement with said driven members for causing the latter to impart motion thereto and progress the film through the tray.

1,785,632. CARBURETOR DUST CLEANER. STANLEY P. KLIMA, Odessa, Wash. Filed July 17, 1929. Serial No. 379,048. 1 Claim. (Cl. 123—119.)

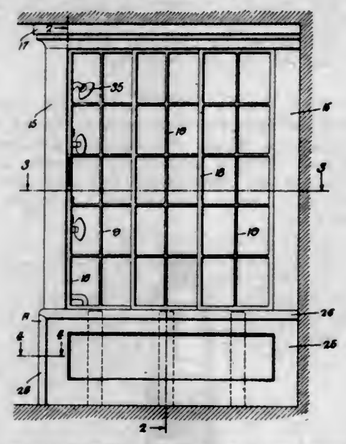


The combination of an internal combustion engine having an air filter, of an elbow for the filter projecting from the discharge end thereof, of a T-coupling carried by and supported upon the breather pipe of the engine having connection at its ends with the remaining end of the elbow and the air inlet of the engine carburetor, and a sleeve having an obliquely disposed top arranged within the T-coupling to create suction through the breather pipe whereby lubricant fumes may be drawn through the flexible conduit.

1,785,633. AIRCRAFT. STEFAN F. KUMOR, Chicago, Ill. Filed Mar. 20, 1929. Serial No. 348,610. 4 Claims. (Cl. 244—25.)

1. In an aircraft, a fuselage having a plurality of compartments at the forward end thereof, steam generating means in one of said compartments, steam operated means in another of said compartments, a slidably mounted shaft, means for detachably connecting said shaft to said steam operated means, and a propeller on said shaft and operable therewith.

1,785,634. CYLINDER LOCK. ALFRED LAWRENCE, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed May 27, 1927. Serial No. 194,717. 10 Claims. (Cl. 70—93.)

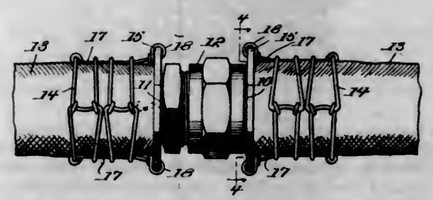


1. In a pin-tumbler lock, a key plug having a groove leading from a pin-tumbler bore, a pin-tumbler and driver in said bore, said tumbler, driver, and groove being adapted to confine the movement of the plug to the length of said groove.

1,785,635. METHOD OF MANUFACTURE OF PHOTOGRAPHIC PICTURES ON CHROMATED GEL-LAYERS. NIKOLAUS LEBEDENKO, Berlin-Wilmersdorf, Germany. Filed Apr. 28, 1928, Serial No. 273,773, and in Germany May 4, 1927. 6 Claims. (Cl. 95—5.6.)

1. Method of manufacturing a photographic picture on a chromated gel-layer comprising exposing the layer and subjecting the exposed layer to a treatment with a vapor atmosphere oversaturated with steam followed by the usual washing and staining treatments.

1,785,636. COMBINATION BATHTUB AND SHOWER. HARRY S. LEBER, Crafton, Pa. Filed Jan. 24, 1930. Serial No. 423,198. 4 Claims. (Cl. 4—148.)

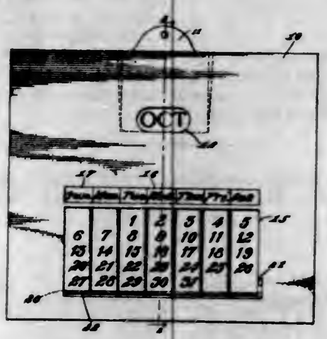


1. A combined bath tub and shower compartment comprising complemental wall structures, a cornice, post members carried by the tub supporting the portions of the cornice extended from the wall structures, and closures slidably arranged between the tub and cornice.

1,785,637. METHOD OF MAKING HATS AND THE PRODUCT THEREOF. CLARENCE LIPPER, Philadelphia, Pa., assignor to Lipper Manufacturing Co., Inc., a Corporation of Pennsylvania. Filed Mar. 6, 1930. Serial No. 433,781. 9 Claims. (Cl. 66—171.)

1. The method of making hats which consists in knitting an elongated tubular body of uniform or constant diameter, of strands including relatively flat, ribbon-like synthetic cellulose thread, and of a texture which renders said body subject to stretch and contraction, and a permanent set, closing one end of a suitable length of said knitted tubular body, by a single elongated and shaped seam convexed outwardly, so as to permit the blocking of the closed end of the tubular body into a smooth crown of a hat, and lastly blocking this seamed, knitted tubular body, to form a hat of any desired shape, devoid of any side seams and having merely a top seam.

1,785,638. HOSE COUPLING. FRED LUDWIG, Honolulu, Territory of Hawaii. Filed June 29, 1928. Serial No. 289,266. 1 Claim. (Cl. 285—84.)



In combination with a hose a nipple therefor, of means for attaching the hose to the nipple, including a collar supported by the nipple and against which the adjacent end of the hose is adapted to engage, said collar being shaped to provide apertured extensions projecting beyond the sides of the hose at diametrically opposite points, a pair of wire clamps surrounding the hose, each clamp including spaced convolutions formed from a single length of wire and having a closed end, the free ends of each clamp being looped about the closed end thereof, and spaced longitudinal strands of wire connecting the convolutions of both clamps and arranged at diametrically opposite points along the hose, each of said strands being bent outwardly from its point of contact with said clamp in the direction of said collar, with said portion spaced from the hose, the corresponding extremities of said bent portions being passed through the apertures of said extensions and looped about the latter, and finally coiled about the bent portions passing between the space between the latter and the hose.

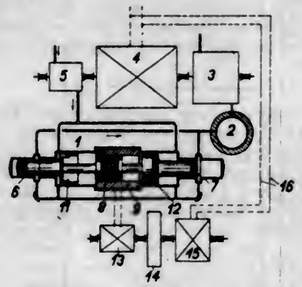
1,785,639. PACKAGE-OPENING DEVICE. OTTO T. MAURER, New York, N. Y. Filed June 18, 1929. Serial No. 371,849. 3 Claims. (Cl. 229—51.)

1. A sealed package of the class described including an inner wrapper sheet of paper completely enveloping the contents of the package, an outer wrapper sheet of paper sealing the package, slits in the folds of the wrapper sheets, the slits in the folds of the outer sheet being offset with respect to the slits in the folds of the inner sheet, said inner sheet having partly severed portions, tabs integral with said portions, said tabs being extended outwardly through said slits to present protruding ends exteriorly of the package, whereby a pull on said protruding ends of the tabs will break the seal of the package, and will also detach said portions, to form an opening in the package through which the contents of the package may be removed.

1,785,640. CALENDAR. EDWARD MCNAMARA, Wolsey, S. Dak. Filed Jan. 23, 1930. Serial No. 422,860. 1 Claim. (Cl. 40—107.)

A perpetual calendar comprising a housing including a vertical passage within its upper portion in communication with an elongated horizontally disposed sight opening exposed toward the front, placards removably secured within said passage having the abbreviations of the months of the year inversely arranged adjacent the opposed side edges and upon both sides to selectively exhibit the abbreviations of the months through the sight opening in readable formation, said housing being further provided with a pocket recessed for an appreciable distance in the face thereof and below the sight opening, the upper edge of said pocket having an undercut groove, strip members receivable within said pocket and projecting at their uppermost ends within the under-cut groove are provided with successions of day date legends upon opposite sides thereof, means carried upon that portion of the face of the housing overhanging the under-cut groove including the days of the week identifying the day dates, said housing having oppositely disposed horizontally aligned pockets within the side edges of the first mentioned pocket, one of the pockets being downwardly and inwardly projected from and opening to the front, and a bar removably positioned within the pockets and engaging the strip members to prevent accidental displacement thereof.

1,785,641. COMPOSITION FOR AND PROCESS OF TREATING PLANT WOUNDS. IRVING E. MELHUS, Ames, Iowa. Filed June 17, 1926. Serial No. 116,748. 18 Claims. (Cl. 47—8.)

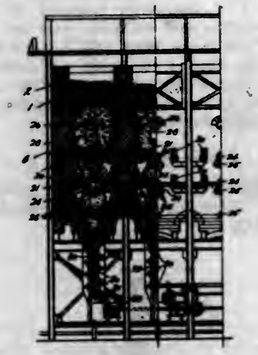


4. In a process of treating wounds of trees and other plants, covering the wounds with a composition comprising a fungicide and a solution of a condensation product of furfural, creosol and a condensing agent in an organic solvent containing furfural.

1,785,642. BLOTTER HOLDER. NORMAN DUDLEY MURRAY, Dartmouth, Nova Scotia, Canada. Filed Oct. 26, 1929, Serial No. 402,734, and in Canada Aug. 16, 1929. 7 Claims. (Cl. 120—25.)

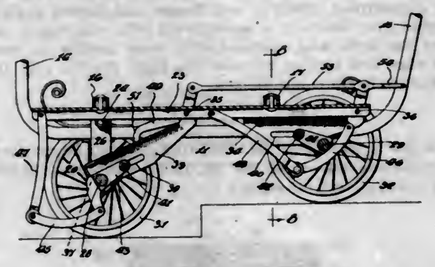
1. In a device of the character described a body upon one face of which a length of sheet material is adapted to be arranged, an expansible and yieldable bail pivoted on the body, and an abutment also on the body and cooperating with the free end of the bail in clamping one end of the sheet material thereto, and a clamping bar carried by the bail adjacent its pivoted end and adapted to clamp the opposite end of the sheet to the plate.

1,785,643. INTERNAL-COMBUSTION POWER PLANT. WALTER GUSTAV NOACK and JEAN DE FREUDENREICH, Baden, Switzerland. Filed Sept. 15, 1927, Serial No. 219,734, and in Switzerland Apr. 25, 1927. 3 Claims. (Cl. 290—4.)



1. Internal combustion power plant comprising, in combination, a gas turbine, an electric generator driven by said gas turbine, a reciprocating engine of the free or flying piston type the expanded working fluid of which operates the gas turbine, a reciprocating electric generator driven by the aforesaid reciprocating engine, and electric coupling means between the said reciprocating electric generator and the electric generator driven from the gas turbine, as and for the purpose set forth.

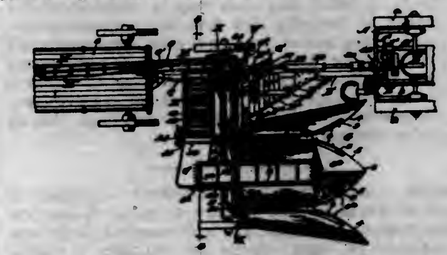
1,785,644. SLIP SOCKET. WALTER A. O'BANNON, Tulsa, Okla., assignor to Walter O'Bannon Co., a Corporation of Oklahoma. Original application filed Mar. 6, 1929, Serial No. 259,544. Divided and this application filed May 23, 1929. Serial No. 365,395. 5 Claims. (Cl. 294—102.)



1. A sucker rod socket comprising a barrel, a slip unit mounted therein and composed of complemental gripping sections, and separate means common to and interlocking with said sections and tending to expand the sections into contact with the barrel walls with movement of the slip unit upwardly within the barrel and preventing longitudinal displacement of the sections relative to each other.

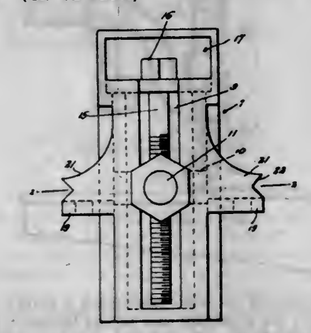
1,785,645. APPARATUS FOR CARBONIZING AND DISTILLING CARBONACEOUS MATERIALS. WILLIAM W. ODELL, Minneapolis, Minn., assignor, by mesne assignments, to Northern Lignite Coal Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 17, 1924, Serial No. 744,143, and in Canada May 30, 1924. 14 Claims. (Cl. 202—121.)

1. A vertical apparatus for carbonizing and distilling solid carbonaceous materials providing a vertically disposed passage, and a plurality of air ducts arranged in horizontal pairs at different levels, with the ducts of the pairs on opposite walls of the passage, each duct being partially embedded in the wall with one side flush with the inner surface of the passage and each having a bottom portion which overhangs the passage, which overhanging portion has discharge openings communicating with the passage.



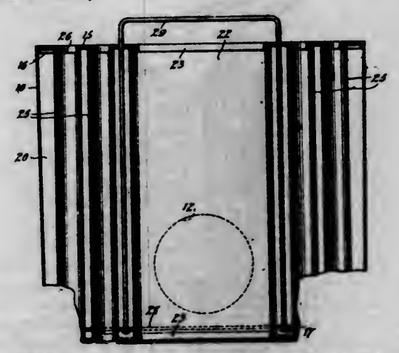
1,785,646. BABY CARRIAGE. ALEX. PASCOO, Bronx, N. Y. Filed July 9, 1928. Serial No. 291,315. 10 Claims. (Cl. 280—29.)

1. In a wheel vehicle, front and rear sets of swingingly mounted wheels for swinging movement to two different horizontal planes, manually operated means for locking either or both of said sets of wheels at the limit of their swinging movement to the higher plane, and automatic means for locking said sets of wheels upon actuation of said manually operated means to unlocked position.



1,785,647. CORN-HARVESTING MACHINE. JOHN POWELL, Kokomo, Ind. Filed Mar. 27, 1925. Serial No. 18,718. 7 Claims. (Cl. 56—18.)

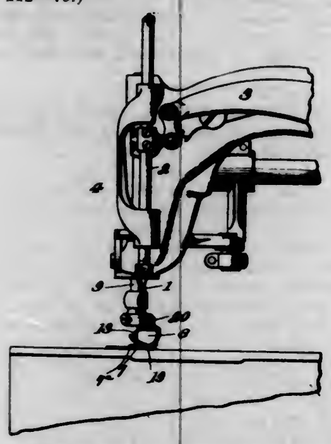
5. In a corn harvester of the class described, a unitary transverse main frame having ground wheels mounted on the ends thereof, two pairs of snapping rolls mounted on the front end of the frame at one side thereof, and a forwardly extending hitch mounted on the other front side of said frame by means of two widely spaced pivots, adjustable means connecting said frame and said hitch, whereby the operator can move the front or receiving ends of said rolls up and down, elevating means for the ears located between said pairs of rolls, whereby the ears will be carried in rear of said frame, a transversely positioned husking device mounted to the rear of said frame, paralleling the same and positioned in rear of said hitch,



a chute for transferring the ears from said elevator to said husking unit, and a final elevator detachably positioned at the outlet end of said husking unit whereby the husked corn can be elevated to a final receptacle.

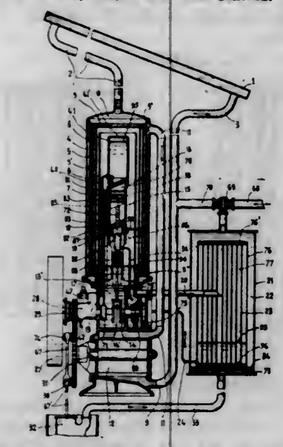
1,785,648. CONCRETE ANCHOR. OSCAR RICE, Chicago, Ill. Filed June 25, 1929. Serial No. 373,576. 5 Claims. (Cl. 72—105.)

1. In a structure of the class described, a hollow open front box-like anchor, a bolt mounted for rotation therein, a block adjustably mounted on said bolt, an angle iron support, and means connecting said support with said block through said open front.



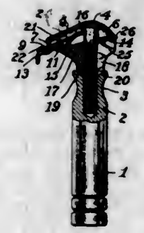
1,785,649. AIR HEATER. STELMER D. RICH, Newport, Me., assignor of one-half to Cuyler W. Rich, Newport, Me. Filed Mar. 5, 1929. Serial No. 344,461. 4 Claims. (Cl. 257—167.)

4. A heater of the class described, comprising the combination of a casing section adapted to be connected in a flue of a stove or the like, a separate unit consisting of heads, tubes arranged between said heads to form therewith air passages, means securing said heads to-



gether with said tubes held in place between said heads, a plate positioned between said heads, said plate being perforated to accommodate and move along said tubes, a rod attached to said plate and extending through one of said heads by which said plate may be reciprocated, for the purpose of removing soot from the surfaces of said tubes and casing section, and said unit thus constructed being adapted for removable disposition in said casing section and when disposed therein defining therewith a heat chamber through which the heated flue gas circulates, for the purpose of heating said tubes to heat the air circulating through said passages.

1,785,650. RUG-TUFTING MACHINE. ALBERT S. RIVIERE, Evanston, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 10, 1928. Serial No. 291,550. 6 Claims. (Cl. 112—79.)



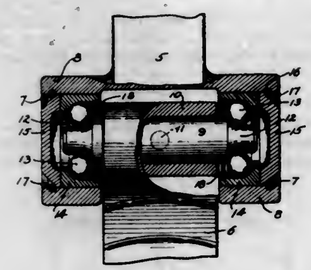
1. A rug tufting machine comprising a thread carrying needle, means for vibrating said needle laterally, a thread carrying looper cooperating with said needle, and means engaging the needle thread between consecutive reciprocations of the needle for forming loops therein and for severing the same to form tufts.

1,785,651. SUN-HEAT MOTOR. TITO ROMAGNOLI, Bologna, Italy. Filed May 17, 1928, Serial No. 278,603, and in Italy May 21, 1927. 13 Claims. (Cl. 60—26.)

1. A sun heat operated motor comprising a heat absorber, a heat exchanger, a fluid, means for circulating said fluid through said heat absorber and exchanger, said heat exchanger providing a sealed vaporizing chamber containing a bottom layer of lubricant and a supernatant body of operating medium, an engine cylinder extending in said vaporizing chamber and having ports opening therein, a piston reciprocating in said cylinder, a crank shaft and a connecting rod operated by said piston, said crank shaft being journalled in said vaporizing chamber, an exhaust duct, a distributor operated by said crank shaft and controlling said cylinder ports for timed communication of the same with said vaporizing chamber and said exhaust duct, a condenser connected with said exhaust duct, means for cooling said condenser and means conveying condensed operating medium from said condenser to said vaporizing chamber.

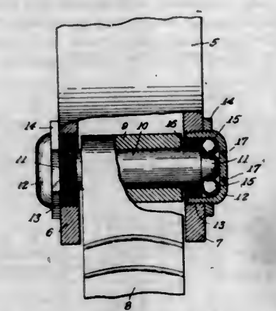
1,785,652. SAFETY RAZOR. EDWARD C. SASSER, Washington, D. C. Filed June 23, 1928. Serial No. 287,782. 3 Claims. (Cl. 30—12.)

3. A safety razor comprising a supporting member having a recess leading in from the edge thereof, a guard member mounted upon the supporting member, a blade mounted upon the guard member and having a recess leading in from the edge thereof, the recess in the edge adapted to register with the recess in the supporting member, a cover member having a securing bolt passing through said registering recesses, said cover member having downturned stiffening end flanges and having a plate portion provided with a downturned edge adapted to engage the blade and provided with slots leading in from the edge and located between the plate portion and the downturned stiffening flanges.



1,785,653. STEEL-WOOL HOLDER. SAUL SCHULHOFF, Baltimore, Md. Filed Dec. 17, 1929. Serial No. 414,800. 5 Claims. (Cl. 15—209.)

1. A holder adapted for holding a pad of steel wool or the like, comprising a flexible body portion, said body portion having a groove therein, and a plurality of elliptical headed stud members spacedly positioned in said groove for holding the steel wool on the body, said headed members lying normally below the surface of said body member and extending transversely of said groove.

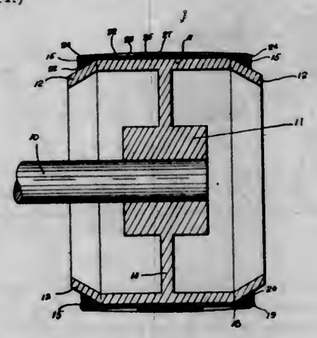


1,785,654. ANTIFRICTION SPRING CONNECTION. RAYMOND R. SEARLES, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Jan. 29, 1925. Serial No. 5,624. 2 Claims. (Cl. 267—54.)

1. In a spring end connection, a frame part having spaced apart seats for bearing cups, bearing cups in said seats and insertible axially thereof, bearing pin means to be secured to a spring and project beyond the sides thereof, the ends of said pin means extending into said bearing cups and having bearing raceways formed directly thereon, antifriction bearing members interposed between said bearing cups and the ends of said pin means, a lubri-

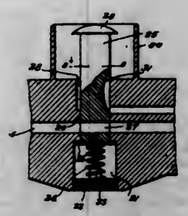
cant retaining and dust excluding closure ring carried bodily by each bearing cup and extending to and surrounding said projecting ends of said pin means so as to close the annular space between said bearing cups and said pin means extending thereinto, and means for retaining said bearing cups in place in said seats.

1,785,655. VEHICLE SPRING BEARING. RAYMOND R. SEARLES and ELISHA H. COOPER, New Britain, Conn., assignors to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Mar. 10, 1925. Serial No. 14,394. 2 Claims. (Cl. 267—54.)



1. In a spring end connection, a frame part having spaced apart members with aligned threaded apertures therein, closed bearing cups having threaded outer surfaces for engagement with said threaded apertures, pin means to be secured to a spring and project beyond the sides thereof, the ends of said pin means projecting beyond the sides of said spring being positioned within said bearing cups, anti-friction bearing members interposed between said cups and ends of said pin means, lubricant retaining and dust excluding rings carried bodily by said bearing cups and engaging over said pin means inwardly of the ends thereof to seal said anti-friction bearing members in said cups, said cups being formed of metal of substantially uniform thickness throughout, means for locking said bearing cups in place in threaded engagement with said spaced apart members, said bearing cups together with said anti-friction bearing members and dust rings being removable as units from said spaced apart members.

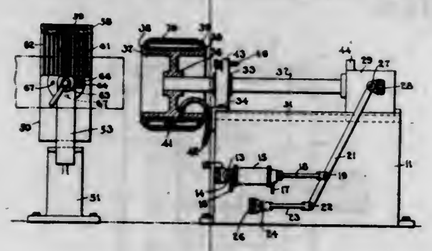
1,785,656. METHOD OF PREPARING THIAZOLES. LORIN B. SEBRELL and JAN TEPPEMA, Akron, Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed June 17, 1925, Serial No. 37,861. Divided and this application filed Jan. 7, 1928. Serial No. 245,262. 2 Claims. (Cl. 260—44.)



1. A method of preparing aryl thiazoles which comprises reducing an ortho-nitroaryl hydrosulphide in solution to an ortho-amino-aryl hydrosulphide, and subsequently causing the latter while still in solution to react with carbon bisulphide to complete the thiazole ring.

1,785,657. PNEUMATIC TIRE. WALTER E. SHIVELY, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 5, 1926. Serial No. 106,914. 3 Claims. (Cl. 154—14.)

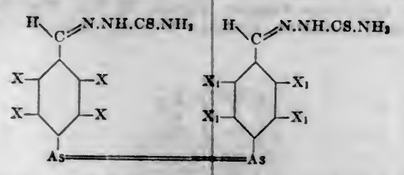
1. A method of manufacturing pneumatic tires which comprises shaping an inner fabric band to have a substantially cylindrical intermediate portion and outwardly beveled edge portions, applying molded semi-cured beads to the beveled edges of the fabric by moving them axially of the fabric band, applying additional bands of fabric and a tread band to complete the assembly of the tire, stitching the bands together and about the beads, expanding the tread portions of the tire and at the same time causing the beads to rotate about their circumferential axes to the position they normally assume in the finished tire.



1,785,658. VALVE FOR AIR GAUGES. HOWARD STANLEY and RUFUS STANLEY, Dunbar, W. Va. Filed Feb. 7, 1928. Serial No. 252,503. 1 Claim. (Cl. 251—76.)

A valve structure comprising a body having an opening therein, said body being provided with a bore extending through the body transversely of said opening, said body being provided with a duct extending from said bore, a valve element slidable within said bore, and provided with an actuating knob at one end thereof, said element being provided with a transverse opening, and a longitudinally extending channel, said body being provided with an enlarged counter bore threaded at its outer end and communicating with the transverse bore of the body, a head

on the element operative within the enlarged bore, spring means operating against said head for normally maintaining the element projected outwardly so that the channel will open the duct to the atmosphere while the transverse opening in the element is alined with the opening thru the body, and a threaded plug for disposition within the enlarged bore adapted to be urged against the spring means to adjust the pressure thereof.



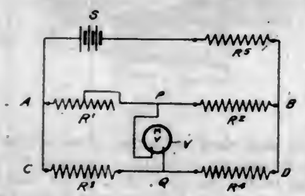
1,785,659. TIRE-BUILDING MACHINE. WILL C. STATE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 12, 1929. Serial No. 339,371. 12 Claims. (Cl. 154—10.)

3. A machine for constructing pneumatic tire casings comprising means for supporting the tread ply of a pneumatic tire casing by its outer periphery, means successively to insert the inner plies within the inner circumference of the tread ply, and means to secure each successive ply into position against the inner circumference of the preceding ply.

1,785,660. THIOSEMICARBAZONES OF HYDROXY ARSENOBENZENES AND PROCESS OF PREPARING THE SAME. KARL STREITWOLF, Frankfort-on-the-Main, and ALFRED FEHRLE, Badsoden-on-the-Taunus, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed July 11, 1928, Serial No. 292,020, and in Germany July 21, 1927. 10 Claims. (Cl. 260—15.)

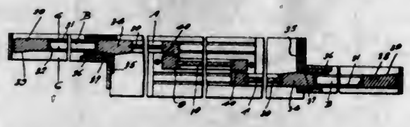
9. As new products, the thio-semicarbazones of hydroxy-arsenobenzenes having the general formula:

wherein one X and the corresponding X_1 stand for OH and the other X and the corresponding X_1 for H, NH_2 or halogen, said new products being yellow to yellowish-red colored bodies which melt with decomposition and readily dissolve in alkalies with formation of the respective alkali metal salts which in the dry state are yellow to brownish-red powders, readily soluble in water with alkaline reaction.



1,785,661. DOOR WITH HINGE. AUGUSTUS F. WASMUTH, Huntington, Ind., assignor to Wasmuth-Endicott Company, Andrews, Ind., a Corporation of Indiana. Filed Oct. 7, 1929. Serial No. 397,987. 8 Claims. (Cl. 20—35.)

1. In combination with a door having recesses in one face; concealed hinges each consisting of a pad and a leaf pivoted upon and overlapping the pad, each leaf entering a recess; the recesses being of such depth that

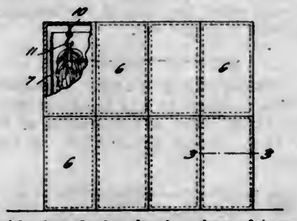


the recessed face of the door will be substantially flush with the pad; means for securing each leaf in its recess; and a member on the door covering the recesses.

1,785,662. TEMPERATURE-INDICATING DEVICE. PAUL GEORGE WATERLOO, Madera, Pa. Filed May 9, 1928. Serial No. 276,358. 1 Claim. (Cl. 73—32.)

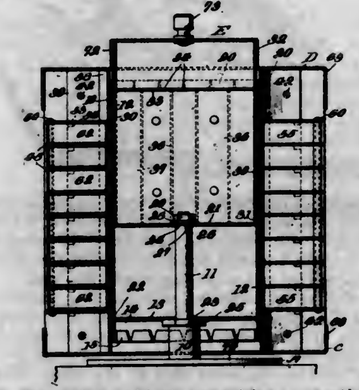
In a temperature indicating apparatus for use in connection with internal combustion engines having a cooling system embodying a water conduit, a union for installation in the conduit of cylindrical form, the union having openings in its upper side and adjacent its ends, a hollow tubular body arranged within the union and provided at its ends with upwardly extending branches fitting in said openings in the union, plugs of insulating material fitted in the ends of said branches, binding posts for electrical conductor wires mounted in said plugs, and an electrical resistance element comprising a coil arranged within the said tubular body in spaced relation to the walls thereof and having its terminals extending upwardly through the branches of the body and spaced from said branches and connected with respective ones of the binding posts.

1,785,663. COMBINATION WINDOW AND SCREEN. CLARENCE M. WITTMANN, Pittsburgh, Pa. Filed Aug. 15, 1929. Serial No. 386,101. 6 Claims. (Cl. 20—52.1.)



1. In a structure of the class described, a frame, a center sash mounted in the frame, means for mounting the center sash to swing on a vertical axis equidistant from the sides thereof, side sashes slidably mounted in the frame, said means being detachable.

1,785,664. ANIMAL TRAP. HENRY W. ABEL, Brillion, Wis. Filed Oct. 16, 1929. Serial No. 400,050. 5 Claims. (Cl. 43—61.)

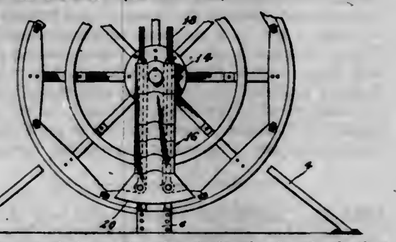


1. In an animal trap, a housing open at one end, a door hinged at one edge of the opening, a spring ball extending transversely of the door and having its ends operatively connected with the housing, means connecting the bail with the door to yieldingly hold the door closed, a trigger operatively mounted upon the housing, means carried by the trigger to engage the bail and hold the door in open position, and a bait holder adapted to be removably engaged with the trigger to hold the latter in bail engaging position.

1,785,665. MERCHANDISE CARRIER. ETHAN E. ASELTINE, St. Albans, Vt. Filed Mar. 26, 1929. Serial No. 350,029. 2 Claims. (Cl. 217—52.)

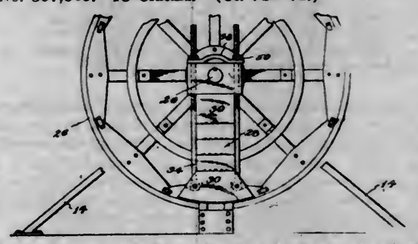
1. In a shipping device for bunches of bananas, a casing having an open side, a flexible member having its edges secured at the sides of the opening of the container and having its body looped rearwardly into the container, stays connecting the flexible member to the inner walls of the casing whereby the flexible member will be held in spaced relation to the said walls, and means engaging the flexible member between the locations of the anchorage of its edges to the container and bananas which may be embraced by said flexible member for drawing the flexible member around the bananas.

1,785,666. TOOL CABINET. FRANK H. BACHELDER, Orange, Mass. Filed Sept. 22, 1928. Serial No. 307,595. 9 Claims. (Cl. 312—148.)



9. A dispensing cabinet comprising a vertically arranged hollow tube, back plates paralleling the outer faces of said tube and attached thereto, a cabinet top and a cabinet bottom, columns in spaced relation intermediate the cabinet bottom and top, vertical tiers of horizontal shelves in spaced relation extending across the spaces between said columns, and horizontally swinging pockets telescoping the spaces between said shelves, for the purpose described.

1,785,667. TREATMENT FOR LINERS. PAUL BEEBE, Los Angeles, Calif., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 26, 1929. Serial No. 342,933. 4 Claims. (Cl. 154—2.)



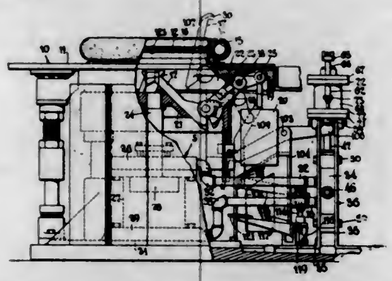
1. A liner fabric which has been dipped in a solution of soap.

1,785,668. COUNTERBALANCE. CHARLES H. BERGQUIST, Okmulgee, Okla., assignor of one-half to Emery A. Locke, Okmulgee, Okla. Filed Feb. 6, 1929. Serial No. 337,922. 11 Claims. (Cl. 74—71.)

7. In a counterbalance for the shaft of a band wheel, a body consisting of a plurality of sections having grooves, arms pivotally connected to said body and extending through said grooves, and an attaching member having means whereby the same may be attached to the shaft of a band wheel, said arms being provided with means to secure the innermost section of said body in pressure engagement with said attaching member.

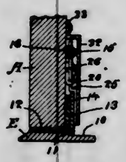
1,785,669. COUNTERBALANCE. CHARLES H. BERGQUIST, Okmulgee, Okla., assignor of one-half to Emery A. Locke, Okmulgee, Okla. Filed Apr. 23, 1929. Serial No. 357,535. 13 Claims. (Cl. 74—71.)

12. In a counterbalance for the shaft of a band wheel, an attaching block having means whereby the same may be attached to a band wheel shaft, a weighted body, hangers pivoted to the body and having means to secure one end of said body in pressure engagement with one surface of said attaching block, said body consisting of a plurality of sections confined between said hangers.



1,785,670. COMBINED MIXING AND FLOW DEVICE. LEWIS E. BUNCH, Pampa, Tex. Filed June 18, 1930. Serial No. 461,023. 2 Claims. (Cl. 103—232.)

1. In a mixing device and flow valve for wells, a flow tube, a hollow member adapted to be connected in the flow

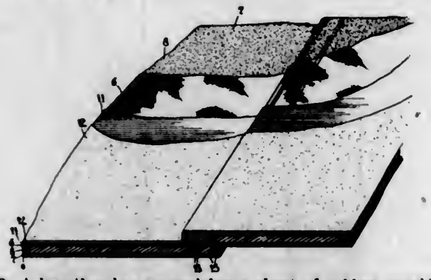


tube, a pipe section located within said member and spaced from the walls thereof to provide a mixing chamber having communication with the flow tube and an air chamber surrounding the mixing chamber, said air chamber having air inlet openings at its upper end for the passage of air under pressure, a rotatable member located within the mixing chamber in the path of liquid passing through the flow tube, means having communication with the air chamber to direct air therefrom into the mixing chamber for mixture with the liquid to impart a swirling action thereto, and means located within the air chamber in the path of the air to operate the rotatable member.

1,785,671. RIMMING PRESS. WALLACE H. CAMPBELL, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 10, 1927. Serial No. 239,176. 8 Claims. (Cl. 18—2.)

4. The combination with a fluid actuated rimming press of a valve for controlling the flow of fluid to the press, means for operating the valve for initiating the operation of the press, means engaged by the press during its rim closing movement for discontinuing the flow of fluid to the press, and means for continuing the flow of fluid to the press for completing the rim closing movement.

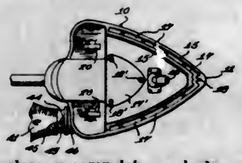
1,785,672. AUTOMATIC WEATHER STRIP FOR DOORS. JOHN W. CARTER, Neillsville, Wis. Filed Aug. 26, 1929. Serial No. 388,525. 1 Claim. (Cl. 20—68.)



The combination with a swinging door and its frame, including a door sill and a wear plate upon the upper side of the sill, and which sill is recessed at its upper side in rear of said plate, of a rod mounted transversely upon the door at the inner side of said door, a weather strip comprising a plate of metal and a facing of packing material upon one side of said plate, arms secured to the outer side of said plate and extending over the upper edge thereof and thence upwardly and provided at their upper ends with inwardly directed right angular extensions to engage the surface of the door against which the facing strip is disposed, the facing strip being so positioned with respect to the lower edge of the plate that the lower edge of the strip will seat upon the upper side of the wear plate and the lower edge of the said weather strip plate will project below the lower edge of the facing strip to seat in the recess in the sill of the door frame, resilient members mounted for rocking movement between their ends upon the outer side of the door, the members each having an upstanding arm and the rod having openings into which the ends of the arms project, each of said members further comprising an arm extending at an angle to the first mentioned arm and provided with a loop to slidably engage the upstanding portion of the respective arm upon the plate and beneath the terminal extension of said arm whereby to support the plate in elevated position, and a coiled spring upon the door having one end engaging the said rod and its other end fixed with respect to the door and holding the rod shifted in a direction to maintain the weather strip unit normally in an elevated position, and an abutment upon the jamb of the door frame to which the door is hinged, positioned to be engaged by one end of the said rod when the door is swung to closed position whereby to shift the rod against the tension of said spring and effect lowering of the weather strip unit into engagement with the sill.

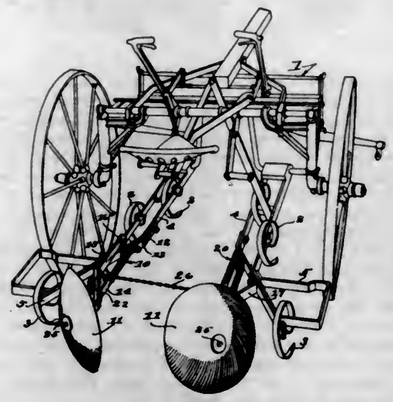
1,785,673. PRINTING ROLLER. CHARLES CATTRAN, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 30, 1928. Serial No. 273,817. 6 Claims. (Cl. 91—67.8.)

1. A printing roll formed of resilient material, having end portions more flexible than the intermediate portions of the roll.



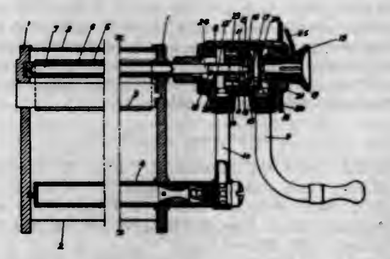
1,785,674. FABRIC FOR BREATHER BAGS. JAMES F. COOPER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 13, 1927. Serial No. 219,250. 6 Claims. (Cl. 154—46.)

3. A breather bag comprising a sheet of rubber provided upon each side with a ply of textile material, the one ply being coated with glue, and the other ply being coated with a weather resisting material including a coating of aluminum bronze and a coating of paraffin wax.



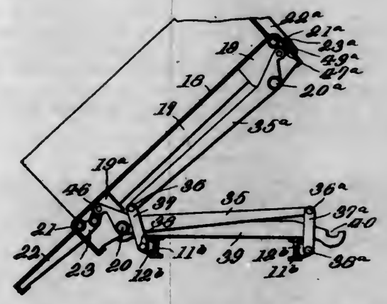
6. A method of preparing breather bag material composed of a number of individual sheets comprising coating sheets of fabric upon at least one side with rubber, superposing the edges of the sheets, securing the edges together, coating the inner side of the fabric with glue, and coating the outer side of said material with a weather resistant paint.

1,785,675. VACUUM CLEANER. KENNETH K. CUNDIFF, Tulsa, Okla., assignor of one-half to B. F. Alexander, Tulsa, Okla. Filed Oct. 13, 1927. Serial No. 226,025. 4 Claims. (Cl. 15—16.)



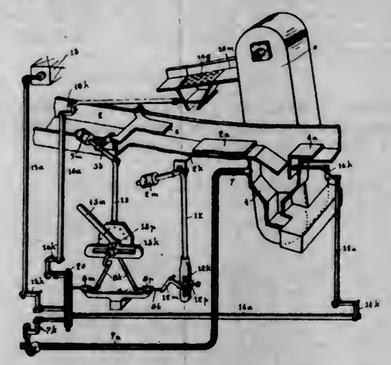
1. A vacuum cleaner comprising a body portion having opposite sides converging toward their forward ends, said body being provided with a relatively large internal vacuum chamber extending throughout the width thereof, the walls of said chamber terminating in flange portions opening beneath said body and arranged adjacent and parallel to the converging sides thereof, a plurality of ribs arranged between the flange portions of said walls and extending outwardly from the center of the chamber to divide the space between the flange portions into a plurality of suction nozzles, said body portion being provided with a relatively small passage communicating at its forward end with said chamber and extending rearwardly therefrom, and suction creating means communicating with the rear end of said chamber.

1,785,676. HILLING ATTACHMENT FOR CULTIVATORS. CHARLES MARSHALL DE YONE, Dover-Foxcroft, Me. Filed May 22, 1928. Serial No. 279,748. 1 Claim. (Cl. 97—179.)



A disk attachment for cultivators comprising a bracket composed of a flat metal strip having a shank with an offset intermediate its ends to fit snugly against the cultivator frame member, parallel edge-wise disposed arms extending longitudinally from one end of said shank, one of said arms being in alinement with said shank, a laterally extending arm connecting the other longitudinal arm to said shank, a brace for connecting one of said arms with the cultivator frame, bearings carried by the free ends of said longitudinal arms, an L-shaped shaft having one arm mounted in said bearings and a disk carried by the other shaft arm, means whereby said disk may be locked on said shaft arm, and means for adjustably connecting said shaft in said bearings.

1,785,677. GAS HEATER FOR CURLING IRONS. GUILLAUME DUCART, Paris, France. Filed May 31, 1927, Serial No. 195,519, and in France June 4, 1926. 3 Claims. (Cl. 126—229.)

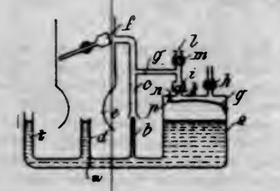


1. A gas iron heater comprising a plurality of spaced supporting members, a gas burner plate mounted in said supporting members, a heating box mounted in said supporting members, a thermo-regulator disposed adjacent to the side of the heating box opposite the gas burner, a sleeve enclosing said thermo-regulator and said heating box, and fuel control means associated with and operated by said thermo regulator.

1,785,678. DUMP VEHICLE WITH ACTUATED DOORS. HENRY FORT FLOWERS, Findlay, Ohio. Original application filed Apr. 8, 1926, Serial No. 100,577. Divided and this application filed May 25, 1928. Serial No. 280,505. 12 Claims. (Cl. 298—18.)

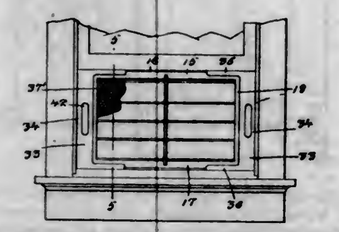
1. In a dump vehicle, a frame, a dump body tiltable upon said frame for dumping to either side, side doors for said body, transverse bars extending across said frame and alternately pivoted thereto at opposite sides thereof, said bars being pivoted adjacent their free ends to said body, and positive means connecting said bars and said doors to limit the opening of said doors during the tilting of the body toward the respective side, said bars and said doors having cooperating cam surfaces in mutual abutting relation during normal transport to hold said doors closed during such normal transport.

1,785,679. CLASSIFYING APPARATUS. ANTOINE FRANCE, Brussels, Belgium. Filed Nov. 8, 1927, Serial No. 231,960, and in Belgium Apr. 2, 1927. 8 Claims. (Cl. 209—18.)



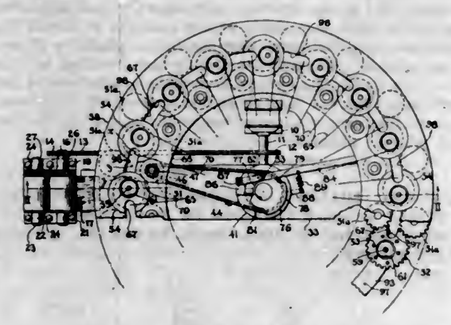
1. In a classifying apparatus comprising a classifying channel along which elements of various density to be separated are carried by a current of liquid, means for varying the conditions of classification of said elements, said means comprising a valve controlling the carrying current, a hopper introducing a certain charge of additional dense materials, a pocket having means providing a variable aperture and passing an ascending current of liquid therethrough, and a control device acting simultaneously on the said varying means and constituted by a float disposed in the channel and influenced by the quantity of dense materials in the channel.

1,785,680. FOUNTAIN PEN. ABRAHAM GOLDKNOPF, New York, N. Y. Filed May 18, 1929. Serial No. 364,174. 3 Claims. (Cl. 120—43.)



1. The combination with a fountain pen, of means adapted to control the flow of ink, said means being automatically operable to shut off the flow of ink to the nib, and also manipulatable to allow the ink to flow to said nib, and means manipulatable by the writer to check the means first mentioned to obtain a constant flow of ink while writing with the pen.

1,785,681. CARBURETOR. FÉLIX GOUDARD, Neuilly Sur Seine, France. Filed Mar. 5, 1926, Serial No. 92,596, and in Belgium Mar. 14, 1925. 4 Claims. (Cl. 261—41.)



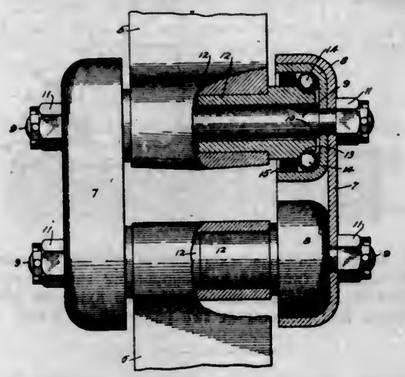
1. A carburetor comprising in combination a main nozzle, an auxiliary nozzle, a main mixing chamber, an auxiliary mixing chamber communicating with said mixing chamber and with the auxiliary nozzle, a throttle valve operable to simultaneously control the outlets of the main and auxiliary mixing chambers, a chamber provided with means for maintaining a liquid at a substantially constant level therein, and a conduit connecting said auxiliary mixing chamber to the upper part of the last-named chamber.

1,785,682. WINDOW VENTILATOR. WILLIAM B. HAMILTON, Pittsburgh, Pa. Filed Oct. 22, 1928. Serial No. 314,272. 3 Claims. (Cl. 98—99.)

1. In a window ventilator, a frame having side walls including an outer wall and an inner skeleton wall communicating with and spaced from the outer wall, said inner skeleton wall including vertically disposed rails and slotted inclined bars connecting the rails, and louvres having their opposite ends extending through the slotted bars.

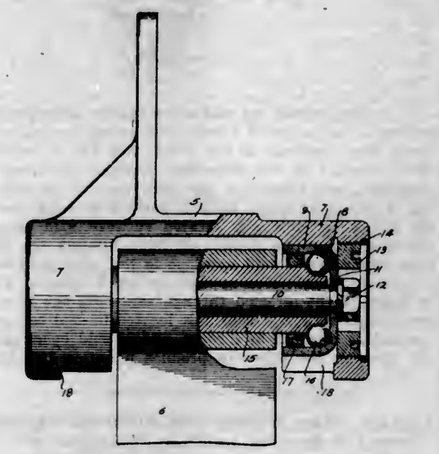
1,785,683. BRAIDING MACHINE. GERALD D. MALLORY, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 15, 1929. Serial No. 363,369. 4 Claims. (Cl. 96—2.)

1. A braiding machine comprising a pair of concentrically disposed curvilinear supports, spaced apertures formed in the supports, notched carriers rotatably mounted within the apertures to rotate about axes perpendicular to the planes of the support, means for simultaneously rotating the carriers, means for supporting spools eccentrically mounted upon the carriers, fixed spools mounted adjacent the supports upon the sides opposite the spools upon the carriers and constituting means for supplying strands of flexible material between the supports and means comprising a member apertured to receive the strands extending parallel to the supports and disposed between the fixed spools and the carriers for oscillating the strands of flexible material from the fixed spools from the opening in one carrier to the opening in the adjacent carrier whereby to cause the strands from the fixed spools to be entwined with the strands from the spools upon the carriers to form the braid.



1,785,684. LOOSE-LEAF BINDER. JOHN L. MCMILLAN, Syracuse, N. Y., assignor to McMillan Book Company, Syracuse, N. Y., a Corporation of New York. Filed Mar. 14, 1928. Serial No. 261,532. 31 Claims. (Cl. 129—17.)

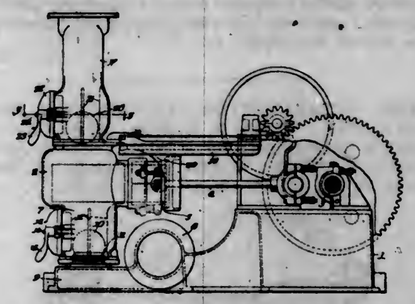
1. In a loose leaf binder adapted to contain record leaves, two series of impaling prongs, means for mounting and guiding the series of impaling prongs for movement away from each other to permit removal or addition of record leaves, and means pivotally mounting the impaling prongs of one series for movement to dispose the same angularly with respect to the impaling prongs of the other series and effect longitudinal shifting of said leaves with reference to each other.



1,785,685. SPRING SHACKLE. JOHN W. SMITH, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed June 9, 1928. Serial No. 284,188. 18 Claims. (Cl. 267—54.)

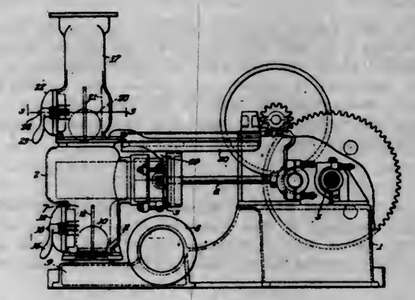
1. In an antifriction spring shackle, a pair of shackle links having antifriction raceways at opposite ends thereof, means at opposite ends of said links for connecting said links together and definitely spacing the same apart at definite distances, means having antifriction raceways

complementary to the raceways on said shackle links and antifriction bearing members interposed between the raceways on said means and on said shackle links.



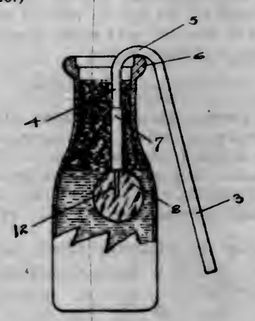
1,785,686. SPRING-END CONNECTION. JOHN W. SMITH, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed June 9, 1928. Serial No. 284,189. 11 Claims. (Cl. 267—54.)

1. In a spring end connection, a bracket having spaced apart seats thereon, raceway members in said seats, antifriction bearing members for said raceway members, means having complementary raceways engaging said antifriction bearing members, means independent of said bracket for connecting said raceway members in said seats for definitely spacing the same apart, and means for supporting said raceway members in said seats axially thereof.



1,785,687. STUFF PUMP. ALONZO ALDRICH, Beloit, Wis. Filed Apr. 24, 1924. Serial No. 708,615. 3 Claims. (Cl. 103—6.)

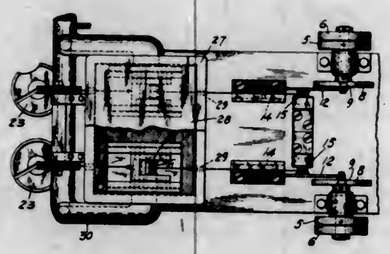
1. The combination with a plurality of horizontally arranged stuff pump cylinders with a common operating mechanism, of separate interconnected inlets to some of said cylinders and separate interconnected outlets from



the cylinders selectively permitting the operation of some of the cylinders on one kind of material and another cylinder or cylinders on a different kind of material.

1,785,688. GUIDEWAY FOR RECIPROCATING ENGINES, PUMPS, OR THE LIKE. ALONZO ALDRICH, Beloit, Wis. Original application filed Apr. 24, 1924, Serial No. 708,615. Divided and this application filed Mar. 10, 1926. Serial No. 93,568. 13 Claims. (Cl. 308—5.)

4. The combination with the piston and cylinder of a cross head member carried at the outer end of the piston and comprising a web-like member extending across the piston and secured to the same, said member having a forwardly extending portion, the upper end of which is extended laterally to form guide members, an elevated guideway in which said guide members travel, and a piston rod connection carried by said cross head member.



1,785,689. SKIMMER. CARL C. BARNES, Portland, Oreg. Filed Jan. 21, 1929. Serial No. 333,941. 1 Claim. (Cl. 137—20.)

In a skimmer: a siphon tube open at each end; an air chamber at the intake end of said tube and offset there-

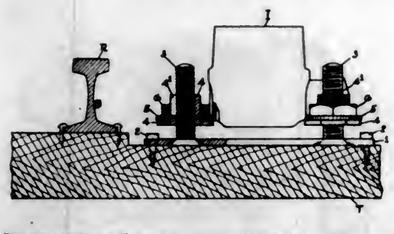
from; and an orifice in said chamber to admit liquid thereinto, and to discharge air into the body of liquid into which said air chamber has been immersed, said air being discharged from said orifice immediately below the intake end of said siphon tube.

1,785,690. APPARATUS FOR AND METHOD OF TESTING CORDS. THOMAS B. BUFFUM, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 29, 1923. Serial No. 628,611. 9 Claims. (Cl. 73—51.)

1. A cord testing device comprising means for imposing a load upon and for securing a cord against rotative movement about its own axis, including members about which the cord is looped, said means also including a member connecting the ends of the cord adjacent each other, and means acting upon the last named member for flexing the cord.

1,785,691. TIRE FLAP. RICHARD S. BURDETTE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 17, 1928. Serial No. 270,665. 3 Claims. (Cl. 152—20.)

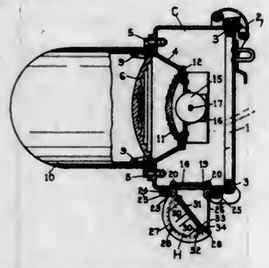
1. A tire flap comprising a body portion, and means on the rim side of the flap to prevent adhesion of the body portion to the rim, said means comprising graphite combined with a soluble binder.



1,785,692. ANTIOXIDANT OR AGE RESISTER. ALBERT M. CLIFFORD, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Feb. 7, 1928, Serial No. 252,677. Divided and this application filed Feb. 5, 1929. Serial No. 337,736. 13 Claims. (Cl. 18—50.)

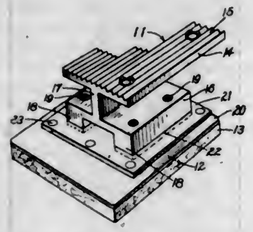
1. A method of preserving rubber which comprises incorporating therein a material having the following structural formula:

$$R-N-R_1,$$
$$N=O$$



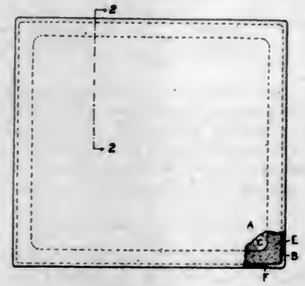
in which R and R_1 are naphthyl groups.

1,785,693. TRAIN CONTROL. WILBUR D. CLOUD, New York, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Mar. 19, 1929. Serial No. 348,204. 7 Claims. (Cl. 246—63.)



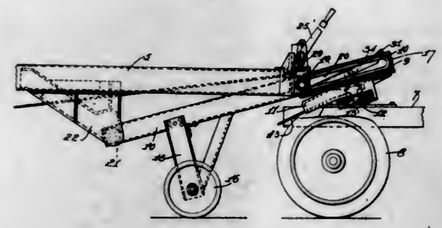
1. In an automatic train control system, the combination with an inductor and supporting ties therefor, of means for adjustably supporting, and fixing in adjusted position, said inductor at two points at each end.

1,785,694. COLOR-LIGHT SIGNAL. SALISBURY M. DAY, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Nov. 6, 1922. Serial No. 599,361. 6 Claims. (Cl. 177—329.)



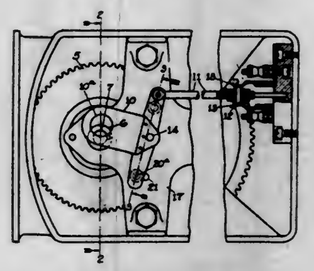
1. A light signal for railway signaling purposes comprising, a substantially rectangular casing having a relatively large opening in the front wall and a relatively small opening in the side wall, a light producing and projecting unit located in the large opening in said casing, a nontransparent barrier portion forming part of the projecting unit and located between said openings and preventing the passage of light through the casing from either one of said openings to the other, and means for reflecting light located over the small opening, whereby light can be directed through said openings from the single light source of said unit located in said casing but can not be directed in through one of said openings and out through the other to produce phantom indications.

1,785,695. PAD HOLDER FOR RUBBING MACHINES. GUSTAF H. EKSTROM, Rockford, Ill., assignor to C. Paul Parker, trustee, Evanston, Ill. Filed June 11, 1923. Serial No. 644,567. 4 Claims. (Cl. 51—175.)



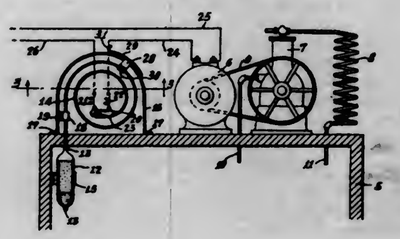
1. A pad holder for rubbing machines having, in combination, a bearing slide having screw openings and downward projections, a top plate having slots for receiving the downward projections of said bearing slide, a bottom plate secured to said top plate and having holes underlying said slots, a rubbing pad, and screws extending through said holes into said screw openings for holding the rubbing pad against said bottom plate and said bottom plate against said bearing slide.

1,785,696. BORDER SEAL FOR LAMINATED GLASS. ROBERT W. HACKETT, Upper Darby, and ARTHUR G. WORRALL, Philadelphia, Pa., assignors to Louis J. Kolb, trading as Safetee Glass Company, Philadelphia, Pa. Filed May 25, 1928. Serial No. 280,518. 4 Claims. (Cl. 49—81.)



1. The herein described laminated glass, composed of two sheets of glass having an interposed sheet of celluloid or pyroxylin compound united into a unitary structure, the border edges of the glass sheets extending beyond the celluloid or pyroxylin sheet to provide a groove between the perimeters of the glass sheets, and the groove substantially filled with a sealing substance which comprises a powdered metallic base suspended in an adhering vehicle of a plastic character capable of being forced into the groove to be sealed.

1,785,697. FIFTH-WHEEL CONSTRUCTION FOR SEMITRAILERS. HARRY W. HELMS, Edgerton, Wis., assignor to Highway Trailer Company, Edgerton, Wis., a Corporation of Wisconsin. Filed Mar. 30, 1929. Serial No. 351,143. 23 Claims. (Cl. 280—33.15.)

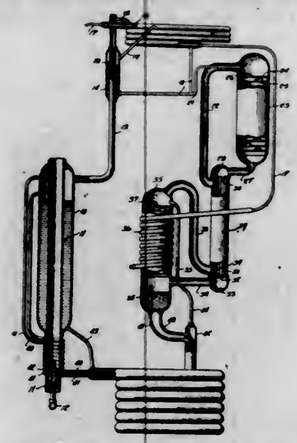


5. In combination with a semi-trailer and a tractor, a fifth wheel swivelly supporting one end of the trailer on the tractor when coupled thereto, said fifth wheel comprising an upper member tiltably supported on the trailer and a cooperating lower member rockably carried on the tractor, said upper member being tilted upward and forward when in uncoupling position and adapted to be moved to horizontal position by the coupling operation of the tractor and trailer, and means responsive to such rocking movement of the upper fifth wheel member for automatically locking said fifth wheel members together.

1,785,698. SWITCH MACHINE FOR RAILROADS. WINTHROP K. HOWE, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Aug. 16, 1929. Serial No. 386,307. 4 Claims. (Cl. 246—143.)

1. In a switch machine, means permitting hand operation of the switch machine and including a movable member, power control contacts operated by movement of said member, and a spring actuated locking device for retaining said member in its operated position, said locking means being contained in a locked compartment and releasable only by an authorized person holding a key to said compartment.

1,785,699. CONTROL FOR REFRIGERATION MECHANISM. THOMAS J. LITLE, Jr., Detroit, Mich., assignor to Copeland Products, Inc., Detroit, Mich., a Corporation of Michigan. Filed June 12, 1926. Serial No. 115,686. 6 Claims. (Cl. 200—140.)

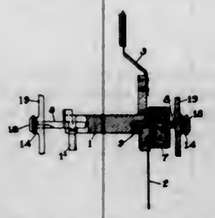


1. A control means for the refrigerating mechanism of a mechanically refrigerated cabinet comprising a continuous piece of tubing having one end sealed and adapted to be disposed in said cabinet and the other end flattened and coiled at its extremity, a heat gasifying liquid in said tube tending to coil and uncoil said coiled end in response to temperature variations, adjustable means for regulating said coiling and uncoiling, and a switch mechanism operated by the movement of the free end of said coil.

1,785,700. REFRIGERATION. CARL GEORG MUNTERS, Stockholm, Sweden. Filed Dec. 20, 1929, Serial No. 415,374, and in Sweden Jan. 21, 1929. 12 Claims. (Cl. 62—119.5.)

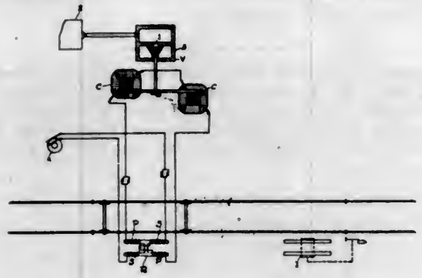
1. In a refrigerating apparatus, in combination, a generator, an absorber, means to convey liquid from said

generator to said absorber, a conduit connecting the bottom of said absorber with the upper part of said generator,



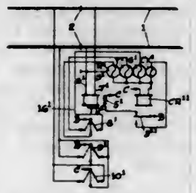
a conduit connecting an intermediate point of said absorber with the upper part of said generator and means to heat both of said conduits.

1,785,701. FRICTION ELEMENT AND PROCESS OF MAKING THE SAME. IZADOR J. NOVAK, Bridgeport, Conn., assignor, by mesne assignments, to Raybestos-Manhattan, Inc., a Corporation of New Jersey. Filed June 20, 1928. Serial No. 287,046. 2 Claims. (Cl. 18—55.)



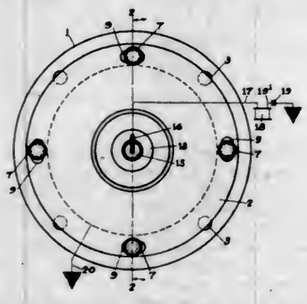
1. The process of producing a friction material for a friction element suitable for automobile brakes, clutches and the like which comprises mixing together fibrous asbestos and a hardenable binder into a readily-malleable mass with the fibres distributed through the same, extruding the mass through a suitable die thereby producing a continuous unlaminated strip of the cross-section desired surface-troweled on all sides by the action of the die and with the fibres in the interior thereof running in substantially all directions, drying the product thereby producing a flexible porous mass of somewhat greater thickness than that of the completed article and compressing and hardening the same into a hard dense article of the desired shape.

1,785,702. BEARING. JOHN L. OSBORNE, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Mar. 11, 1929. Serial No. 346,236. 5 Claims. (Cl. 308—2.)



1. In a spindle bearing for railway apparatus and the like, a spindle positioned to rock on a horizontal axis, a groove in the lower side of the spindle extending inwardly from the end of the spindle, a cup like socket in the end of the spindle intersecting said groove, a casing loosely receiving the end of the spindle, a knife edge support carried by the casing and received in said groove to support said spindle, and a ball in said cup and held therein by said casing.

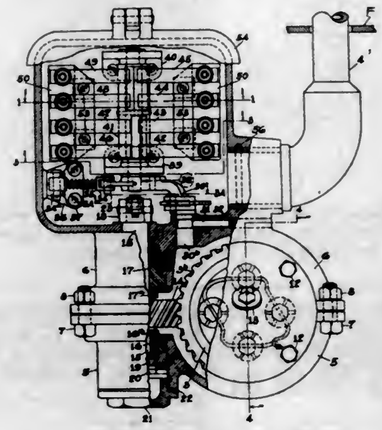
1,785,703. AUTOMATIC TRAIN-CONTROL SYSTEM. WADE H. REICHARD, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed July 15, 1929. Serial No. 378,323. 9 Claims. (Cl. 246—63.)



1. In an electro-magnetic valve for train control systems, in combination, a valve for controlling an air line, a U-shaped field core comprising separate laterally offset legs and a separate back yoke butted, and clamped, against ends of said legs and an armature pivoted to operate between and against side faces of said offset legs and actuate said valve.

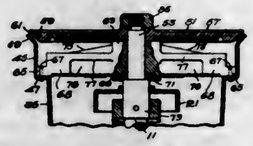
1,785,704. CHECK-LIGHT SIGNAL. OSCAR A. ROSS, New York, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed July 14, 1928. Serial No. 292,752. 14 Claims. (Cl. 246—45.)

1. In a railway signalling system, in combination, a signal including a plurality of indications governed in accordance with traffic conditions ahead, a check signal for indicating a signal failure, and means for causing an intermittent operation of said check signal upon failure of an indication of said signal when such indication should be active.



1,785,705. CIRCUIT CONTROLLER. HERBERT B. TAYLOR, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed June 22, 1928. Serial No. 287,568. 8 Claims. (Cl. 200—80.)

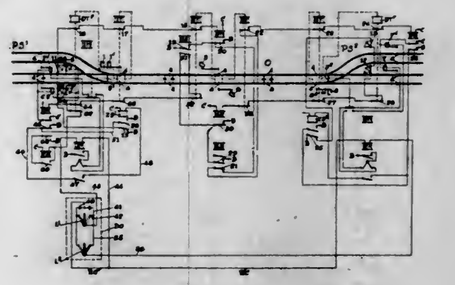
1. In a circuit controller, a casing adapted for connection to rotate in accordance with the speed of a vehicle,



spaced contacts in said casing, fluid means for electrically connecting said contacts when said casing is stationary and for disconnecting said contacts when said casing is rotated, and adjusting means for varying flow of the liquid means for causing said contacts to be disconnected upon various speeds of rotation depending on the adjustment.

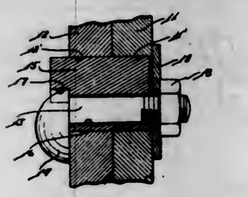
1,785,706. TRAIN CONTROL. HERBERT B. TAYLOR, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed July 23, 1929. Serial No. 380,379. 8 Claims. (Cl. 246—62.)

1. In a reversing switch mechanism for train control systems, a shaft, means operatively connecting said shaft to the end of a vehicle axle, an electric switch capable of assuming either of two extreme positions, means operating said electric switch to an opposite extreme position upon reversal of rotation of said shaft, and means holding said switch in its extreme positions independently of said operating means.



1,785,707. LIQUID-FUEL BURNER. EZEKIEL F. WHITE, Hartford, Conn., assignor to Grover V. Lassen, West Hartford, Conn. Filed Apr. 9, 1929. Serial No. 353,824. 4 Claims. (Cl. 158—77.)

4. A centrifugal, rotary atomizer for a liquid fuel burner having a rotary shaft, an atomizing cup secured to said shaft, a heat protecting head for the delivery end of the atomizing cup also mounted on said shaft, and yieldable means carried by the shaft adapted to permit the axial expansion of said heat protecting head.

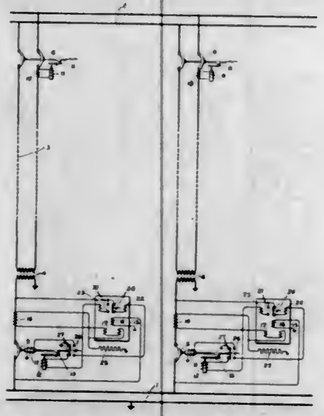


1,785,708. TRAIN-DISPATCHING SYSTEM FOR RAILROADS. SEDGWICK N. WIGHT, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed July 14, 1928. Serial No. 292,883. 13 Claims. (Cl. 246—3.)

1. In combination, a dispatcher's office, two control relays located distant to the dispatcher's office, two levers in said office for controlling the energization of said control relays, means responsive to the sequence in which said control relays are energized if energized in succession

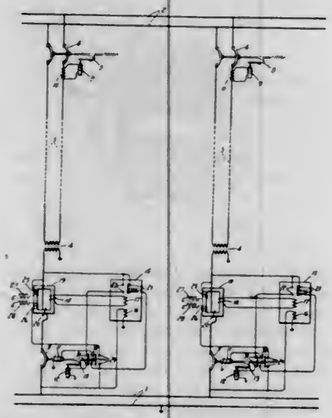
with an intervening period of time, and means for indicating in the dispatcher's office when he has moved his levers in succession too quickly.

1,785,709. BOLT AND BUSHING THEREFOR. JULIAN G. CAMPAU, Monroe, Mich., assignor of one-fourth to Harry Bonifacio, Monroe, Mich.; Emilie J. Campau, administratrix of said Julian G. Campau, deceased. Filed Apr. 14, 1930. Serial No. 444,016. 4 Claims. (Cl. 85—1.)



4. A device of the class described, comprising: a cylindrical retaining member having an axially extended eccentric passage formed therein and having one end cut away at said passage to provide a recess; a bolt head of a diameter corresponding to the outside diameter of said retainer; a stem projected eccentrically from one face of said bolt head and rotatably positioned in said passage, said head and said retaining member being in peripheral alignment upon rotation of said stem to predetermined position, and said head being engageable in said recess upon rotation of said stem to a predetermined position, said stem being non-rotatable upon engagement of said head in said recess, said stem having flat faces; and a separable plate provided with a flat sided opening for projection of said stem therethrough.

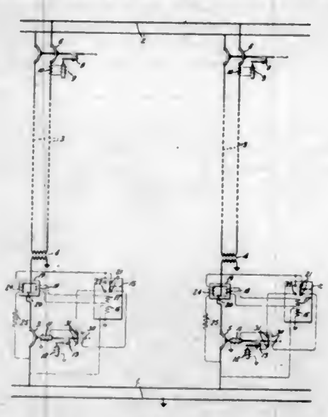
1,785,710. SYSTEM OF ELECTRIC DISTRIBUTION. WILLARD J. MCLACHLAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 19, 1929, Serial No. 348,340. Renewed Oct. 6, 1930. 6 Claims. (Cl. 175—294.)



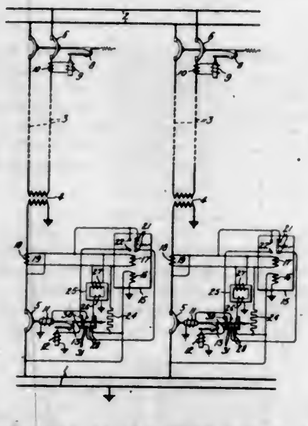
1. In combination, two electric circuits, a switch connecting said circuits, a power directional relay for controlling the opening of said switch having a voltage coil connected to one of said circuits and a current coil connected in series relation with said circuits when said switch is closed, and means controlled by said relay for

effecting the connection of said current coil across said other of said circuits when said relay is in a position to

effect the opening of said switch whereby said relay is maintained in said position as long as said other circuit is energized after said switch is opened.



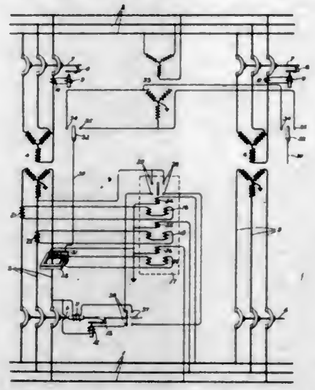
1,785,711. SYSTEM OF ELECTRIC DISTRIBUTION. WILLARD J. MCLACHLAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 13, 1929. Serial No. 354,961. 5 Claims. (Cl. 175—294.)



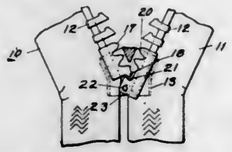
1. In combination, two alternating current circuits, a circuit breaker interconnecting said circuits, a current transformer having a primary winding connected in series with said circuits and a secondary winding, a relay controlling said circuit breaker having a winding connected to the secondary winding of said transformer, and two voltage windings on said current transformer respectively energized in response to the voltages of said circuits when said circuit breaker is open.

1,785,712. SYSTEM OF ELECTRIC DISTRIBUTION. WILLARD J. MCLACHLAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 13, 1929. Serial No. 354,962. 8 Claims. (Cl. 175—294.)

1. In combination, an electric circuit, a circuit breaker in said circuit, a current transformer having a primary winding connected in series with said circuit and a secondary winding, a relay for controlling the operation of said circuit breaker having a winding connected to the secondary winding of said transformer, and a tertiary winding on the core member of said current transformer connected across the terminals of said circuit breaker.



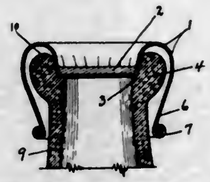
1,785,713. SYSTEM OF ELECTRIC DISTRIBUTION. WILLARD J. MCLACHLAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 13, 1929. Serial No. 354,963. 5 Claims. (Cl. 175—294.)



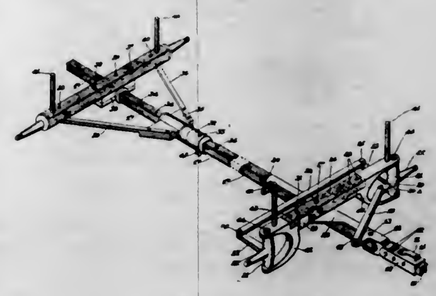
1. In combination, an alternating current circuit, a circuit breaker in said circuit, a current transformer having a primary winding energized in response to the current in said circuit, a potential transformer having a primary winding energized in accordance with the voltage of said circuit, and power directional means for controlling the operation of said circuit breaker having a winding simultaneously connected across the secondary windings of said transformers so that the amount of power required to operate said power directional means to effect the operation of said circuit breaker varies substantially directly with the voltage of said circuit.

1,785,714. CONTROL SYSTEM. WILLARD J. MCLACHLAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 23, 1929. Serial No. 409,389. 4 Claims. (Cl. 171—97.)

1. In combination, two electric circuits, a circuit breaker for connecting said circuits together, means for effecting the opening of said circuit breaker in response to the flow of power between said circuits in a predetermined direction including a current transformer having its primary winding connected in series with said circuits when said circuit breaker is closed and a power directionanl relay having a voltage winding connected to one of said circuits and a current winding connected to the secondary winding of said current transformer, and means for remotely controlling the opening and closing of said circuit breaker including a tertiary winding of said current transformer and means for impressing upon said tertiary winding voltages having different phase relations with respect to the phase of the voltage impressed upon said voltage winding of said relay.

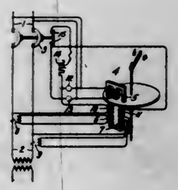


1,785,715. SEPARABLE FASTENER. SAMUEL HABEY NORTON, Meadville, Pa., assignor to Hookless Fastener Company, Meadville, Pa., a Corporation of Pennsylvania. Filed May 6, 1927. Serial No. 189,193. 10 Claims. (Cl. 24—205.)



1. A separable fastener comprising a pair of stringers having opposed series of interlocking members, a slider movable along said stringers to engage and disengage said members, a member having a plurality of teeth mounted on one stringer, and a member having a plurality of teeth mounted on the other stringer and arranged to mesh with the teeth of said first mentioned member to guide said interlocking members into engagement in the proper sequence.

1,785,716. BOTTLE CLOSURE. DURLIN N. VAN ALSTYNE, Syracuse, N. Y., assignor of fifty per cent to James N. Van Alstyne, Fulton, N. Y. Filed Aug. 4, 1927. Serial No. 210,534. 1 Claim. (Cl. 215—38.)

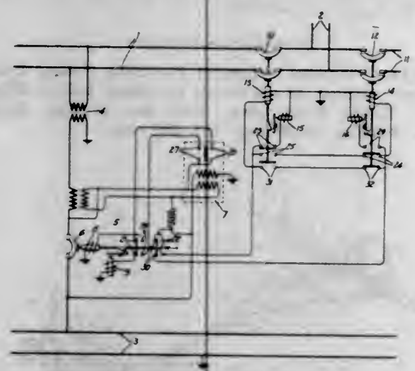


In a bottle closure, a pliable member loosely encircling the bottle top and normally in spaced relation thereto, and having a depending skirt extending downwardly along the bottle neck and being free to move vertically in relation thereto in both directions, and a sealing disk superposed on said pliable member and coacting therewith to seal the mouth of the bottle.

1,785,717. WAGON. MATHIAS J. ADAMS, Turkey River, Iowa, assignor of one-fourth to Adams Patent Wheel Co., Turkey, River, Iowa. Filed Mar. 2, 1929. Serial No. 343,959. 5 Claims. (Cl. 280—80.)

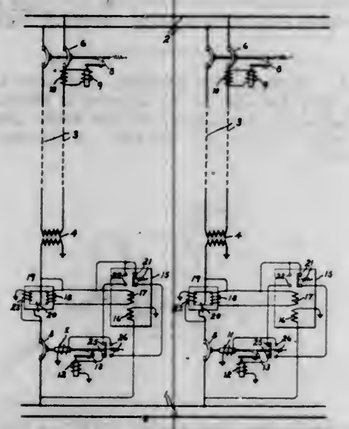
1. In a wagon running gear including front and rear axles and a tongue, a reach bar connecting said axles, a U-shaped reinforcing member embracing said reach bar and clamped thereto, one side of said U-shaped reinforcing member having a U-shaped keeper for the reception of the front axle, and means securing said front axle to said U-shaped reinforcing member against shifting.

1,785,718. PROTECTIVE SYSTEM. SEYMOUR LEOPOLD BAUM, New Rochelle, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 16, 1928. Serial No. 293,189. 9 Claims. (Cl. 175—294.)



1. In combination, two electric circuits, a switch connecting said circuits, and a control relay responsive to a minimum reverse power value which varies with the voltage of the interconnected circuits when said switch is closed and responsive to the phase relation between the voltages of said circuits when said switch is open including means controlled by said switch for producing a restraining torque in said relay which varies with the voltage of said circuits and is operative only while said switch is closed.

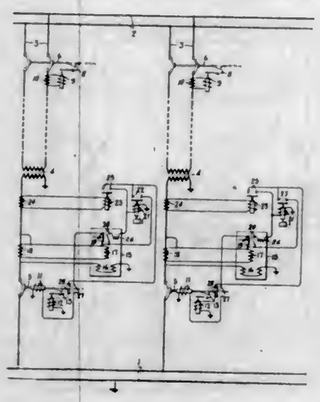
1,785,719. AUTOMATIC CONTROL SYSTEM. DAVID K. BLAKE, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 19, 1929. Serial No. 333,705. 4 Claims. (Cl. 171—97.)



1. In combination, a supply circuit, two load circuits normally supplied therefrom, an auxiliary source, means responsive to the disconnection of one of said load circuits from said supply circuit for effecting the disconnection of the other load circuit from said supply circuit

and the connection of said other load circuit to said auxiliary source, and means responsive to the connection of said one of said load circuits to said supply circuit

for effecting the disconnection of said other load circuit from said auxiliary source and the connection of said other load circuit to said supply circuit.

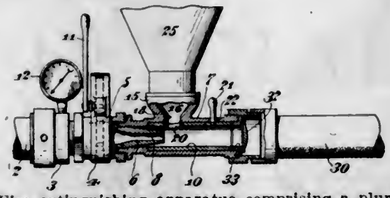


1,785,720. SYSTEM OF ELECTRIC DISTRIBUTION. DAVID K. BLAKE, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 19, 1929. Serial No. 348,337. 13 Claims. (Cl. 175—294.)

1. In combination, two electric circuits, a circuit breaker interconnecting said circuits, a current transformer having three inductively connected windings, two of which are respectively connected so as to be responsive to the voltage of the interconnected circuits and the current flowing between them, and a power directional relay for controlling the opening of said circuit breaker having a winding connected to the third winding of said current transformer.

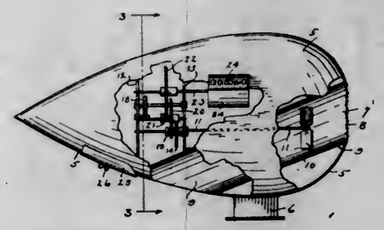
1,785,721. SYSTEM OF ELECTRIC DISTRIBUTION. DAVID K. BLAKE, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 19, 1929. Serial No. 348,338. 9 Claims. (Cl. 175—294.)

1. In a system of electric distribution, two alternating current circuits, switching means for interconnecting said circuits, and means for effecting the opening of said switching means including a power directional relay responsive to the direction of power flow through said switching means, timing means controlled by said power direction relay for effecting the opening of said switching means when power flows through said switching means



in a predetermined direction for a predetermined time, and overload responsive means for effecting the opening of said switching means independently of said timing means.

1,785,722. CONTROL SYSTEM. DAVID K. BLAKE, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed July 26, 1927, Serial No. 208,647. Divided and this application filed Nov. 1, 1929. Serial No. 404,148. 9 Claims. (Cl. 171—97.)



1. In combination, an electric circuit, a circuit breaker in said circuit, a power directional relay including a voltage and a current winding for controlling the opening of said circuit breaker in response to the direction of power flow in said circuit, and means for remotely controlling the opening and closing of said circuit breaker including means for energizing said relay independently of said electric circuit so as to vary the phase relation between the currents in said relay windings.

1,785,723. APPARATUS FOR PRODUCING FIRE-EXTINGUISHING FOAM. FISHER L. BOYD, Haverford, Pa., assignor, by mesne assignments, to National Foam System, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed June 16, 1927. Serial No. 199,277. 2 Claims. (Cl. 169—15.)

1. Fire extinguishing apparatus comprising a plurality of conduits through which water is adapted to flow, the forward ends of said conduits being united to form a single eduction conduit, valves for controlling the flow of water through said conduits, hoppers in communication with the first named conduits, means located within said conduits in operative relation to the discharge ends of said hoppers whereby the flow of water therethrough is adapted to cause discharge of said material from said hoppers into the said conduits, and rotatable tubular valve sections mounted within the first named conduits in operative relation to the discharge ends of said hoppers for opening and closing said discharge ends.

1,785,724. ELAPSED-TIME REGISTER FOR AIRPLANES. CLYDE C. BRANT, Terre Haute, Ind. Filed Aug. 17, 1928. Serial No. 300,196. 2 Claims. (Cl. 161—15.)

1. A portable registering device comprising a housing, a wind tunnel through the housing, an air screw in the tunnel, a guard at the mouth of the tunnel to prevent manipulation of the screw, a registering mechanism driven by the screw and means limiting the rate of rotation of the screw.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 401—No. 4 TUESDAY, DECEMBER 23, 1930 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual index, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,549,166, E. B. Thurston, Elevator control device, decided December 4, 1930, claim 11.

Pat. 1,639,817, A. H. Taylor, Pieso-electric crystal system, decided November 11, 1930, claims 1 and 8.

Pat. 1,678,471, D. E. Hunter, Heat-resisting filing device, decided December 2, 1930, claims 10, 11, 12, 14, and 15.

Pat. 1,727,994, L. E. La Brie, Brake equaliser, decided December 1, 1930, claims 1, 2, and 7.

Final decision in interference has been rendered against the following trade-mark:

T. M. 174,587, Radio detector and amplifier, O. and T. Electric Corporation of New York, N. Y. Registered October 23, 1923, decided November 12, 1930.

Changes in Classification

Order No. 3,173, December 5, 1930, directs:

In *class 62, Refrigeration* (Division 44), establish the following subclass and definition to follow and be coordinate with subclass 108.

Ice-making apparatus
Freezers
108.5 Molds.

108.5. ICE-MAKING APPARATUS, FREEZERS, MOLDS. Ice-forming molds usually in multiple units and adapted for use with the household type of refrigerators.

The patents contained in this subclass have been taken for the most part from class 62, subclass 111, Ice-making apparatus, Separator.

Disclaimers

1,752,974.—*Charles R. Boggs*, Waban, Mass. Cable. Patent dated April 1, 1930. Disclaimer filed December 6, 1930, by the assignee, *Simplex Wire and Cable Company*.

Hereby enters the following disclaimer, to wit:

A. Your petitioner disclaims from claim 1 of said Letters Patent all cable except cable in which the "non-metallic strip" comprising the "armor" is hard vulcanised fibre or, with respect to the quality of hardness, the equivalent of hard vulcanised fibre.

B. Your petitioner disclaims from claim 5 of said Letters Patent all cable except cable in which the "non-metallic tape" comprising the "armor" is hard vulcanised fibre or, with respect to the quality of hardness, the equivalent of hard vulcanised fibre.

1,772,186.—*Fred L. Lee*, Binghamton, and *Burdett H. Phillips*, of Endicott, N. Y. Duplicating Punching Device. Patent dated August 5, 1930. Disclaimer filed December 5, 1930, by the assignee, *The Tabulating Machine Company*.

Hereby enters this disclaimer to claim 11 in said specification which is in the following words, to wit:

11. The combination with a card punching mechanism and a keyboard adapted to operate said mechanism of a frame carrying said mechanism and keyboard and means to support the frame in either a horizontal position or in an inclined position to permit the punch operator to conveniently operate the keyboard.

Condition of Applications Under Examination at Close of Business December 12, 1930

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 108,101; Trade-Mark Division, 1,339. Oldest new case, Feb. 21, 1930; oldest amended, Mar. 6, 1930.) DECISIONS IN PATENT AND TRADE-MARK CASES

Commissioner's Decisions

EX PARTE ROOT

Decided August 7, 1930

DESIGNS—TITLE—INDEFINITE.

The title to a design given as "An Article of Manufacture" *Held* too broad and indefinite.

Mr. Sol Shappirio for applicant.

ON PETITION.

ROBERTSON, *Commissioner:*

Applicant petitions from the action of the Examiner objecting to the title given to applicant's alleged invention as being too broad and indefinite.

As now amended the title is given as "An Article of Manufacture". The claim reads as follows:

The ornamental design for an article of manufacture substantially as shown.

In *Ex parte Guinzburg*, 341 O. G. 1049, it was pointed out that the statute speaks of a design for an article of manufacture and it was said that "there is nothing to establish that applicant has invented any other article of manufacture than that which he shows".

It has been noted that this decision overrules certain prior decisions in which the use of a title such as applicant is using here was apparently approved. It is thought that the holding in *Ex parte Guinzburg*, supra, is proper and that it is incumbent upon the applicant to give to his design a title which is consistent with the article shown and not merely the generic title, "An Article of Manufacture". What variants of the design shown would be infringement of the patent, if granted, is a question for the courts and not for this Office.

With reference to the patents involved in the case of *Graff* v. *Webster*, 189 F. 902, cited in the petition, it is not correct to say that there "was no specific mention made of any specific article of manufacture nor was one shown". The title of the first of the two designs involved in that case was a "Dish" and of the second a "Border Section". No decision has been cited nor has any been found other than the Commissioner's decisions referred to in the cases cited in *Ex parte Guinzburg*, supra, which would support applicant's contention as to the generic term, "An Article of Manufacture", being a proper title.

The petition is denied.

EX PARTE SHULTZ *v.* DUNHAM

Decided October 20, 1930

1. INTERFERENCE—RIGHT TO MAKE THE CLAIMS—EXPERT TESTIMONY.

It has been repeatedly ruled, both by this Office and the Court of Appeals of the District of Columbia, that expert testimony as to the scope of the issue is not permissible.

2. SAME—SAME—SAME.

Statements, in affidavits of persons alleged to be experts in the particular art, that the inventions of the parties to the interference are different and that the claims in issue are not properly readable upon the disclosure of one of the parties *Held* insufficient to justify permission to take the testimony of the affiants.

ON APPEAL.

HEATING SYSTEM

Messrs. Brown, Jackson, Boettcher & Dienner for Shultz.

Messrs. Barnett & Truman for Dunham.

ROBERTSON, *Commissioner:*

The party Shultz has filed an appeal from the decision of the Law Examiner denying his motion to be permitted to take testimony.

The motion was denied on the ground that the testimony sought to be taken was merely that of experts as to what was disclosed in the Dunham application and that the readability of the issue of an interference on the disclosure of one of the parties is not to be decided on the opinion of experts or on their testimony but must be determined by the Examiner of Interferences in the first instance and the appellate tribunals, if appeal is taken.

On behalf of Dunham it is argued that no appeal lies from such a decision of the Examiner of Interferences. On behalf of Shultz it seems to be argued that the motion should have been granted as a matter of course because Shultz was not under an order to show cause and times had been set for him to take testimony, in other words, that the testimony should be permitted to be taken leaving the question of its materiality to be determined by the tribunals before whom the case may come.

It is not necessary to decide in this case whether an appeal actually lay or not because the question can be considered under any circumstances under the supervisory authority of the Commissioner.

So far as the question that seems to be raised by Shultz is concerned, if the motion ought to be granted as a matter of course, then no reason is seen why it was brought. The times were running for Shultz to take his testimony and, if his contentions were right, all he had to do was take it over the objections of the opposing party, if such objections were made.

[1] The question of the right to take expert testimony as to the issue of an interference has been repeatedly considered by this Office (see *Pym* v. *Hadaway*, 1907 C. D. 189; *Ricketts* v. *Ambruster and Beck*, 1909 C. D. 109; *Von Keller* v. *Hayden et al.*, 1911 C. D. 217; *Cooper* v. *Downing*, 1916 C. D. 227, and *Armstrong* v. *Levy*, 1929 C. D. 113). In these decisions it has been repeatedly ruled that expert testimony as to the scope of the issue is not permissible.

In the case of *Cooper* v. *Downing*, supra, the Court of Appeals of the District of Columbia said:

> The Commissioner of Patents properly refused to hear evidence as to what was intended by Downing's original application and disclosure, holding that it is the duty of the tribunals of the Patent Office, composed of men presumed to be sufficiently expert in understanding technical terms and the state of the art, to determine for themselves what an application discloses.

That holding was approved by the same court in the case of *Armstrong* v. *Levy*, supra, in which, with reference to the argument that error was made in not permitting similar testimony to be taken, the court, after quoting from the Commissioner's decision, said:

> The decision of the Commissioner on this interlocutory motion is assigned as error here, but is without merit. *Cooper* v. *Downing*, 45 App. D. C. 345; 230 O. G. 909.

[2] It is argued on behalf of Shultz that the testimony sought to be taken is not expert testimony in the sense in which that expression is used in the decisions above cited.

A consideration of the motion and the affidavits in support thereof is not deemed to support this contention. In addition to the affidavit of the attorney of record for Shultz there was filed the affidavits of two parties, each of whom qualifies himself in the affidavit as competent to pass upon this question. The closing paragraph of Anderson's affidavit is as follows:

> It is deponent's opinion that the counts in issue, considered in their entirety, apply specifically to the Shults system and not to the Dunham system.

Rohlin, in his affidavit, after stating that he has studied the decisions of the Law Examiner rendered on the motion to dissolve, alleges that in his opinion several assumptions made by the Law Examiner are not correct and not supported by the Dunham application and "not in accordance with known principles of steam heating.".

It is not alleged that the Dunham structure as shown in his application is inoperative but merely that it will not operate in the manner in which it has been construed to operate, and the attorney, in his affidavit, states that in his opinion the inventions of the two parties are different and that a certain operation alleged to take place in an apparatus of the Dunham application under certain conditions will not in fact take place.

These are all questions for argument before the tribunals who have to decide the case.

There is no allegation in any of the affidavits that any apparatus was ever built by or on behalf of Shultz and tested in accordance with the disclosure of the Dunham application. Nor is there any allegation that, if the affiants were called as witnesses, they would testify as to experiments or conduct experiments in the presence of counsel for the opposing party.

The decision in *Weintraub* v. *Hewitt and Rogers*, 1907 C. D. 49, cited in the reply brief of Shultz, is not regarded as authority for taking testimony of the kind here referred to. The facts are not fully stated in that decision, but while the taking of testimony was permitted as to a certain question, the taking of testimony in an attempt to establish that the inventions were in fact not identical was denied. If the language of the decision can be construed as authorizing the introduction of mere expert testimony as to the right of a party to make the claims, it is thought that it is in effect overruled by the later decisions above cited.

It is also argued on behalf of Dunham that, in view of the preliminary statement of Shultz which alleged no date prior to Dunham's filing date except a date of conception, judgment of priority should be now entered in favor of Dunham. Such a motion was denied by the Examiner of Interferences and no reason is found for reviewing his action in that respect.

The party Shultz, in connection with his appeal, has asked for a stay of proceedings until this motion is decided and an extension of time and that, if an oral hearing be permitted, it be set at as early a date as convenient.

It is not customary to set petitions of this kind for hearing and no reason is found for making an exception in this case.

Inasmuch as no extension of Shultz's time for taking testimony, which was set to expire on October 25th, was asked of the Examiner of Interferences and it is not apparent that Shultz desired to take any further testimony except that of the experts referred to in the motion, no reason is seen for directing that the times be reset.

The decision of the Examiner of Interferences is affirmed.

U. S. Court of Customs and Patent Appeals

MAATSCHAPPIJ TOT EXPLOITATIE VAN RADEMAKER'S KONINKLIJKE CACAO & CHOCOLADE FABRIEKEN *v.* RADEMAKER

Nos. 2,352–2,354. Decided June 4, 1930

[41 F.(2d) 406]

1. TRADE-MARKS—REGISTRATION—OWNERSHIP.
   The registration of a trade-mark under the "ten years" proviso of the act of February 20, 1905, makes a prima facie case of ownership.
2. SAME—CANCELLATION PROCEEDING—BURDEN OF PROOF.
   In a proceeding for the cancellation of the registration of the trade-mark the burden of proof is upon the petitioner.
3. SAME—SAME—EVIDENCE.
   The evidence presented in the trade-mark cancellation proceeding *Held* insufficient to overcome the prima facie evidence of the registrant's ownership of the registered mark.

Appeal from the Commissioner of Patents. Reversed.

Messrs. Mock & Blum and *Mr. Charles R. Allen* for the appellant.

Mr. Joseph W. Milburn, Mr. William Wallace White, and *Mr. Wallace White* for the appellee.

HATFIELD, *J.*:

This is an appeal in trade-mark cancellation proceedings from the decision of the Commissioner of Patents affirming the decision of the Examiner of Interferences sustaining the petitions of appellee for the cancellation of appellant's registered trade-marks for use on sugar candy.

Three cancellation proceedings are involved. They were consolidated, and but one record is before us.

The marks were registered under the "10 years" proviso of section 5 of the Trade-Mark Act of February 20, 1905 (15 U. S. C. A. sec. 85), which reads as follows:

> And provided further, That nothing herein shall prevent the registration of any mark used by the applicant or his predecessors, or by those from whom title to the mark is derived, in commerce with foreign nations or among the several States or with Indian tribes which was in actual and exclusive use as at trade-mark of the applicant, or his predecessors from whom he derived title for ten years next preceding February 20, 1905. * * *

The three marks are not identical, but the words "Rademaker's Hopjes" are the dominating features of each, and the case has been presented on this hypothesis.

Appellant's marks were registered as follows: No. 82,808, July 25, 1911; No. 85,756, March 12, 1912; No. 89,860, January 14, 1913.

In his applications for cancellation, appellee alleged that the marks were descriptive of the goods on which they were used; that the registrant did not use the marks in question in the United States "for ten years prior to February 20, 1905"; that the registrant "has been and is making wrongful use of said registrations to interfere with the business of petitioner, in particular to delay entry of petitioner's goods through the customs, and in other ways"; and that the registrations complained of interfere with petitioner obtaining registrations of his alleged trade-marks, the dominating features of which were the words "Rademaker's Hopjes."

[1] It appears from the record that appellee and William Rademaker, managing director of appellant, are brothers; that they were engaged in business with their father, "making cocoa, chocolate and confectionery," including coffee-flavored candy, known as "Rademaker's Hopjes," in Scheveningen, Holland, for several years prior to the year 1899, when the father sold the business to appellant; that appellee was a manager "in his father's business" from 1891 to 1899. In this connection, appellee testified:

> * * * From 1884 up to the end of 1899 I was gradually introduced by my father into the full knowledge of everything going on in his business, commercially, technically and financially. I became fully aware of all details of delivering and shipping goods, engaged travelers and representatives, signed all out-going letters and read and dealt with all in-coming letters, discussed all business matters of some importance with my father, in so far as such matters were not entirely left to me to decide. I dealt with every detail of the packing and wrappers, and of the sale of the goods, and of the marks used. No goods have ever been shipped without my consent or knowledge during the years 1884 up to the end of 1899.

He further testified that "Hopjes" candy was not shipped to, nor sold in, the United States prior to the year 1904, when he left the employ of appellant; that from 1899 to 1904 he was manager of appellant's branch office in London, England; and that in 1904 he went into business for himself. His testimony shows that the first shipment of "Hopjes" candy to the United States under his trade-mark was in 1919.

It appears that William Rademaker, managing director of appellant, was connected with his father's business at Scheveningen, Holland, from 1886 to about 1894; that, from 1894 to 1899, when the father sold his business, he was superintendent of his father's factory located in Cologne, Germany; and that in 1899 he became managing director of appellant, the position he now holds.

William Rademaker testified that "Hopjes" candy, bearing the trade-mark "Rademaker's Hopjes," was sold in Holland and in the United States during the 10-year period 1895 to 1905; that appellant was unable to produce documentary evidence of sales to purchasers in the United States during that period, because the books of appellant and its predecessor covering that period had been destroyed; that, although he could not be positive, due to the many years that had elapsed, he thought that appellant and its predecessor had shipped "Hopjes" candy, bearing the trade-mark "Rademaker's Hopjes," to the Holland Importing Company, or the Dutch Importing Company, at Philadelphia, Pa., and the Lindt Chocolate Company, New York, during the critical period, 1895 to 1905, inclusive.

The testimony of the witness Van Zeeland, was taken October 14, 1926. He testified that he had been in the employ of appellant's predecessor for eight years, as foreman of the "despatch department"; that he has held the same position for appellant since its purchase of the business; and that "Hopjes" candy has been shipped to the United States and sold here under the mark "Rademaker's Hopjes" since prior to 1895. However, he was unable to remember the names of the purchasers in the United States to whom the candy was sold.

It clearly appears from the record that the witness William Rademaker was in error in testifying that the Holland Importing Company of Philadelphia and the Lindt Chocolate Company of New York had purchased "Rademaker's Hopjes" prior to 1905.

Other witnesses testified in the case, but their testimony is not of importance and need not be referred to here.

The Examiner of Interferences held that the burden of proof was upon appellant to establish exclusive and continuous use of the involved trade-marks in the United States for 10 years "next preceding" February 20, 1905, and that he had failed to do so.

The Commissioner of Patents held that appellant's certificates of registration of the involved marks established a prima facie case of ownership, and that the burden of proof was on the petitioner for cancellation. He held, however, that the evidence warranted the conclusion that the goods bearing the involved trade-marks had not been "sold in the United States during the ten year period of the Trade Mark Act," and that, as one of the customers of appellee had been sued by appellant in the Federal court in New York for infringement of the registered marks, appellee had established

"damage to him and his right to file the petitions for cancellation," and accordingly affirmed the decision of the Examiner of Interferences sustaining the petitions for cancellation.

[2] Registration of a trade-mark under the "ten years" proviso of the Trade-Mark Act of February 20, 1905, makes a prima facie case of ownership, and the registrant is entitled to be protected in its use of such mark. In a proceeding for the cancellation of such a registration, the petitioner has the burden of proof. See section 16, Trade-Mark Act of February 20, 1905 (15 U. S. C. A. sec 96); *Thaddeus Davids Company* v. *Davids*, 233 U. S. 461, 34 S. Ct. 648, 58 L. Ed. 1046.

[3] It appears that the petitioner, appellee, was the only witness who testified that the registrant, appellant, and its predecessor had not used the registered trade-marks on "Hopjes" candy during the 10 years immediately preceding February 20, 1905. He presented no documentary or other evidence in corroboration of his testimony in this regard. He testified in 1926, entirely from memory, to events occurring during the period from 1895 to 1904. It is true that his testimony is positive. He testified that he was in a position, during that period, to know the facts. He did not testify as one having used the involved trade-marks in the United States during the statutory period. On the contrary, he testified that he first used his mark in the United States in 1919. Just how he could show probable legal damage or injury, under such circumstances, is not quite clear. *McIlhenny's Son* v. *New Iberia Extract of Tabasco Pepper Company, Limited*, 30 App. D. C. 337; *Battle Creek Sanitarium Company, Limited*, v. *Fuller*, 30 App. D. C. 411; *Hump Hairpin Company* v. *De Long Hook & Eye Company*, 39 App. D. C. 484; *Tim & Co.* v. *Cluett, Peabody & Co.*, 42 App. D. C. 212; *B. V. D. Co.* v. *Potterf*, 43 App. D. C. 33; *Wilson* v. *Hecht*, 44 App. D. C. 33; *Standard Brewery Company* v. *Interboro Brewing Company*, 44 App. D. C. 193; *Edward Smith & Co.* v. *C. Schrack & Co.*, 56 App. D. C. 347, 13 F.(2d) 318. But, however that may be, registration under the proviso in question would be nothing more than a farce if a registrant be required in a cancellation proceeding to establish his right to registration, simply because a petitioner, testifying from memory to events occurring from 21 to 31 years prior thereto, asserts, without any corroboration, that the registrant did not use the involved mark during the statutory period.

It is true that the evidence submitted by the registrant is not very satisfactory. However, two witnesses contradicted the testimony of the petitioner, and testified that the involved trade-marks were used by the registrant during the statutory period.

In our opinion, the petitioner, appellee, has wholly failed to overcome the prima facie evidence of appellant's ownership of the registered marks.

The decision is reversed.

Reversed.

U. S. Circuit Court of Appeals—Sixth Circuit

ADAMS ET AL. *v.* GALION IRON WORKS & MFG. CO.

No. 5,228. Decided July 2, 1930

[42 F.(2d) 395]

1. PATENTABILITY—ROAD GRADERS.
   Certain claims for a road grader *Held* unpatentable since invention was not involved either in transferring shiftability from the front to the rear axle or in the use of a shiftable rear axle, old in the art, in combination with the equally old device of tilting wheels to correct side draft.
2. SAME—INVENTION—SELECTION OF OLD PARTS.
   No invention is involved in the selection and putting together the most desirable parts of different machines in the same art where each separate part is selected solely to perform the obvious purpose for which it was used in the prior art.
3. SAME—SAME—HOW DETERMINED.
   In determining patentability the question of invention must be approached from the standpoint of one skilled in the particular art, not merely one of reasonable mechanical ability in other arts, and consideration must be given to the nature of the problem confronting the patentee.

APPEAL from the District Court of the United States for the Eastern Division of the Northern District of Ohio; D. C. Westenhaver, judge.

Patent infringement suit by Roy E. Adams and others, doing business as J. D. Adams & Co., against the Galion Iron Works & Manufacturing Company. From a decree dismissing bill [28 F.(2d) 225], complainants appeal.

Affirmed.

Mr. D. W. Cooper (*Messrs. Kwis, Hudson & Kent, Mr. D. W. Cooper, Mr. Geo. B. Schley,* and *Mr. Verne A. Trask* on the brief) for the appellants.

Mr. W. L. Day (*Messrs. Day & Day* and *Mr. F. S. Stitt* on the brief) for the appellee.

Before DENISON, KNAPPEN, and HICKENLOOPER, Circuit Judges

HICKENLOOPER, *Cir. J.:*

Appellants brought their action for infringement of Patent No. 1,133,251, issued to Roy E. Adams, March 30, 1915, for a grader. Claims 5, 6, 9, 12, 15, 20, 22, 23, 26, 31, 32, 35, and 41 are in suit. The district court held claims 20 and 26 to be anticipated by patent to J. D. and R. E. Adams, No. 1,014,989, issued January 16, 1912, prior to application of the patent in suit. The remaining claims were held invalid on the grounds of aggregation and want of invention. (D. C.) 28 F.(2d) 225. Claim 22 may be taken as typical of all the claims in suit, including claims 20 and 26, and is printed in the margin.[1] Reissue Patent No. 16,200, which was also held invalid, is not involved in the present appeal.

Road graders, consisting of an adjustable moldboard carried on a frame which is supported by front and rear pairs of wheels, are extremely old and well known to every one. In the course of

[1] 22. A grader, comprising a frame, a pair of front supporting wheels and a pair of rear supporting wheels therefor, said rear supporting wheels as a unit being shiftable and tiltable relatively to said frame, said two adjustments being obtainable independently of each other, and said front supporting wheels as a unit being tiltable relatively to said frame and a mold board carried by said frame.

natural development it was found that the pressure of earth or road material upon the diagonal surface of the moldboard tended to force the rear wheels to a position oblique to the line of travel. This was called side draft. Side draft was very early corrected by tilting or leaning the rear wheels, so as to resist this skidding movement. Compare patents to Adams, No. 310,165, and its reissue. No. 10,666 (1885); to Adams and Pennock, No. 370,589 (1887); to Ridings, No. 829,605 (1906); to R. E. Adams, No. 853,614 (1907); to J. D. and R. E. Adams, No. 1,014,989 (1912), and others. These patents usually covered particularly the mechanical means by which the wheels were tilted, for there were many ways of accomplishing such result.

Another difficulty was encountered which had to be overcome. As the pressure upon the moldboard increased, the grader had a tendency to ride upon the moldboard over the obstructions it was intended to move, thus lifting one of the rear wheels from the ground. This tendency was sought to be corrected by the use of much wider or longer rear axles. It was also common practice, not only to change the angularity of the moldboard, but to permit it to be shifted bodily toward one side or the other. Thus the wider rear axle would not prevent the grader from being reversible, that is, working one side of the road in both directions, but occasions sometimes arose where, because of the configuration of the ground to be traveled, it was desirable that front and rear wheels on the same side track, or travel upon the same line. J. D. and R. E. Adams accomplished this end, in Patent No. 1,014,989, by a shifting of the frame upon the front axle whereby the front and rear wheels upon one side might be brought into alignment. Others had accomplished this same result by providing axles for the rear wheels which were laterally adjustable with respect to the frame. Compare patents to Bunnell and Page, No. 567,293 (1896); to J. B. and B. O. Rhodes, No. 724,042 (1903); to Lathrop, No. 940,169 (1909); to Wold, No. 968,439 (1910), as examples.

During the process of changing the alignment of front and rear wheels, the pivoting of the front axle permitted the change of direction of the front set to reach the new relative position to the rear set. In most of the patents of the prior art the laterally adjustable or shiftable rear axle was also made angularly adjustable to the line of travel, or skewable. (Compare Bunnell and Page, No. 567,293; Rhodes, No. 724,042; and Lathrop, No. 940,169.) It may have been that this was originally thought to be necessary in order to effect, or assist in, the realignment, but the more obvious assumption is that, in these particular patents, skewability of the rear axle was employed as a means of correcting side draft.

Counsel concede, and indeed a review of the prior art compels the conclusion, that tiltable wheels to correct side draft were of ancient origin, and that shiftable rear axles to readjust the alignment of front and rear wheels were old in this particular art when the application for the patent in suit was filed. Whether we consider that the prior art did or did not depend solely upon the skewability of the shiftable rear axle to correct side draft, with its attendant disadvantages, all that Adams did in the patent in suit was to take the shiftable axle of the prior art, useful only in the prior art, or now, to secure alignment of front and rear wheels, and thus increasing reversibility in some cases, and substitute for the skewable axle, as a correction for side draft, an even older means to accomplish the same purpose. The question of aggregation aside, no invention was required to make this substitution.

It is urged that a skewable rear axle and tiltable wheels do not function mechanically in the same manner, nor operate to accomplish the result in the same way, and therefore cannot be considered mechanical equivalents; that a patent may issue for a combination notwithstanding the fact that all the elements were old, provided the combination be new; that the utility of the present combination is manifest, and was not obvious to those skilled in the art, for the shiftable, skewable rear axle and the tiltable rear wheels had been separately known and used for years, and it had occurred to no one to combine them in the same machine, or to substitute the tiltable rear wheels for the skewable axle; that the shiftable axle and tiltable wheels co-operate to produce a new grader which both permits the tracking of front and rear wheels on the same side and overcomes side draft when so operating, to a degree and in a manner unknown to the prior art; and that the total result is a grader which would do a greater amount and more kinds of work than any previously known. These contentions are all urged in answer to the defense of aggregation, except the claim that the advantages of the combination were not obvious to one skilled in the art, and that more than mechanical skill was involved. To this last position alone need we direct attention.

[1, 2] We see no patentable distinction between the laterally-shiftable moldboard, with the relatively shiftable front and rear axles, and tiltable wheels, of the patent to Adams, No. 1,014,989, and the shiftable rear axle and tiltable wheels of the patent in suit. Invention is not involved either in transferring shiftability from the front to the rear axle, or in the use of a shiftable rear axle, old in the art, in combination with the equally old device of tilting wheels to correct side draft. Probably the specific mechanical means of rack bar, gears, pinions, levers, etc., employed by appellants, if new, might have been made the subject of patent for a rear axle which permitted tilting of the wheels and was also shiftable; but the selection and putting together of the most desirable parts of different machines in the same art, where each separate part is selected solely to perform the obvious purpose for which it was used in the prior art, is not invention, but rather the evolution of the mechanical

ability of one skilled in that particular art. *Huebner-Toledo Breweries Co.* v. *Mathews Gravity Carrier Co.*, 253 F. 445, 447 (C. C. A. 6); *Excelsior Steel Furnace Co.* v. *Williamson Heater Co.*, 286 F. 131, 133 (C. C. A. 6); *Thompson* v. *Boisselier*, 114 U. S. 1, 11, 5 S. Ct. 1042, 29 L. Ed. 76; *R. R. Supply Co.* v. *Elyria Iron & Steel Co.*, 244 U. S. 285, 292, 37 S. Ct. 502, 61 L. Ed. 1136. In this connection it should be remarked that none of the claims in suit is limited to the mechanical means employed in constructing the rear axle, but each claims to cover broadly any road grader having both features of shiftable axle and tiltable wheels, by or through whatever mechanisms the result may be accomplished.

Several answers are suggested to the contention of the appellants that invention is disclosed by commercial success and the fact that the elements of a shiftable rear axle and tiltable wheels were both separately known to the trade for many years before it occurred to Adams to combine them in one machine, and yet no other person conceived the idea. It may be that the mere desirability of a shiftable rear axle, which, as we have said, has a very limited necessity in use, was regarded as presenting mechanical problems, the solving of which was not considered worth while. Most users of graders purchase them for a particular type of open work in which a shiftable rear axle might be a convenience, but is not an essential, and it may be that the additional expense incident to producing such a construction was considered as negativing probability of a broad market. The commercial success of appellants' machinery, and the greatly increased use of such graders, are largely attributable to the development of cheap tractors as a motive power, supplanting horses, and to the tremendous activity in road building which came with the use of the automobile. Commercial success, and delay by others in applying their mechanical ability, are thus not as indicative of invention in this case as in many others.

[3] Furthermore, the question of invention must be approached from the standpoint of one skilled in the particular art, not merely one of reasonable mechanical ability in other arts, and consideration must be given to the nature of the problem confronting the patentee. The applicant for a patent is presumed to know of all devices which have already been patented or the subject of prior public use. The only practical solution to correct side draft, and the one in universal use at the time of application for the patent in suit, was the tiltable wheel. The problem which confronted Adams was, therefore, given the shiftable rear axle of the prior art, assuming the desirability of using such an axle in a grader, and apart from the specific mechanical means to be employed in accomplishing the result, how could side draft best be corrected? The only conceivable answer from one skilled in the art would have been "by the use of the common and well-known tiltable wheel, if mechanical means for its use upon a shiftable axle could be devised." To the extent and breadth of the claims in suit, therefore, the patent demonstrates only mechanical ability and not invention. *Concrete Appliances Co.* v. *Gomery*, 269 U. S. 177, 342 O. G. 507, 68 L. Ed. 858.

Being convinced, as we are, of the invalidity of the claims for the reasons above stated, it becomes unnecessary to pass upon the questions of aggregation or the anticipation of claims 20 and 26. The latter present no new feature, and whether they are anticipated or not becomes immaterial.

Judge Knappen participated in the hearing, consideration, and conference in this case, and was engaged in the preparation of an opinion at the time of his death. He therefore did not participate in the preparation of this opinion, although he had expressed his tentative concurrence in the result now announced.

The decree of the district court is affirmed.

U. S. Circuit Court of Appeals—Seventh Circuit

BLAZEK *v.* X-L REFRIGERATING CO. ET AL.

No. 4,267. Decided June 10, 1930

[41 F.(2d) 453]

PATENTABILITY—REFRIGERATING SYSTEM.

Blazek patent for a refrigerating system, claim 5, *Held* invalid as involving nothing more than the rearrangement of the compartments of the structure shown in a prior patent.

APPEAL from the District Court of the United States for the Eastern Division of the Northern District of Illinois.

Patent infringement suit by Joseph Blazek against the X-L Refrigerating Company and another. From a decree dismissing suit, plaintiff appeals.

Affirmed.

Mr. Samuel W. Banning for the appellant.

Mr. C. Paul Parker and *Mr. Earl C. Carlson* for the appellees.

Before ALSCHULER and EVANS, Circuit Judges, and LINDLEY, District Judge.

EVANS, *Cir. J.*:

This appeal is from a decree dismissing appellant's suit brought to recover damages arising out of the alleged infringement of Patent No. 1,553,846, dated September 15, 1915, and covering a refrigerating system. Appellees' defenses were built on alleged noninfringement and invalidity. To support their claim of invalidity, appellees assert (*a*) that the invention was anticipated, (*b*) prior public use, and (*c*) that the inventor, Blazek, obtained his ideas respecting the invention from one Bloom, who was the inventor, if the structure was in fact patentable.

The cause was referred to a master who found that the defense of prior public use was not established, but that the structure embodied in claim 5, the only one in issue, did not, in view of the prior art, constitute invention. Upon exceptions to the master's report, the cause was presented to the district judge who found not only that the patent was invalid for want of patentable novelty over the prior art, but also that the patent was not infringed if valid.

In our opinion, the defense of invalidity for want of patentable novelty is the only one that requires consideration.

In his specifications patentee says that his system is one—

> which utilizes jets of cold brine or other refrigerating medium for the purpose of cooling the air within the compartment wherein perishable articles are stored, and for the purpose of establishing air currents which will tend to withdraw the warmer air from the upper portions of the chamber or compartment, and, after cooling the same, recirculate the air back to the starting point.

It—

> is peculiarly adapted for use in the construction of refrigerating display counters, in that it permits the use of the entire upper portion of the counter for display purposes, and obviates the necessity for providing ice chambers, or the like, which will interfere with the display of goods and are otherwise objectionable, since they frequently interfere with easy access to the goods on display.

Claim 5 reads:

> In a refrigerating counter, a structure having means for dividing it into a relatively high and capacious display compartment for the housing of perishable articles, and a relatively low and restricted underlying spraying space, said spraying space being in communication at each end with the overlying display compartment through air upflow and downflow passages respectively, a spraying pipe adapted to discharge into the spraying space and located in proximity to the downflow air passage, and provided on the side fronting the spraying space with a discharge opening toward said space adapted to direct the flow of a jet of cooling liquid beneath the base of the display compartment to induce air currents through the relatively restricted spraying space and upwardly through the air upflow passage toward which the jet is directed and to cause said air currents to return through the downflow air passage, the base of the spraying space being provided with a drain passage, a brine cooling tank in communication with said drain passage, and a pump in communication on its intake side with the brine tank and on its discharge side with the spray pipe, and means for operating the pump, subetantially as described.

Two patents, one to Gardner and one to Moorehead, are enlightening. The latter covered a refrigerator showcase of several compartments. It is for the display of meats, vegetables, etc. The upper compartment was the display case. Another compartment, somewhat smaller and located below, held a cake of ice. Adjacent to this lower compartment and opening into it was one containing an electrically operated fan which drove the air from the ice compartment up through an opening leading to the display compartment, across it, and down an opening in the floor of the same compartment on the opposite side. The Gardner patent also covers refrigerating apparatus necessitating the use of compartments and the propelling of air cooled by sprays of chilled brine driven by a motor through nozzles. It differs from the patent in suit in two respects. First, its cooling chamber is located at the top while Blazek's is at the bottom of the counter. Likewise, it was not intended for a display counter, but merely refrigeration.

Both structures, however, broadly speaking, made use of compartments, one to store the meat to be displayed and one for holding the cooling material. Each used a motor to drive cooled salt brine through sprays thereby cooling the air and forcing this chilled air through an opening or air passageway in the wall that separates the two compartments and over and across the food and out another air passageway at the opposite end of the food compartment and back to the starting place. Appellant, it is true, has this latter apartment divided into two separate compartments, one above the other. This is an immaterial difference, however, and one that appellant cannot insist upon for appellees' structure differs from appellant's in that it has but one compartment for its cooling and spraying devices.

If Gardner's structure was turned upside down, we would have appellant's structure. The district court held that because appellees' system did not have the three compartments it did not infringe. But setting this distinction to one side as nonessential, we have in Gardner's system inverted, the appellant's structure. Appellant, by this structure, placed his compartment holding the food at the top. Gardner had no such thought but merely sought to cool the food. To relocate the compartment holding the meat and place it at the top of the counter so that it could be used as a display counter, and place the spraying compartment below instead of above the compartment containing the meat, did not, in our opinion, constitute invention.

The decree is affirmed.

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

1,012,820, C. B. Cory, Golf game; 1,391,306, R. Eliaser, Game; 1,578,415, Mendes and Lanners, Toy golf game, D. C., E. D. Mich., S. Div., Doc. 2531, *Chester-Pollard Amusement Co., Inc.*, v. *H. B. Leinbach*. Dismissed for want of prosecution Oct. 21, 1930.

1,020,593, J. W. Aylsworth, Phenolic condensation product and method of preparing same; 1,098,608, same, Enamel lacquer or varnish; 1,038,475, L. H. Baekeland, Process of making insoluble bodies derived from phenol alcohols, D. C. Inc., S. D. N. Y., Doc. E 46/74, *Bakelite Corp.* v. *General Plastics, Inc.*, all patents held valid; 1,098,608 also held infringed Oct. 28, 1930.

1,031,864, H. Pauling, Method of concentrating aqueous solutions of nitric acid, D. C. Del., Doc. E 733, *Southern Electro Chemical Co.* v. *Tibiss Artificial Silk Co. of America*. Consent decree dismissing bill Oct. 30, 1930.

1,038,475. (See 1,020,593.)

1,087,017, M. Houdaille, Shock absorber; 1,426,115, A. B. Shults, same, D. C., E. D. Mich., S. Div., Doc. 3386, *Houde Engineering Corp.* v. *Gabriel Snubber Mfg. Co., Inc., et al.* Dismissed under equity rule 57 Oct. 24, 1930.

1,092,870, Spillman and Mooers, Piston for explosion engines or motors; 1,153,902, G. E. Franquist, Piston; 1,402,309, L. P. Mooers, Piston for internal-combustion motor; 1,763,523, F. Jardine, Piston, filed Oct. 24, 1930, D. C., N. D. Ohio, E. Div., Doc. 3561, *The Cleveland Trust Co.* v. *The Lawrence-Ohio Co. et al.*

1,098,608. (See 1,020,593.)

1,125,476, G. Claude, System of illuminating by luminescent tubes, D. C., E. D. Mich., S. Div., Doc. 3170, *The Bellows-Claude Neon Co. et al.* v. *Walker & Co.* Dismissed by consent on merits Oct. 28, 1930.

1,128,145, Inwood and Lavenberg, Means for making box blanks, filed Oct. 29, 1930, D. C., S. D. Tex. (Houston), Doc. 422, *Wirebounds Patents Co. et al.* v. *Continental Wirebound Box Co.*

1,153,089, W. Jay, Fuel-feeding device for internal-combustion engines, D. C., E. D. Mich., S. Div., Doc. 3635, *W. Jay et al.* v. *National Products, Inc.* Dismissed under equity rule 57 Oct. 29, 1930.

1,153,775, F. Gailer, Book-sewing machine, filed Oct. 27, 1930, D. C., S. D. N. Y., Doc. E 56/157, *W. H. Rodemacher & Son Co. et al.* v. *Dess & Talan Co., Inc.*

1,153,902. (See 1,092,870.)

1,180,856, 1,180,858, C. F. Lefever, Liquid gun, D. C., E. D. Mich., S. Div., Doc. 3297, *Daisy Mfg. Co.* v. *All-Metal Products Co.* Dismissed by consent on merits Oct. 24, 1930.

1,180,858. (See 1,180,856.)

1,225,051, H. M. Peters, Portable electric lamp, filed Oct. 24, 1930, D. C. Conn. (New Haven), Doc. E 2095, *Faries Mfg. Co.* v. *Greist Mfg. Co.*

1,276,920, F. F. Hopkins, Refuse burner, D. C. Wash. (Seattle), Doc. 612, *F. F. Hopkins* v. *Springer Mill Co. et al.* Injunction granted Oct. 28, 1930.

1,290,060, A. J. Boland, Enameling furnace, D. C., E. D. Mich., S. Div., Doc. 2765, *A. J. Boland* v. *Victor-Peninsular Co.* Dismissed for want of prosecution Oct. 23, 1930.

1,352,506, E. E. Fowler, Filing and indexing equipment, filed Nov. 1, 1930, D. C., S. D. Ohio, W. Div., Doc. —, *Postindex Co., Inc.*, v. *International Visible Systems Corp.*

1,391,306. (See 1,012,820.) 1,402,309. (See 1,092,870.)

1,426,115. (See 1,087,017.)

1,449,449, J. H. Sayres, Line-throwing gun, D. C., S. D. N. Y., Doc. E 27/286, *J. H. Sayres* v. *Stewart Davit & Equipment Corp.* Consent decree for plaintiff Oct. 31, 1930.

1,534,478, W. J. Wiswall, Manifolding book, filed Oct. 29, 1930, D. C., S. D. Calif., C. Div., Doc. S–63–C, *American Sales Book Co.* v. *R. M. Breeden (Los Angeles Register & Printing Co.).*

1,556,314, J. D'Orio, Game, filed Oct. 28, 1930, D. C., W. D. Wash., N. Div., Doc. 776, *J. D'Orio* v. *G. B. Graham & Co., Inc.*

1,559,520, T. M. Fairbairn, Putting green and similar playing surface, filed Aug. 18, 1930, D. C., E. D. Pa., Doc. 6183, *National Pipe Products Corp. et al.* v. *A. L. Martin.*

1,564,378, H. Stein et al., Bleached and dyed furs; 1,573,200, same, Process of bleaching and dyeing furs, D. C., S. D. N. Y., Doc. E 53/184, *Steinfur Patents Corp.* v. *P. Singer & Bro. et al.* Discontinued Oct. 29, 1930.

1,573,200. (See 1,564,378.) 1,573,415. (See 1,012,820.)

1,592,030. (See 1,698,566.)

1,597,358, O. H. Hansen, Can-filling machine, filed Oct. 30, 1930, D. C., E. D. Wis. (Milwaukee), Doc. 3017, *Hansen Canning Machinery Corp.* v. *Rockfield Canning Co.*

1,600,324, A. Dorsey, Switch mechanism; 1,751,542, same, Clock, filed Oct. 25, 1930, D. C., S. D. N. Y., Doc. E 56/156, *A. Dorsey* v. *Crannell, Nugent & Kranzer.*

1,630,639, T. M. Taylor, Drip sheet, filed Oct. 30, 1930, D. C., S. D. N. Y., Doc. E 56/184, *Keystone Roofing Mfg. Co.* v. *Levitan Co.*

1,641,620, H. P. Brown, Continuous interfold packet; 1,736,427, E. K. Bottle, Construction facilitating multiple carbon separation and control, filed Oct. 30, 1930, D. C., S. D. N. Y., Doc. E 56/185, *American Sales Book Co., Ltd.*, v. *The Autographic Register Co.*

1,669,640, B. C. Warlick, Indoor golf, D. C., S. D. N. Y., Doc. E 55/390, *B. C. Warlick et al.* v. *T. Speed.* Consent decree for plaintiff Oct. 30, 1930.

1,689,732. (See Re. 16,422.) 1,691,661. (See Re. 16,422.

1,698,566, R. J. Simpson, Case for measuring tapes; Des. 71,257, same, Measuring tape; 1,592,030, A. Langsner, Tape reel, D. C. Del., Doc. E 727, *The L. S. Starrett Co.* v. *E. Dietzgen Co.* Consent decree dismissing bill Oct. 30, 1930.

1,702,318, P. J. Rossman, Claim check for parking stations, D. C., E. D. Wis. (Milwaukee), Doc. 2874, *Badger Auto Service Co., Inc.*, v. *Central Parking Stations, Inc.* Decree for plaintiff Oct. 24, 1930.

1,730,399, C. P. Wetmore, Reamer, D. C., E. D. Wis. (Milwaukee), Doc. 2898, *Wetmore Reamer Co.* v. *Waukesha Tool Corp.* Consent decree dismissing bill Oct. 28, 1930.

1,731,967, L. J. Antonsen, Paper excelsior machine, filed Sept. 22, 1930, D. C., N. D. Calif. (San Francisco), Doc. 2689–S, *L. J. Antonsen* v. *J. Scherman (Western Paper Stock Co.).*

1,736,427. (See 1,641,620.) 1,751,542. (See 1,600,324.)

1,763,523. (See 1,092,870.)

Re. 16,422, O. Johnson Adhesive; 1,689,732, 1,691,661, Laucks and Davidson, Vegetable glue and method of making same, D. C., W. D. Wash., N. Div., Doc. (374) 691, *I. F. Laucks, Inc.*, v. *G. H. Osgood et al.* Decree for plaintiff Oct. 20, 1930. Doc. (379) 690, *L. F. Laucks, Inc.*, v. *Balfour Guthrie & Co. et al.* Decree as above.

Re. 16,736, H. O. McMillan, Clamp for concrete-column forms, filed Oct. 29, 1930, D. C., S. D. Ohio, W. Div., Doc. E 709, *H. O. McMillan (M. & M. Wire Clamp Co.)* v. *The H. W. Roos Co.*

Des. 71,257. (See 1,698,566.)

T. M. 87,202, General Roofing Mfg. Co., Roofing; T. M. 103,781, same, Merchandise, appeal filed May 27, 1930, C. C. A., 3d Cir., Doc. 4432, *Certain-Teed Products Corp.* v. *Philadelphia & Suburban Mortgage Guarantee Co.*

Notices of Cancellation

U. S. PATENT OFFICE, *Washington, Dec. 8, 1930.*

William M. Grant & Son, their assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Peck & Peck, 587 Fifth Avenue, New York, N. Y., to effect the cancellation of the trade-mark registration of William M. Grant & Son, of 31–33 South Market Street, Johnstown, N. Y., No. 170,123, dated July 10, 1923, and the notice of such proceeding sent by registered mail to the said William M. Grant & Son, at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said William M. Grant & Son, their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Dec. 9, 1930.*

G. C. Mitchell Co., Inc., its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Kranish Bros., Inc., of 10 West Thirty-seventh Street, New York, N. Y., to effect the cancellation of the trade-mark registration of G. C. Mitchell Co., Inc., No. 238,289, dated January 31, 1928, and the notice of such proceeding sent by registered mail to the said G. C. Mitchell Co., Inc., at the said address having been returned by the post office undeliverable, notice is hereby given that unless said G. C. Mitchell Co., Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Dec. 11, 1930.*

The Jell-X-Cell Co., its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Jesse C. Stewart Co., 568–580 South Aiken Avenue, Pittsburgh, Pennsylvania, to effect the cancellation of the trade-mark registration of The Jell-X-Cell Co., of 1360 Allison Avenue, Los Angeles, Calif., No. 217,892, dated September 14, 1926, and the notice of such proceeding sent by registered mail to The Jell-X-Cell Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless The Jell-X-Cell Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, DECEMBER 23, 1930

[VOL. 401. No. 4]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 301,454. INDIANA LIMESTONE COMPANY, Bedford, Ind., and New York, N. Y. Filed May 28, 1930.

ILCO UNIVERSITY RUSTIC

For Building Stone as It Comes from the Quarry.
Claims use since May, 1926.

Ser. No. 307,250. THE BRENWITT COAL & COKE CO., Toledo, Ohio. Filed Oct. 28, 1930.

SUNBRITE
TENNESSEE COAL
Nature's Work of Perfection

The words "Tennessee Coal" and "Perfection" are disclaimed apart from the mark shown.
For Coal.
Claims use since August, 1925.

Ser. No. 307,614. THE AMERICAN BRIQUET COMPANY, Philadelphia, Pa. Filed Nov. 7, 1930.

MYSTIC BRIQUETS

The exclusive use of the word "Briquets" is disclaimed except in connection with the trade-mark as shown.
For Coal Briquets.
Claims use since Nov. 3, 1930.

CLASS 2

Receptacles

Ser. No. 301,862. THE C. B. DOLGE CO., Westport, Conn. Filed May 31, 1930.

DEODORATOR

For Wall Diffusers for Deodorizing Blocs.
Claims use since January, 1927.

CLASS 3

Baggage, Animal Equipments, Portfolios, and Pocketbooks

Ser. No. 307,473. BLOOMINGDALE BROS., INC., New York, N. Y. Filed Nov. 3, 1930.

Plaza
WARDROBE TRUNK
Bloomingdale's

Applicant disclaims the words "Wardrobe Trunk."
For Trunks.
Claims use since Oct. 3, 1930.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 280,355. HENRY SEGALL, doing business as Arnold Pharmacal Company, New York, N. Y. Filed Mar. 6, 1929.

KEMAPURE

For Olive-Oil Shampoo, Nail Polish, Skin and Tissue Emollient.
Claims use since Apr. 15, 1928.

Ser. No. 287,982. E. R. SQUIBB & SONS, New York, N. Y. Filed Aug. 1, 1929.

The drawing is lined for brown, the mark being usually of that color, but other colors are also employed on occasion.

For Absorbents, Allergens, Alteratives, Analeptics, Analgesics, Anesthetics, Anodynes, Antacids, Anthelmintics, Antiarthritics, Antichlorotics, Antiemetics, Antiepileptics, Antigalactagogues, Antigonorrheics, Antihidrotics, Antilithics, Antineuralgics, Antiparasitics, Antiperiodics, Antiphlogistics, Antipyretics, Antirheumatics, Antiseptics, Antisialagogues, Antispasmodics, Antisyphilitics, Antitoxins, Antizymotics, Aperients, Astringents, Biological Reagents, Cardiac Depressants, Sedatives, and Stimulants, Carminatives, Cathartics, Cerebral Depressants and Stimulants, Cholagogues, Constructives, Corrigents, Counterirritants, Demulcents, Deodorants, Deoxidizers, Depilatories, Depressants, Diaphoretics, Digestives, Diphtheria Products, Discutients, Disinfectants, Diuretics, Ecbolics, Emetics, Endocrines, Errhines, Escharotics, Expectorants, Galactagogues, Gastric Tonics, Hemostatics, Hormones, Hypnotics, Irritants, Laxatives, Hematinics, Hepatic Stimulants, Motor Depressants, Motor Excitants, Mydriatics, Myotics, Narcotics, Nervines, Nutrients, Oxytocics, Pollen Extracts, Prophylactics, Ptyalagogues, Purgatives, Pustulants, Refrigerants (Medicinal), Rabies Vaccine, Resolvents, Respiratory Depressants and Stimulants, Restoratives, Rubefacients, Scarlet-Fever Products, Sedatives, Serums, Sialagogues, Soporifics, Sternutatories, Stomachics, Styptics, Sudorifics, Teniafuges, Thromboplastin, Tonics (General), Urinary Antiseptics, Vasoconstrictors, Vasodilators, Vascular Sedatives, Vaccines (Bacterial), Vermicides, Vesicants, Veterinary Products; Chemicals and Drugs—Specifically; Acacia, Acetphenetidin; Acids—Namely, Acetylsalicylic, Boric, Hydriodic; Amidopyrine, Ammonium Carbonate, Ammonium Chloride; Ampuls—Namely, Camphor, Ergot, Glycerophosphates Compound, Iron Arsenite, and Strychnine, Iron Citrate Green, Mercury Salicylate, Sodium Cacodylate; Analgesic Balm, Antiseptic Powder, Aromatic Cascara, Balsam Peru, Barbital Powder, Barium Sulphate, Bath Toilet Powder, Benedict's Test Solution, Benzoinated Cream, Bismuth Subcarbonate, Bismuth Subgallate, Bismuth Subnitrate, Brown Mixture Modified, Caffeine Citrated, Calcium Phosphate, Carlsbad Salt (Artificial), Castor-Oil Aromatic, Castor-Oil Tasteless, Chloramine, Chloramine Surgical Paste, Chloroform, Chloroform Dropping Ampul, Cinchophen Powder, Codeine Phosphate, Codeine Sulphate, Cod-Liver Oil, Cod-Liver Oil Mint-Flavored, Cod-Liver Oil for Poultry and Animal Husbandry, Cod-Liver Oil for Dogs, Cold Cream, Collodion Flexible, Compound Licorice Powder, Corn Collodion, Cream of Tartar, Dental Cream, Dental Lotion, Dextrose, Dusting Powder, Dextro-Vitavose, Emulsion Castor Oil, Ephedrin Preparations; Elixirs—Namely, Ammonium Valerate, Cuprifertum, Gentian Glycerinated, Glycerophosphates Compound, Apral, Iron, Quinine, and Strychnine, Iron, Quinine, and Strychnine Phosphate, Pepsin, Bismuth, and Strychnine, Terpin Hydrate, and Codeine; Ephedrine Hydrochloride, Epsom Salt, Epsom-Salt Special, Essence Pepsin, Ether, Ethyl Bromide; Extracts—Namely, Cascara Sagrada Powdered; First-Aid Cream, First-Aid Powder; Fluids and Fluid Extracts—Namely, Asclepias, Benzoin for Tincture, Buchu, Cascara Sagrada, Cascara Sagrada Aromatic, Cinchona, Colchicum, Ergot, Gentian Compound, Grindelia Soluble, Hyoscyamus (Henbane), Ipecac, Larkspur, Rose Soluble, Senega, Valerian; Glycerite Acid Tannic, Granular Effervescent Sodium Phosphate, Granular Effervescent Sodium Phosphate Compound (Antilithic), Hexamethylenamine, Hydrogen-ion Concentration Test Papers, Iodine Resublimed, Ipral Powder, Iron and Strychnine Citrate, Iron Peptonized and Manganese, Jalap, Lanoline (Toilet), Lead Acetate, Lime Hydrated; Liniments—Namely, Camphor, Soft Soap; Liquid Court Plaster, Liquid Petrolatum, Liquid Petrolatum with Agar, Litmus Paper; Lozenges—Namely, Benzoic Acid and Catechu Compound, Brown Mixture with Ammonium Chloride, Brown Mixture without Opium, Brown Mixture and Ammonium Chloride without Opium; Magnesia Oxide Heavy, Magnesia Oxide Light, Magnesium Carbonate, Magnesium-Hydroxide Suspensions, Manganese Hypophosphite, Menthol, Methyl Salicylate, Magnesia Wafers, Milk of Bismuth, Milk Sugar, Mixture Glycyrrhiza Compound without Opium, Mixture Rhubarb Compound, Morphine Sulphate, Neocinchophen, Novargentum; Ointments—Namely, Acid Boric, Blue, Mercury Ammoniated, Mercury Oxide Yellow, Prophylactic, Sulphur, White Petrolatum, Zinc; Opium Powdered, Petrolatum White, Petrolatum Yellow, Phenolphthalein, Potassium Acetate, Potassium Bitartrate, Potassium Bromide, Potassium Citrate, Potassium Iodide, Potassium Permanganate, Powder Jalap Compound, Protargentum, Rhubarb Powdered, Rhubarb and Soda, Rochelle Salt, Saccharin, Salol, Silver Nitrate, Silver-Nitrate Solution Wax Ampuls, Sodium Bicarbonate, Sodium Bromide, Sodium Chloride, Sodium Citrate, Sodium Glycocholate, Sodium Iodide, Sodium Phosphate, Sodium Salicylate, Sodium Sulphate, Solargentum; Solutions—Namely, Alkaline Aromatic, Antiseptic, Cresol Compound, Iron Iodide, Peptonized Iron and Manganese, Potassium Arsenate; Spirts—Namely, Ammonia Aromatic, Camphor, Ether Nitrous; Strontium Bromide, Suppositories, Glycerin (Adults), Suppositories, Glycerin (Infants' Long); Syrups—Namely, Acid Hydriodic, Hypophosphites Compound, Hypophosphites Compound Cloudy, White-Pine Compound; Tablets—Namely, Aspirin, Acid Arsenous, Acid Benzoic and Belladonna Compound, Aconite Fluidextract 1 Min., Aconite and Belladonna, Aconite and Colchicum Compound, Ammonium Chloride and Sanguinarine Compound, Antipyrine and Diacetylmorphine Compound, Asafetida, Barbital, Bismuth and Magnesia, Bismuth and Sodium Bicarbonate, Bismuth, Magnesia, and Sodium Bicarbonate, Bismuth Subnitrate, Blank, Borax and Sodium Salicylate Compound, Buchu Compound, Caffeine Compound, Calomel, Calomel and Soda, Cannabin Compound, Cannabis and Hyoscyamus Compound, Capsicum and Nux, Cascara Compound Hinkle, Cascara Sagrada Extract, Cathartic Compound, Cathartic Compound Improved, Cerium Oxalate and Cocaine Compound, Chloramine, Chlorodyne (Chocolate Coated), Chromium Sulphate, Cinchophen, Citabs, Codeine, Codeine Phosphate, Codeine Sulphate, Coryza (C) Modified, Cystitis, Digitalis, Dover's Powder and Aconite Compound, Dover's Powder and Belladonna Compound, Emmenagogue Improved, Ephedrine Hydrochloride, Glycerophosphates Compound, Helonias and Witch-Hazel Compound, Hexamethylenamine, Intestinal Antiseptic, Ipral, Iron, Arsenic, and Strychnine, Lithia Effervescent, Magnesia and Soda, Mercury Bichloride Compound (Bernay's Modified), Mercury Bichloride Compound (Wilson's), Mercury Iodide, Mercury and Iron, Migraine, Migraine Improved, Mixed Treatment No. 1, Morphine Sulphate, Neocinchophen, Nitroglycerin Compound "A", Occult Blood Test, Opium, Camphor, and Lead, Opium Extract, Opium Powder, Papain Compound, Phenacetin (Acetphenetidin), Phenolphthalein, Potassium Chlorate, Potassium Iodide, Potassium Permanganate, Protargentum, Quinine and Camphor Compound, Rhinitis, Rhubarb Compound, Saccharin, Santonin and Calomel, Santonin and Calomel "C", Sedative

(Dr. Baer), Sedative (Dr. Brown), Soda Mint, Serenium, Soda Mint and Pepsin, Sodium Bicarbonate, Sodium Chloride, Sodium Citrate, Sodium Iodide with Chocolate, Sodium Salicylate, Solargentum, Sparteine Sulphate, Strychnine Sulphate, Sumbul Compound (Dr. Goodell), Tartar Emetic and Ipecac (Dr. Fowler), Terpin Hydrate Compound "A", Thyroxin, Triple Bromides Effervescent, Urease, Uterine Astringent and Antiseptic; Hypodermic Tablets—Namely, Codeine Phosphate, Codeine Sulphate, Morphine Sulphate, Morphine and Atropine, Scopalamine (Hyoscine) Hydrobromide, Strychnine Nitrate, Strychnine Sulphate; Talcum Powders—Namely, Bouquet, Carnation, Nursery, Unscented, Violet; Talcum Purified, Thymol, Thyroxin (Crystalline); Tinctures—Namely, Aconite Stabilized, Asafetida, Belladonna, Benzoin Compound, Cantharides, Cinchona Compound, Digitalis, Gentian, Hyoscyamus, Iodine, Ipecac and Opium, Iron Chloride, Nux Vomica, Opium, Opium Camphorated, Strophanthus, Valerian, Veratrum Viride, Viburnum Opulus Compound; Tragacanth, Valerian, Vanishing Cream, Vinegar Tarragon, Vitavose, Zinc Oxide (Light), Zinc Sulphate, Cod-Liver Oil with Viosterol, Viosterol in Oil, Cod-Liver Oil with Viosterol Mint Flavored; Allergens—Namely, Various Individual and Group; Amniotin; Antibacterial Serums—Namely, Antimeningococcic, Antipneumococcic, Antistreptococcic, Antistreptococcic Rheumatic, Poliomyelitis Antistreptococcic; Arsphenamine Products—Namely, Ampuls Sterile Double-Distilled Water, Arsphenamine, Neoarsphenamine, Sulpharsphenamine, Solution of Arsphenamine; Autogenous Vaccines, Bacillus Bulgaricus; Biological Reagents—Namely, Antipara-Typhoid Serum "A" Antipara-Typhoid Serum "B", Antipneumococcic Serum, Antisheep Amboceptor, Antityphoid Serum, Para-Typhoid "A" Antigen, Para-Typhoid "B" Antigen, Syphilitic Antigen, Typhoid Antigen, Wassermann Reaction; Diphtheria Products—Namely, Diphtheria Antitoxin, Diphtheria Toxin for Schick Test, Diphtheria Toxin-Antitoxin Mixture, Diphtheria Toxoid; Erysipelas Antitoxin, Insulin, Leucocyte Extract, Loeffler's Blood-Serum Culture Medium, Normal Horse Serum, Parathyroid Hormone, Pituitary Solution, Poison-Ivy Toxol, Poison-Oak Toxol; Scarlet-Fever Products—Namely, Scarlet-Fever Streptococcus Antitoxin, Scarlet-Fever Streptococcus Antitoxin (Authorized) for Blanching Test, Scarlet-Fever Streptococcus Toxin (Authorized) for Dick Test, Scarlet-Fever Streptococcus Toxin (Authorized) for Active Immunization; Smallpox Vaccine, Tetanus Antitoxin, Thromboplastin Hypodermic, Thromboplastin Local; Bacterial Vaccines—Namely, Acne Vaccine, Catarrhal Vaccine Combined, Colon, Gonococcus, Gonococcus Combined, Influenza, Influenza Combined, Pneumococcus, Pneumococcus Streptococcus, Staph Acne, Staphylococcus, Staphylococcus Streptococcus, Staphylococcus Combined, Streptococcus, Typhoid Immunizing, Typhoid Combined Immunizing, Van Cott's Vaccine, Whooping-Cough Curative, Whooping-Cough Immunizing, Whooping-Cough Combined; Treatment Sets of Pollen Allergen Solutions, Pollen Allergen Solutions Diagnostic, Rabies Vaccine Pasteur, Rabies Vaccine Semple, Anticanine Distemper Serum, Canine Distemper Vaccine, Canine Rabies Vaccine, Leucocyte Extract, Tetanus Antitoxin Veterinary.

Claims use since May, 1917.

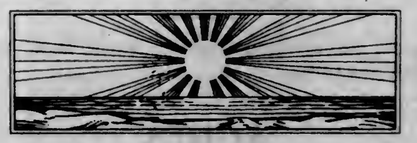
Ser. No. 290,505. MADAME DORDILLY DITE DURDILLY NÉE CLEMENCE JACOTIN, Paris, France. Filed Oct. 2, 1929.

L'ÉPILOR VÉGÉTAL

Applicant disclaims the word "Vegetal" apart from the mark shown.

For Hair-Removing Wax.

Claims use since Oct. 1, 1911.



Ser. No. 291,091. PAUL HARTMANN AKTIENGESELLSCHAFT, Heidelheim, Wurttemberg, Germany. Filed Oct. 15, 1929.

Kosmoplast

For Medicated Plasters, Cream for Preventing Sore Feet, Ointments and Creams for the Care of the Skin, Ointment for the Treatment of Wounds and Skin Ailments.

Claims use since Apr. 10, 1929.

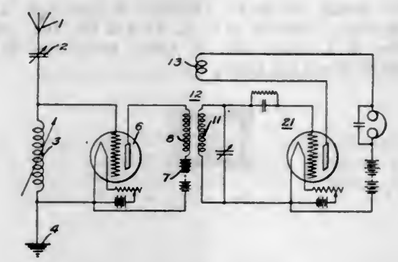
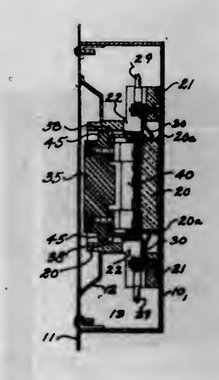
REISSUES



DECEMBER 23, 1930

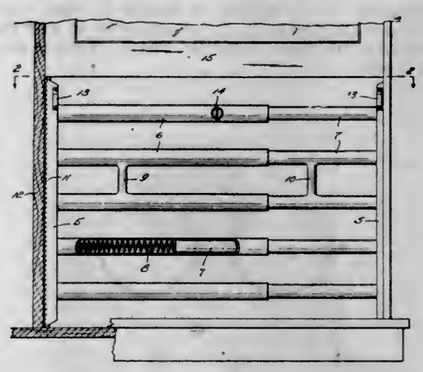
17,908. FURNACE AND METHOD OF BURNING FUEL. MILTON W. ARROWOOD, Greenwich, Conn., assignor to Universal Engineers, Inc., Worcester, Mass., a Corporation. Filed Feb. 14, 1929. Serial No. 339,964. Original No. 1,617,510, dated Feb. 15, 1927, Serial No. 490,529, filed Aug. 8, 1921. 41 Claims. (Cl. 263—40.)

39. The combination with a heating chamber provided with a hearth constructed to contain a shallow bath, of means for delivering at relatively low velocity to said chamber a swirling turbulent combustible mixture comprising air with fuel uniformly diffused therethrough.



17,909. RADIO RECEIVING SYSTEM. MAX C. BATSEL, Yonkers, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 29, 1930. Serial No. 492,002. Original No. 1,709,651, dated Apr. 16, 1929, Serial No. 634,762, filed Apr. 26, 1923. 4 Claims. (Cl. 250—20.)

1. A radio receiving system comprising a radio receptor circuit, a radio-frequency amplifier circuit, a regenerative detector adapted to receive oscillations from said receptor through said amplifier, and means for substantially preventing the transfer of oscillations in a reverse direction, said means comprising an oscillation transformer disposed between said amplifier circuit and said detector circuit, said transformer having a primary circuit the natural frequency of which is below the lowest radio-frequency which said receptor circuit is adapted and intended to receive.

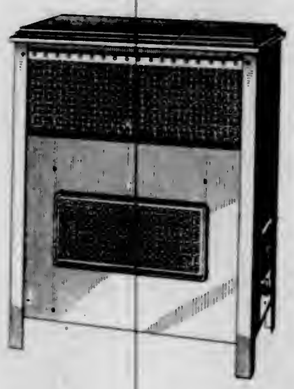


17,910. FUSED SWITCHING DEVICE. HARRISON J. L. FRANK, Detroit, Mich., assignor to Bull Dog Electric Products Company, Detroit, Mich., a Corporation of West Virginia. Filed June 9, 1930. Serial No. 460,069. Original No. 1,733,370, dated Oct. 29, 1929, Serial No. 160,751, filed Jan. 12, 1927. 22 Claims. (Cl. 200—133.)

1. In a fusing device, a cup-shaped socket of insulating material having ribs on opposite walls, contact members in the bottom of said socket on opposite sides of said ribs, a fuse block of insulating material having a rib thereon with fuse holding and contact means on either

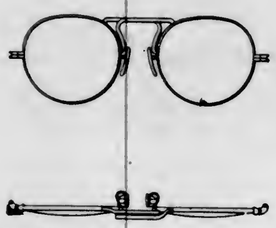
side thereof, said fuse block adapted to fit into said socket and make contact between said means and members with said ribs in alignment whereby to form a dividing wall between said fuses and contacts.

17,911. WINDOW GRATING. OTTO M. REXINGER, Beverly Hills, Calif. Filed May 12, 1930. Serial No. 451,771. Original No. 1,662,167, dated Mar. 13, 1928, Serial No. 157,565, filed Dec. 28, 1926. 6 Claims. (Cl. 20—71.)



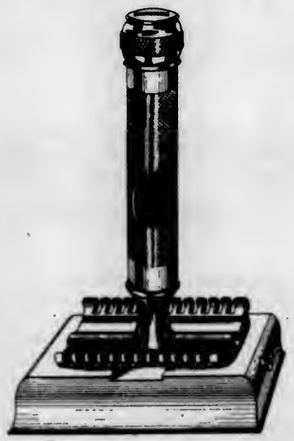
1. A device of the character described, comprising a pair of variably spaced parallel side members; a plurality of spaced pairs of telescopic members connecting and aligning the side members; springs within the outer telescopic members adapted for pushing the inner telescopic members outwardly to separate the side members; and means for locking the telescopic members in extended position.

DESIGNS



DECEMBER 23, 1930

82,870. SPACE HEATER. ALOYSIUS W. BECKER, Chicago, Ill., assignor to Econoheet Company, Chicago, Ill., a Corporation of Illinois. Filed July 11, 1930. Serial No. 36,328. Term of patent 14 years.

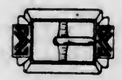


The ornamental design for a space heater, as shown.

82,871. SPECTACLE FRAME. SAMUEL E. BOUCHARD, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 28, 1930. Serial No. 35,415. Term of patent 14 years.

The ornamental design for a spectacle frame substantially as shown.

82,872. RAZOR-BLADE-VENDING-MACHINE CASING. ARTHUR J. BRANSTAD, Eau Claire, Wis. Filed Sept. 15, 1930. Serial No. 36,973. Term of patent 14 years.



The ornamental design for a razor blade vending machine casing, as shown.

82,873. SHOE BUCKLE. CHARLES W. BRIGHAM, Attleboro, Mass., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Oct. 4, 1930. Serial No. 37,127. Term of patent 3½ years.

The ornamental design for a shoe buckle as shown.

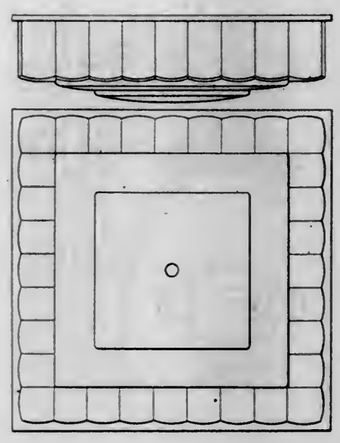
82,874. SHOE BUCKLE. CHARLES W. BRIGHAM, Attleboro, Mass., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Oct. 4, 1930. Serial No. 37,128. Term of patent 3½ years.

The ornamental design for a shoe buckle as shown.

82,875. SHOE BUCKLE. CHARLES W. BRIGHAM, Attleboro, Mass., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Oct. 4, 1930. Serial No. 37,129. Term of patent 3½ years.

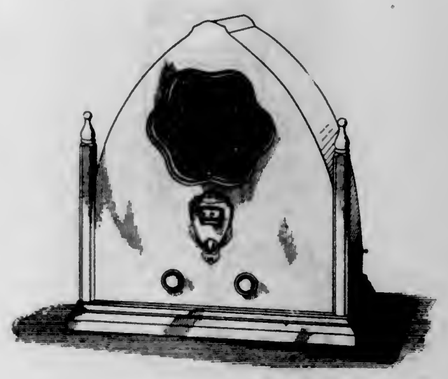
The ornamental design for a shoe buckle as shown.

82,876. SHOE BUCKLE. CHARLES W. BRIGHAM, Attleboro, Mass., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Oct. 4, 1930. Serial No. 37,131. Term of patent 3½ years.



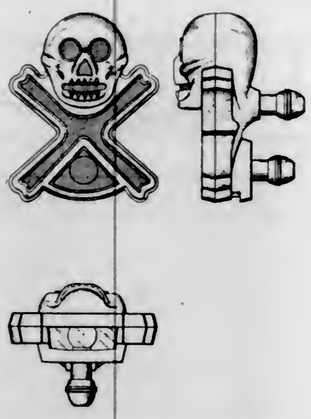
The ornamental design for a shoe buckle as shown.

82,877. LAMP. LE ROY O. BROWN, Chicago, Ill., assignor to Justrite Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 7, 1930. Serial No. 35,182. Term of patent 14 years.



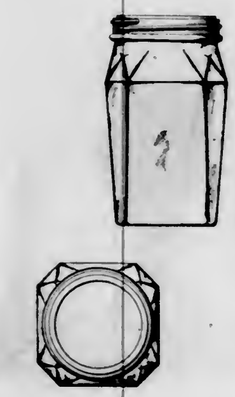
The ornamental design for a lamp as shown and described.

82,878. CEILING DIFFUSER CHANDELIER BOWL. KENNETH R. CRUMPTON, Pittsburgh, Pa., assignor to Kaufmann Department Stores, Inc., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 8, 1930. Serial No. 37,186. Term of patent 14 years.



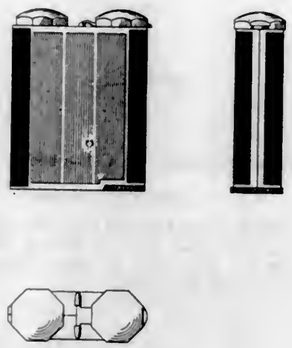
The ornamental design for a ceiling diffuser chandelier bowl, as shown.

82,879. RADIO CABINET. FRITZ W. FALCK, Los Angeles, Calif. Filed June 2, 1930. Serial No. 35,885. Term of patent 3½ years.



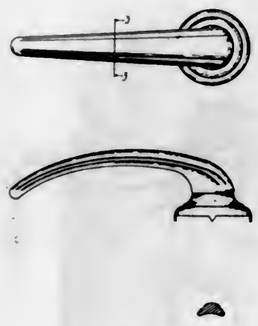
The ornamental design for a radio cabinet substantially as shown and described.

82,880. COMBINATION TAIL AND STOP LIGHT. ALEXANDER FISHER, Chicago, Ill. Filed Aug. 25, 1930. Serial No. 36,757. Term of patent 3½ years.



The ornamental design for a combination tail and stop light as shown and described.

82,881. JAR. EDWIN WENDELL FUERST, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 9, 1930. Serial No. 37,204. Term of patent 14 years.

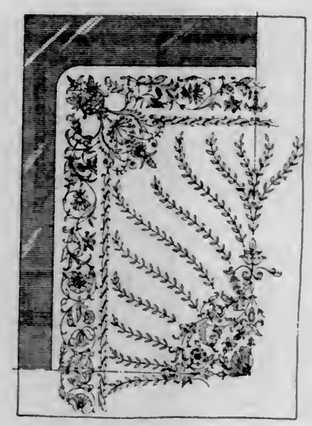


The ornamental design for a jar substantially as shown.

82,882. ATOMIZER. CHARLES S. GAGE, Tarrytown, and CHARLES T. MARDING, Elmhurst, N. Y., assignors to Lentheric, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1930. Serial No. 37,277. Term of patent 7 years.

The ornamental design for an atomizer substantially as shown.

82,883. MOTOR-VEHICLE-DOOR HANDLE OR SIMILAR ARTICLE. GEORGE GRAFF, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 28, 1930. Serial No. 35,423. Term of patent 14 years.

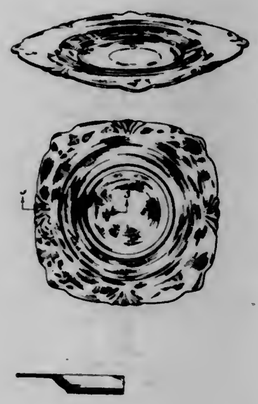


The ornamental design for a motor vehicle door handle or similar article substantially as shown.

82,884. TEXTILE PANEL FOR A MATTRESS COVERING. HERMAN HAUG, New York, N. Y., assignor to Rosemary Mfg. Co., Roanoke Rapids, N. C., a Corporation of North Carolina. Filed Mar. 22, 1930. Serial No. 35,001. Term of patent 3½ years.

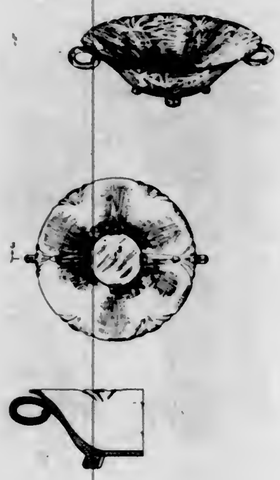
The ornamental design for a textile panel for a mattress covering, as shown and described.

82,885. TEXTILE PANEL FOR A MATTRESS COVERING. HERMAN HAUG, New York, N. Y., assignor to Rosemary Mfg. Co., Roanoke Rapids, N. C., a Corporation of North Carolina. Filed Mar. 22, 1930. Serial No. 35,002. Term of patent 3½ years.



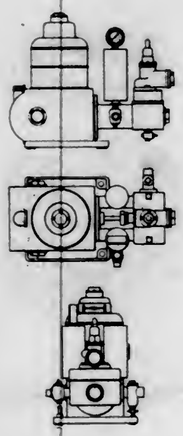
The ornamental design for a textile panel for a mattress covering as shown and described.

82,886. TEXTILE PANEL FOR A MATTRESS COVERING. HERMAN HAUG, New York, N. Y., assignor to Rosemary Mfg. Co., Roanoke Rapids, N. C., a Corporation of North Carolina. Filed Apr. 1, 1930. Serial No. 35,089. Term of patent 3½ years.



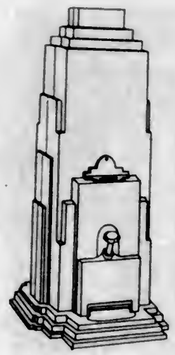
The ornamental design for a textile panel for a mattress covering, as shown and described.

82,887. GLASS PLATE OR ARTICLE OF SIMILAR NATURE. THOMAS CLARENCE HEISEY, Newark, Ohio, assignor to A. H. Heisey & Company, Newark, Ohio. Filed Oct. 27, 1930. Serial No. 37,400. Term of patent 14 years.



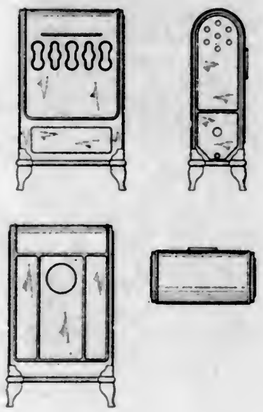
The ornamental design for a glass plate or article of similar nature as shown.

82,888. FLOWER BOWL OR ARTICLE OF SIMILAR NATURE. THOMAS CLARENCE HEISEY, Newark, Ohio, assignor to A. H. Heisey & Company, Newark, Ohio. Filed Oct. 27, 1930. Serial No. 37,401. Term of patent 14 years.



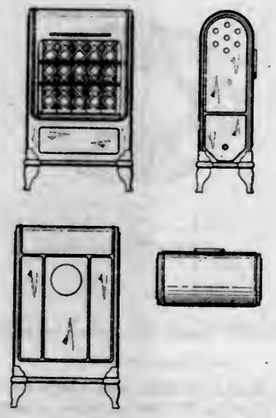
The ornamental design for a flower bowl or article of similar nature as shown.

82,889. CAR-WASHING PUMP. EDWARD A. HOBART, Troy, Ohio, assignor to The Hobart Bros. Company, Troy, Ohio, a Corporation of Ohio. Filed Sept. 16, 1930. Serial No. 36,987. Term of patent 7 years.



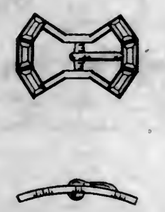
The ornamental design for a car washing pump, substantially as shown.

82,890. ARTICLE-DISPENSING MACHINE CASING. EDWARD KANTER and EMIL FELDMAN, Cleveland Heights, Ohio. Filed Aug. 27, 1930. Serial No. 36,792. Term of patent 14 years.



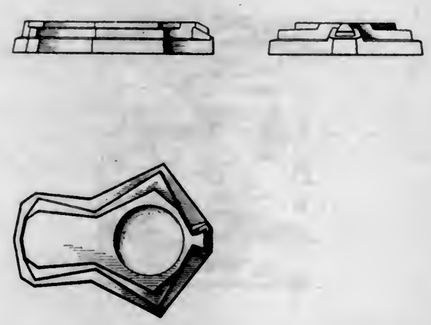
The ornamental design for an article dispensing machine casing, as shown.

82,891. GAS HEATER. HENRY KIELBERG, Martins Ferry, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed Oct. 25 1930. Serial No. 37,385. Term of patent 7 years.



The ornamental design for a gas heater, as shown.

82,892. RADIANT GAS HEATER. HENRY KIELBERG, Martins Ferry, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed Oct. 25, 1930. Serial No. 37,386. Term of patent 7 years.



The ornamental design for a radiant gas heater, as shown.

82,893. SHOE BUCKLE. CLIFFORD G. KING, Barrington, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Oct. 4, 1930. Serial No. 37,134. Term of patent 3½ years.

The ornamental design for a shoe buckle as shown.

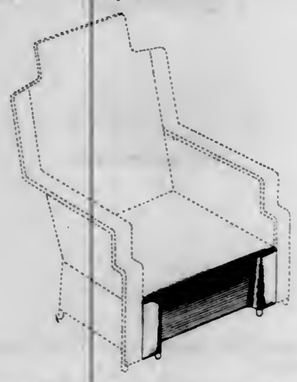
82,894. ASH TRAY OR THE LIKE. ALBERT KLEIN, New York, N. Y. Filed Dec. 26, 1929. Serial No. 33,917. Term of patent 3½ years.

The ornamental design for an ash tray or the like substantially as shown.

82,895. COLLAR HOLDER. BORIS BLECHER, Philadelphia, Pa. Filed Oct. 3, 1930. Serial No. 37,116. Term of patent 14 years.

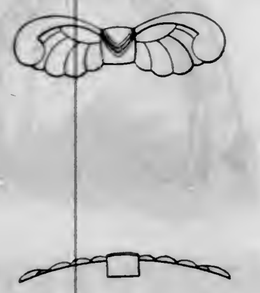
The ornamental design for a collar holder, substantially as shown.

82,896. BOTTLE RACK OR SIMILAR ARTICLE. CHARLES LIONEL MARCUS, New York, N. Y. Filed July 12, 1930. Serial No. 36,339. Term of patent 14 years.



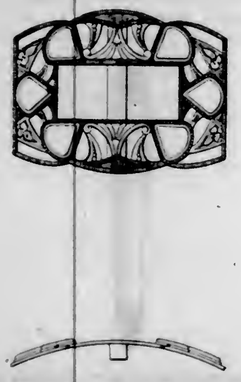
The ornamental design for a bottle rack or similar article, substantially as shown.

82,897. FOUNTAIN PEN OR SIMILAR ARTICLE. LOUIS MORRISON, New York, N. Y. Filed Apr. 4, 1930. Serial No. 35,159. Term of patent 7 years.



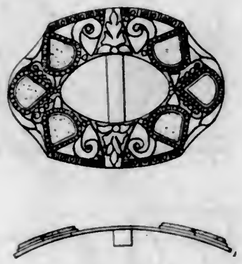
The ornamental design for a fountain pen or similar article as shown and described.

82,898. CHAIR OR THE LIKE. VINCENT OLIVA, New York, N. Y., assignor to Grand Central Wicker Shop, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 23, 1929. Serial No. 33 533. Term of patent 7 years.



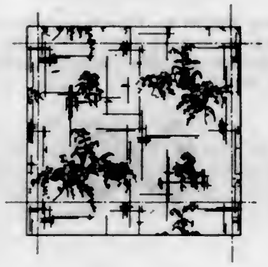
The ornamental design for a chair or the like, as shown.

82,899. SHOE ORNAMENT. ATTILIO R. PASCUCCI, Providence, R. I., assignor to Haverhill Shoe Novelty Company, Haverhill, Mass., a Corporation of Massachusetts. Filed Oct. 16, 1930. Serial No. 37,275. Term of patent 7 years.



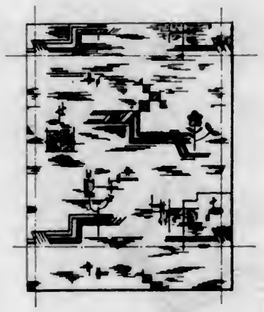
The ornamental design for a shoe ornament as shown.

82,900. SHOE ORNAMENT. ATTILIO R. PASCUCCI, Providence, R. I., assignor to Haverhill Shoe Novelty Company, Haverhill, Mass., a Corporation of Massachusetts. Filed Oct. 16, 1930. Serial No. 37,276. Term of patent 7 years.



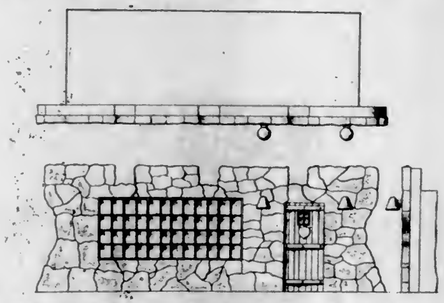
The ornamental design for a shoe ornament as shown.

82,901. SHOE ORNAMENT. ATTILIO R PASCUCCI, Providence, R. I., assignor to Haverhill Shoe Novelty Company, Haverhill, Mass., a Corporation of Massachusetts. Filed Oct. 17, 1930. Serial No. 37,282. Term of patent 7 years.



The ornamental design for a shoe ornament as shown.

82,902. WALL PAPER OR SIMILAR MATERIAL. JAMES G. PRAGER, Worcester, Mass., assignor to Prager Co., Inc., a Corporation of New York. Filed Mar. 17, 1930. Serial No. 34,935. Term of patent 3½ years.



The ornamental design for wallpaper or similar material as shown and described.

82,903. WALL PAPER OR SIMILAR MATERIAL. JAMES G. PRAGER, Worcester, Mass., assignor to Prager Co., Inc., a Corporation of New York. Filed Mar. 17, 1930. Serial No. 34,936. Term of patent 3½ years.

The ornamental design for wallpaper or similar material as shown and described.

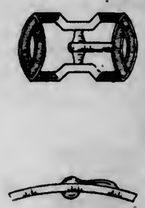
82,904. MERCHANDISE BOOTH. EARL S. PRINCE, Sterling, Ill., assignor to Prince & Company, Sterling, Ill., a Corporation composed of Earl S. Prince and Earl H. Prince. Filed June 13, 1930. Serial No. 36,043. Term of patent 14 years.

The ornamental design for a merchandise booth, as shown.

82,905. SHOE ORNAMENT. ORLANDO RICHARD RECCHIA, Cranston, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Oct. 4, 1930. Serial No. 37,133. Term of patent 3½ years.

The ornamental design for a shoe ornament, as shown.

82,906. SHOE BUCKLE. ORLANDO RICHARD RECCHIA, Cranston, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Oct. 20, 1930. Serial No. 37,323. Term of patent 3½ years.

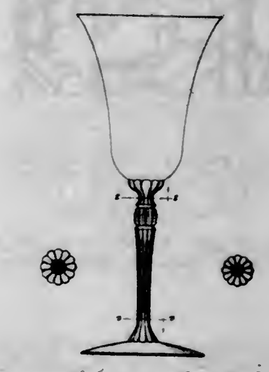


The ornamental design for a shoe buckle as shown.

82,907. SHOE BUCKLE. ORLANDO RICHARD RECCHIA, Cranston, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Oct. 20, 1930. Serial No. 37,324. Term of patent 3½ years.

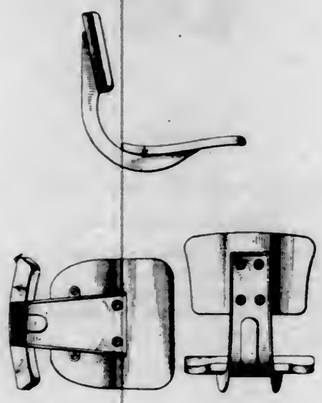
The ornamental design for a shoe buckle as shown.

82,908. SHOE BUCKLE. ORLANDO RICHARD RECCHIA, Cranston, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Oct. 20, 1930. Serial No. 37,325. Term of patent 3½ years.



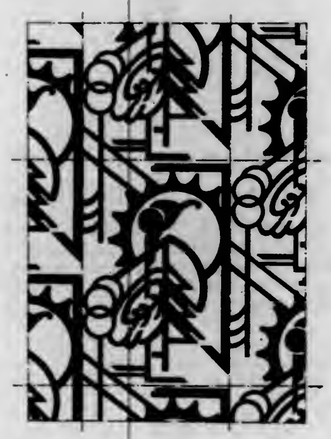
The ornamental design for a shoe buckle as shown.

82,909. GOBLET OR SIMILAR ARTICLE. GEORGE SAKIER, New York, N. Y., assignor to Fostoria Glass Company, Moundsville, W. Va., a Corporation of West Virginia. Filed Oct. 28, 1930. Serial No. 37,412. Term of patent 3½ years.



The ornamental design for a goblet or similar article, as shown.

82,910. GLASS GOBLET OR SIMILAR ARTICLE. EDWARD J. SCHAUB, Wheeling, W. Va., assignor to Central Glass Works, Wheeling, W. Va., a Corporation of West Virginia. Filed Oct. 28, 1930. Serial No. 37,411. Term of patent 3½ years.



The ornamental design for a glass goblet or similar article, as shown.

82,911. COMBINATION CHAIR SEAT AND BACK. JAMES RILEY SCHMIDT, Trenton, N. J., assignor to New Jersey Seating Co., New York, N. Y., a Corporation of New Jersey. Filed Sept. 10, 1929. Serial No. 32,715. Term of patent 14 years.

The ornamental design for a combination chair seat and back, as shown.

82,912. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. HULDA M. SCHWEER, New York, N. Y. Filed Aug. 16, 1930. Serial No. 36,690. Term of patent 7 years.

The ornamental design for a textile fabric or similar article of manufacture as shown and described.

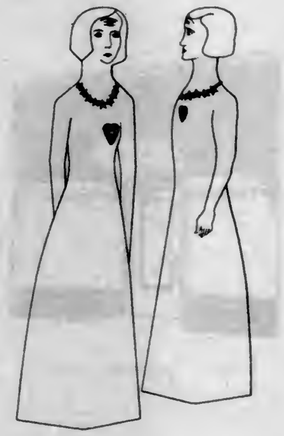
82,913. LINK CHAIN. OLIVER SELLE, St. Louis, Mo. Filed Aug. 6, 1930. Serial No. 36,575. Term of patent 7 years.

The ornamental design for a link chain, as shown.

82,914. CASING FOR AN IMPULSE-SENDING MACHINE. HANS SENGEBUSCH, Villa Park, Ill., assignor to Reserve Holding Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 19, 1930. Serial No. 35,314. Term of patent 14 years.

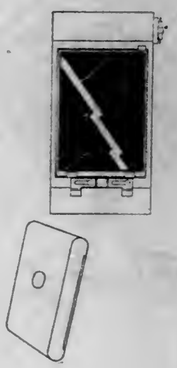
The ornamental design for a casing for an impulse sending machine, as shown and described.

82,915. CORNER CHINA CLOSET. GEORGE A. SIMONS and GEORGE FREEBERG, Minneapolis, Minn., assignors to Simons Millwork, Inc., Minneapolis, Minn., a Corporation of Minnesota. Filed May 24, 1929. Serial No. 31,395. Term of patent 14 years.



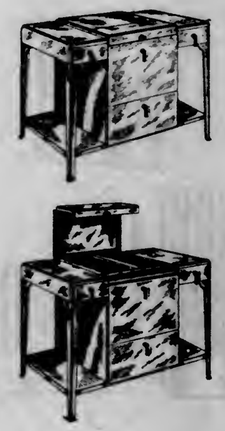
The ornamental design for a corner china closet as shown.

82,916. CORNER CHINA CLOSET. GEORGE A. SIMONS and GEORGE FREEBERG, Minneapolis, Minn., assignors to Simons Millwork, Inc., Minneapolis, Minn., a Corporation of Minnesota. Filed May 24, 1929. Serial No. 31,396. Term of patent 14 years.



The ornamental design for a corner china closet as shown.

82,917. DOLL. VIOLET D. STEINEMANN, Los Angeles, Calif. Filed Feb. 3, 1930. Serial No. 34,387. Term of patent 3½ years.

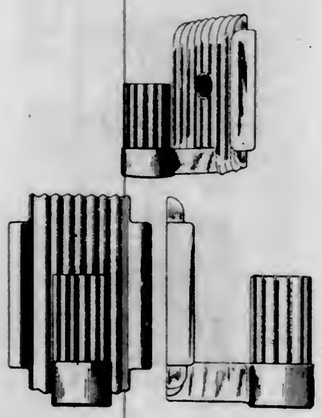


The ornamental design for a doll as shown.

82,918. CAMERA CASING OR THE LIKE. WALTER D. TEAGUE, New York, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 26, 1930. Serial No. 36,479. Term of patent 3½ years.

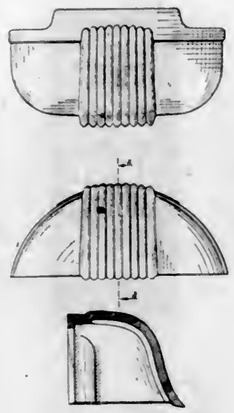
The ornamental design for a camera casing or the like, as shown and described.

82,919. CABINET GAS OR ELECTRIC RANGE. JACOB TELLER, Chicago, and ARTHUR P. SCHULZ, Berwyn, Ill., assignors to Teller Corporation, Chattanooga, Tenn., a Corporation of Tennessee. Filed Oct. 23, 1930. Serial No. 37,363. Term of patent 7 years.



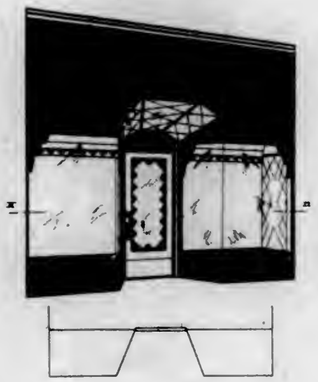
The ornamental design for a cabinet gas or electric range as shown.

82,920. ASH RECEIVER. VOLNEY WAYNE THOMSON, Portsmouth, Ohio. Filed Nov. 9, 1929. Serial No. 33,393. Term of patent 14 years.



The ornamental design for an ash receiver substantially as shown.

82,921. LIGHTING FIXTURE OR ARTICLE OF SIMILAR NATURE. WALTER VON NESSEN, New York, N. Y., assignor to Efcolite Corporation, Trenton, N. J. Filed May 24, 1930. Serial No. 35,746. Term of patent 7 years.



The ornamental design for a lighting fixture, or article of similar nature, as shown.

82,922. LIGHTING FIXTURE SHADE OR ARTICLE OF SIMILAR NATURE. WALTER VON NESSEN, New York, N. Y., assignor to Efcolite Corporation, Trenton, N. J. Filed Sept. 17, 1930. Serial No. 36,993. Term of patent 7 years.

The ornamental design for a lighting fixture shade or article of similar nature, as shown.

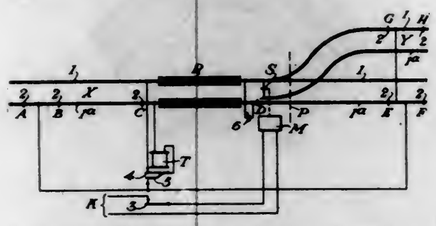
82,923. STORE FRONT. JACOB ROBERT WOLF, Pittsburgh, Pa., assignor to Smart Set Shops, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 26, 1929. Serial No. 33,168. Term of patent 3½ years.

The ornamental design for a store front, as shown.

82,924. WATER COOLER. RICHARD C. WOLFE, Los Angeles, Calif., assignor to California Consolidated Water Co., Los Angeles, Calif., a Corporation of Delaware. Filed Oct. 30, 1930. Serial No. 37,446. Term of patent 14 years.

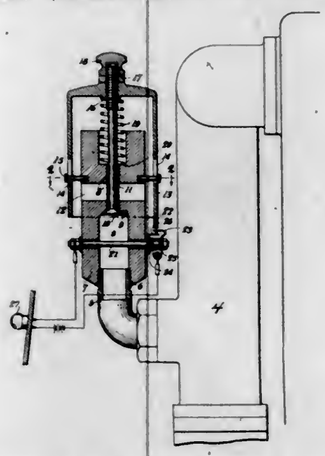
The ornamental design for a water cooler, as shown.

82,925. SHOE-HEEL COVER. JOSEPH BURGER, Brooklyn, N. Y. Filed Aug. 9, 1930. Serial No. 36,617. Term of patent 14 years.



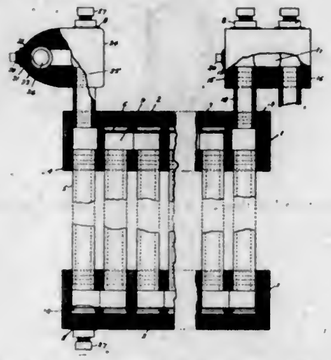
The ornamental design for a shoe heel cover, substantially as shown.

PATENTS



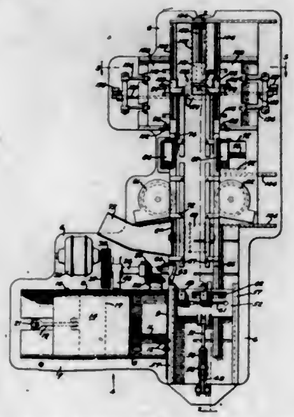
GRANTED DECEMBER 23, 1930

1,785,725. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. VINCENT S. ALEXANDER, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 17, 1930. Serial No. 453,358. 9 Claims. (Cl. 246—41.)



1. In combination, a stretch of railway track, one rail of which is divided by insulated joints to form a main section and at least one pick-up section, a track relay having a front and a back contact so adjusted that when the relay becomes energized the back contact does not open until after the front contact has closed, one terminal of the winding of said relay being connected with the divided track rail of said main section, means for connecting the other terminal with the undivided rail through said front contact or with the divided rail of the pick-up section through said back contact, and a source of current connected across the undivided rail and the divided rail of the main section.

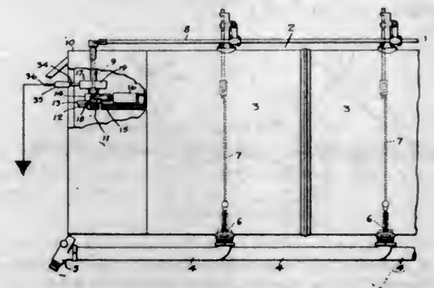
1,785,726. AIR-REGULATING DEVICE FOR INTERNAL-COMBUSTION ENGINES. ALEXANDER BALASH, Vaux Hall, N. J. Filed Mar. 9, 1929. Serial No. 345,850. 1 Claim. (Cl. 251—145.)



An automatic air regulating device comprising a block having communicating longitudinal and transverse passages, said block having a chamber opening into the longitudinal passage, a valve for closing the opening between the longitudinal passage and the chamber, a rod fixed to the valve and extending through the longitudinal passage, a casing surrounding the block and spaced apart therefrom, said block having slots in its sides, a boss on said casing in threaded engagement with an end of the rod, a spring between the boss and the block to normally maintain the casing in a predetermined position relative to the block, and pins projecting from the block and slidable in the slots in the casing to limit the movement of the latter.

1,785,727. END CONNECTER FOR TUBES. MATVEY A. CAPELIUSCHNICOFF, New York, N. Y., assignor of one-half to Vladimir G. Shukhoff, Moscow, Union of Soviet Socialist Republics. Filed Nov. 8, 1929. Serial No. 405,688. 4 Claims. (Cl. 122—360.)

1. In a tube end connecter, the combination with a block of an elongated shape provided with a plurality of transverse apertures, of plugs closing said apertures on one side of said block, said apertures on the other side of said block being adapted to receive the ends of tubes, said apertures inside of said block being eccentrically counterbored, said counterbores of each consecutive pair of said apertures merging into each other so as to form a communicating passage inside of said block between said adjacent apertures.

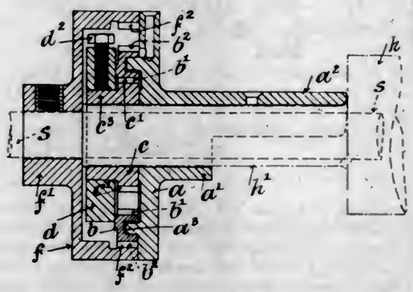


1,785,728. SPLINING MACHINE. CHARLES W. CARR and ELWOOD I. TRIPP, Susanville, Calif., assignors of one-fourth to Frank B. Hutchens, San Francisco, Calif., and one-fourth to Earl B. Birmingham, Susanville, Calif. Filed Apr. 16, 1928. Serial No. 270,453. 11 Claims. (Cl. 144—2.)

1. A device for applying a fluid in a groove, comprising a reservoir for the fluid, having a slot in register with

the groove, a strip arched over said slot and adapted to enter the groove, and means for feeding a grooved article past the slot.

1,785,729. SAFETY DEVICE FOR TANKS. AUGUSTINE DAVIS, Jr., Cincinnati, Ohio. Filed Nov. 4, 1927. Serial No. 231,116. 6 Claims. (Cl. 175—264.)

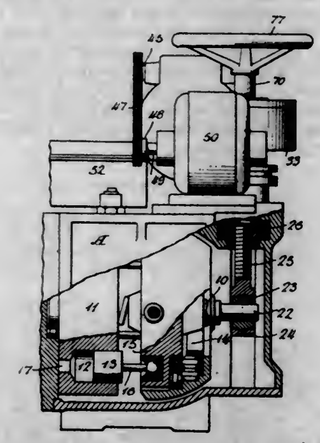


1. The combination of a tank having an outlet passage through which liquid is withdrawn from the lower portion of a tank, a valve for opening and closing said passage, a lock for preventing opening of said valve, and means adapted to be applied to release said lock and by such application to electrically ground the tank prior to the discharge of liquid from said outlet passage.

1,785,730. DI-ALKYL UREA. TENNEY L. DAVIS, Norwell, Mass. Filed Nov. 5, 1927. Serial No. 231,386. 7 Claims. (Cl. 260—125.) (Granted under the act of Mar. 3, 1883, 22 Stat L., 625.)

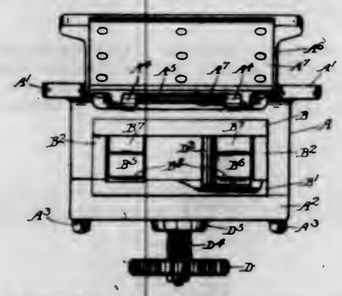
1. The process for the preparation of sym-di-alkyl ureas which consists in heating urea in the presence of a primary amine of the aliphatic series to a temperature of reaction.

1,785,731. DIFFERENTIAL MOTION FOR TRAVERSING CARD GRINDING ROLLERS. JAMES DRONSFIELD, Oldham, England. Filed Jan. 5, 1929, Serial No. 330,553, and in Great Britain Mar. 24, 1928. 4 Claims. (Cl. 74—7.)



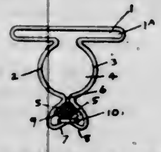
1. An enclosed differential motion for traversing card grinding rollers, comprising a stationary supporting plate, means for fixing said supporting plate against rotation, an eccentric ring projecting from said supporting plate, an intermediate pinion having an annular groove in one face thereof, said groove engaging said eccentric ring, said intermediate pinion having an external ring of teeth and an internal ring of teeth, a driving pinion having teeth in mesh with the internal ring of teeth on the intermediate pinion, said driving pinion having a boss, a rotatable hollow sleeve passing through said pinions, means for fixing said boss to said sleeve for rotation therewith, an exterior casing having a ring of internal teeth in mesh with a portion of the external teeth on the intermediate pinion, all of said rings of teeth being in radial alinement, a right and left-hand screw-threaded shaft mounted for rotation in said sleeve and passing through said casing, and means for fixing said casing on said shaft for rotation therewith.

1,785,732. FOUNTAIN BRUSH. JAMES FLOCKHART, San Francisco, Calif., assignor to The Flockhart Company, San Francisco, Calif., a Corporation of California. Filed Sept. 30, 1929. Serial No. 396,082. 5 Claims. (Cl. 15—139.)



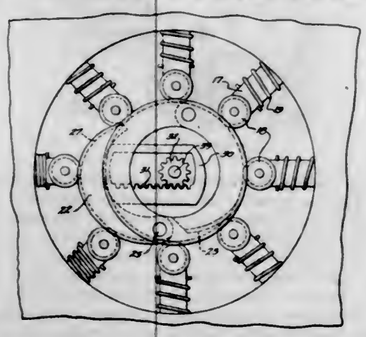
1. A fountain brush of the class described, comprising a flat body member having an open paint reservoir extending across its lower end, a plate extending across the body member from side to side, and top to bottom, and forming one wall of the reservoir, a transverse pivot member intermediate the top and bottom, a spring acting to hold the plate in contact with the bottom of the reservoir, and a rubber spreader secured to the bottom of said plate.

1,785,733. CONTROL MEANS FOR VARIABLE-SPEED TRANSMISSIONS. DANIEL R. FRANCIS, Waterbury, Conn., assignor to The Waterbury Tool Company, Waterbury, Conn., a Corporation of Connecticut. Filed July 24, 1929. Serial No. 380,474. 10 Claims. (Cl. 74—14.)



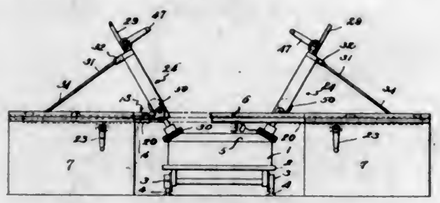
1. The combination of a variable speed gear having a swash plate adapted to be adjusted to different inclined positions to vary the effective speed of said gear, control means for changing the angle of inclination of said swash plate, a coupling member connected with said control means, means for automatically operating said control means, means for manually operating said control means independently of said automatic means, and a connection whereby the operative movements of both the automatic and manually operated means are transmitted to the coupling member and to the control means.

1,785,734. CONNECTER FOR ELECTRIC-TRAIN LIGHTS AND THE LIKE. ALBERT E. GANZERT, Chicago, Ill., assignor to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 5, 1927. Serial No. 210,771. 3 Claims. (Cl. 173—332.)



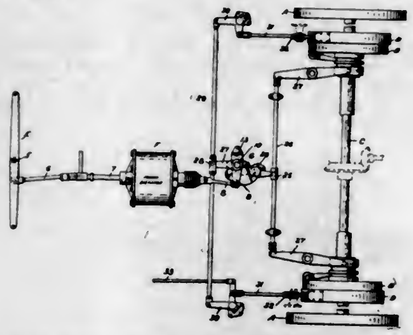
1. In an insulating box for electric train circuit connectors and the like, a plurality of conductor sockets contained therein, the opposed walls of the box being recessed and an insulating plate loosely held against displacement within the recess interposed between the conductor sockets.

1,785,735. BUTTON LOOP. GEORGE B. HEATHER, West Haven, Conn., assignor to The Wire Novelty Manufacturing Company, West Haven, Conn., a Corporation of Connecticut. Filed Feb. 20, 1930. Serial No. 429,949. 3 Claims. (Cl. 24—224.)



1. A button loop comprising a resilient wire bent to form associated loops in axial alignment, the loops having an intermediate restricted throat portion and the end portions of the wire extending relatively crossed within a loop along intersecting arcs described by the end portions upon the expansion and contraction of the loops; means provided by the end portions to limit their relative movement in the plane of the loops; and an enclosing member securing the end portions against relative movement out of the said plane.

1,785,736. CAM. JOHN P. HESS, Milwaukee, Wis. Original application filed Nov. 28, 1927, Serial No. 236,101. Divided and this application filed July 30, 1928. Serial No. 296,242. 4 Claims. (Cl. 74—1.)



1. A cam comprising a cam body, wings comprising hinged portions of the surface of the cam having ribbed surfaces, ribbed portions of the cam body to mate with the free ends of the wings, whereby to provide a continuous path for a cam follower.

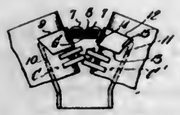
1,785,737. STONE CUTTING AND POLISHING MACHINE. ROBERT B. JONES, Barre, Vt., assignor to Jones Brothers Company, Boston, Mass., a Corporation of Maine. Filed Aug. 26, 1927. Serial No. 215,602. 6 Claims. (Cl. 51—112.)

2. A machine for cutting or polishing washes on stone bases comprising a support, a carriage horizontally slidable thereon, means for adjusting the position of the carriage with respect to the support, a frame pivotally mounted in the carriage for swinging movement in a vertical plane, means for varying the angular position of the frame with respect to the carriage, bearings in the frame, a shaft in the bearings, a disk mounted on one end of the shaft having its outer face provided with abrasive material, and driving means effective in any adjusted position of the disk.

1,785,738. STEERING-CONTROL SYSTEM FOR VEHICLES. HARRY A. KNOX and BERT F. BAKER, Davenport, Iowa. Filed Mar. 17, 1930. Serial No. 436,613. 3 Claims. (Cl. 180—17.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

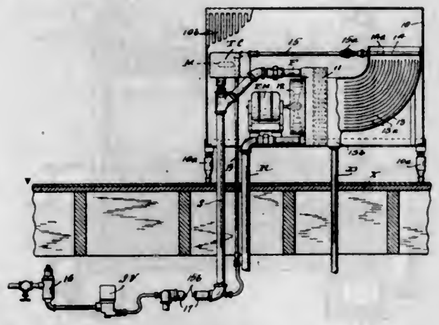
1. In a control system for power vehicles, a pair of steering clutches and brake mechanisms, a control member and operative connections between the control member and the steering clutches and brake mechanisms including a power operator under control of the control member, a cam member movable by the power operator, a lever having one end under control of the cam member, a rod reciprocable by said lever to selectively disengage the clutches, a lever having the same angular movement as the cam member, and a rod reciprocable by said lever to selectively apply the brake mechanisms.

1,785,739. METHOD OF PEAT MINING. MICHAIL N. KOZELIN, Moscow, Russia. Filed July 28, 1928, Serial No. 296,080, and in Russia Dec. 10, 1926. 3 Claims. (Cl. 44—29.)



1. The method of peat mining consisting in crushing and disintegrating the top layer of peat in the field,

gathering the finely crushed material into sharp edged ridges with wide burrows, between said ridges, periodically removing thin dried layers from the inclined sides

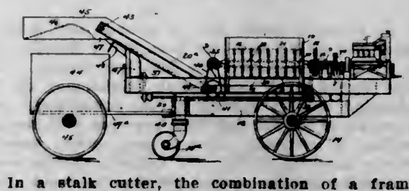


of said ridges, and building new ridges from said dried material in said burrows until said first ridges are completely removed.

1,785,740. SEPARABLE FASTENER. ROBERT C. LEGAT, New Britain, Conn., assignor to G. E. Prentice Manufacturing Company, New Britain, Conn., a Corporation of Connecticut. Filed July 23, 1929. Serial No. 380,337. 2 Claims. (Cl. 24—205.)

1. In combination with a separable fastening device of the kind having flexible stringers defining the opposite edges of a gap, a series of fastener elements carried by each stringer and an actuating slider comprising guide elements defining channels for the respective series of fastener elements, a stop firmly attached to the stringer adjacent to the end of one series of fastener elements in such a manner that the edge of the stop nearest the edge of the gap is closely adjacent and substantially parallel to the edge of said stringer, the depth and lateral width at the base of the stop being such as to permit the stop to enter the channel of the slider, the top of the stop having substantially the same depth but having a lateral width which prevents the stop from completely entering the channel of the slider although permitting a sufficient entry to effect a substantial closure of the gap.

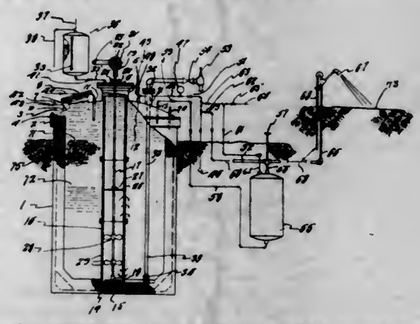
1,785,741. AIR-CONDITIONING SYSTEM. CARROLL E. LEWIS, St. Paul, Minn., assignor to The Lewis Corporation, Inc., Minneapolis, Minn., a Corporation of New Mexico. Filed July 29, 1929. Serial No. 381,905. 6 Claims. (Cl. 236—44.)



1. In an air conditioning system, a device for controlling delivery of liquid to a humidifier, a humidity actuated regulator, connections between said regulator and said delivery control device, a heating medium, a thermally actuated regulator subjected to said heating medium and connections between said last mentioned regulator and said humidity actuated regulator to render said humidity regulator operative.

1,785,742. FLOTATION MATERIAL AND PROCESS OF MAKING SAME. STUART P. MILLER, Philadelphia, Pa., assignor to The Barrett Company, a Corporation of New Jersey. Filed Nov. 17, 1924. Serial No. 750,505. 17 Claims. (Cl. 252—9.)

1. A flotation reagent comprising a solvent and the mother liquor obtained in the purification of crude alpha-naphthylamine by forming a solution of crude alpha-naphthylamine in a solvent, partially crystallizing the alpha-naphthylamine of the solution, and separating the crystals.

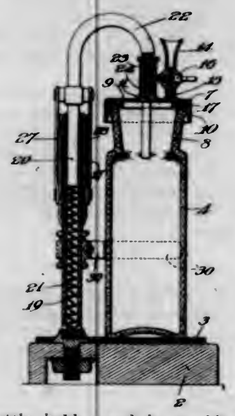


15. In a process for concentrating ores by flotation, the improvement which consists in employing as a flotation agent a mother liquor comprising alpha-naphthylamine and other constituents of crude alpha-naphthylamine, obtained by forming a solution of crude alpha-naphthylamine in an organic solvent, partially crystallizing the alpha-naphthylamine content of the solution and separating the crystals.

1,785,743. CANE CUTTER. WILLIAM HENRY MORGAN, Alliance, Ohio, assignor, by mesne assignments, to The Morgan Hurrycane Company, New York, N. Y., a Corporation of Florida. Filed Dec. 19, 1924. Serial No. 756,992. 11 Claims. (Cl. 146—122.)

1. In a stalk cutter, the combination of a frame, a hopper on said frame, stalk cutting apparatus within said hopper, means for delivering the stalks to the cutter, a rear end conveyor, a trash guiding device at the rear of the rear end of said conveyor and a blower adapted to discharge an air blast between the discharge end of the rear conveyor and the trash guiding device.

1,785,744. PROCESS AND APPARATUS FOR GENERATING SMOKE SCREENS. NICHOLAS E. OGLESBY, Edgewood, Md. Filed Dec. 21, 1927. Serial No. 241,639½. 17 Claims. (Cl. 252—1.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

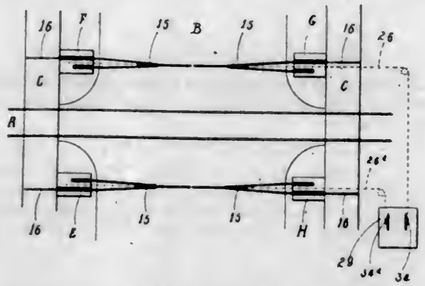


1. An apparatus for dispersing solids spontaneously combustible in air, comprising means to dissolve the solid out of contact with the air, means to deliver the liquid

out of contact with the air to a discharge point, and means to discharge the liquid.

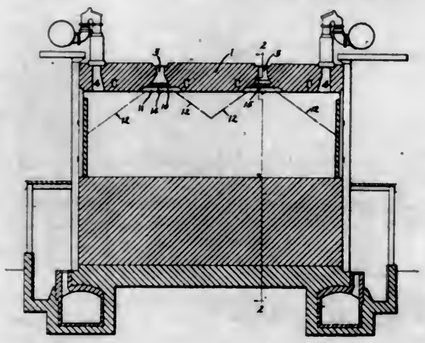
10. A process for preparing solids spontaneously combustible in air for dispersion as liquids comprising, introducing the solid in a container filled with an inert fluid and displacing the fluid and introducing a solvent in the container and displacing the inert fluid.

1,785,745. SURGICAL SUCTION AND PRESSURE APPARATUS. CHARLES J. PILLING, Lansdowne, Pa., assignor to The George P. Pilling & Son Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 5, 1927. Serial No. 188,943. 6 Claims. (Cl. 248—65.)



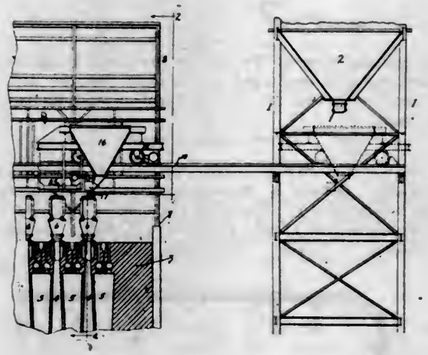
1. In a bottle holder and in combination, a base, a tubular post rising from the base, a rod slidable in the post and projecting above the same and having a downwardly turned upper end portion overhanging the base, a clamping member carried by the downwardly turned end portion of the rod and being provided with means for adjusting it vertically thereon, and means associated with the post for moving the rod and thereby moving the clamping member toward the base to clamp a bottle between them.

1,785,746. SURGICAL SUCTION AND PRESSURE APPARATUS. CHARLES J. PILLING, Lansdowne, Pa., assignor to The George P. Pilling & Son Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 5, 1927. Serial No. 188,944. 3 Claims. (Cl. 248—65.)



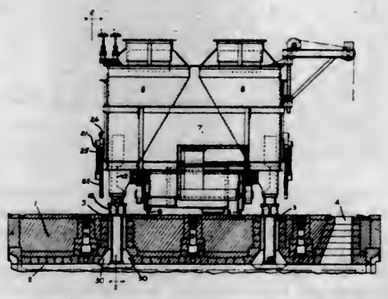
1. In a bottle holder and in combination, a base having a central post rising therefrom, a bottle receiving table supported by the post, an arm extending from the post, a standard rising from the arm, an arm extending from the standard, a clamping member movably supported by the last named arm, and a hand operated lever fulcrumed on the last named arm and provided with a cam constructed to move the clamping member toward the table to clamp a bottle between them when the lever is operated.

1,785,747. RAILROAD-CROSSING GATE. ALBERT EDWARD SPOONER, Renfrew, Ontario, Canada. Filed Apr. 3, 1930. Serial No. 441,273. 1 Claim. (Cl. 39—62.)



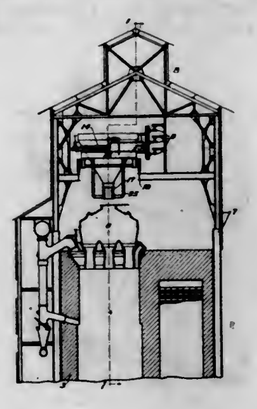
A railroad-crossing gate comprising a set of four housings, one positioned at each respective corner of the intersection between a roadway and a railroad bed; each of said housings comprising side walls, end walls and a base; each of said housings having a shaft suitably mounted in bearings supported in the side walls of said housing; an operating gear keyed on said shaft; counterbalance weights keyed on said shaft; road gates; the ends of the side bars of said road gates being connected to said counterbalance weights; a pedestrian gate, having a facer plate on its under side adjacent its inner end; a facer plate on the top of the end wall over which said pedestrian gate facer plate is adapted to move; the end of said pedestrian gate being hingedly connected to the end of one of the side bars of said road gate; a counterbalance weight suspended from the pin of said hinge; flexible connections between the respective gears in the housings on one side of the road with the gears in the respective housings on the opposite side of the road and said respective flexible connections being trained over separate operating means, in an operating tower, for operating said connections.

1,785,748. MEANS FOR REMOVAL OF SMOKE FROM COKE OVENS. JOSEPH VAN ACKEREN, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 27, 1925. Serial No. 40,067. 17 Claims. (Cl. 202—263.)



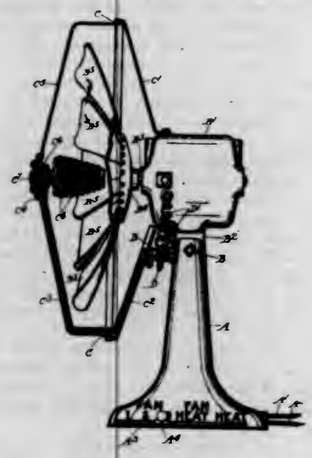
1. In coke ovens, or the like, in combination: a heat treating chamber having a wall provided with a feed opening for delivering to the chamber the material to be heat treated and having smoke or gas pockets on opposite sides of said opening that open into said chamber; and means bridging said opening for conveying smoke and gases from one pocket to the other past a stream of material entering through said feed opening; substantially as specified.

1,785,749. CHARGING VERTICAL RETORTS. JOSEPH VAN ACKEREN, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 27, 1925. Serial No. 40,068. 5 Claims. (Cl. 214—18.)



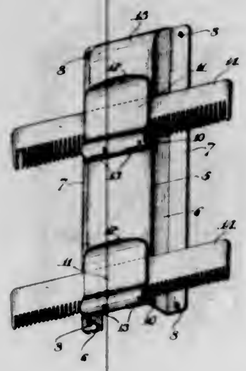
1. In a vertical retort battery, or the like, in combination: a larry car provided with a charging hopper adapted to discharge fuel into a retort chamber, said hopper being provided at its lower extremity with an offset discharge member provided wih a valve controlling the flow of the fuel, said member being adapted to be positioned over the feed opening in the retort chamber to provide a view of the charging operation unobstructed by the body of the hopper; and an operator's platform carried by the larry car adjacent said offset discharge member substantially as specified.

1,785,750. MEANS FOR CHARGING COKE OVENS. JOSEPH VAN ACKEREN, Pittsburgh Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 27, 1925. Serial No. 40,069. 14 Claims. (Cl. 202—263.)



1. In combination with a coke oven battery having side-by-side horizontal coking chambers with intermediate heating walls, an oven-roof covering the tops of said coking chambers and heating walls and forming the tops of said chambers, and having a charging opening and a gas offtake opening for each of said coking chambers, both the charging opening and the gas offtake opening extending through said oven-roof from the top to the bottom thereof and said charging opening being intermediate the ends of the oven; a charging device mounted for movement on the top of said oven-roof into and out of charging position with respect to the charging opening of each of said chambers; a hopper carried by said charging device in spaced relation to said oven-roof; and a chute carried by said hopper and movable relative thereto so as to bridge the space between said hopper and said oven-roof for conveying fuel from said hopper to said coking chambers; said chute being adapted to be adjusted into each of said charging openings and being so proportioned and arranged relative to said oven-roof and the said charging openings as to extend down to the bottom of the oven-roof and be spaced from the roof structure forming said openings so as to provide a free space in each of said openings when therein for passage of gas from the top of each of said chambers on one side of said openings to the top of said chambers on the other side for offflow through their respective gas offtakes while said chute is feeding fuel from said hopper through said openings into their respective chambers.

1,785,751. APPARATUS AND METHOD OF CHARGING A RETORT. JOSEPH VAN ACKEREN, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 25, 1926. Serial No. 137,706. 5 Claims. (Cl. 202—36.)



1. In a continuous vertical coking apparatus, the combination with a battery of continuous vertical coking retorts; covered coal-feeding magazines mounted in the top of and individual to the several coking chambers and adapted to feed coal continuously and gradually into the tops of said chambers; and a plurality of storage bins for coals of respectively different physical character mounted above said battery at one end thereof; of a charging larry-car adapted to receive coals from each of said bins and shiftable from beneath the same and into positions above and for connection with said magazines for severally recharging them and provided with weighing means for weighing the total quantity of coal received from said bins by said car and for determining by weight the portions of the total quantity delivered by said car to the respective magazines.

1,785,752. COMBINED AIR CIRCULATING FAN AND HEATER. ROYAL C. VILAS, Golf, Ill. Filed Aug. 16, 1930. Serial No. 475,819. 7 Claims. (Cl. 219—39.)
